# VI. INTERNATIONAL ANKARA MULTIDISCIPLINARY STUDIES CONGRESS

October 13-14, 2023

Ankara, Türkiye

## CONGRESS PROGRAM

**Meeting ID: 859 7119 7642**

**Passcode: 131313**

**Join Zoom Meeting**

<https://us02web.zoom.us/j/85971197642?pwd=YVh3M2lrMXd1Ql9UUDFvZE5GSkU0Zz09>

### **PARTICIPANT COUNTRIES (31):**

Türkiye, Azerbaijan, Turkish Republic of Northern Cyprus, Iraq, Nigeria, Indonesia, Vietnam, Pakistan, Romania, Ukraine, Tunisia, Algeria, Serbia, India, Morocco, Kingdom of Saudi Arabia, Germany, Georgia, Brazil, China, Hungary, Bulgaria, Uzbekistan, Congo, Albania, Croatia, Benin, France, Argentina, Egypt, UK

### Önemli, Dikkatle Okuyunuz Lütfen

- ❖ Kongremizde Yazım Kurallarına uygun gönderilmiş ve bilim kurulundan geçen bildirimler için online (video konferans sistemi üzerinden) sunum imkanı sağlanmıştır.
- ❖ Online sunum yapabilmek için <https://zoom.us/join> sitesi üzerinden giriş yaparak “Meeting ID or Personal Link Name” yerine ID numarasını girerek oturuma katılabilirsiniz.
- ❖ Zoom uygulaması ücretsizdir ve hesap oluşturmaya gerek yoktur.
- ❖ Zoom uygulaması kaydolmadan kullanılabilir.
- ❖ Uygulama tablet, telefon ve PC’lerde çalışıyor.
- ❖ Her oturumdaki sunucular, sunum saatinden 5 dk öncesinde oturuma bağlanmış olmaları gerekmektedir.
- ❖ Tüm kongre katılımcıları canlı bağlanarak tüm oturumları dinleyebilir.
- ❖ Moderatör – oturumdaki sunum ve bilimsel tartışma (soru-cevap) kısmından sorumludur.

### Dikkat Edilmesi Gerekenler- TEKNİK BİLGİLER

- ◆ Bilgisayarınızda mikrofon olduğuna ve çalıştığına emin olun.
- ◆ Zoom’da ekran paylaşma özelliğine kullanabilmelisiniz.
- ◆ Kabul edilen bildiri sahiplerinin mail adreslerine Zoom uygulamasında oluşturduğumuz oturuma ait ID numarası gönderilecektir.
- ◆ Katılım belgeleri kongre sonunda tarafınıza pdf olarak gönderilecektir
- ◆ Kongre programında yer ve saat değişikliği gibi talepler dikkate alınmayacaktır

### IMPORTANT, PLEASE READ CAREFULLY

- ❖ To be able to attend a meeting online, login via <https://zoom.us/join> site, enter ID “Meeting ID or Personal Link Name” and solidify the session.
- ❖ The Zoom application is free and no need to create an account.
- ❖ The Zoom application can be used without registration.
- ❖ The application works on tablets, phones and PCs.
- ❖ The participant must be connected to the session 5 minutes before the presentation time.
- ❖ All congress participants can connect live and listen to all sessions.
- ❖ Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

### Points to Take into Consideration - TECHNICAL INFORMATION

- ◆ Make sure your computer has a microphone and is working.
- ◆ You should be able to use screen sharing feature in Zoom.
- ◆ Attendance certificates will be sent to you as pdf at the end of the congress.
- ◆ Requests such as change of place and time will not be taken into consideration in the congress program.

Before you login to Zoom please indicate your name\_surname and HALL number:  
**exp. Hall-1, Seda BEYAZ**

HYACINTH BEAN HUSK: CHROMATOGRAPHIC ELUTION APPROACH		
--	--	--

All participants must join the conference 10 minutes before the session time.  
Every presentation should last not longer than 10-12 minutes.  
Kindly keep your cameras on till the end of the session.

**Session-3, Hall-5**

**14.10.2023**

**Moderator: Khaoula Mkhayar**

**Meeting ID: 859 7119 7642 / Passcode: 131313**

**Ankara Local Time: 14:00 – 16:00**

Title	Author(s)	Affiliation
EXPLORING THE COMPUTATIONAL ANALYSIS OF FLAVONE DERIVATIVES FOR SARS-CoV-2 PROTEIN INHIBITION	Merzouki Mohammed A, Bouammali Boufelja A, Challioui Allal A	Mohammed I University, Morocco
SYNTHESIS AND CHARACTERIZATION OF NEW HYBRID CATALYST BY IRON COMPLEX MODIFICATION OF MONTMORILLONITE K-10 CLAY FOR THE DEGRADATION OF CONGO RED DYE	MEKIDICHE Mounir, KHALDI Khadidja, CHOUKCHOU-BRAHAM Abderrahim	University of Tlemcen, Algeria Center for Scientific and Technical Research in Physico-chemical Analyzes CRAPC, Algeria
IN-SILICO AND RETROSYNTHESIS APPROCHE FOR 1,2,3-TRIAZOLE-QUINOLINE AS POTENTIAL INHIBITORS AGAINST SARS-COV-2 VIRUS	Yassine Koubi, Youness Moukhliiss, Halima Hajji, Oumayma Abdessadak, Marwa Alaqarbeh, Mohammed Aziz Ajana, Hamid Maghat, Tahar Lakhlifi, Mohammed Bouachrine	
ESTIMATION OF GLOBAL SOLAR RADIATION USING FIVE SUNSHINE BASED MODELS FOR ILORIN, NORTH-CENTRAL NIGERIA	Ibrahim B. B, Usman A	Kwara State Polytechnic, Ilorin
THE SYNTHESIS OF HETERO-ANNULATED QUINOLONES AND THE BIOLOGICAL ACTIVITIES OF THESE COMPOUNDS	Ayoub El-mrabet, Youssef Kandri Rodi, Ahmed Mazzah, Amal Haoudi	University of Sidi Mohamed Ben Abdellah, Morocco University of Lille, France
BIOSORPTION OF Ni <sup>2+</sup> AND Pb <sup>2+</sup> FROM WASTE WATER USING DOUM PALM NUT SHELL ACTIVATED CARBON	Sulaiman S.Y., Hafsat M.	Umaru Musa Yar'adua University, Nigeria
UNEARTHING FRESH ANTICANCER AGENTS FOR HUMAN BREAST CANCER CELL LINE: INVESTIGATING VIA QSAR AND MOLECULAR DOCKING ANALYSES	Khaoula Mkhayar, Kaouakeb El khattabi, Souad Elkhattabi	Sidi Mohamed Ben Abdellah- Fez University, Fez, Morocco. Hassan II University of Casablanca, B.P 7955, Casablanca, Morocco
SYNTHESIS AND CHARACTERIZATION OF METAL MOLYBDATE CATALYSTS AND ITS APPLICATION IN THE REDUCTION REACTION OF THE THREE ISOMERS OF NITROPHENOL	Yousra Taoudi, Hicham Oudghiri Hassani, Souad Rakass, Mohammed Lachkara	Sidi Mohamed Ben Abdellah University, Morocco

All participants must join the conference 10 minutes before the session time.

Every presentation should last not longer than 10-12 minutes.

Kindly keep your cameras on till the end of the session.

**Session-3, Hall-6**

**14.10.2023**

**Moderator: Dr. Namrata Kumari**

**Meeting ID: 859 7119 7642 / Passcode: 131313**

**Ankara Local Time: 14:00 – 16:00**

GENOME WIDE ANALYSIS OF UBIQUITIN CARBOXYL TERMINAL HYDROLASES IN RICE: THEIR ROLE IN GROWTH AND STRESS RESPONSE	Chippala Naga Swapna, K. Harika, M. Vani & K Gnaneswari	Sri Padmavati Mahila Visvavidyalam, Tirupati
ASSESSING THE INFLUENCE OF CLIMATE CHANGE ON MOROCCO'S RESERVE RESOURCES FOR DURUM WHEAT LAND	SAGHOURI EL IDRISSE Imane, KETTANI Rajae, KHALFI Chemsdoha, FERRAHI Moha, EL FECHTALI Mohamed, ZIRI Rabea, BRHADDA Najiba	National Institute of Agronomic Research (INRA), Morocco University of Ibn Tofail, Morocco.
SOIL STABILIZATION WITH AERATED CEMENTED CLAY- FA SUPPLANT	CHODAVARAPU GIRIDHAR KUMAR, SADHU RENUKA, POLAMARASETTI JAGADEESWAR	
ANALYSIS AND DESIGN OF PRESTRESSED CONCRETE SLEEPERS WITH PARTIAL REPLACEMENT OF FLYASH IN CONCRETE	Chodavarapu Giridhar Kumar, MADDILA SASIKALA, DUSARI PRANEETHBABU	
ECOLOGY OF JAPANESE ENCEPHALITIS DISEASE	Dr. Namrata Kumari	Gauhati University, Assam, India
PROGRAMMING WATER USE OF GRAIN CORN IN THE COLD STEPPE ZONE USING INFORMATION TECHNOLOGIES	Dr. Pavlo LYKHOVYD Viktor SHARII	Institute of Climate-Smart Agriculture of NAAS, Ukraine
MODELING POTENTIAL WAVE ENERGY CONVERTER CASES FOR MOROCCO: EXPLORING ENERGY CONVERSION OPPORTUNITIES	SOUFIANE EL BOUJI NOUREDDINE KAMIL ZITOUNI BEIDOURI	Hassan II University of Casablanca, Morocco

**All participants must join the conference 10 minutes before the session time.  
 Every presentation should last not longer than 10-12 minutes.  
 Kindly keep your cameras on till the end of the session.**

Session-4, Hall-1

14.10.2023

Moderator: Assist. Prof. Dr. Ayşen Çakır

Meeting ID: 859 7119 7642 / Passcode: 131313

Ankara Local Time: 16:30 – 18:30

### ABSTRACT

In this work we study numerically the natural convection of a carbon-based nanofluid (water + C<sub>60</sub>) in a differentially heated square cavity. One of the vertical walls of the cavity is grooved and maintained at a high temperature. The purpose of this work is to compare the effect of the macrostructural aspect of the grooves and the effect of the addition of fullerene nanoparticles (C<sub>60</sub>) to pure water on the heat exchange by natural convection in this type of geometry. To better quantify the convective heat exchange numerically near the grooves we used a refined grid with two non-conforming blocks at the hot wall level. The governing equations were discretized by the finite volume method using a power law scheme which offers a good stability characteristic in this type of flow. A numerical code was designed and produced in this context to use numerical simulation as an investigative tool.

The results are represented in the form of streamlines and isothermal fields. The variation in the mean Nusselt number of the cold wall to the right of the cavity is calculated as a function of the volume fractions of the nanoparticles ( $0 \leq \Phi \leq 0.06$ ) for different numbers and sizes of the grooves and for different Rayleigh numbers ( $10^3 \leq Ra \leq 10^6$ ).

**Keywords:** Numerical, convection, double refined grid, nanofluid.

## A QUALITATIVE INVESTIGATION OF TIME MANAGEMENT INTERVENTIONS FOR WORKING STUDENTS IN THE PHILIPPINES TO BALANCE ACADEMICS AND WORK

*John Erwin Prado Pedroso, Phd*

*West Visayas State University*

*Khate Aponte*

*West Visayas State University*

*Reyken Chiefe*

*West Visayas State University*

*Willmi Grace Juanico*

*West Visayas State University*

### ABSTRACT

Time management has been the problem of the students most especially for those who work at the same time, where they are loaded with responsibilities needed to be accomplished both in school and in their workplace. This descriptive-qualitative study aimed to explore the time management interventions of working students in their workplace. Using the inclusion criteria, the researchers have purposely chosen six (6) working students from a public state university. Google form was utilized to gather data, which the researchers sent to the informants through Facebook messenger and email, and researchers also utilized messenger for further clarifications and follow-up from the informants. Thematic analysis was used in analyzing the data gathered. The results revealed two themes such as (1) internal efforts and (2) external environment adaptations. Moreover, the researchers generated four (4) categories from the analyzed data. It implied that working students' time management interventions are (1) development of organized approaches and (2) reduction of potential barriers. In addition, they also adapt from their external environment, wherein they (3) promote workplace flexibility and lastly (4) practice effective designation. Thus, the demand in both school and workplace made way for the working students to have time management interventions in their workplace to successfully accomplish their tasks and to avoid procrastination.

### ABSTRACT

This research investigates potential wave energy converter models tailored to the distinctive coastal features of Morocco. Understanding and addressing the specific energy conversion requirements and opportunities in Morocco's coastal regions are pivotal for developing effective and sustainable solutions. Our objective is to identify feasible wave energy technologies, evaluate their viability, and propose optimized models aligned with Morocco's energy goals and environmental priorities. By focusing on potential wave energy converter scenarios, our aim is to provide valuable insights to advance the sustainable energy transition in Morocco and effectively utilize the considerable wave energy potential along its coastlines.

The analysis of our results reveals that a combination of  $H_s=1\text{m}$  and  $T_e=6\text{s}$  produces the lowest power output, ranging from 15707.78 W to 5044.367 W for various lengths of air chamber ( $L_w$ ). This suggests that this specific combination of wave heights and periods may not be optimal for efficient energy production.

In contrast, we found that the combination of  $H_s=5\text{m}$  and  $T_e=16\text{s}$  generates the maximum power output, varying between 2.89.1010 W and 7.27.1008 W for different lengths of air chamber. These findings underscore the potential for higher waves and longer periods to significantly enhance energy generation. These insights can guide future endeavors in wave energy conversion and its application in Morocco's coastal energy strategy.

**ÖZET**

Endüstriyel süreçlerde suyun kullanımı kaçınılmazdır. Bunun sonucu olarak hem temiz su kaynakları tükenmekte hem de endüstriyel süreçlerde kirlenen su çevresel sorunlara neden olmaktadır. Bu nedenle endüstriyel atık suların temizlenmesi büyük önem arz etmektedir. Suyu en fazla kullanan sanayi kuruluşların başında tekstil endüstrisi gelmektedir. Türüne ve özelliklerine bağlı olarak bir kilogram tekstil üretimi için 95 litre ile 400 litre arasında su tüketilmektedir. Bu çalışmada katyonik bir polimer olan polidialildimetilamonyum klorür (poliDADMAC) serbes radikalik yöntemle sentezlenmiş ve tekstil atık suyunda renk giderim performansı araştırılmıştır. Bunun için başlangıç renk değeri 443 Pt/Co olan tekstil atık suyuna 150 ppm poliDADMAC dozajlanmış, pH değeri 8-10 aralığına ayarlanmış ve 320 saniye karıştırma sonrasında renk değeri UV spektrofotometre ile ölçülmüştür. Sonuçlardan atık su renginin poliDADMAC ile muamelesinden sonra 69 Pt/Co seviyesine düştüğü ve %84,4 oranında renk giderimi elde edildiği görülmüştür. İleri çalışmalarda dozajlama miktarı, pH değeri ve karıştırma süresi optimize edilerek daha yüksek renk giderim oranına ulaşılabileceği öngörülmektedir.

**Anahtar Kelimeler:** PoliDADMAC, atık su arıtımı, renk giderimi, katyonik polimer, flokülasyon

**ABSTRACT**

The use of water is inevitable in industrial processes. As a result, clean water resources are depleted and water polluted in industrial processes causes environmental problems. Therefore, industrial wastewater treatment is of great importance. The textile industry is one of the industrial organizations that use water the most. Depending on its type and properties, between 95 liters and 400 liters of water are consumed to produce one kilogram of textile. In this study, polydiallyldimethylammonium chloride (polyDADMAC), a cationic polymer, was synthesized by the free radical method and its dye removal performance in textile wastewater was investigated. For this, 150 ppm polyDADMAC was dosed into textile wastewater with an initial color value of 443 Pt/Co, the pH value was adjusted to the range of 8-10, and after 320 seconds of mixing, the color value was measured with a UV spectrophotometer. The results showed that the wastewater color decreased to 69 Pt/Co level after treatment with polyDADMAC and 84.4% color removal was achieved. It is predicted that a higher color removal rate can be achieved by optimizing the dosing amount, pH value and mixing time in further studies.

**Keywords:** PolyDADMAC, wastewater treatment, decolorization, cationic polymer, flocculation

## BISMUTH OXIDE DOPED WITH CHITOSAN/POLYVINYLPIRROLIDONE FOR ANTIBACTERIAL AND CATALYTIC DYE DEGRADATION PURPOSES

*Dr. Abdul Ghaffar*

*Department of Physics, Government College University, Lahore, 54000 Pakistan.*

### ABSTRACT

At a nanoscale, the effect of doping can induce physical and chemical changes in the host material that can be revealed in terms of their application. Bismuth oxide ( $\text{Bi}_2\text{O}_3$ ) doped with polyvinylpyrrolidone (PVP) was further processed to incorporate chitosan was synthesized using the co-precipitation method. Standard characterizations confirm the desired materials with certain physical attributes. Chitosan and PVP-doped  $\text{Bi}_2\text{O}_3$  showed catalytic activity of 99%. Also, antibacterial potential of the prepared nanomaterial was checked against *E. coli* and *S. aureus*.

## PREDICTION OF OIL PRICE USING MARINE PREDATORS ALGORITHM AND FEED FORWARD NEURAL NETWORK

*Dr. Ceren BAŞTEMUR KAYA*

*Department of Computer Technologies, Nevşehir Hacı Bektaş Veli University, Nevşehir 50300,  
Türkiye*

*ORCID ID: 0000-0002-0091-3606*

### ABSTRACT

One of the important artificial intelligence techniques used for oil price prediction is artificial neural networks (ANNs). When the literature is examined, it is seen that there are many ANN-based studies for oil price prediction. One of the most important processes in ANNs is the training process. Meta-heuristic algorithms are used extensively in the training processes of ANNs. In this study, marine predators algorithm (MPA), one of the important meta-heuristic algorithms and feed forward neural network (FFNN) were used to predict the oil price. The weights of FFNN were adjusted using MPA. Within the scope of the study, daily oil prices belonging to 2022 were used. In order for this data to be applied to FFNN, it was converted into a data set containing two inputs and one output. 80% of the data set was used in the training process. The remaining data is reserved for the testing process. The network structure of FFNN may affect performance. Therefore, results were obtained for different network structures. In applications, both the solution quality and convergence speed of MPA were evaluated. At the same time, mean squared error (MSE) was used as the error metric. The performance of MPA was compared with some meta-heuristic algorithms to solve the relevant problem. The results showed that FFNN training performed with MPA is successful for short-term oil price forecasting.

**Keywords:** Marine Predators Algorithm, Swarm Intelligence, Meta-heuristic Algorithm, Feed Forward Neural Network, Oil Price Prediction.

## CHARACTER STRENGTHS AND THE ADOLESCENT JOURNEY TO WELL-BEING: A THEORETICAL LENS

*Stenny Anto K*

*Research Scholar*

*Department of Psychology, CHRIST University, Bangalore*

*Dr. Shinto Thomas*

*Assistant Professor*

*Department of Psychology, CHRIST University, Bangalore*

### ABSTRACT

The period of adolescence is a profound and transformative stage in human development, marked by significant changes in the body, mind, and emotions. Navigating this crucial phase successfully hinges on understanding how character strength and well-being are intertwined in teenagers. This study delves into this intricate connection through the lens of various psychological theories. We aim to unravel the contributions of character traits to the overall well-being of teenagers, drawing upon the foundational principles of positive psychology.

Positive psychology, pioneered by Martin Seligman, forms the cornerstone of our exploration. It underscores the pivotal role of cultivating character qualities in enhancing well-being. While positive psychology provides a robust framework, its tenets are reinforced by a constellation of complementary psychological theories. Self-determination theory posits that autonomy, competence, and relatedness, which are closely linked to character strengths, are essential for fostering well-being. Well-being theory emphasizes the holistic nature of well-being, encompassing hedonic and eudaimonic aspects, both of which are influenced by character strengths. Resilience theory highlights how character strengths act as protective factors during adversity, Social cognitive theory elucidates how observational learning and role modelling play a vital role in the development and expression of character strengths.

Our study synthesizes these diverse theoretical perspectives to offer a comprehensive understanding of the intricate relationship between character strength and well-being in teenagers. By intertwining these theories, we aim to shed light on how character strengths contribute to positive emotions, a sense of purpose, resilience, and personal growth—all of which are fundamental components of well-being.

Beyond theoretical exploration, our research holds practical implications of great significance. We anticipate that our findings will inform the design of interventions and educational strategies tailored to nurture character strengths in adolescents. In sum, our study advances a holistic perspective on adolescent development, underscoring the pivotal role of character strengths in promoting their well-being.

## LIMITATIONS OF SYNTHETIC POLYMERS IN NOVEL DRUG DELIVERY SYSTEMS

*Shakthivel K, Jayaramakani N, Dr.R.Srinivasan*

*Bharath Institute of Higher education and Research - Faculty of Pharmacy*

### ABSTRACT

Synthetic polymers have long been a cornerstone in the development of innovative drug delivery systems, offering a wide range of tunable properties and controlled-release mechanisms. However, this abstract delves into the multifaceted limitations that synthetic polymers present within the context of novel drug delivery systems. These constraints span areas such as biocompatibility, toxicity, degradation, and precision in drug release kinetics. One of the primary limitations of synthetic polymers is their biocompatibility. While some polymers have demonstrated excellent biocompatibility, others can elicit immune responses or cause adverse reactions in the host organism. Addressing these biocompatibility issues is crucial to ensure the safety and effectiveness of drug delivery systems. Toxicity is another critical concern. Some synthetic polymers and their degradation by-products can be toxic to cells and tissues. This raises questions about the long-term safety of polymer-based drug carriers and emphasizes the need for rigorous toxicity testing. Degradation, or lack thereof, is a significant limitation. Many synthetic polymers used in drug delivery systems exhibit limited biodegradability, leading to concerns about their accumulation in the body over time. Biodegradable alternatives are sought after to mitigate this issue. Precision in drug release remains a challenge. Achieving site-specific targeting and controlled release at the desired rate often requires sophisticated engineering and formulation techniques. Ensuring that drugs are delivered precisely where and when they are needed is pivotal for maximizing therapeutic efficacy and minimizing side effects. This abstract underscores the importance of acknowledging these limitations and the necessity of exploring alternative materials and strategies to overcome them. Researchers are increasingly turning to natural polymers, nanoparticles, and innovative delivery techniques to address these challenges and enhance the performance of drug delivery systems.

### ABSTRACT

Amphibians are one of the constituent elements of the ecosystem which have an important role as bio-indicators of environmental damage. This research aims to determine the diversity of amphibian species in agroforestry locations in forest areas in Ulubelu, Tanggamus Regency. The research was carried out on agroforestry land, where this location is a habitat for amphibian species. The method used in collecting amphibian data is VES (Visual Encounter Survey) with data collection based on 5 different locations, each using 20 minutes, then doing three repetitions, namely evening-morning and evening (MPM). The time distribution at each habitat location is divided into two data collection times, namely morning time (05.30-07.30) and evening time (19.00-21.00). Identification is carried out using the field disembarkation guide book. Data analysis was carried out descriptively and quantitatively to calculate the species diversity index (Shannon Wiener), species richness index, dominance index (Simpson's Index), species evenness index. During observations carried out in Penantian Village and Sinar Banten Village, a total of 25 individuals consisting of 9 species were found. This species consists of 4 families, with Ranidae being the most numerous family. The species found were the green tree frog (*Rhacoporus reinwardti*), the striped tree frog (*Polypedates leucomystax*), the rice field frog (*Fajervarya cancrivora*), the rock frog (*Limnonectes macrodon*), the dwarf frog (*Limnonectes microdiscus*), the horned frog (*Megophrys montana*), the bullfrog (*Bufo asper*), river bullfrog (*Bufo asper*), and moor frog (*Fajervarya limnocharis*). Diversity on agroforestry land is categorized as moderate, with a diversity value of  $H' = 1.099$ .

### ABSTRACT

Purpose and background: Mental resilience refers to the athlete's capacity to bounce back from setbacks, manage external pressures effectively, and surmount unforeseen challenges. It's worth emphasizing that psychological attributes like mental resilience play a vital role in enabling individuals to attain success within the realm of sports. Sports psychologists support research that empowers martial arts athletes, including wrestlers. Wrestlers ought to exhibit considerable mental resilience, making wrestling an optimal domain for research in the field of sport psychology. The aim of the study was to explore the expression of mental resilience among wrestlers of youth and junior age. Methods and organization of the study: For the evaluation of mental resilience skills, the Psychological Performance Inventory-Alternative was selected. This inventory comprises 14 statements and encompasses four dimensions (factors): the determination factor includes 3 statements, the visualization factor consists of 4 statements, the positive cognition scale also consists of 4 statements, and the self-belief scale includes 3 inventory statements. There were 49 wrestlers tested in the youth group and 48 wrestlers tested in the junior group. Results: When comparing the mental resilience skills of wrestlers assessed in the youth group and those evaluated in the junior group, it is evident that youth athletes demonstrated superior scores in determination ( $p < 0.05$ ) and visualization ( $p < 0.05$ ). It was established that there were no statistically significant differences in positive cognition and self-belief ( $p > 0.05$ ). Conclusions: The focus of enhancement in determination and visualization should be directed toward junior wrestlers, as athletes in this age group exhibit lower levels of these resilience skills.

**Keywords:** Mental resilience, youth and junior age, sport.

## A STUDY ON EFFECT OF NOSTALGIA MARKETING ON CONSUMER'S PERCEPTION

*Tejaswini M*

*Student, Department of Management Studies, Dayananda Sagar College of Engineering, Bangalore, India*

### ABSTRACT

In today's competitive marketplace, marketers are increasingly turning to nostalgia as a strategic tool to influence consumer perceptions. This study investigates the dynamic relationship between nostalgia marketing and consumer perception, aiming to elucidate the effects of invoking nostalgia in advertising on consumer attitudes, behavior, and brand perception. The research commences by delineating the concept of nostalgia marketing, tracing its historical evolution, and elucidating the psychological foundations that underlie its potency. Emphasizing the capacity of nostalgia to evoke warm, sentimental emotions and create a sense of connection with the past, the study delves into how these emotional triggers can be harnessed to shape consumer perceptions. An intrinsic element of this research is the examination of how different demographic groups respond to nostalgia marketing. By analyzing consumer segments across diverse age groups, the study discerns whether nostalgia holds universal appeal or if its effectiveness varies among generations. These insights are invaluable for marketers seeking to tailor their campaigns to resonate with specific target audiences. Methodologically, the study employs a mixed-methods approach, incorporating qualitative interviews, focus groups, and quantitative surveys. The combination of these methods facilitates a comprehensive understanding of consumer responses to nostalgia marketing. Qualitative insights provide a deeper exploration of the emotional and cognitive processes at play, while quantitative data allow for generalizable findings. Preliminary findings suggest that nostalgia marketing exerts a notable positive influence on consumer perception, fostering brand affection and heightened purchase intent. However, the authenticity and resonance of the nostalgic elements employed in marketing campaigns significantly impact these outcomes. Transparency emerges as a crucial factor, as consumer's value honesty and genuine connections with the past. The study have some potential drawbacks associated with nostalgia marketing, such as the risk of appearing inauthentic or failing to align with a brand's identity. In sum, this study contributes to the burgeoning literature on advertising and consumer behavior by shedding light on the multifaceted interplay between nostalgia marketing and consumer perception. Its insights are indispensable for marketers aiming to harness nostalgia effectively, providing them with a roadmap to forge meaningful connections with consumers while mitigating potential pitfalls. As the consumer landscape continues to evolve, this research offers invaluable guidance to businesses seeking to navigate the power of nostalgia in their marketing endeavors.

### ABSTRACT

We present a highly efficient and site-selective palladium-catalyzed oxidative arylation of substituted 1H-indazoles with a diverse array of arenes and heteroarenes as coupling partners. The key to the success of this method lies in the strategic placement of electron-withdrawing groups (EWG) at the C4 position of the 1H-indazole, which enables precise C7 arylation. Our approach delivers the desired products in moderate to good yields, capitalizing on 4-NO<sub>2</sub> or 4-CO<sub>2</sub>Me substituted 1H-indazoles in conjunction with various (hetero)aryls as coupling partners.

The catalytic system comprises Pd(OAc)<sub>2</sub> as the catalyst, phenanthroline as the ligand, Ag<sub>2</sub>CO<sub>3</sub> as the oxidant, and NaOH as the base. Notably, this method exhibits excellent regioselectivity, resulting in the exclusive arylation at the C7 position of 1H-indazole.

To further elucidate the underlying reaction mechanism, we conducted density functional theory calculations, enhancing our comprehension of this transformation. Overall, our methodology offers a highly effective, direct, and atom-economical approach for the construction of C7-(hetero)arylated 1H-indazole compounds. This innovation in selective C7 functionalization of 1H-indazole provides a valuable tool for the synthesis of diverse and biologically relevant molecules, with potential applications in drug discovery and material science.

## TÜRK MUTFAĞININ YEMEK İMAJİ: DENEYSSEL ÇALIŞMALAR ÜZERİNE BİR İNCELEME

### FOOD IMAGE OF TURKISH CUISINE: A REVIEW OF EMPRICAL STUDIES

*Elvan KESER*

*Dr. Öğretim Üyesi, Aydın Adnan Menderes Üniversitesi, Turizm Fakültesi,*

*Yiyecek ve İçecek İşletmeciliği Bölüm, Kuşadası, Aydın Türkiye*

*ORCID ID: 0000-0003-4224-7258*

#### ABSTRACT

Besides being crucial to attract and retain tourists, a distinctive and consistent image is an ultimate goal for destination marketers. Destination brand image is a perception shaped by the qualities and the attributes of a destination such as accommodation and entertainment facilities, cultural and natural attractions along with the local cuisine. Building and retaining a favorable food and cuisine image is expected to enhance the competitiveness of the destination by distinguishing its genuineness. Korea, Hong Kong, Tunisia, Japan, France, Italy, Mexico, Serbia, Jordan, Ukraine are just a few countries which successfully strive to legitimize their traditional food and cuisine as an intangible cultural heritage under UNESCO. This study addresses the current state of the food image research of Turkish cuisine and attempts to direct the future research by pointing out the gap in food and cuisine image in destination branding literature. Four different electronic databases; Science Direct, Emerald Insight, Taylor & Francis and Google Scholar were used to reach the peer-reviewed researches by using “Turkish food image”, “Turkish food and food image”, “destination image and food image” as keywords both in English and Turkish summed up to sixteen original papers. A systematic review of the articles reveals the scarcity of attention in the Turkish food image literature from destination marketers’, host communities’ and visitors’ perspective despite the fact that there are efforts of drawing few local food images for culinary destinations with an unclear theoretical and conceptual framework.

**Key words:** Destination food image, destination brand image, food destinations

#### ÖZET

Destinasyon pazarlamacıları için turistleri çekmenin ve elde tutabilmenin yanı sıra, farklılaştırılmış ve tutarlı olarak algılanabilen bir imajı yaratabilmek, ulaşılmak istenen nihai bir hedef olarak görülmektedir. Destinasyon marka imajı, bir destinasyonun konaklama ve eğlence olanakları, kültürel ve doğal çekicilikleri ile yerel mutfağı gibi özellikleri ve nitelikleriyle şekillenen bir algıdır. Olumlu bir yemek ve mutfak imajının oluşturulması ve sürdürülmesinin, destinasyonun özgünlüğünü öne çıkararak rekabet gücünü artırması beklenmektedir. Kore, Hong Kong, Tunus, Japonya, Fransa, İtalya, Meksika, Sırbistan, Ürdün, Ukrayna, geleneksel yemeklerini ve mutfaklarını UNESCO kapsamında somut olmayan kültürel miras olarak tanıtımına katkı yapmaya çalışan ülkelerden sadece birkaçıdır. Bu çalışma, Türk mutfağının yemek imajı araştırmalarının mevcut durumunu ele almakta ve destinasyonların markalaşması ile ilgili literatürde yemek ve mutfak imajı konusundaki boşluğa dikkat çekerek gelecekteki araştırmalara yön vermeye çalışmaktadır. Dört farklı elektronik veri tabanı; Science Direct, Emerald Insight, Taylor & Francis ve Google Akademik, hakemli dergilerde yayınlanmış araştırmalara ulaşmak için hem İngilizce hem de Türkçe olarak “Türk yemeği imajı”, “Türk yemeği ve yemek imajı”, “destinasyon imajı ve yemek imajı” anahtar kelimeler kullanılarak taranmıştır. On altı orijinal makalenin sistematik incelemesi, yemek destinasyonlarına ait imaj çalışmalarının teorik ve kavramsal çerçevelerinin yetersizliğinin yanısıra destinasyon pazarlamacılarının, yerel halkın ve ziyaretçilerin bakış açılarından inlenmesi gerekliliğini ortaya koymaktadır.

**Anahtar Kelimeler:** Destinasyon yemek imajı, destinasyon marka imajı, yemek destinasyonları.

**ABSTRACT**

Python is a scriptable and interpreted language for both learning and real-world programming. Python is a powerful, high-level language developed by Guido van Rossum. In this paper, we will provide an introduction to the main Python programming software tools used for data science and machine learning techniques. Briefly, this paper will first introduce Python as a language, give an introduction to data science and machine learning, and then describe packages that are popular in the data science and machine learning sectors, such as NumPy, SciPy, TensorFlow, Keras, Matplotlib,Matplotlib etc. From there, we will move on to show the importance of Python for building data science applications. We will use different code examples throughout. To aid the learning experience, execute the following examples contained in this paper interactively using Jupiter notebooks.

**Assist. Prof. Dr. Pelin BAYRAM**

*Faculty of Economics & Administrative Sciences*

*European University of Lefke*

**ABSTRACT**

**Purpose** – This study aims to understand the various changes in consumer behaviors from the perspective of environmental awareness, sustainable consumption, social responsibility, and corporate philanthropy during the COVID-19 pandemic. Furthermore, the research attempts to investigate the moderating effect of genders and generations.

**Design/methodology/approach** – This research has used quantitative research techniques. Data was collected from 531 participants in Turkey and structural equation modelling was employed to test the hypothesis.

**Findings** – Findings revealed that COVID-19 has changed consumer perspectives on environmental issues such as air pollution, natural resources, sustainable consumption, and social responsibility. Pandemic restrictions helped people to witness the environmental recovery. The current study proved that consumers are highly aware of this recovery and changing their behaviors as well as their social responsibilities. Furthermore, genders and generations have not moderated the relationship between COVID-19 and the constructs of the study.

**Research limitations/implications** – Our study has some limitations. Primarily, the survey research was carried out online on social media platforms via a questionnaire link. Then, the findings' generalizability to other consumer intentions could be hampered by external validity.

**Keywords:** Covid-19, consumer behavior, environmental awareness, sustainable consumption, social responsibility, corporate philanthropy.

## ASSESSING THE EFFECTIVENESS OF ORGANIC INHIBITORS IN PREVENTING IRON CORROSION IN HYDROCHLORIC ACID ENVIRONMENT: A DFT INVESTIGATION

*M. Omari<sup>1</sup>, M. El idrissi<sup>2</sup>, A. Tounsi<sup>1</sup>*

<sup>1</sup>*Agroindustrial, Environmental and Ecological Processes Team, Faculty of Science and Techniques of  
Beni Mellal, Sultan Moulay Slimane University, Beni Mellal, Morocco*

<sup>2</sup>*Faculty Polydisciplinary, Team of Chemical Processes and Applied Materials, Sultan Moulay Slimane  
University, Beni-Mellal, Morocco*

### ABSTRACT

This study focuses on inhibiting iron corrosion in a 1M hydrochloric acid solution using two organic inhibitors: 2,5-bis(2-thienyl)-1,3,4-thiadiazole (2-TTH) and 2,5-bis(3-thienyl)-1,3,4-thiadiazole (3-TTH). Utilizing DFT/B3LYP/6-311(d,p) calculations, we assessed the corrosion inhibiting properties of these organic inhibitors. The results reveal a strong correlation between inhibitory efficiency (IE%) and quantum chemical parameters, as well as reactivity descriptors derived from DFT. Furthermore, we investigated the interactions between these inhibitory molecules and the metal surface through molecular dynamics simulations and Monte Carlo (MC) simulations. Our findings indicate that these organic compounds form robust interactions with the metal surface, making them highly effective in predicting inhibition against metal corrosion. In conclusion, both corrosion inhibitors exhibit superior inhibitory efficiency and can be employed to reduce the rate of metal corrosion.

**Keywords:** Corrosion inhibitor; DFT, Monte Carlo Simulation, Molecular dynamics.

SYNTHESIS OF PURE GISMONDINE-NAP ZEOLITE FROM BENTONITE FRACTION  $>2$   
 $\mu\text{M}$

**Rafik Abdelkrim Boudia<sup>1</sup>, Mehdi Adjdir<sup>1,2</sup>, Miloud Mohamed Mazari<sup>1</sup>**

Moulay, 20000, Saïda, Algeria.

**ABSTRACT**

In this study, Si et al. investigated the production of monophasic gismondine-Na zeolite (GIS-NaP) of type P from a natural bentonite fraction  $>2$   $\mu\text{m}$  ( $\text{Cf} > 2$   $\mu\text{m}$ ). The goal was to develop a cost-effective method for large-scale production of zeolites in the industry. The raw  $\text{Cf} > 2$   $\mu\text{m}$  was initially activated through alkaline fusion at 750 °C in a 1:1.2 ratio of  $\text{Cf} > 2$   $\mu\text{m}$ : NaOH. Subsequently, the crystalline pure GIS-NaP zeolite was successfully synthesized in a one-step hydrothermal activation process using the supernatant obtained from the Na-Cf fusion-water treatment at a 1:4 ratio of Na-Cf  $> 2$   $\mu\text{m}$ :H<sub>2</sub>O. The presence of  $\text{Cf} > 2$   $\mu\text{m}$  was confirmed using X-ray diffraction (XRD), while the supernatant was analyzed using inductively coupled plasma optical emission spectrometry (ICP-OES). The synthetic products were characterized through XRD, scanning electron microscopy (SEM), energy-dispersive spectroscopy (EDS), and Fourier-transform infrared spectroscopy (FT-IR). The study found that a high-order crystallinity polymorph P1 was formed under Si/Al ratio of 1.47 within 18 hours of hydrothermal treatment. The content of Na-P1 zeolite significantly increased with the extension of the hydrothermal time from 18 to 36 hours, reaching its peak crystallization at 36 hours with a Si/Al ratio of 1.34. The N<sub>2</sub> adsorption data indicated a mesoporous nature of Na-P1 at its climax, exhibiting a BET surface area and pore size of 41.76 m<sup>2</sup>.g<sup>-1</sup> and 8.2 nm, respectively. Additionally, a polymorph P2 with a Si/Al ratio of approximately 1.81 was spontaneously formed after 6 days of crystallization (interzeolite transformation) from the same supernatant. These findings provide an experimental basis for utilizing the clay fraction  $>2$   $\mu\text{m}$  in the synthesis of P-type zeolites, which could prove valuable for future applications.

**Keywords:** Bentonite fraction  $> 2$   $\mu\text{m}$ ; Hydrothermal; Gismondine; Zeolite Na-P1; Polymorph P2; Interzeolite transformation

### ABSTRACT

This research aims to examine MS Glow's digital marketing in entering global marketing. This research is library research with a qualitative approach. The data sources used in this research come from various literature journal articles that are relevant to the research topic. The data analysis method used is content analysis of the literature sources used in the research. As the MS Glow business does, they don't just market their products online. However, combine it with other marketing techniques offline through a network of resellers spread across various regions. An omnichannel marketing strategy like this makes it possible to reach more customers. Customers can also feel more satisfied with the services provided, and can achieve maximum profits. In this case, MS Glow utilizes various social media for promotional platforms. Starting from Instagram, Twitter, TikTok, and YouTube. This way of promoting business is very effective attract customers. Because, the digital era allows every community to have access to online platforms. In entering the global market, MS GLOW implements very good and structured strategies, so that the products they sell sell well and can be known throughout the world. And also MS GLOW provides facial care for all ages so it is in great demand and its purchasing power has also increased in the market because it can be used by various ages.

**Keywords:** Digital marketing, MS Glow, and literature review.

### ABSTRACT

This research intends to explain about Islamic scientific paradigm. The Islamic perspective on science based on the source of the Qur'an which is believed to be true. Recently there has been a dichotomy between religious science and general science. Religious science talks about the relationship between humans and God and the relationship between humans and humans, while general science talks a lot about the universe. The relationship between religious knowledge and general science is a topic that is still relevant to study. Because there are still many people who think that religious knowledge and general knowledge conflict with each other. In fact, this relationship can be harmonized by changing the paradigm that religious knowledge is not only a matter of humans and their God or humans and each other but for all aspects of human life. The research method uses a type of qualitative research with a library research approach. This study concludes that the Islamic scientific paradigm is a study that is closely related to the point of view in understanding the problems that occur. The emergence of a paradigm is the result of scientific research carried out in depth until finally something new is discovered and a new paradigm emerges regarding that matter.

**Keywords:** paradigm, science, and knowledge.

### ABSTRACT

One of the directions in the search for an effective method of treating such wounds is the development of combined drugs of multifunctional action for external use, containing several active substances in their composition, which have complex therapeutic activity against the main substrates of complex, long-lasting wounds.

The purpose of the research is to develop the composition of a gel with a pharmaceutical composition based on innovative substances - the chitosan complex, which exhibits proteolytic, osmotic, antibacterial and wound-healing effects, to study the relevance and prospects of creating a new drug.

The development of an innovative multi-functional medicinal preparation for external use in the form of a gel containing active substances with complex therapeutic activity in relation to the main pathophysiological processes of a complex long-term unhealed wound, in particular, capable of cleaning the wound surface from purulent-necrotic masses, providing antimicrobial action, to reduce the pain syndrome and, ultimately, to heal the wound in a short time, is an urgent task of modern pharmacy, determined by the needs of practical health care.

Pharmaceutical substances based on chitosan, included in the medicinal product as an active substance, are original in composition. In the available patent and literature sources, no data were found on the preparation.

Thus, it can be concluded that the search and study of application drugs with proteolytic, antibacterial and reparative activity in the modern pharmaceutical science of Ukraine, and taking into account the relevance of the current realities of military operations, is a promising direction of development among scientists and doctors.

**Keywords:** gel base, carbopol, acrilates, chitosan.

### ABSTRACT

Sayyidina Ali : I am the city of knowledge and Ali is the door). Ali bin Abi Talib ra was a friend of Rasulullah SAW who was known to be intelligent, honest and broad-minded. Many histories tell of his skills in mathematics. The findings of Ali bin Abi Talib r.a which have been explained above regarding the prevalence of multiples which are now known as KPK (Least Common Multiples), are useful in the operations of adding and subtracting fractions, by equating the denominators. This inheritance law (faraidh) is also used. Al-Khwarizmi was a Muslim scientist who was very concerned with the development of mathematics. He contributed many ideas in the field of algebra. The full name of this Muslim scientist is Abu Jafar Muhammad bin Musa alKhwarizmi. The writing method uses library research or literature reviews soSSurced from journals and e-books regarding the harmony of science and religion. The results of this study conclude that the persistence and intelligence of this Muslim scientist also This has directly provided motivation for the West to develop their culture or ancient Roman culture which was later called the Renaissance. So throughout the 12th century and part of the 13th century, Muslim works in various fields were successfully translated into Latin, especially into Spanish.

### ABSTRACT

This research aims to determine the contribution of Islam in the development of science and the growth of science in the past. The writing method uses library research or literature reviews sourced from journals and e-books regarding the harmonization of science and religion. The results of this research state that history has proven that the progress of science in the modern world is an indisputable historical fact, many even argue that science began in the Islamic world which then experienced transmission (spread) and proliferation (development) to the previously Western world. The Western world was hit by the dark ages so that an era of enlightenment emerged in Europe. In the 12th century, Islamic civilization was the highest of all previous years so that many books on science and philosophy written by Muslim experts and philosophers were translated into European languages. At this time, apart from being recorded as the highest achievement ever achieved by Muslims, it was also recorded as The early period of the decline of Muslims, while in the West began to resound with awareness and attention of Western people towards science by translating books by Muslim scholars until finally creating a pattern of changing the direction of knowledge from previously oriented towards Islamic civilization to oriented towards Western civilization which until now now it feels good enough. Islam was also present in the midst of the harsh Jahiliyah civilization in the Arabian Peninsula so that it was able to change the Jahiliyah civilization that existed in the Arabian Peninsula at that time, so from a historical perspective Islam has played a significant role in the development of several aspects of world civilization.

### ABSTRACT

The purpose of writing this article is to describe the Future of Islamic Science. This research is library research with a qualitative approach. The data sources used in this research come from various literature journal articles that are relevant to the research topic. The data analysis method used is content analysis of the literature sources used in the research. Science or knowledge has a very broad meaning in the Islamic tradition. Science includes ratios and also metaphysical dimensions contained in the Koran and Sunnah. To see the future of Islamic science we have to look at the activities of Islamic science in the Muslim world, what Muslims are doing in relation to science. The relationship between Islam and science can be understood from many points of view. Both of these have an influence on humans, including: Islam and Science both provide strength, science gives humans tools and accelerates the rate of progress, Islam sets the goals of human efforts and at the same time directs these efforts. Science brings an outer (material) revolution, Islam brings an inner (spiritual) revolution. Science beautifies the mind and mind, Islam beautifies the soul and feelings. Science protects humans from disease, floods, storms and other natural disasters. Islam protects humans from worry, anxiety and discomfort. Science harmonizes the world with humans and Islam harmonizes with itself. The result of separating the two has brought irreparable losses. Religion must be understood with the development of science, so that religious renewal can occur from the grip of myths. Religion without science ends in stagnation. So if religion without science will only be used as a tool for hypocrites to achieve their goals

### ABSTRACT

The relationship between science and religion which are often considered to be opposites in looking at a problem. The conflict between science and religion began to emerge in the Middle Ages, when church authorities condemned Galileo Galilei in 1633. However, several historical changes show that this was highly optical and alternative views about the relationship between science and religion were widely held throughout the period. centuries. The war of popular science against religion was sharpened by the media because the controversy between scientific materialism and biblical literalism was much more popular with audiences from moderate positions. The theological spectrum can be mapped as follows: naturalism (including materialism), pantheism, liberalism, neoorthodoxy, traditionalism, conservatism, and biblical literalism (or fundamentalism). Barbour places these two extremes in conflict—two views that seem mutually exclusive. However, several studies show that science and religion can complement each other and contribute to each other in understanding the world and life.

**Key words:** science, religion, relationships, conflict, science, philosophy, relationships, methodology.

### ABSTRACT

The complex functions of the intestinal microbiota must be coordinated between different bacterial organisms and the host. By producing a large number of metabolites, the intestinal bacteria contribute to host physiology and homeostasis. This organization is achieved by various chemicals such as signaling molecules or metabolites required for metabolic reactions. Metabolites produced by bacteria are available to host cells and thus affect physiological processes both locally and systemically. They contribute to the metabolic phenotype of the host and thus may influence disease risk. Nutrients of the human organism are essential for bacteria. In turn, bacteria participate in the catabolizing of non-digestible carbohydrates and form short-chain fatty acids, which are essential for a number of physiological processes and also regulate immune responses. Among many microbial metabolites, short-chain fatty acids (butyric, acetic, and propionic acids) are the main metabolites of intestinal bacteria. Their direct function is to lower intestinal pH and increase mucin production, which reduces the growth and adhesion of pathogens, improves epithelial integrity, and enhances host systemic immunity.

**Key words:** short-chain fatty acids, bacteria, metabolites, homeostasis.

### ABSTRACT

Breast cancer remains a significant global health challenge, with early and accurate diagnosis being of paramount importance. This research presents an innovative approach to enhance the quality of breast cancer images through noise detection using deep auto encoders.

Our proposed deep auto encoder model is designed to address the pervasive issue of noise in breast cancer images acquired through various medical imaging modalities. By employing a diverse dataset of breast cancer images, both noisy and clean, we have trained our model to identify and reduce noise while preserving diagnostically relevant information.

The deep auto encoder architecture leverages an encoder-decoder framework, where the encoder learns to extract essential features from noisy breast cancer images, and the decoder reconstructs high-quality, denoised images. A critical aspect of our model is its ability to distinguish between clinically significant structures and image artifacts caused by noise.

Preliminary results demonstrate the effectiveness of our deep auto encoder in noise detection and image enhancement for breast cancer images. The model's capacity to improve image quality while retaining diagnostically relevant features holds great promise for radiologists and healthcare professionals.

By enhancing the interpretability of breast cancer images and reducing the impact of noise, our approach contributes to more accurate diagnoses and, consequently, better patient outcomes. This research underscores the potential of deep auto encoders in revolutionizing breast cancer imaging and diagnosis.

**Keywords:** Breast cancer, image quality enhancement, noise detection, deep auto encoders, medical imaging, diagnostic accuracy.

### ABSTRACT

Micro business development in Mulyorejo village can be done in several ways, such as conducting surveys and observing potential places, improving relationships with other people, using technology, marketing products via social media, and building structured management. However, micro businesses in Mulyorejo village also face several challenges, such as limited access to capital, intense competition, limited sales systems, lack of innovation/motivation, limited digital readiness, and poor administrative and organizational management, such as budget costs in tourism. Mulyorejo mangroves receive little attention and traders who experience losses will lose enthusiasm due to reduced capital and motivation. To overcome this challenge, Mulyorejo village has implemented various programs to support micro, small and medium enterprises (MSMEs). By holding outreach to the community in Mulyorejo village about MSME businesses and providing direction, motivation and tricks on how to trade well and correctly. With adequate support and resources, micro businesses in Mulyorejo village can develop and contribute to the national economy. Micro businesses are productive businesses owned by individuals or individual business entities that meet the criteria for micro, small and medium enterprises (MSMEs). The development of micro businesses among the community is important because it can help improve the economy and empower the community. Micro, small and medium enterprises (MSMEs) are a good forum for job creation which is planned by the government, private sector and individual entrepreneurs. The aim of this research is to determine the growth and correlation of micro, small and medium enterprises which influence economic growth.

### ABSTRACT

The use of gadgets, including smartphones and tablets, has become an integral part of everyday life, including among children. A gadget is a small electronic device that has a variety of special functions. The presence of radiation waves on gadgets emits various impacts that can be harmful to the human organ system. The research method used in this research is literature study. Data collection is obtained from journals, scientific articles that are directly related to the research object. The results of this research show that excessive use of gadgets will result in the emission of blue light affecting brain development. Where this can greatly influence the child's motoric development and brain or cognitive development. Using gadgets too often and excessively can have a negative impact on children's motor and cognitive development. And the positive impact is that it is easier for children to gain new knowledge, such as acquiring new vocabulary and imitating movements and songs. The conclusions of this research are important for parents, educators and society to understand the negative impacts that may arise due to excessive use of gadgets on children. Awareness and appropriate actions are required, such as managing the time of gadget use.

**Key words:** Gadget Use, Cognitive Development, Children, Digital Technology.

## HAZARD ANALYSIS AND CRITICAL CONTROL POINT ANALYSIS: A CASE OF GARI PRODUCTION IN OSARA GARI FACTORY

\*<sup>1</sup>Adeboye, M. M., <sup>1</sup>Sadiku, J. O., and <sup>1</sup>Usman, A. U.

<sup>1</sup>Department of Microbiology, Faculty of Science, Confluence University of Science and Technology,  
Osara, Kogi State, Nigeria

### ABSTRACT

This article is an analysis of the gari production in Osara production factory with little interview in the production process in line with the HACCP guideline. Cassava (*Manihot esculenta*) is a known tuber crop converted to varieties of food in different forms consumed by both poor and rich. Microbial contamination such as high bacteria load and fungi presence especially the threat consequences of mycotoxin from fungal has been known worldwide to be of great health challenge once the mycotoxin exceed the permissible limit in food. The gari process began with peeling, washing, grinding, pressing and fermenting, frying, packaging and storage. Microbial contamination of susceptible commodities does happen due to factor like environmental conditions in the pre-harvest field and improper harvesting, transportation, storage and processing operations. Hazard Analysis Critical Control Point (HACCP) programmes is advocated in managing the risks associated with potential contamination of food products with pathogenic micro-organisms. Specific processing and physical method of eliminating damaged, microbial infected cassava play a role in getting rid of microbes in the final product as Gari. Conclusively, there is need to implement and maintain the HACCP principle for safe food consumption as it surround the three quadrant of manufacturing practices, good quality and food safety..

**Keywords:** *Manihot esculanta*, Gari, HACCP, Bacteria, and Fungal Mycotoxin

*<sup>2</sup>Electrical Engineering Laboratory, University Mohamed Boudiaf of M'sila, Algeria*

### ABSTRACT

In the realm of microgrid (MG) inverters, the intricate challenge lies in orchestrating a seamless transition from the conventional grid-connected (GC) mode to the autonomous stand-alone (SA) operation mode. This transition requires a delicate balance to maintain the inverter's frequency and voltage parameters within specified tolerances, especially in islanded grid configurations. A precise and adaptive frequency and voltage droop control mechanism are crucial to address this challenge. The proposed control methodology consists of two essential components, finely tuned for a smooth GC to SA transition. First, a fixed voltage reference generation algorithm, inspired by the well-established droop technique, ensures compatibility with all operational modes, enabling seamless shifts between grid-connected and stand-alone operation. Second, an innovative modified voltage-current controller incorporates a Luenberger observer for real-time voltage reference estimations during SA mode, crucial for maintaining stability. A comprehensive evaluation, focusing on current measurement at the point of common coupling (PCC), assesses system feasibility and effectiveness across various scenarios. The study unequivocally validates the efficiency and robustness of the proposed control strategy across microgrid inverter operations, bolstering the reliability and resilience of microgrid systems.

**Key words:** Microgrid; Droop controller; Grid-connected; Stand-alone; Observer.

### ABSTRACT

This brief paper provides a comprehensive summary of the application of direct torque control (DTC) in the context of a brushless DC (BLDC) three-phase motor. The Direct Torque Control (DTC) technique is a sophisticated control approach that facilitates accurate regulation of torque and flux in brushless direct current (BLDC) motors, eliminating the necessity for a rotor position sensor. This study examines the fundamentals of direct torque control (DTC) and emphasises its benefits in relation to rapid dynamic response, little torque ripple, and effective operational performance. The primary objective is to examine the utilisation of direct torque control (DTC) as a means to enhance motor performance and energy economy, rendering it a viable option for a wide range of industrial and automotive uses.

The observer method was employed initially to determine the buck-EMF value, which subsequently allowed for the calculation of torque. Additionally, the flux value was determined by considering the current and tension values. Subsequently, the effectiveness of direct torque control (DTC) was demonstrated across a range of speeds, including both high and low speeds. The system is simulated using Simulink in MATLAB.

In order to assess potential disparities in performance, we conducted tests employing both a proportional-integral-Derivative (PID) controller and a sliding mode control (SMC) controller. The SMC controller has demonstrated its efficacy and superiority in terms of stability, particularly in response to variations in the reference speed. This is evident from the simulation results obtained.

**ABSTRACT**

Product design provides a critical competitive advantage to companies by differentiating their products in the marketplace, communicating their value, and increasing their functionality (Bloch, 1995). Therefore, studies that measure consumers' responses to product design have increased in the design, marketing, and ergonomics fields. Accordingly, measuring design has come into prominence in recent years. Several product design scales were introduced to the literature (e.g., Homburg et al., 2015; Moon et al., 2015; Gilal et al., 2018; El Amri and Akrouf; 2020; Sample et al., 2023). However, although these scales are intended to measure different characteristics of product design (e.g., newness, innovativeness, communication), the content of these scales have some similarities and overlaps (Sample et al., 2023). In this study, we aim (1) to compare the dimensions and items of each scale (2) to purify the scales based on item-level comparisons and expert opinions, and (3) to develop a Turkish version of the product design scale. We followed the procedures and standards suggested by Hinken (1995; 1998), and Nunnally and Bernstein (1994) to develop and adapt a purified version of the product design scale. First, we pooled all the items used in previous scales. Then, a team that consisted of three marketing experts and an industrial design expert evaluated the overlaps between items and dimensions. The same experts also assessed the adaptability of the items to the Turkish context. Finally, iterative translation (Douglas and Craig, 2007) and back-translation approaches were applied to translate all the items in the pool. A professional translator helped with the back-translation process and independently evaluated the accuracy of translated items. According to our comparison, the new product design scale of Homburg et al. (2015); the innovative product design scale of Moon et al. (2015), and the four-factor scale of Gilal et al., (2018) had quite similarities in terms of dimensionality and expressions. On the other hand, After the elimination of overlapping items, the final item pool consists of 32 items that manifest 4 product design dimensions, which are functionality, aesthetics, ergonomomy, and symbolism.

## A REVIEW OF THE PROTECTIVE PROPERTIES OF MEDICINAL PLANTS AGAINST DIABETES-RELATED HEART DISEASE

*Omar BENAMARI<sup>1\*</sup>, Hassan AMHAMDI<sup>1</sup>*

<sup>1</sup> *Research Unit in Applied Chemistry, Faculty of Sciences and Techniques, Abdelmalek Essaadi University, Al-Hoceima 32003, Morocco*

### ABSTRACT

Since the beginning of time, humans have used many medicinal plants as a popular medicine to cure many human and livestock health problems, such as diabetes and cardiovascular disorders. In the Rif region of northern Morocco, as in all rural areas of the world, these plants have always held an important place in traditional medicine due to the low socio-economic situation in these areas, where people prefer to rely on traditional medicine rather than modern medicine.

Diabetes-related heart disease is a significant health burden with increasing prevalence. It remains the most common cause of morbidity and mortality worldwide.

This work aims to describe the mechanisms of action of some medicinal herbs that have been shown to have cardioprotective effects in diabetes.

Literature searching was performed using Google Scholar, PubMed, ScienceDirect, and Scopus. The keywords used for the search include: folk medicine, herbal medicine, diabetic problems, heart disorders, and cardiovascular diseases. After screening through the 14 English articles from 2010 to date, a total of seven medicinal plants have been reported to be used as traditional herbal medicines that would reduce risk factors associated with diabetes and cardiovascular diseases.

**Keywords:** Medicinal plants, Traditional medicine, Diabetes, Cardioprotective, Cardiovascular.

## IMPROVING THE EFFICIENCY OF PHOTOVOLTAIC PANEL-BASED ENERGY PRODUCTION SYSTEMS

*Samira Boumous\*, Zouhir Boumous*

*Electrical engineering Department, LEER Laboratory, Souk Ahras, university, Algeria*

### ABSTRACT

Improving the efficiency of photovoltaic (PV) panel-based energy production systems is crucial for advancing renewable energy adoption and reducing our reliance on fossil fuels. Higher efficiency means that PV systems can convert more sunlight into electricity, resulting in greater energy output for the same amount of sunlight. In present research several strategies and technologies to enhance the efficiency of PV systems. High-efficiency solar panels, tracking systems, optimal panel orientation and Tilt, cleanliness and maintenance, improved materials and coatings, inverter efficiency, MPPT (Maximum Power Point Tracking), energy storage, smart Grid Integration and cooling Systems, advanced tracking algorithms, hybrid systems, local conditions monitoring, energy-efficient appliances and government incentives. the choice of efficiency-enhancing measures will depend on factors like budget, location, and specific energy needs. A combination of these strategies can help maximize the efficiency of photovoltaic panel-based energy production systems and make them more competitive with conventional energy sources. Simulations play a crucial role in optimizing the efficiency of photovoltaic (PV) systems, there are a most simulation methods and tools to enhance the efficiency of PV system, system modeling software: Utilize specialized PV system modeling software like PVsyst, SAM (System Advisor Model), or HOMER to simulate and optimize the performance of your PV system. These tools consider various factors such as panel specifications, weather data, shading, and electrical components to provide accurate predictions, weather data sources: Use high-quality local weather data or historical weather databases to input realistic meteorological conditions into your simulations. Accurate weather data ensures more precise results and shading analysis: Incorporate shading analysis tools like Solmetric SunEye or PVSyst's shading calculator to identify and mitigate shading issues that can impact PV panel efficiency. In present paper, a simulation of micro grid based on photovoltaic panel ys presented, and the results are discuted.

## BRAZILIAN WORKFORCE: BLACK WOMEN CHALLENGES

*Panche Motta Ribeiro*

*Candido Mendes University, Rio de Janeiro, Brazil*

### ABSTRACT

This paper aims to investigate the causes and economical impacts of non-completion of English Language courses by Brazilian black women. The relation between structural racism and inequality (Gonçalves, 2018) in the country, as well as the studies on social mobility through education (IBGE, 2013) are concerns of recent academic debate that this paper tries to resume. Based on studies in inequalities (Almeida, 2019) and the social question discussion in Brazil (Moura, 1988), considering that the formation of the Brazilian society took place on the basis of a slavery system, where policies to deny black citizens access to the Welfare State, we argue that white and black women have different opportunities to participate in the wealth distribution. In order to develop our ideas, we will analyse the employment vacancies published by companies that have the proficiency in English as a requirement. Also, based on the intersectionality of the analyses where women of colour stand, we shall analyse narratives to acquire the factors which cause black women to dropout the English courses, and study what could be done in order to stimulate their course completion. By these means, it is expected to conclude that among black women, when compared to other sectors of society, we find lower income and underemployment placement due to the lack of access to education, specially the non-completion in the English language courses, making them lower in the competitive labour market and, therefore, maintaining their position of reserve of the reserve army.

**Key words:** workforce, social issue, black women

### ABSTRACT

Piperazine and acetanilide moieties are emerging as primary scaffolds to enhance the drug-like properties of the molecules in the rational drug design process. Due to this innate quality, since long they have been used in the development of various classes of pharmacologically active compounds. Piperazine is a dinitrogen-containing heterocycle that spans many applications, including anticancer, anticonvulsant, antidepressant, antimicrobial, antimalarial, antiviral, antitubercular, anti-inflammatory, activities. In a similar fashion, the second moiety, i.e., acetanilide, an N-phenylacetamide, also executed a large number of bioactivities, which included anticancer, antileishmanial, antipyretic, analgesic, antidiabetic, antiviral potential, etc. These moieties show a plethora of biological applications, e.g., anti-COVID, anticancer, antidiabetic, antibacterial, antifungal, antipsychotic, antidepressant, analgesics, anti-inflammatory, antitubercular, antiarrhythmic, etc. Various synthetic methods have been developed for the synthesis of piperazine-based acetanilide and its derivatives. In this review, we have addressed different synthetic strategies that have been reported in the past.

**MONETARY AND FISCAL POLICIES' EFFECTS ON AGGREGATE DEMAND IN  
NIGERIA: A SIMULATION APPROACH**

*Yunana, Titus Wuyah, PhD*

*Department of Economic, Faculty of Social and Management Sciences, Nigeria Police Academy,  
Wudil-Kano*

**ABSTRACT**

The study examined monetary and fiscal policies' effects on aggregate demand in Nigeria using time series annual data from 1986-2017. The study used secondary data obtained from the Central Bank of Nigerian (CBN) Annual Statistical Bulletin, National Bureau of Statistics (NBS), and World Bank Financial Report. The study constructs simple structural macroeconomic models made up of three blocks: consumption, investment, and export-import sector that contain 21 variables. The variables are linked to one another through 8 behavioural equations and 4 identities. The models were estimated and analyzed using Two Stage Least Square methods and a simulation experiment was also conducted on the simple structural macroeconomics models. The study finds that broad money supply, interest rate, government expenditure, taxation and public debt have significant influence on aggregated demand in Nigeria during the period under investigation. The baseline simulation demonstrates good tracking power of the actual from the baseline simulation as the nature of the oscillation suggested. The study, therefore, recommends that the government should encourage expansionary monetary and fiscal policies by lowering interest rate in order to encourage investors to borrow for investment, increase money supply in the economy, increase government expenditure channeled to infrastructure and other productive sectors of the economy such as agriculture and manufacturing; reduction in both direct and indirect taxes as it improve the purchasing power of the people which stimulate aggregate demand and growth. The government should encourage proper interaction between monetary and fiscal authorities for effective implementation through committee that will comprise of both members.

## THE EFFECTS OF AQUEOUS SHOOT EXTRACT OF *Chromolaena odorata* ON THE GROWTH PARAMETERS AND YIELD OF *Abelmoschus esculentus* (OKRO) SEEDLINGS

*Dare Abel Adesokan*

*Department Of Botany, Faculty Of Science, Obafemi Awolowo University, Ile-Ife, Osun State, Nigeria.*

### ABSTRACT

*Chromolaena odorata* King and Rob (Syn. *Eupatorium odoratum* Linn.) is a known toxic weed that is widespread over many parts of the world including Nigeria. *Chromolaena odorata* is considered an invasive weed of field crops in its introduced range. The invasive nature had been attributed to the presence of various allelochemicals in the plant, in various proportions. In this study, the effect of aqueous extract from shoot of *Chromolaena odorata* was investigated on the germination, growth and yield of Okro (*Abelmoschus esculentus*) — the only vegetable crop of significance in the Malvaceae family. Seeds of *A. esculentus* were planted in buckets and the effect of the application of aqueous shoot extract of *C. odorata* was observed over various densities of *A. esculentus*. Growth and yield parameters of the *A. esculentus* seedlings were observed and recorded over the two months. Results indicated that the aqueous shoot extract of *C. odorata* had a significant reduction ( $P < 0.05$ ) on the growth parameters like leaf areas, leaf numbers and shoot heights. Significant reduction ( $P < 0.05$ ) was observed in yield parameters like dry shoots weight, dry leaves weight and dry roots weight. Effect was also more pronounced among *A. esculentus* plants present in higher densities than in lower densities. Overall, results suggest that allelochemicals from the aqueous shoot extract of *C. odorata* inhibits the growth of *A. esculentus* in all the densities observed. Degree of inhibition however varies with densities; higher degree was observed in higher densities and lower degree for lower densities.

**Keywords:** Weed, *Chromolaena odorata*, Okro, Allelochemicals

Chennai -600 073, India*

## ABSTRACT

The use of digital tools for the delivery of medical treatment is one of the areas of improving health. The use of digital medicines and care products is designed to decrease risks and uncertainties while accelerating information interchange within the system of medical care quality control. By giving a clinician access to fast, accurate information support and boosting patient adherence to treatment, digital pills with ingestible sensors are an efficient instrument for arranging the delivery of high-quality medical care. With the aid of the software on gadgets like tablets and smartphones, digital pills with built-in sensors can monitor the success of pharmacotherapy. Such monitoring is crucial since low patient compliance (medication opt-out) is a substantial hurdle for all areas of medicine. This review will provide comprehensive information on digital pills.

## IMPACT OF FLOOD IN UJJAIN, MADHYA PRADESH, INDIA DURING SEPT 2023 AND ITS CONSEQUENCES IN THE MINDFULNESS OF THE LOCAL COMMUNITY OF UJJAIN

*Dr. Satish Menon*

*Alliance University, India*

*Dr. Senbagavalli M*

*Alliance University, India*

### ABSTRACT

Effect of Flood in Ujjain during Sept 2023 and its consequences in the Mindfulness of the local community of Ujjain.

Mindfulness is the practice of being aware of your body, mind, and feelings in the present moment, thought to create a feeling of calm.

This study aimed at bringing the situation of flood in Sept 2023 in Ujjain and to show how people practiced mindfulness in uncertain conditions caused by mother nature.

The study focused first on the real-life scenario of the flood situation in Sept 2023 where it concentrated on the devastation caused by the flood to the life of human beings and the properties and other assets of the public.

It also emphasizes the help given by the local community of Ujjain to the public and how the public has sustained themselves for a couple of days without power and other necessary infrastructure.

The next part focused on how the emergency services were responding to the calls from several people and how they were trying to answer and keep the public calm for all the messages and calls for flood-related issues. It also focuses on the ambulatory services, Police services for their swift action.

The last part focused on mindset and the mindfulness people practiced resulting in becoming calmer and more composed by the people of Ujjain.

## ECONOMIC AND ENVIRONMENTAL FEASIBILITY OF LANDFILL GAS TO ENERGY PROJECT IN OUM AZZA LANDFILL, MOROCCO

*Roukaya Bouyakhssas<sup>1\*</sup>, Salah Souabi<sup>1</sup>, Soukaina Bouaouda<sup>1</sup>, Abdeslam Taleb<sup>1</sup>, Tonni Agustiono Kurniawan<sup>2</sup>, Xue Liang<sup>3</sup>, Hui Hwang Goh<sup>3</sup>, Abdelkader Anouzla<sup>1</sup>*

<sup>1</sup> *Laboratory of Process Engineering and Environment, Faculty of Science and Technology, Hassan II University, Mohammedia, Morocco.*

<sup>2</sup> *College of Ecology and the Environment, Xiamen University, Xiamen 361102, Fujian, China*

<sup>3</sup> *School of Electrical Engineering, Guangxi University, Nanning 530004, Guangxi, PR China*

### ABSTRACT

In the context of waste management, an increasingly prevalent approach involves harnessing the potential of biogas production resulting from the burial of waste in public landfills. As organic waste decomposes under anaerobic conditions in these landfill sites, it generates a mixture of gases, primarily methane and carbon dioxide, collectively known as biogas. This biogas, a valuable energy resource, holds the potential to not only alleviate the strain of waste accumulation but also offer a sustainable alternative to conventional fossil fuels.

The landfill gas-to-energy project in Oum Azza Landfill showcases robust economic potential. With a positive net present value, the initiative carries a Total Life Cycle Cost of 59.04 million USD, based on a Levelized Cost of Energy of 0.05 USD/kWh, yielding an estimated payback period of 11.45 years. The project's most significant impact, however, lies in its environmental contributions.

By harnessing landfill gas for energy production, the project is poised to slash global methane emissions by an impressive 79.1% compared to a scenario where the landfill operates without biogas recovery. This substantial reduction in greenhouse gas emissions underscores its vital role in addressing climate change concerns.

The outcomes of this preliminary analysis hold noteworthy implications for potential investors and governmental bodies. The study's insights serve as a valuable roadmap for effectively introducing this pioneering technology across Morocco. Furthermore, the project aligns with the nation's strategies for climate change adaptation.

### ABSTRACT

*Syzygium polyanthum*, commonly known as "daun salam" or Indonesian bay leaf, has been traditionally used for culinary and medicinal purposes. This research seeks to explore the therapeutic potential of *S. polyanthum* as an anti-inflammatory and antidiabetic agent, shedding light on its ability to mitigate inflammation and manage diabetes mellitus, which is in the 3<sup>rd</sup> position among non-communicable diseases in the world. causing est. 6.7 million deaths in 2021. Utilizing in silico techniques with PyRx and AutoDock Vina, the anti-inflammatory activity of *S. polyanthum* was evaluated based on its 27 ligands fetched from NCBI. The results demonstrated significant inhibition of pro-inflammatory mediators, suggesting its potential as an anti-inflammatory agent. Moreover, this study assessed the ability of *S. polyanthum* compounds to regulate obesity and diabetes as well as improve insulin sensitivity, reduce dyslipidemia, and reverse central obesity. Beta-sitosterol in *S. polyanthum* seems to be the compound that gives the best results to each receptor, for both as an anti-inflammatory and an antidiabetic agent. These findings present compelling evidence for the potential therapeutic promise of *S. polyanthum* as a natural remedy for inflammation and diabetes management. In conclusion, the multifaceted therapeutic properties of *S. polyanthum* makes it a promising candidate for future drug development efforts and offers opportunities to harness the benefits of traditional herbal medicine in modern healthcare approaches focused on inflammation and diabetes management.

## DISCOVERING THE FRAMES OF BLOCKCHAIN IN THE PUBLIC DISCOURSE ON TWITTER: A MACHINE LEARNING APPROACH

*Xiaoqun Zhang, Ph.D.*

*Associate Professor  
Department of Media Arts*

*University of North Texas*

*Suruthi Selvam*

*Graduate Student*

*Department of Information Science*

*University of North Texas*

### ABSTRACT

Blockchain is a disruptive innovation that has been diffused rapidly in various industries. This research project aims at identifying the major frames in the public discourse on Twitter and exploring the connections among these frames and the major factors in diffusion of innovation theory (DOI) and technology acceptance model (TAM). A state-of-the-art machine learning approach is applied in identifying the frames. The findings reveal the links between media framing theory and DOI/TAM and suggest the potential of theoretical advance in media effect research.

### Introduction

Blockchain is a decentralized and distributed digital ledger that is used to record and store data in a secure and transparent manner. It is a technology that enables a network of computers to maintain a continuously growing list of records, called blocks, that are linked and secured using cryptography. Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data. Once a block is added to the blockchain, it cannot be altered or deleted without affecting the entire chain, making it tamper-proof and providing a high level of security.

Blockchain technology has been rapidly applied in various fields such as telecommunication, finance, supply chain management, and healthcare. In telecommunication industry, the major telecom companies in many countries have adopted blockchain technology. For example, AT&T, the largest telecom company in the United States, has adopted blockchain technology for supply chain management and to enhance its identity management and verification processes. Telefonica, a major Spanish telecom company, has adopted blockchain technology to offer secure and transparent transactions to its customers. Vodafone, a major England based telecom company has partnered with blockchain startups to explore the potential of blockchain in areas such as identity management, supply chain management, and digital identity.

As a disruptive technology that may transform many industries, blockchain has attracted the attention of researchers. They conducted research to explore the driving forces for their rapid adoptions and diffusions (e.g., Agi & Jha, 2022; Grover et al., 2019; Helliari et al., 2020; Liu & Ye, 2021; Perdana et al., 2021). Two well-established theoretical frameworks —diffusion of innovations theory (DOI) and technology acceptance model (TAM) — have been applied in their investigations of how blockchain has been adopted by various people in different industries.

On the other hand, blockchain has quickly gained the popularity on public discourse (Perdana et al., 2021). Many people discussed it on various traditional and social media platforms. According to the propositions of media effects theories, such as media framing theory, the frames in media affect people's perceptions of and attitudes toward entities/issues (e.g., Entman, 1993). Media framing theory has been widely applied in the areas of political communication, health communication, and public opinion

research, but rarely applied in the adoption and diffusion of innovations. The purpose of this study is to find the connections between the major frames in the public discourse and the factors in DOI and TAM, and the theoretical implications of these connections for DOI, TAM, and media framing theory.

### Literature Review

#### Diffusion of Innovations Theory (DOI)

DOI defines the rate of innovation adoption as the relative speed with which an innovation is adopted by members of a social system, and it is usually measured by the members of a system who adopt an innovation in a given time period (Rogers, 1962). This theory presumes that if the cumulative number of adopters is plotted over time, an s-shaped curve will be obtained. This s-shape curve portrays the trajectory of the innovation diffusion process. Rogers (2003) noted that “there is a variation in the slope of the “s” from innovation to innovation” (p. 23). Some slopes of the s-shape curves are steep while others are flat. The s-shape curves of the same innovation also exhibit different patterns in different social systems.

DOI also provides a classical framework that consists of five major characteristics of innovations: relative advantage, compatibility, complexity, trialability, and observability. Rogers (2003) also stated that other factors — such as communication channels and the characteristics of social system — also influence the adoption rate. Barnett (2011) incorporated these characteristics into the coefficients of the mathematical models that reflect the complexity of the diffusion of innovations.

#### Technology Acceptance Model (TAM)

TAM posits that two instrumental attributes — the perceived ease of use (PEOU) and the perceived usefulness (PU) — influence people’s intentions to adopt innovations (Davis, 1989; Davis et al., 1989). PEOU refers to the amount of effort required to use the innovations. PU refers to the subjective evaluation of the utilities of the innovations. TAM approach focuses on the psychological aspects and emphasizes the influence of various attitudes and intentions on the technology adoptions.

The original TAM applies an individualistic perspective and neglects the impacts of social systems. To overcome this shortcoming, several scholars extended the original TAM model and incorporated social factors into it. For instance, Venkatesh et al. (2003) proposed the Unified Theory of Acceptance and Use of Technology theory (UTAUT). According to this theory, an individual’s intention and adoption of innovations are influenced by four factors: effort expectancy, performance expectancy, social influence and facilitating conditions.

#### The Application of DOI and TAM in the diffusion and adoption of blockchain

There are a number of studies that used DOI to conduct empirical research on the diffusion of blockchain in various contexts. For example, Grover et al. (2019) applied DOI to explore the blockchain technology diffusion in different industries through a combination of academic literature and Twitter. Helliar et al. (2020) explored the barriers and drivers of the diffusion associated with two types of different blockchain technologies — permissionless and permissioned blockchains — based on DOI framework. Other researchers developed theoretical frameworks based on DOI to facilitate the empirical research on the diffusion of blockchain. Agi and Jha (2022), For example, developed a comprehensive framework based on DOI and other theories for blockchain adoption in the supply chain by identifying the enablers and their impacts on adoption.

TAM is another major theoretical framework that has been applied in the study of the adoption of blockchain. For example, Liu and Ye (2021) explored the driving forces such as trust and information quality of the blockchain adoption based on TAM. The modified TAM models, such as UTAUT model, have been also applied in the research. Queiroz et al. (2021), for example, applied UTAUT model to investigate the adoption behavior and possible barriers of blockchain. Likewise, Jain et al. (2022) identified and analyzed the antecedents to blockchain-enabled e-commerce platform adoption in secondhand apparel retailing market using UTAUT model.

Several researchers used both DOI and TAM in their research on the diffusion and adoption of blockchain. For example, Ullah et al. (2021) developed an expanded model by integrating the DOI and TAM and explored the key factors affecting the intentions of educational institutions to use blockchain

technology for e-learning. Perdana et al. (2021) investigated the media's coverage on blockchain technology and how media coverage affected the adoption of it based on DOI and TAM.

### Media framing theory

Communication scholars have developed multiple theoretical frameworks to investigate the influence of media content on people's perceptions and attitudes. Media framing theory is one of the well-established media effects frameworks that have been tested and applied in various circumstances. This theory basically posits media outlets actively construct frames through the use of language, images, and other visual cues. These frames then shape the way in which the people interpret the story and its meaning (Reese, Gandy, & Grant, 2001).

Although media framing theory has been widely used in political communication, health communication, and public opinion research, it has seldomly been applied in the study of the diffusion and adoption of innovative technologies. Rogers (2003) argued that communication channel is one of the factors that influence the diffusion of innovations. Nevertheless, there is no strong connection between DOI/TAM and media framing theory in the literature. To fill this gap in the literature, this study identifies the attributes and frames in the public discourse of blockchain in social media, and investigates the possible connections between the DOI/TAM and media framing theory.

Based on the literature review, the following research questions are proposed:

*RQ1: What frames people used to discuss blockchain in the public discourse of social media?*

*RQ2: Which frames people discussed more positively or negatively in the public discourse of social media?*

*RQ3: What are the connections between these frames and the major variables in DOI and TAM?*

*RQ4: What are the implications of these connections to DOI, TAM, and media framing theory?*

### Research Methods and Progress

Twitter was selected as the representative of social media because Twitter has increased its dominance in public discourse (Jones-Jang et al., 2020). The authors collected Twitter data using Twitter's Application Programming Interface (API), which enables researchers to access Twitter data in unique ways. We applied full-archive endpoint app with an academic research project account. Using this endpoint, the authors extracted 2000 tweets regarding blockchain each day on Twitter.

The authors used a state-of-the-art machine learning approach — the Bidirectional Encoder Representations from Transformers (BERT) model — to analyze Twitter data. BERT was proposed by Devlin et al. (2019) as the architecture to conduct natural language processing (NLP) tasks. The authors used BERT-based models to extract attributes and frames regarding blockchain and conduct sentiment analysis on these attributes/frames. To extract attributes and frames, the authors used a topic model proposed by Grootendorst (2020). This model is based on a novel algorithm for generating topics using state-of-the-art embeddings. Moreover, this model uses multiple pre-trained models/packages. For the embedding package, this model uses sentence-transformers package which typically works well for document-level embeddings. To classify the documents, this model uses several other packages a class-based variant of TF-IDF (c-TF-IDF), which is the proxy of information density and defined by the following equation:

$$c\text{-TF-IDF}_i = \frac{t_i}{w_i} \times \log \frac{m}{\sum_j^n t_j}$$

Where the frequency of each word  $t$  is extracted for each class  $i$ ,  $w$  is the total number of words,  $m$  is the number of documents,  $n$  is number of classes.

To create a topic representation, a number of top words are selected per topic based on their c-TF-IDF scores. The higher the score a word has, the more representative it should be of its topic. Usually, a large number of topics can be obtained from a large number of documents. To reduce the number of topics, this model compares the c-TF-IDF vectors among topics, merges the most similar ones, and then recalculates the c-TF-IDF vectors to update the representation of the topics.

October 13-14, 2023

The authors have already downloaded the data of the first three months of 2023, and conducted preliminary analysis. The remaining work will be downloading more data to the date of June 2023, and conduct machine learning analysis on these data. The full paper will be completed by the end of July 2023.

## BORIS FROM KYIV, USURPER IN THE MEDIEVAL HUNGARIAN KINGDOM

*Sándor FÖLDVÁRI*

*Debrecen University, Faculty of Humanities, Baltic Studies Courses,  
Debrecen - Hungary*

*ORCID ID: 0000-0002-7825-0531*

### ABSTRACT

There was a single usurper in the history of the Hungarian Kingdom. Boris, the pretender to the throne, whose action highlights the complex ties between the Byzantine and Western authorities in the history of Central Europe. Dynastic ties of Hungarian Kings in the Middle Ages with the Eastern Slavic princes were frequent, and the Hungarian king Coloman “The Learned” (1070-1095-1116) married Euphemia of Kyiv, who was the daughter of Grand Duke Vladimir II of Kyiv and the second wife of the Hungarian King. The marriage did not turn out to be a happy one. Euphemia got into a sexual with a soldier of the king. That man was beheaded, albeit the lady was sent back to Kyiv. She was pregnant, and she gave birth to a son later at home, in the principality of Kiev. Although probably that son (named “Boris”) was from the young soldier, by no means from the sick elderly king, Boris was brought up as a real son of the Hungarian king. Then, when other kings came to the throne in the Hungarian Kingdom, Boris appeared and demanded the throne of Hungary for himself. He asked for the help of the Byzantine Emperor in Constantinople, where the Orthodox “prince” was gladly received. He was supported by Byzantine troops, too. Of course, no one was interested in the question of Boris's lawless origin, as long as he could act supported by the Kiev and even more so by the Byzantine states. Neither the Eastern Slavs nor the Byzantines looked at the natural fact that Boris was the son of a soldier with whom his mother, the queen, slept because King Coloman himself knew well that he did not beget a son to that wife. Contrary to the Byzantine warriors, when Boris as an adult pretender to the throne appeared in the Hungarian Kingdom, the new generation of Hungarians did not want to accept the illegitimate son of the former king, since no one in Hungary wanted political ties with either Byzantium or the Eastern Slavs, while the Germans intervened in the Hungarian throne conflicts — the Byzantine wars under the Orthodox Slavic illegal pretender were not needed. — The report gives a brief overview of the political relations between the authorities of Eastern and Southern Europe of the XVII century and the competition between the Roman Catholic and Orthodox-Byzantine authorities for Central Europe.

## DEVELOPMENT AND USE OF NONVERBAL COMMUNICATION IN CHILDREN WITH AUTISM SPECTRUM DISORDERS (ASD) AND THEIR PARENTS

*Violeta Glogova<sup>1</sup>*

*New Bulgarian Univesrity, Sofia, Bulgaria*

### ABSTRACT

The purpose of this publication is based on a literature review to highlight the main aspects of nonverbal communication and its application to create a stronger lasting "parent-child" relationship and in the education of children with ASD. The main approaches to teaching children with ASD are reviewed- learning through games, videomovies, through their peers with typical behavior, through art. In all these, albeit diverse, approaches to learning, several common and important features stand out: 1. Reciprocity in activities - the child with ASD must feel the care and special attention and attitude towards him; 2. Encouragement to creativity, stimulation and integration of personal skills; 3. Absence of stress factors and the therapist's desire to build an environment and relationships with an atmosphere of calm and safety. 4. Nonverbal communication is the basis of each of the learning approaches. 5. The listed approaches can be applied in an integrated manner.

**Key words:** autism, disorders, nonverbal communication, children, parents, therapy

**ABSTRACT**

Coccidian protozoa of the genus *Eimeria* are common in sheep around the world. *Coccidia* have a very complicated life cycle, with many stages of development. The egg-like structure of *coccidia* is called an oocyte. It is passed in the feces of infected sheep and goats. When first passed, the oocyst is not infective. It must undergo a period of development called sporulation (hatching). Sporulation requires oxygen and moisture. When a sheep ingests a sporulated oocyst, sporozoites are released and enter the cells lining the small intestines. Lambs between the ages of 1 and 6 months are most commonly affected by *coccidia*. During our examination, 4 to 8 week old lambs were the most likely to be affected and 4 week old lambs were the most vulnerable to clinical disease. Many disease outbreaks occur shortly after weaning, as this is a very stressful period in the lamb young life. Typical signs include diarrhea, dysentery, dehydration and loss of appetite and body condition. Sheep can usually tolerate small burdens of *coccidia*, but if parasite numbers become large, for example as a result of an environment heavily contaminated with viable infective oocysts, or other stressors affecting the sheep, disease can result. During our examination performed in period 2017-2019 in sheep herds in south part of Serbia *coccidiosis* were occurred at 37.92%. We usually occurred mixed infection with 3-4 *coccidia* species. At sheep most abundant species were *E. ovina* found at 76.7%, followed by *E. ovinoidalis* (63%), *E. faurei* (42%), *E. ahsata* (37%), *E. granulosa* (28%), *E. intricata* (15%), and *E. pallida* (3%). Oocyst were found at adult and young animals, but clinical sign of disease were present only at young animals. The number of excreted oocysts was higher in lambs (26625±23993 OPG) than in adult sheep (19974±11353 OPG).

**ADSORPTION STUDY OF RHODAMINE B ONTO GROUNDNUT SHELL ADSORBENT**

*James Akoji*

*B.Sc. Industrial Chemistry, Bayero University Kano, Kano State Nigeria*

**ABSTRACT**

The potential of groundnut shell, for the removal of Rhodamine B dye from aqueous solution was studied. The adsorbent was ground, wash with distilled water, dried at room temperature sieved to obtained particle size the result adsorbent was stored in an air tight for future use. Adsorption studied were conducted and various parameters such as contact time, adsorbent dosage, initial dye concentration, adsorption isotherm and kinetics were studied to observe their effects in the dye adsorption process. The optimum condition for the adsorption of Rhodamine B onto the adsorbent was found to be at 47 mins. The experimental equilibrium adsorption data was best and well fitted to the Langmuir isotherm model for the dye adsorption. The maximum adsorption capacity was found to be 94.348mg/g for the adsorption of Rhodamine B. dye. The optimum adsorption of RB dye was found at pH 10. The kinetic data obeyed to the pseudosecond-order kinetic model.

## REVOLUTIONIZING HEALTHCARE: UNVEILING THE PROS AND CONS OF TELEMEDICINE IN THE DIGITAL ERA

*Jenifer Alat Stephen<sup>1</sup>*

<sup>1</sup>2-year Student of the Faculty of General Medicine, Tashkent Medical Academy, Tashkent, Uzbekistan.

<sup>1</sup>ORCID ID: <https://orcid.org/0009-0000-6585-542X>

*Mirkhamidova Sevara Mirmakhmudovna<sup>2</sup>*

<sup>2</sup>Assitant of the Department of Public Health and Management, Tashkent Medical Academy, Tashkent, Uzbekistan.

### ABSTRACT

In recent years, telemedicine—the use of technology to deliver medical treatment remotely—has attracted a lot of interest. This abstract thoroughly analyzes the merits and drawbacks of telemedicine in the healthcare industry, showing its potential advantages and difficulties. Telemedicine has several benefits. First, it expands accessibility to healthcare by removing geographical boundaries and enhancing convenience, especially for people living in rural or underserved areas. Patients may speak with doctors, get diagnoses, and even get treatment in the convenience of their own homes. Second, by doing away with in-person appointments, travel fees, and hospital stays, telemedicine lowers healthcare costs. Additionally, it reduces production losses brought on by travel time and clinic wait times. Furthermore, telemedicine provides a platform for remote patient monitoring, making it possible to observe vital signs and the development of diseases in real-time, resulting in early intervention and better health outcomes. In addition, telemedicine enables effective teamwork and communication among medical specialists, facilitating on-time consultations and decreasing referral wait times. Telemedicine does, however, come with certain difficulties. One major worry is the possible absence of a physical examination, which might make it difficult to correctly diagnose some disorders that need a hands-on approach. Aside from these factors, telemedicine services' dependability and quality may also be impacted by concerns over patient privacy, data security, and the possibility of technological difficulties or connectivity issues. Also, not all medical illnesses may be treated by telemedicine since complicated situations sometimes require in-person exams, treatments, or operations. The digital gap, which includes differences in access to technology and digital skills, may also make it difficult for underprivileged communities to use telemedicine fairly. In conclusion, telemedicine has several benefits for the provision of healthcare, including increased accessibility, cost-effectiveness, remote patient monitoring, and greater teamwork. However, it is important to take into account equitable issues, technical difficulties, privacy issues, and constraints on physical examinations. To maintain the best patient outcomes and equitable access to healthcare for everyone, it is crucial to find a balance between in-person treatment and remote services as telemedicine continues to develop.

## METRONIDAZOLE: AN UPDATE ON METABOLISM, STRUCTURE–CYTOTOXICITY AND RESISTANCE MECHANISMS

*A. Vivek, Dr. VRakshana, Dr. R.Srinivasan*

*Faculty of Pharmacy, Bharath Institute Of Higher Education And Resarch, Selaiyur, Chennai, Tamil Nadu*

### ABSTRACT

Metronidazole, a nitroimidazole, remains a front-line choice for treatment of infections related to inflammatory disorders of the gastrointestinal tract including colitis linked to *Clostridium difficile*. Despite >60 years of research, the metabolism of metronidazole and associated cytotoxicity is not definitively characterized. Nitroimidazoles are prodrugs that are reductively activated (the nitro group is reduced) under low oxygen tension, leading to imidazole fragmentation and cytotoxicity. It remains unclear if nitroimidazole reduction (activation) contributes to the cytotoxicity profile, or whether subsequent fragmentation of the imidazole ring and formed metabolites alone mediate cytotoxicity. A molecular mechanism underpinning high level (>256 mg/L) bacterial resistance to metronidazole also remains elusive. Considering the widespread use of metronidazole and other nitroimidazoles, this review was undertaken to emphasize the structure–cytotoxicity profile of the numerous metabolites of metronidazole in human and murine models and to examine conflicting reports regarding metabolite–DNA interactions. An alternative hypothesis, that DNA synthesis and repair of existing DNA is indirectly inhibited by metronidazole is proposed. Prokaryotic metabolism of metronidazole is detailed to discuss new resistance mechanisms. Additionally, the review contextualizes the history and current use of metronidazole, rates of metronidazole resistance including metronidazole MDR as well as the biosynthesis of azomycin, the natural precursor of metronidazole. Changes in the gastrointestinal microbiome and the host after metronidazole administration are also reviewed. Finally, novel nitroimidazoles and new antibiotic strategies are discussed.

## MONITORING AND RESCHEDULING STRATEGY IN MINIMIZING PROBLEM FINANCING THROUGH IDAMAAN MOBILE APPLICATION AT PT AMAAN SEJAHTERA INDONESIA

<sup>1</sup>*Khoirum Rodhiatul Ifa*, <sup>2</sup>*Hendri Hermawan Adinugraha*

*UIN K.H. Abdurrahman Wahid Pekalongan*

### ABSTRACT

This research focuses on monitoring and rescheduling at PT Amaan Sejahtera Indonesia to reduce non-performing financing using the Idamaan mobile application. Although some financial members experience delays in payments. Therefore, PT Amaan Sejahtera Indonesia can overcome these problems well. The writing method used in the preparation of this thesis is descriptive qualitative research method. Information was obtained from observation, documents and direct interviews. Data analysis techniques with interactive models. The results of this study concluded that: the implementation of monitoring and rescheduling, in minimizing financial problems at PT Amaan Sejahtera Indonesia. Monitoring by directly checking the location of the customer's business. 2. rescheduling especially by extending the financing period. The positive impact of monitoring and rescheduling is that the number of non-performing financing is reduced and customers become more compliant, while the negative impact is reduced efficiency and business performance if not resolved immediately.

### INTRODUCTION

In this era of globalization, economic activities are growing rapidly. Many financial institutions are needed by the community to finance their needs. Financial institutions are one of the things that influence the development of economic growth in Indonesia. One of the largest funding businesses in financial institutions is financing. This financing is needed by the community for consumer needs and business capital.(Kharis Fadlullah Hana & Raunaqa, 2022)

Financing is the source of funding expended to support planned investments. Persons involved in sponsorship activities must follow reasonable financial procedures, including financial approval procedures, administrative procedures and financial supervision procedures. The sponsorship approval of each customer must be done through an objective evaluation process of various aspects related to the different sponsorship objects. This is intended to ensure all parties involved that the customer can fulfill all its obligations according to the agreed terms and timeframe.(Gazali & Usman, 2010)

The distribution of financial institution financing has two consequences, namely: first, the customer returns the money on time and brings profit to the financial institution, second, the customer does not return the money on time according to the initial agreement, resulting in funding becoming non-existent. Thus causing the risk of non-performing financing and can hamper the operations of financial institutions.(Alfani & Solihin, 2023)

In the current era there are often bad and problematic loans. Non-performing financing is financing where the customer is unable to pay the financing in accordance with the specified time.(Kharis Fadlullah Hana & Raunaqa, 2022) Thus, financing risks arise related to personal and unexpected conditions. Personal risks can arise when customers do not maintain the trust given by the sponsor, and at the same time unexpected risks such as accidents and natural disasters that lead to financial difficulties arise.(Alfani & Solihin, 2023)

This situation requires financial institutions to implement internal controls, including conducting pre-and post-financing monitoring of existing financial resources to anticipate risks that will arise. At the same time, the establishment of a post-financing monitoring mechanism aims to maintain the current quality of the financial resources. (Dian Pramana Putra, dkk 2023)

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

This situation requires financial institutions to implement internal controls, including conducting pre- and post-financing monitoring of existing financial resources to anticipate risks that will arise. At the same time, the establishment of a post-financing monitoring mechanism aims to maintain the current quality of the financial resources. (Dhani, Suhartono, & Noranita, 2012)

One of the Fintech companies involved in sharia digital finance is PT Amaan Indonesia Sejahtera, which offers financing services for MSME business owners with sharia digital applications. To increase family income, PT Amaan Indonesia Sejahtera also provides access to business capital financing without collateral. PT Amaan Indonesia Sejahtera concentrates mainly on the financial industry in managing its operations, particularly financing with the Sharia model. However, while being a financing provider institution, it is not without obstacles. Many problems arise, especially bad credit or financial problems.

Strategies can be applied to minimize problematic financial problems applied in PT Amaan Indonesia Sejahtera, namely by monitoring and rescheduling so that customers do not feel pressured by late payments that benefit, but feel helped by monitoring, changing payment schedules, changing the planned payment period. Monitoring and rescheduling can be an effective way because it does not force the situation and performance of the customer or customer according to the needs of the customer or the customer's own topic without any obstacles. Supervision and financial restructuring carried out by PT Amaan Indonesia Sejahtera aims to provide support to problematic customers or financial customers in order to pay off their obligations without seeming burdensome and in accordance with their abilities.

Therefore it is important for PT Amaan Indonesia Sejahtera to carry out financial monitoring or supervision to fix existing financial problems. Based on this background, this research was compiled with the title Monitoring and Rescheduling Strategies in Minimizing Problem Financing through the Idamaan Mobile Application at PT Amaan Sejahtera Indonesia.

## METHOD

This research uses qualitative methods. The purpose of this research is to describe and analyze systematically, factually, and accurately about matters relating to current events. In addition to interview transcripts, field notes, pictures, personal documents, memos, and other official recordings, the information collected is also in the form of words or tables rather than numerical data. (Emzir, 2012) Data collection methods are the first step in carrying out research, because the purpose of research is to obtain valid data. Without using these data collection methods, we will not get data that meets the standards set. (Sugiyono, 2020) The data collection techniques used in this research are interviews, observation and documentation.

The data obtained is then analyzed with the aim of simplifying the data into a form that is easier to read and interpret. In addition, the data is translated and utilized so that it can be used to answer the problems posed in the research. (Moleong & J, 2005) The data analysis method is a process of systematically searching and compiling data obtained from interviews, field notes, and other materials, so that it can be easily understood, and the findings can be informed to others. (Sugiyono, 2012) In this study, researchers used an interactive model data analysis technique, where this interactive model of data reduction and data presentation paid attention to the results of the data collected, then in the process of drawing conclusions and verification. (Soekanto & Soerjono, 1984)

## RESULTS AND DISCUSSION

Factors Causing Problem Financing at PT Amaan Sejahtera Indonesia

Non-performing financing is when a debtor or customer of a lending institution is in a situation where they are no longer able to make installment payments or repayments on time in accordance with the terms of the submission agreement that has been submitted. This situation can arise due to deliberate debtor behavior or due to extenuating circumstances that were not initially anticipated. (Subagyo, 2015)

Based on the results of interviews with employees of the CMP or collection department at PT Amaan, there are several loans that are considered to be starting to be problematic, including substandard loans, loans that are in arrears in principal payments, loans that are not yet due, and loans that have matured. Bad debts are loans that do not meet the criteria of substandard and doubtful and meet the criteria of

doubtful because there has been no repayment for 12 (twelve) months since the credit was classified as doubtful.

In addition to the explanation given by the employees regarding the causes of non-performing loans, an interview was also conducted with the debtor or customer named Mrs. Ainun Jariyah, a customer who had experienced non-performing loans at Amaan where she said that the non-performing loan was experienced because of her uncertain income as a tailor whose turnover per day was uncertain so that it could not be collected to pay credit for several months and then sold assets owned to meet her needs. Now he has changed jobs as a seller of cilok and ice drinks but the results are also uncertain, causing his credit to become problematic. (Interview on Thursday, September 7, 2023 at 13.00 WIB)

Credit is likely to become problematic influenced by several things as the results of the interviews described above. The findings from the interview results described above are only one of the factors that cause bad credit. Actually, from the debtor or customer side, they have good intentions to explain the reasons why the customer cannot pay their debts on time, honestly, and in accordance with their ability to pay, so that employees can solve problems regarding credit settlement in non-litigation through negotiation instead of litigation.

Monitoring and Rescheduling Strategy in Minimizing Problem Financing through Idamaan Mobile Application at PT Amaan Sejahtera Indonesia

There must be a possibility of problematic financing, regardless of how well the financing analysis analyzes the financing application. This is caused by more or less two things: the institution's analysis is inaccurate, or the financing analyst and the debtor or customer conspire to conduct the analysis subjectively. Customer carelessness is the second component that contributes to bad debts due to intentional or unintentional circumstances. (Alfani & Solihin, 2023)

There must be a possibility of problematic financing, regardless of how well the financing analysis analyzes the financing application. This is caused by more or less two things: the institution's analysis is inaccurate, or the financing analyst and the debtor or customer conspire to conduct the analysis subjectively. Customer carelessness is the second component that contributes to bad debts due to intentional or unintentional circumstances. (Djamil, 2014)

### **Monitoring**

Lukman Dandawijaya, monitoring or supervision is the practice of overseeing how all organizational actions are carried out to ensure that everything done is in accordance with a previously decided plan. (Alfani & Solihin, 2023)

To maintain that the financing provided to customers can run in accordance with the agreement, banks need to monitor the financing. Monitoring is carried out to avoid unwanted possibilities for both the ongoing financing and the possible risks arising from the provision of such financing. (Listiyani, 2018)

Monitoring is one of the management activities or functions related to other functions such as planning, organizing, leading, determining and implementing decisions. (Sinn, Abu, & Ibrahim, 2006) Monitoring can be a control tool to know that the provision of financing has been carried out in accordance with the provisions and plans that have been determined in the financing section. (K. F Hana & Andriani, 2022)

The implementation of financing monitoring carried out by PT Amaan Indonesia Sejahtera there are 2 ways, namely:

1. Direct Monitoring

In-person monitoring is field monitoring where officers monitor the customer's location directly in the field to determine if there are any bottlenecks in the customer's business journey. If there are, the officer will utilize this information to remove the bottleneck as soon as possible. Building strong relationships with customers through effective communication is another reason to go to the field by officers to the customer's place with the aim of directly monitoring the customer's business whether there are obstacles or not, if there are obstacles then the officer will use this information to overcome the problem as early as possible. Another goal of going to the field is to build good communication with customers so as to create a good relationship between the two parties.

2. Follow-up Monitoring

This monitoring is monitoring carried out when there are customers who need special attention, namely financing that is not going well. The effort made by the officer is to give a warning and make continuous billing to the customer. If reprimands and billing have been made but still have not paid installments, the financing marketing officer will visit the customer's home to analyze the problem and provide solutions. If the effort is still not paying and there is no good faith from the customer, the officer will visit regularly.

Financing monitoring, if noted, is interrelated between one goal and another so that it can facilitate financial institutions, especially at PT Amaan Indonesia Sejahtera, to anticipate any irregularities that may result in a financing risk in the future. Of course, both parties must be able to work well together in accordance with the procedures that have been determined so that the level of effectiveness of the financing monitoring carried out can be achieved properly.

**Rescheduling**

It is an effort made by PT Amaan Indonesia Sejahtera in rescuing non-performing financing. Because in handling problematic financing does not recognize fines. Instead, it provides relief and leeway. This policy applies only to customers who are really struggling in their business and there is no element of intentionality. The author views that the settlement of problematic financing at PT Amaan Indonesia Sejahtera is in accordance with sharia principles. Islam teaches to provide relief in terms of payment maturity until the customer is free from difficulties and provides relief in payment.

Rescheduling or rescheduling is a change in the schedule for making payments, as for the factors that support the provision of these actions, there is marketing from the debtor who is still good. (Kharis Fadlullah Hana & Raunaqa, 2022)

Rescheduling at PT Amaan Indonesia Sejahtera is by increasing the installment period for customers who experience problematic financing. So that with the extension of time for payment, the number of installments will decrease. With the extension of time, it is hoped that customers will be able to pay off their financing.

**Constraints and Solutions in Monitoring and Rescheduling at PT Amaan Indonesia Sejahtera**

Constraints and Solutions in Monitoring and Rescheduling at PT Amaan Indonesia Sejahtera:

1. The existence of customers or customers who are not in good faith where they deliberately do not fulfill their obligations in resolving their financing problems, besides that the economic constraints faced by customers or customers can also be an obstacle in resolving financing problems
2. Customers are not honest in reporting the chronology of the consequences of problem financing. Many people say they are no longer working, but in reality they still have other businesses outside the city and are not reported

In addition to constraints, there are also solutions that support the implementation of Monitoring and Rescheduling at PT Amaan Indonesia Sejahtera including the following:

1. Marketing parties who always supervise customers regularly. In the case of problematic financing after supervision, customers must continue to monitor their progress. This can make the resolution of problematic financing quickly resolved.
2. There is awareness and goodwill of the customer to pay. With this, customers who feel that they have been given facilities that alleviate their obligations and encourage them to make installment payments on time. Some customers are also aware that poor or non-performing financing quality will affect the realization of financing in the future.

**Idamaan Mobile Application at PT Amaan Sejahtera Indonesia**

Idamaan Mobile application is an android application intended for daily activities used in collecting customer installments. Fitur Idamaan Mobile terdiri dari menu login, beranda, daftar customer, Riwayat aktivitas, form laporan aktivitas, dan pembayaran.

## Customer Main Detail Home Page

## CONCLUSION

Based on the results of the research and discussion that has been stated in the previous chapters, it can be concluded that:

1. The implementation of monitoring conducted by PT Amaan Indonesia Sejahtera is by conducting direct monitoring and follow-up. Direct monitoring is direct monitoring to the field by officers to the customer's place of business. While the follow-up monitoring is that the officer gives a warning and makes continuous billing to the customer. If a warning and billing has been made but still has not paid the installment, the financing marketing officer will visit the customer's home to analyze the problems and provide solutions.

The implementation of Rescheduling carried out by PT Amaan Indonesia Sejahtera is to increase the installment period for customers so that customers are able to pay off their financing.

2. The impact after the implementation of monitoring and rescheduling in overcoming PT Amaan Indonesia Sejahtera's problematic financing. The positive impact is that the amount of problematic financing is reduced and members become more compliant and punctual in making installment payments from financing and if there is problematic financing the company is able to handle the problem properly. While the negative impact requires human resources who are experts in their fields. Because if there are no experts, it will reduce performance and achievement and will have a negative impact on cooperative finances.

3. The impact after the implementation of monitoring and rescheduling in overcoming PT Amaan Indonesia Sejahtera's problematic financing. The positive impact is that the amount of problematic financing is reduced and members become more compliant and punctual in making installment payments from financing and if there is problematic financing the company is able to handle the problem properly. While the negative impact requires human resources who are experts in their fields. Because if there are no experts, it will reduce performance and achievement and will have a negative impact on cooperative finances.

**ECOLOGY OF JAPANESE ENCEPHALITIS DISEASE**

*Dr. Namrata Kumari*

*Gauhati University, Assam, India*

In Japan, the first case of the Japanese encephalitis virus disease (JE) was reported in 1871. The Japanese encephalitis (JE) virus has a strong propensity to spread and has recently expanded its geographic distribution throughout much of southeastern Asia. The Japanese encephalitis virus (JEV) is a key contributor to human neurological illness. India has a high frequency of JEV, with major outbreaks during the monsoon season concentrating in the northeast and to a lesser extent in the southwest. The main JEV vector in Asia, *Culex tritaeniorhynchus* also plays a significant role in transmission in India.

The virus is a member of the family Flaviviridae and possesses a positive sense RNA genome within a membrane produced by the host. In a natural cycle involving birds and some cattle species, it is spread by mosquitoes, notably those of the genus *Culex*, like many flaviviruses. Pigs frequently serve as a major amplifying host during outbreaks in human populations, despite the fact that ardeid-wading birds like egrets and herons are the natural reservoir of JEV.

To understand the overall ecology it is necessary to study the targeted animals for novel health of JEV surveillance in India. So identification of species may play the role of amplification and maintenance.

## FAULT-TOLERANT CONTROL OF A WIND ENERGY CONVERSION SYSTEM USING A MATRIX CONVERTER

*Aboubaker Essaddiq MAZOUZ<sup>1</sup>, Said HASSAINE<sup>1</sup>, Abdelhamid BOUMEDIENE<sup>1</sup>*

<sup>1</sup>*Department of Electrical Engineering L2GEGI Laboratory, Faculty of applied science, University of  
Tiaret, Algeria*

### ABSTRACT

As wind energy continues to play a pivotal role in the transition towards sustainable power generation, ensuring the reliability and efficiency of wind energy conversion systems (WECS) becomes paramount. This paper introduces a novel approach to enhance the fault tolerance of WECS through the implementation of a matrix converter-based control system. The inherent variability of wind conditions can pose challenges to the stable operation of WECS. Unpredictable faults and disturbances may further exacerbate these challenges. In response, this research presents a comprehensive fault-tolerant control strategy that leverages the capabilities of a matrix converter. By utilizing the matrix converter's ability to establish direct connections between input and output voltages, the system gains enhanced flexibility and resilience in the face of faults. The study outlines the design and implementation of the fault-tolerant control scheme, including fault detection and isolation strategies. Simulations and experimental results demonstrate the system's ability to continue operating efficiently even in the presence of component failures or grid disturbances. Furthermore, the proposed approach offers improved fault tolerance without compromising overall system performance. This research contributes to the advancement of sustainable energy generation by addressing the critical issue of reliability in wind energy conversion systems. The findings not only enhance the robustness of these systems but also facilitate their integration into the broader energy grid, thus promoting the adoption of renewable energy sources on a larger scale.

**ABSTRACT**

In the pursuit of sustainable energy sources, variable speed wind turbines play a pivotal role in harnessing the power of wind resources efficiently. This research delves into the application of Backstepping Control as a robust control strategy for optimizing the performance of variable speed wind turbines equipped with Doubly Fed Induction Generators (DFIG) and utilizing Matrix Converters (MC). The Backstepping Control method, known for its effectiveness in complex dynamic systems, is applied to regulate the operation of DFIG in wind turbines. By systematically designing local controllers that address the unique dynamics of each component within the system, a global controller is synthesized, ultimately enhancing the turbine's ability to track variable wind speeds while ensuring stable and efficient power generation. The integration of Matrix Converters further elevates the system's performance by enabling precise and flexible power conversion. Matrix Converters, with their matrix-based signal transformations, provide a versatile platform for adapting to varying wind conditions and grid requirements. This research explores the seamless integration of Matrix Converters into the control architecture, emphasizing their role in enhancing grid compatibility and overall system efficiency. Our study encompasses theoretical analysis, simulation studies, and experimental validation, demonstrating the effectiveness of the proposed Backstepping Control strategy and the advantages of employing Matrix Converters in the context of variable speed wind turbines. Results showcase improved energy capture, grid stability, and fault tolerance, highlighting the potential for this integrated approach in advancing renewable energy technology. In summary, this research contributes to the growing body of knowledge in wind turbine control strategies and underscores the potential of Backstepping Control and Matrix Converters as key enablers for optimizing the performance and reliability of variable speed wind turbines in a sustainable energy landscape.

**Keywords:** backstepping control, DFIG, wind turbine, vector control, active and reactive power, matrix converter, MPPT.

MODELING, SIMULATION AND CONTROL OF WIND TURBINE DRIVEN DOUBLY-FED

ABSTRACT

This paper delves into a wind energy conversion system featuring a variable-speed wind turbine equipped with a doubly fed induction generator (DFIG) and powered by a matrix converter. The wind turbine's stator connects directly to the grid, while the rotor links via slip-rings to the matrix converter's output. This converter draws power from the grid and replaces the traditional pair of back-to-back converters used for DFIG control. DFIG, known for its exceptional performance, has gained prominence in wind energy due to its ability to independently control the rotor and grid-side power. This study places a significant emphasis on the control strategy within the matrix converter. A robust control scheme is devised to ensure seamless power transfer between the rotor and grid while addressing fault tolerance and grid code compliance. Controller performance undergoes rigorous evaluation through simulation experiments and, where applicable, practical validation. The addition of a matrix converter on the rotor side further enhances system flexibility and efficiency. This research aims to provide valuable insights into the design and operation of advanced wind energy systems. The system's modeling encompasses both super-synchronous and sub-synchronous operating conditions, enabled by the matrix converter. To efficiently separate active and reactive power, stator field-oriented control is employed. For optimal wind energy extraction, a speed mode control strategy considers wind speed and turbine pitch angle at each sampling interval. Additionally, a 2-D lookup table is introduced to calculate the reference speed through interpolation/extrapolation. Concurrently, reactive power control ensures that stator reactive power remains at zero. The study presents promising simulation results, demonstrating the wind energy conversion system's control performance.

**ABSTRACT**

With the explosive magnification of online video content, there is an incrementing desideratum for implements that can efficiently identify and extract highlights from videos. However, doing so accurately and expeditiously predicated on everyday language queries can be a challenging task, as highlight detection itself is a relatively incipient research area. In replication to this challenge, this project proposes an incipient scheme for performing and optimizing the task of highlight detection. The authors compare their method to subsisting approaches and test it on the YouTube Highlights public datasets, demonstrating that their method is highly efficacious, superior, and flexible across a range of different scenarios. The proposed scheme leverages a cumulation of natural language processing and computer vision techniques to identify and extract pertinent highlights from videos predicated on utilizer queries. Concretely, the authors utilize an attention-predicated mechanism to identify the most informative segments of the video that correspond to the utilizer's query, and then employ feature extraction and homogeneous attribute metrics to rank and retrieve the most germane highlights. In integration to demonstrating the efficacy of their approach, the authors withal highlight the flexibility and scalability of their method, which can be acclimated to different video domains and datasets. They argue that their method has the potential to significantly ameliorate the efficiency and precision of highlight detection in a variety of applications, from video search and recommendation systems to sports analysis and broadcasting. Overall, this report presents a valuable contribution to the emerging field of highlight detection, showcasing the potential of natural language processing and computer vision techniques to solve this conundrum. By providing a comprehensive evaluation of their approach and demonstrating its preponderation over subsisting methods, the authors offer a promising avenue for future research in this area.

### ABSTRACT

The project aims to develop an action apperception model utilizing an amalgamation of Convolutional Neural Network (CNN) and Long Short- Term Recollection (LSTM) to relegate human actions from video footage. The CNN is utilized to extract spatial features from the video frames, while the LSTM is utilized to capture the temporal dynamics of the actions. The model is trained and tested on astronomically immense-scale datasets, such as UCF101, HMDB51, and Kinetics, and evaluated predicated on precision, precision, recall, and F1 score. The project has potential applications in surveillance, sports analysis, and human-computer interaction, where the faculty to agnize and understand human actions from video footage is crucial. The project aims to develop a system for apperceiving human actions from video utilizing an amalgamation of Convolutional Neural Networks (CNNs) and Long Short-Term Recollection (LSTM) networks. The system takes a video sequence as input and utilizes a CNN to extract spatiotemporal features from the frames. These features are then victualled into an LSTM network to capture the temporal dependencies between the frames and relegate the action being performed. The system is trained and evaluated on a publicly available dataset, and its performance is compared with other state-of- the-art methods for action apperception. The ultimate goal of the project is to develop a robust and efficient system for genuine-world applications such as video surveillance, human-robot interaction, and sports analysis.

### ABSTRACT

Vehicular Ad-Hoc Networks (VANETs) are a type of wireless communication network that enables conveyances to exchange information with each other and with roadside infrastructure to ameliorate road safety, traffic efficiency, and driving experience. Routing protocols play a crucial role in VANETs by determining the best path for data transmission among conveyances. However, the dynamic nature of vehicular networks, characterized by high mobility, intermittent connectivity, and varying network conditions, presents significant challenges for efficient routing. In this research paper, we propose an enhanced routing protocol for VANETs that addresses the constraints of subsisting protocols. Our protocol incorporates advanced techniques to amend the reliability, efficiency, and security of data transmission in VANETs. Categorically, we integrate predictive mobility model that anticipates conveyance forms of kineticism to proactively establish stable routes, minimizing packet loss and truncating end-to-end delay. Moreover, we employ a multi-objective optimization approach to optimize routing decisions predicated on multiple metrics, such as reliability, delay, and energy consumption, for ameliorated performance. Furthermore, we integrate a secure authentication mechanism to bulwark against malevolent attacks and ascertain data integrity. To evaluate the performance of our proposed routing protocol, we conducted extensive simulations utilizing an authentic vehicular mobility trace. Our results demonstrate that our protocol outperforms subsisting protocols in terms of packet distribution ratio, end-to-end delay, and energy efficiency, while maintaining a high caliber of security. Our research contributes to the field of VANETS by providing an enhanced routing protocol that addresses the unique challenges of vehicular networks, and can be potentially deployed in authentic-world vehicular communication systems to ameliorate the reliability and efficiency of data transmission, leading to safer and more efficient vehicular communication networks.

### ABSTRACT

Hand gesture apperception accomodates as a key role for surmounting many difficulties and providing accomodation for human life. One categorical field of interest is 'dactylology apperception'. Dactylology is a mean of communication among the auditorily impaired and incoherent people. The faculty of machines to understand human activities and their designation can be utilized in an astronomical array of applications. Machine learning techniques can be acclimated to engender interactive inculcative implements or to avail a auricularly discerning-impaired person communicate more efficaciously with someone who doesn't ken dactylology. The proposed study aims to develop a system that will agnize static sign gestures and convert them into text. A vision-predicated approach utilizing a web camera is introduced to obtain the data from the signer. The proponents provided a white background and a categorical location for image processing of the hand, thus, ameliorating the precision of the system and used Convolutional Neural Network (CNN) as the recognizer of the system. We apperceive the gesture shown by the utilizer utilizing Deep Learning methods and then give a text output of it. There are 27 gestures pre-built that includes all the alphabets and blank space.

**ABSTRACT**

Ritonavir, a potent antiretroviral medication, has played a pivotal role in the treatment of HIV (Human Immunodeficiency Virus) since its introduction. This abstract provides an overview of Ritonavir as an anti-HIV drug.

Ritonavir, initially developed as a protease inhibitor, has been a cornerstone in the management of HIV infection. Its mechanism of action involves inhibiting the protease enzyme, crucial for the replication of the virus. This inhibition disrupts the HIV life cycle, reducing viral replication and slowing disease progression.

One of Ritonavir's unique features is its use as a booster for other protease inhibitors. When used in combination therapy, it enhances the effectiveness of other antiretroviral drugs, ensuring lower viral loads and improved immunological outcomes.

Furthermore, Ritonavir has demonstrated efficacy in the prevention of mother-to-child transmission of HIV, making it a valuable tool in reducing the global HIV burden.

Despite its therapeutic benefits, Ritonavir is not without challenges, as it can interact with various medications and has side effects. However, its impact on HIV treatment and prevention remains significant.

In conclusion, Ritonavir, as an anti-HIV drug, exemplifies the progress made in HIV/AIDS management. Its role in combination therapy and its contributions to reducing transmission rates underscore its importance in the ongoing fight against HIV. Further research and development may lead to even more effective treatments and strategies for combating this global health challenge.

**ROBUST NONLINEAR CONTROL OF A THREE-PHASE SHUNT ACTIVE POWER  
FILTER IN THE PRESENCE OF UNCERTAINTIES**

*<sup>e</sup>Department of physics sciences, Higher Normal School of Boussada, Boussada, 28001, Algeria*

**ABSTRACT**

This paper presents a robust nonlinear control strategy for a Three-Phase Shunt Active Power Filter (SAPF) designed to mitigate harmonic distortion and reactive power fluctuations in electrical distribution systems. The presence of uncertainties, such as varying load profiles, grid voltage disturbances, and parameter variations, poses significant challenges for effective SAPF operation. To address these challenges, we propose a control approach based on robust nonlinear control techniques. The core of our proposed control scheme is a robust controller designed to handle uncertainties and disturbances while ensuring stable and accurate compensation of harmonics and reactive power. The controller leverages a mathematical model of the SAPF system, augmented with an uncertainty description that characterizes the variations in system parameters and external disturbances. By utilizing Lyapunov stability theory and robust control methods, the proposed approach ensures the convergence of the SAPF system to a desired operating point in the presence of uncertainties. Furthermore, the control strategy incorporates a nonlinear compensation algorithm that adapts to changing operating conditions, enhancing the SAPF's performance under varying load profiles and grid voltage disturbances. Simulation results and experimental validations on a real-world SAPF system demonstrate the effectiveness of the proposed control strategy in terms of harmonic mitigation, reactive power compensation, and robustness to uncertainties. In summary, this research contributes to the development of robust control techniques for Three-Phase Shunt Active Power Filters, making them more resilient in the face of uncertainties and disturbances commonly encountered in practical electrical distribution systems. The proposed approach holds promise for improving the quality of power delivered to sensitive loads and reducing the impact of nonlinear loads on the grid.

**Keywords:** Shunt active power filter, feedback linearization adaptive nonlinear control, and harmonic current compensation.

### ABSTRACT

Nowadays the Expectations of Industries of the Freshers are increasing a lot. They expect the freshers to be well knowledge and know minimum of 2 to 3 programming languages at their skills. Bio-background students suffer a lot at the first year of their engineering studies to cope up with coding. Not only bio-background students suffer all the students find engineering to be tough. So it's necessary to train them to meet with industrial expectations. STEM stands for Science, Engineering, Mathematics, Technology. Instead of training the students with unwanted subjects in their schooling schools may train the students with these subjects so that it could be easy for them to cope up in their engineering studies later. It is important to train them from the middle school itself, so that they can learn advance things in engineering. The platforms like Byjus, Vedantu, Unacademy, just provide recorded videos and a mentor support for each students. But it's not actually for each students a mentor may have 15-20 students under them so it would not possible for them to keep an eye on all 20. This model has the recorded by their own teacher who teaches the in their school so that they can understand clearly and clear their doubts on the following day. It's not recorded videos these are recorded videos with an chain interactive session. These can develop students according industrial expectaions from their school itself in a good manner

## ADVANCED COATING METHODS: TITANIUM CARBIDE DEPOSITION ON STEEL VIA INDIRECT PROCESSES

*Baali Selma<sup>1,2</sup>, Benarioua Younes<sup>1</sup>*

<sup>1</sup> *Department of Mechanical Engineering, Med Boudiaf University, BP 166, M'sila 28000, Algeria*

<sup>2</sup> *Laboratory of Materials and Mechanics of Structure L.M.M.S, University of M'sila, M'sila 28000, Algeria*

### ABSTRACT

The quest to enhance the performance and durability of steel components has led to innovative coating techniques. This study focuses on the application of advanced coating methods for depositing titanium carbide (TiC) onto steel substrates. The indirect deposition process used in this research offers a promising avenue for precisely and controllably tailoring the surface properties of steel.

In this investigation, we delve into the intricate details of the indirect deposition technique, elucidating the underlying mechanisms and key parameters that influence the composition, microstructure, and mechanical properties of the TiC coating. Through a systematic experimental approach, we explore the impact of deposition parameters such as temperature, gas composition, and deposition time on the resulting TiC coatings.

Our findings reveal the exceptional potential of indirect deposition in achieving uniform and adherent TiC coatings on steel surfaces, offering improvements in hardness, wear resistance, and corrosion protection. Furthermore, the study addresses the challenges and opportunities associated with scaling up this method for practical applications in industries ranging from automotive to aerospace.

This research not only contributes to the advancement of coating technologies but also expands the horizons of materials engineering for improved performance and longevity of steel components in demanding environments. The knowledge gained from this investigation holds promise for the development of next-generation, high-performance steel materials.

### ABSTRACT

The field of economics and business administration pertaining to electric cars encompasses a range of elements, such as market analysis, consumer behavior, supply chain management, business models, financing and investment, and infrastructure development. Among these elements, infrastructure development is of utmost importance for the growth and sustainability of the electric car industry. It involves the establishment of networks of charging stations, advancements in battery technology, and the integration of smart grid systems. These three components, which we will define and explore as the latest technology in this field evolves, play a critical role in ensuring the success of electric cars as a practical alternative to gasoline-powered vehicles. The availability of charging stations, advancements in battery technology, and the integration of smart grid systems contribute to increased convenience and practicality of electric cars, reduced ownership costs, and enhanced sustainability within the industry.

**Keywords-** Electric cars, Infrastructure development, Charging station networks, Advancements in battery technology, Sustainability.

### Introduction

Infrastructure development plays a crucial role in the electric car ecosystem, enabling the widespread adoption and effective operation of electric vehicles (EVs). It encompasses several key components, including the establishment of charging station networks, advancements in battery technology, and the integration of smart grid systems.

#### 1. charging stations

It play a pivotal role in supporting the usability and practicality of electric cars by providing a reliable and convenient means of recharging. They are an essential component of the infrastructure necessary for the widespread adoption and success of electric vehicles because facilities or points where electric vehicles (EVs) can be charged.

##### 1.1 Types of Charging Stations:

Charging stations come in different forms and charging capabilities, catering to various needs and charging speeds. Here are some common types:

###### 1.1.1 Level 1 Charging:

This is the simplest and slowest form of charging, typically using a standard household electrical outlet (120 volts AC). Level 1 chargers are portable and come with most electric vehicles. However, they provide the slowest charging rate and are best suited for overnight charging at home.

---

<sup>1</sup> To whom correspondence should be addressed

### 1.1.2 Level 2 Charging:

Level 2 chargers operate at higher power levels (240 volts AC) and provide faster charging compared to Level 1. They require specialized charging equipment and are commonly installed in public locations, workplaces, and residential areas. Level 2 chargers can fully charge an electric vehicle in a few hours, depending on the battery capacity.

### 1.1.3 DC Fast Charging:

DC fast chargers, also known as Level 3 chargers, offer the fastest charging speeds for electric cars. They operate at much higher power levels (typically 400 volts or higher) and can charge an EV to 80% or more in around 30 minutes. DC fast chargers are commonly found along highways, commercial areas, and EV charging networks.

## 1.2 Charging Station Components:

### 1.2.1 Charging Unit:

The charging unit is the main component of a charging station. It contains the necessary hardware and software to provide electricity to the electric vehicle's battery.

### 1.2.2 Connector:

We have several type :

- ❖ **J1772 Connector:** The J1772 connector is the standard connector for Level 1 and Level 2 charging in North America. It features a plug and socket design, allowing for the safe and secure connection between the charging station and the electric vehicle.
- ❖ **CCS (Combined Charging System) Connector:** CCS connectors are used for DC fast charging and are widely adopted in Europe and North America. They combine the AC charging pins of the J1772 connector with additional DC charging pins for high-speed charging.
- ❖ **CHAdeMO Connector:** CHAdeMO connectors are primarily used for DC fast charging and are common in Asian markets. They have a distinct plug design and enable high-power charging for compatible electric vehicles.
- ❖ **Tesla Supercharger Connector:** Tesla vehicles use their proprietary connector for high-speed charging at Tesla Supercharger stations. Tesla vehicles also come with an adapter that allows them to be charged using other charging connectors.

### 1.2.3 Display and Payment System:

Charging stations often feature a display panel that provides information such as charging status, energy consumption, and sometimes payment options. Payment systems can include credit card readers, mobile payment apps, or RFID cards.

### 1.2.4 Networking and Communication:

Many charging stations are connected to a network, allowing for remote monitoring, maintenance, and payment processing. Networked charging stations provide real-time information on availability, usage, and charging rates.

## 2. Examples of smart grid systems being integrated with electric car infrastructure

Integrating smart grid systems with electric car infrastructure is an important step towards optimizing the charging process, managing energy flow, and enhancing the overall efficiency of the electric grid. Here are some examples of how smart grid systems can be integrated with electric car infrastructure:

1. **Demand Response Programs:** Smart grid systems can enable demand response programs, where charging stations can adjust their charging rates or schedules based on the grid's supply and demand conditions. This allows for better load management and can help prevent grid congestion during peak periods.

2. **Vehicle-to-Grid (V2G) Technology:** V2G technology enables bidirectional energy flow between electric vehicles and the grid. Electric vehicles can not only draw electricity from the grid but also send excess energy back to the grid when needed. This capability can help balance the grid, support renewable energy integration, and provide grid services such as frequency regulation.

3. **Smart Charging Management:** Smart grid systems can facilitate intelligent charging management, allowing for optimized and coordinated charging of electric vehicles. Charging stations can communicate with the grid to determine the best charging times, considering factors such as electricity prices, grid load, and renewable energy availability.

4. **Grid-Friendly Charging Infrastructure:** Smart grid systems can enable the development of grid-friendly charging infrastructure. This includes features such as load balancing, where charging stations distribute the load evenly across the grid to prevent localized overloads. It can also include the capability to communicate with the grid to receive real-time grid status updates and adjust charging accordingly.

5. **Grid Integration with Renewable Energy Sources:** Smart grid systems can integrate electric vehicle charging with renewable energy sources. Charging stations can prioritize charging when renewable energy generation is high, promoting clean energy utilization and reducing the reliance on fossil fuel-based power generation.

### **3. Advancements in battery technology:**

The potential to significantly improve the efficiency and range of electric vehicles (EVs) in several ways:

1. **Increased Energy Density:** Battery technology advancements can lead to higher energy density, allowing for more energy storage within the same physical size or weight of the battery pack. This means that EVs can store more energy, resulting in longer driving ranges without the need for frequent recharging.

2. **Improved Energy Efficiency:** Enhanced battery technology can improve the overall energy efficiency of EVs. This includes reducing energy losses during charging and discharging processes, minimizing internal resistance within the battery cells, and optimizing the battery management system. By improving efficiency, more energy can be effectively used to propel the vehicle, resulting in longer ranges for the same amount of stored energy.

3. **Rapid Charging Capability:** Advancements in battery technology can enable faster charging times. This includes the development of fast-charging technologies and the ability to handle higher charging currents without negatively impacting battery life. Rapid charging capabilities reduce the time required to recharge an EV, making them more convenient and comparable to refueling a gasoline-powered vehicle.

4. **Longer Battery Lifespan:** Battery technology advancements can improve the durability and longevity of EV batteries. This includes advancements in electrode materials, cell chemistry, and thermal management systems. Longer battery lifespan reduces the need for frequent battery replacements, lowering the overall cost of ownership and improving the practicality of EVs.

5. **Enhanced Thermal Management:** Efficient thermal management systems for batteries can prevent overheating and thermal degradation, ensuring optimal battery performance and longevity. Improved cooling and heating mechanisms can maintain the battery within an optimal temperature range, maximizing its efficiency and extending its lifespan.

6. **Solid-State Batteries:** The development of solid-state batteries, which replace the liquid electrolyte with a solid-state electrolyte, shows promise for higher energy density, improved safety, and faster charging times. Solid-state batteries have the potential to revolutionize EVs by addressing current limitations and unlocking even greater efficiency and range.

### **Conclusion**

The field of economics and business administration related to electric cars encompasses various elements, including market analysis, consumer behavior, supply chain management, business models, financing and investment, and infrastructure development. Infrastructure development, particularly the

establishment of charging station networks, advancements in battery technology, and integration of smart grid systems, is crucial for the growth and sustainability of the electric car industry.

The availability of charging stations ensures that electric car owners have convenient access to charging facilities, addressing concerns about range anxiety and promoting widespread adoption. Advancements in battery technology improve the efficiency, range, and charging capabilities of electric vehicles, making them more practical and comparable to traditional gasoline-powered cars. Integration of smart grid systems allows for intelligent management of energy flow and optimization of charging processes, enhancing the overall efficiency and sustainability of the electric car ecosystem.

By focusing on these three components, the electric car industry can achieve increased convenience, reduced ownership costs, and improved sustainability. Continued research and technological advancements will undoubtedly shape the future of electric cars, making them a viable and attractive alternative to conventional vehicles.

## THE THEME OF 'ESCAPE': INTERTEXTUALITY AND COMPOSITIONAL CONTRAST IN SOMERSET MAUGHAM'S SELECTED SHORT STORIES

*Armel MBON*

*Parcours-type: Langues et Littératures, Université Marien NGOUABI, Brazzaville, Congo*

### ABSTRACT

This work analyses the contrast created in William Somerset Maugham's literary composition, with reference to the theme of 'Escape'. Escape is, indeed, a recurrent theme in such Maugham's short stories as 'The Escape', 'Mabel', 'A Friend in Need,' 'The Taipan', 'The Verger', and others. The analysis thereof unfolds through the scrutiny of two samples of these short stories videlicet 'The Escape' and 'Mabel'. In real life, it happens to us to escape either from a country, a nightmare, a delicate financial situation, a mediocre existence, or else. Likewise, in fiction, Roger Charing and George escape from Ruth Barlow and Mabel, the ladies they are engaged to before the wedding days respectively in 'The Escape' and 'Mabel'. This escape, an interconnection between these stories, is prompted by their sudden falling out of love, which is inexplicable in the narrators' words, because as Blaise Pascal thinks, the heart has reasons that reason itself knows nothing about. Apart from this common denominator, the two stories contrast sharply at different levels of their components as setting, characters... To investigate this contrast, owing to the economy and simplicity of the storytelling that characterise a short story, these stories require close scrutiny and textual approach.

**Key words:** escape, intertextuality, contrast, components, short story.

## APPLICATION OF A NEW APPROACH TO ASSESSING THE PERFORMANCE OF A COMPLEX TECHNICAL SYSTEM

*Alexandrov V.S.*

*Kazan National Research Technical University named after A.N. Tupolev, REIMT department*

### ABSTRACT

Nowadays, the solution of the problem of monitoring and diagnostics of complex technical objects at all stages of its functioning is one of the main tasks in the theory of information and the construction of measuring systems. It is important to foresee possible malfunctions at the planning stage of the device model and minimize them during its operation.

Embedded systems have been widely developed today, since they allow analyzing the parameters of a certain measuring system without the necessary removal of measuring devices and sensors from the object. Most of them are built of some kind of measuring system with a set of sensors and microprocessor systems that control the macroscopic parameters of the device with a given degree of accuracy and with the required polling frequency.

At the same time, it is important to ensure the synchronicity of the sensor polling procedure, as well as to calibrate them in accordance with the mode in which they operate. It is impossible to exclude the fact that there are always probabilities of false alarm errors and missing a goal. The main task is to minimize these deviations, since they can make a significant error in the measurement results. It is worth considering the fact that when building an information and measurement system, the accuracy of each subsequent block should be no worse than the previous one.

**Key words:** technical system, data processing, correlation.

## UZHAVAN APP – A DIGITAL APP UTILIZATION BY FARMERS OF TAMIL NADU IN INDIA

*Arunkumar R<sup>1\*</sup> and Dr.P.P.Murugan<sup>2</sup>*

*<sup>1</sup>Research Scholar, Department of Agricultural Extension and Rural Sociology, Tamil Nadu  
Agricultural University, Coimbatore, Tamil Nadu.*

*<sup>2</sup>Director of Extension Education, Tamil Nadu Agricultural University, Coimbatore, Tamil Nadu.*

### ABSTRACT

The spread of mobile technologies, remote-sensing services and distributed computing are already improving smallholders' access to information, inputs and markets, increasing production and productivity, streamlining supply chains and reducing operational costs. The digital agriculture technologies in worldwide are Agricultural Stress Index System (ASIS), Water Productivity Open Access Portal (WaPOR), Food Price Monitoring and Analysis (FPMA), Information Network on Post-harvest Operations (INPhO) and so on. PM-Kisan, mKisan, Kisan Sarathi, Kisan Suvidha are some of the initiatives developed by the Government of India. Some of the Tamil Nadu Government initiatives are Grain, Engirunthum Ennerathilum, Agrisnet, Uzhavan App etc. Uzhavan app is a Tamil Nadu Initiative and it is very useful to the farmers to know the agriculture related information up-to-date. The Uzhavan app provides detailed information about subsidy scheme available for all agricultural inputs, crop insurance notified for crops in specific villages, also provides tractor and farm equipment services to farmers at low cost through custom hiring center in Tamil Nadu. Dharmapuri district was selected because of more number of uzhavan app users in that district in Tamil Nadu. 60 respondents were selected into two categories as 30 uzhavan app users and 30 non-uzhavan app users to study their utilization and constraints on utilization of Uzhavan App in Dharmapuri District of Tamil Nadu. The main reason for using uzhavan app by users was easy to access the app and foremost constraint was lack of market price information for all location. Lack of contact with other users was the major constraint specified by non-users of uzhavan app.

**Keywords:** Digital Agriculture, Uzhavan App, Utilization, Constraints and Tamil Nadu.

### ABSTRACT

Water pollution remains a pressing global issue, especially due to the persistence of industrial dyes in water bodies. Heterogeneous advanced oxidation processes (AOPs) offer a promising solution, and clay-based catalysts, particularly Bentonite (Bt) clay modified with cellulose and copper (Cu/Bt-C), have emerged as effective tools in this endeavor. This study investigates the synthesis and characterization of the Cu/Bt-C catalyst and its application in the degradation of organic Cogo Red dye by various AOPs. The catalyst is prepared through Two user-friendly methods (DPU method and ion exchange-impregnation method). Characterization techniques including FTIR, XRD, and AAS were used. The catalyst demonstrates excellent efficiency in degrading organic azo dyes, signifying its potential in environmental remediation.

**Keywords:** Heterogenous AOPs, Bentonite clay, Cu/Bt-C Photocatalyst, dye degradation.

SIMPLE NOVEL WAYS FOR EFFICIENT REMOVAL OF INDIGO CARMINE BY ION-  
EXCHANGE PROCESS ONTO BASIC RESIN AND BROMOCRESOL GREEN BY  
ADSORPTION TO CITRIC ACID BINDED HYACINTH BEAN HUSK:  
CHROMATOGRAPHIC ELUTION APPROACH

Recognized by University of Mysore), Mysuru-570 025, Karnataka, India*

**ABSTRACT**

Indigo carmine (IC) and bromocresol green (BCG) are two sulfonephthalein dyes used widely in textile and food industries and also as tracking agents for DNA agarose gel electrophoresis and sol gel matrices. Post usage delivery of these dyes to water bodies certainly create the harmful situation to aquatic lives and thus the removal of even their little quantities play significant role. Simple column chromatographic method has been employed to remove IC by ion-exchange and BCG by adsorption mechanism. A basic anion exchange resin has been evolved out as the most selective and appropriate exchanger for IC. Whereas, the BCG has been effectively demonstrated for its removal using citric acid binded haysinth bean husk as an adsorbent. The scanning electron microscopic images (SEM) have confirmed the citric acid binding and dye adsorption onto the adsorbent surface. Experimentally it has been found that at room temperature 1 g of resin showed removal of > 95% of IC up to 150 µg/mL at the pH range from 9 to 10; 0.25g of husk showed removal of 96.6% BCG at pH 2-3 under 1 mL/minute flow rate. The ion-exchange capacity has been determined and reported for wet resin. Experimental parameters like effect of initial dye concentration, thermodynamic studies, contact time, flow rate have been optimized. The thermodynamic aspects viz, the change in Gibbs free energy, enthalpy and entropy of the exchange and adsorption have been calculated and reported. The isothermal studies indicated efficient exchange of IC over the studied concentrations of IC. The reversibility of the exchange process has been ascertained using neutral sodium nitrite. The experimental kinetic isotherm models have also been studied and results reported.

**Keywords:** Ion exchange, adsorption, dye removal, column chromatography, indigocarmine, Hyacinth bean husk.

**A REVIEW ON JERUSALEM ARTICHOKE**

*Punithavalli, Vijitha, Rufina Delphine*

**ABSTRACT**

Jerusalem artichoke (*Helianthus tuberosus*), often referred to as “sunroot” or “earth apple,” is a unique and versatile plant that has been cultivated for centuries. This abstract provides an overview of Jerusalem artichoke, covering its history, characteristics, culinary uses, nutritional value, and potential benefits. Jerusalem artichoke is a member of the sunflower family and is native to North America. It was a staple food for Native American tribes long before European settlers arrived. Early European explorers brought this hardy plant back to their homelands, introducing it to the broader world. This plant is known for its distinctive tuberous roots, which resemble knobby, irregularly shaped potatoes. These tubers are the primary edible part of the Jerusalem artichoke and have a crisp texture and a slightly nutty, sweet flavor. They can be prepared in various culinary applications, such as roasting, sautéing, mashing, or even consumed raw in salads. Nutritionally, Jerusalem artichokes are a valuable source of dietary fiber, vitamin C, and various minerals, including potassium and iron. They are also low in calories and fat, making them a healthy addition to a balanced diet. One of the most notable characteristics of Jerusalem artichoke is its high inulin content, a type of carbohydrate that is not digested in the upper gastrointestinal tract. Instead, it serves as a prebiotic, nourishing beneficial gut bacteria and promoting digestive health. Beyond their culinary uses, Jerusalem artichokes have been explored for potential health benefits. Some studies suggest that inulin-rich foods like Jerusalem artichokes may help regulate blood sugar levels, support weight management, and improve gut health. However, further research is needed to confirm these potential advantages conclusively. In summary, Jerusalem artichoke is a unique and nutritious plant with a rich history. Its tuberous roots offer culinary versatility, and its nutritional composition makes it a healthy addition to various dishes. Additionally, its high inulin content holds promise for potential health benefits, making Jerusalem artichoke a fascinating and valuable component of both culinary and dietary landscapes.

**CHILAITITI SIGN: RARE INCIDENTAL FINDING**

*Hüseyin ŞAHİN*

*Dr. Öğrt. Üyesi, Namık Kemal Üniversitesi,*

*Tıp Fakültesi, Acil Tıp ABD, Tekirdağ, Türkiye.*

*ORCID ID: <https://orcid.org/0000-0002-8681-4034>*

**Introduction:**

A relatively uncommon clinical illness called Chilaiditi's syndrome affects the colon's hepatic flexure, which is situated between the liver and the diaphragm. The presence of free air under the diaphragm on simple abdomen radiographs is known as the Chilaiditi's sign. It is an accidental discovery and often has no symptoms. When vomiting or other symptoms like stomach discomfort are present, it is known as Chilaiditi's syndrome. Report an incident to the emergency department.

**Case:**

A 30-year-old man who was experiencing epigastric and central abdominal discomfort arrived at the emergency room. No prior medical history was present. On examination, there was a rebound and diffuse abdominal discomfort. A pneumoperitoneum was visible on a chest radiograph. There was subdiaphragmatic free air and an elevated right hemidiaphragm. The results of the usual laboratory testing were normal. To treat a possible perforated gastrointestinal tract, the patient was referred to the surgical team. There were no unexpected medical crises. After receiving emergency department care and hydration support, the patient was released from the hospital.

**Discussion:**

Transposition of the colon's hepatic flexure between the liver's surface and the diaphragm's dome causes Chilaiditi's syndrome. In a small number of cases, about 3-5%, the small bowel is out of position. There might be a wide range of symptoms, including nausea, bloating, constipation, and stomach discomfort. An emergency surgical exploration may be indicated if the x-ray reveals open air under the diaphragm. However, there can be other causes for such a result that don't necessitate such an immediate response. The pneumoperitoneum may be confused for Chilaiditi's sign, leading to an unnecessary exploratory laparotomy. Thus, additional research should be done on this straightforward radiological discovery.

**Keywords:** chilaiditi, colon, free air, abdominal pain

## TARGETED DRUG DELIVERY SYSTEMS FOR CANCER THERAPY: RECENT ADVANCES

*M.K. Vijayalakshmi*

*Research Scholar,*

*Faculty of Pharmacy, Bharath Institute of Higher Education and Research*

### ABSTRACT

Cancer stem cells (CSCs) are a subpopulation of cancer cells with functions similar to those of normal stem cells. Although few in number, they are capable of self-renewal, unlimited proliferation, and multi-directional differentiation potential. CSCs have the ability to escape immune surveillance. Thus, they play an important role in the occurrence and development of tumors, and they are closely related to tumor invasion, metastasis, drug resistance, and recurrence after treatment. Therefore, specific targeting of CSCs may improve the efficiency of cancer therapy. Targeted drug delivery systems for cancer therapy have made significant advances in recent years, offering the promise of more effective and less toxic treatments for cancer patients. These systems aim to deliver therapeutic agents directly to cancer cells while sparing healthy tissue, thereby improving treatment outcomes and minimizing side effects.

**Key Words:** Cancer stem cells, Targeting strategies, Drug delivery systems, Cancer treatment

Multan, Pakistan

<sup>2</sup>Department of Parasitology, Faculty of Veterinary Science, University of Agriculture, Faisalabad,  
Pakistan

### ABSTRACT

The use of nanoparticles in physical and biological systems comes under the heading of nanotechnology. In underdeveloped and developing countries, where conventional treatment methods have drawbacks, nanotechnology offers a potentially effective response to the problem of parasitism. Nanoparticles have the potential for vaccine development, improved drug delivery, and decreased toxicity. They can target infected cells, increase treatment efficacy, and reduce the likelihood of drug resistance. Various types of nanoparticles show promise in treating parasitic diseases including polymeric nanoparticles, dendrimers, metal-based, silica-based, carbon-based, and lipid-based nanoparticles. Numerous pathogen-fighting techniques used by nanoparticles include membrane rupture, blocking of communication channels, improved medication effectiveness, targeted drug administration, immunological modulation, and production of reactive oxygen species (ROS). Nanoparticles, especially those made of silver and gold, exhibit a wide range of anti-parasitic properties. Gold nanoparticles (AuNPs) show promise against protozoan infections, including *Plasmodium*, *Leishmania*, and *Toxoplasma*. AuNPs improve drug delivery, promote angiogenesis, and have the potential for diagnostics. Additionally, silver nanoparticles (AgNPs) show effectiveness against diseases like *Plasmodium* and *Leishmania* as well as vectors like mosquitoes. The challenges of treating parasite infections can be assisted by nanotechnology. The limits of traditional approaches are brought on by drug resistance and delivery issues. Nanoparticles offer enhanced drug delivery to target sites, improved drug solubility, resistance mitigation through combination therapies, and reduced side effects through targeted and triggered drug release. Applying nanotechnology to parasitic disease treatment presents challenges. Parasite complexity and varying host immune responses demand adaptable nanoparticle interventions. Targeted drug delivery faces hurdles due to biological barriers, while high production costs and safety concerns can hinder accessibility. The wide range of nanoparticles and their potential toxicity emphasize the need for in-depth safety analyses. In areas with poor access to healthcare, this technology might revolutionize therapeutics.

**FORMULATION AND EVALUATION OF DIRECTLY COMPRESSIBLE  
AGGLOMERATES OF TELMISARTAN**

*D.Jeslin*

*Assistant Professor*

*Faculty of Pharmacy,*

*Sree Balaji Medical College and Hospital Campus, Bharath Institute of Higher Education and  
Research*

*M.K. Vijayalakshmi*

*Assistant Professor,*

*Faculty of Pharmacy, Bharath Institute of Higher Education and Research*

**ABSTRACT**

The aim of the work is to formulate spherical agglomerates and enhance the micromeritic properties, solubility and dissolution rate of Telmisartan, a poorly water soluble anti-hypertensive drug. The poor water solubility and poor micromeritic properties of Telmisartan lead to low dissolution rate and poor flow during tableting. Telmisartan spherical agglomerates were prepared by spherical agglomeration techniques using a quasi emulsion solvent diffusion method consisting of chloroform and water as good solvent and bad solvent respectively. PVP K30 and PEG6000 in different concentration were used as hydrophilic polymers in agglomeration process.

**Key words:** Telmistratan, micromeritic properties, solubility, dissolution rate

CHATBOT FOR TEENAGERS

*Niraimathi M*

*Ponmani S*

*Pratthika A T*

*Priyadharshini D*

**ABSTRACT**

In our rapidly evolving digital age, one of the most pressing challenges we face is the growing chasm between generations, particularly between teenagers and their elders. With mobile devices becoming ubiquitous, children increasingly find themselves engrossed in screens, disconnecting from meaningful face-to-face conversations with parents and guardians. This troubling trend often extends into adolescence, creating a significant barrier for teenagers when it comes to sharing their life experiences and seeking guidance from the very people who care about them the most – their parents.

To address this critical issue and foster stronger intergenerational bonds, we propose the creation of a Chatbot for Teenagers. It represents a groundbreaking, AI-driven conversational platform meticulously designed to facilitate open, meaningful, and ethical communication between teenagers and their parents or trusted adults.

The proposed Chatbot for Teenagers represents an unprecedented and compassionate response to the challenge of intergenerational disconnection exacerbated by the pervasive use of mobile devices. By nurturing open communication, providing sound guidance, and cultivating understanding between teenagers and their parents, it seeks to fortify familial bonds, support healthy adolescent development, and cultivate more connected and empathetic generations. This visionary project leverages the capabilities of AI technology to construct bridges of understanding and compassion within families, fostering healthier, happier relationships between teenagers and their parents or guardians. Crucially, it stands as an unwavering guardian of ethical conduct, ensuring that it never guides teenagers down harmful or inappropriate paths, instead offering a steadfast source of support, guidance, and connection.

**Keywords:** Intergenerational communication, Teenagers, AI-driven conversational platform, Trust-Building, Unwavering Guardian, Ethical Conduct.

## SAND MINING IN WATARI RIVER: NEXUS ENVIRONMENT, ECONOMIC AND SOCIAL IMPLICATIONS

*Ahmad Said Abubakar<sup>1</sup> Nafeesat Hussaini Hassan<sup>1</sup> Ali Hussain<sup>1</sup> Nura Isyaku Bello<sup>2</sup>*

<sup>1</sup>*Department of Geography, Aminu Kano College of Islamic and Legal Studies,*

<sup>2</sup>*Department of Geography, Aliko Dangote University of Science and Technology, Wudil*

### ABSTRACT

The study aimed at assessing the implication of sand mining on environment and socioeconomic activities along Watari River. The study utilizes mixed method; where both qualitative and quantitative methods were used. Both primary and secondary sources of data were used. On the other hand, multi-stage sampling technique was used for this research. Descriptive Statistics (Univariate description) was used for data analysis where tabulation, percentage, bar chart and so on were used. On the other hand, the study reveals that majority of the respondents believed that they receive social benefit from sand mining activities, but all of them stated that they do not benefit from sand mining activity environmentally. Though, economically, majority of the respondent believed that they earn some income through engaging in sand mining activity. It is also identified that the most common social challenge that people face in the study area is death because of falling into some gullies or having accident as a result bad terrain they are having because of sand mining activity. The study recommended that It is recommended that the government should intervene directly into sand mining business by regulating the amount of sand should be mined every year in order to minimize the effect of creating gullies. Government should also enforce the compliance with environmental agencies in order to protect the environment and life of people living in the area.

## EXPLORING THE COMPUTATIONAL ANALYSIS OF FLAVONE DERIVATIVES FOR SARS-CoV-2 PROTEIN INHIBITION

*Merzouki Mohammed<sup>A\*</sup>, Bouammali Boufelja<sup>A</sup>, Challioui Allal<sup>A</sup>*

*<sup>a</sup> Applied Chemistry and Environment Laboratory - Macromolecular Organic Chemistry and Phytochemistry Team, Mohammed I University, Faculty of Sciences, Department of Chemistry, 60000 Oujda – Morocco.*

### ABSTRACT

**Background.** This study aims to identify prospective targets for SARS-CoV-2 RdRp for novel therapeutic natural medicines derived from aromatic and medicinal plants, which are present in various food kinds.

**Methods.** In this research article, we created a library of five compounds of Flavone derivatives that exist naturally (4a, 4b, 4c, 4d and 4e) and standard favipiravir- RTP were examined through an in-silico approach which requires several important processes, including (a) Lipinski's rule of five and ADMET parameters, (b) molecular docking analysis, and (c) molecular dynamics simulation for 100 ns.

**Results.** Based on the outcomes presented above, the five compounds displayed a superior pharmacological response compared to the standard, with promising findings and no limitations. As a result, two flavone derivatives (4d and 4e) were selected as they exhibited stronger binding energies than the reference molecule, having binding affinities of -7.036 kcal/mol and -7.141 kcal/mol. Lastly, the stability of the two best compounds bound with SARS-CoV-2 RdRp was confirmed by subjecting them to molecular dynamics (MD) simulations, which showed that they had a stable trajectory (RMSD, RMSF) and consistent interaction profiles with desirable molecular properties.

**Conclusion.** Several compounds derived from aromatic and medicinal plants have been shown in the current analysis to have in silico potential against SARS-CoV-2 RdRp, making them feasible candidates for in vitro and in vivo testing in the treatment of COVID-19 patients.

Pakistan

<sup>2</sup>Faculty of Veterinary Sciences, Bahauddin Zakariyya University, Multan, Pakistan

### ABSTRACT

Leishmaniasis is a vector-borne parasitic disease. The etiological agent, *Leishmania*, is known to infect a wide range of hosts including domestic and wild animals and being transmitted by sand fly. It is one of the most devastating neglected tropical diseases in the world. Pakistan has more than one million camel population which are highly susceptible to parasitic infections. In Pakistan, no published data is available regarding molecular prevalence of *Leishmania* in camels. Therefore, present study was proposed to investigate the molecular epidemiology of leishmaniasis in camels. Briefly, 384 blood samples were collected from camel population of four districts of Zhob division i.e., Musakhel, Barkhan, Loralai and Zhob in Balochistan using simple random sampling method. The information regarding gender, age, living habitat, feeding pattern and managerial conditions were inquired from farmers on a pre-designed questionnaire. DNA was extracted from the collected blood samples using Wiz Prep gDNA kit and then samples were screened by PCR using genus specific primers. The obtained data was interpreted through odd ratio and multiple logistic regression. The overall prevalence noted for *Leishmania* species in Zhob division of Balochistan was 17.18%. *Leishmania* infection was found higher in Zhob (21.29%), followed by Musakhel (19.58%), Barkhan (13.68%) and Loralai (13.09%) district in decreasing order, respectively. Infection was found higher in females, and animals more than 5 years of age. *Leishmania* prevalence was found higher in rainy season as compared to dry season. Animals living in larger herd size (>20 animals) were found more prone to infection as compared to animals living in smaller herd size (<20 animals).

### ABSTRACT

Intravenous (IV) therapy is a cornerstone of modern healthcare, demanding precise fluid and medication delivery. Our innovative Intravenous Drip Controller (IDC) offers a solution to common challenges associated with traditional IV administration. The IDC features a digital interface for accurate and convenient flow rate adjustments, reducing the potential for human errors and enhancing patient safety. Moreover, the system integrates smart sensors and continuous monitoring capabilities, ensuring real-time assessment of patient vital signs and fluid requirements. This dynamic feedback mechanism enables automatic adjustment of the infusion rate, guaranteeing that patients receive the optimal treatment at all times, particularly crucial in critical care scenarios. The IDC prioritizes both healthcare providers and patients, offering an intuitive interface for medical professionals and peace of mind for patients. This advancement promises to revolutionize IV therapy management, improving patient care, reducing healthcare provider workload, and contributing to better medical outcomes. This paper outlines the IDC's key features and benefits, highlighting its potential to transform the realm of intravenous therapy.

### ABSTRACT

The aim of this work is to analyze the boronizing kinetics of 4Cr5MoSiV1 steel within the temperature interval of 1173-1323 K. The employed approach is based on the application of dimensional analysis. Two dimensionless groups were derived during the establishment of this kinetic model to simulate the layer thicknesses of both FeB and Fe<sub>2</sub>B whose values were concordant with the experimental results taken from the literature. The experimental results were fitted according to the power laws to express the interdependence of the two dimensionless parameters

<sup>a</sup> *Department of Electrical Engineering, LGEB laboratory, Biskra University, Algeria.*

<sup>b</sup> *Department of Electrical Engineering, LMSE laboratory, Biskra University, Algeria.*

### ABSTRACT

This work show a comparison between two Maximum Power Point Tracking (MPPT) methods that aims to achieve optimal power operation for a small grid-connected wind turbine. The MPPT algorithm adjusts the duty cycle of a boost converter in response to changes in the DC link power and DC link voltage in order to achieve maximum power production across all wind speeds. Both MPPT methods under consideration was evaluated using MATLAB/Simulink. The system under consideration comprised a Permanent Magnet Synchronous Generator (PMSG) that was operated by a Small Wind Turbine ( 4,5 KW ). This PMSG combination was connected to the the grid DC/AC converter. This work provides a comprehensive comparison between perturb and observe ( P&O) method and incremental conductance ( INC ) under different wind conditions.

## HEALTHCARE ASSOCIATED INFECTIONS IN HIGH RISK WARDS: PREVALENCE AND ASSOCIATED FACTORS

*Nouha Ketata, Maissa Ben Jmaa, Wissal Ghamgui, Yosra Mejdoub, Jihene Trabelsi, Sourour Yaich, Jamel Damak*

*Community Health and Epidemiology Department, Hedi Chaker University Hospital*

### Introduction

Patients in high risk wards (HRW) are highly exposed to healthcare associated infections (HAI) due to the high prevalence of invasive procedures and devices, induced immunosuppression and comorbidities. In this context, this study aimed to determine the prevalence of HAI at HRW and to identify their associated factors.

### Methods

It was a point prevalence study conducted in the two university hospitals of Southern Tunisia in February 2023. All patients hospitalized for at least 48 hours were included in this study. High risk wards consist of wards with the following specialties: Hematology, Oncology, Burns, Transplantation, and Infectious Diseases.

### Results

We recorded 14 HAI among 70 patients surveyed at HRW, giving a HAI prevalence of 20%. The sex ratio (M/F) was 1. Bloodstream infections were the most frequent HAI (n=8; 57.1%), followed by respiratory HAI (n=4; 28.5%). We noted a single case of urinary tract HAI and of digestive tract HAI (7.1%). The median age of infected patients was 47 years, IQR= [27-62] years. The median length of hospital stay was 8 days IQR= [2-23] days. The most common diagnosis at admission were oncological diseases (n=31; 44.2%) followed by infectious diseases (n=13; 18.5%). Hypertension (23.7% VS 6.5%; OR=1.7; p=0.04) and neutropenia (41.7% VS 15.5%; OR=3.8; p=0.03) were statistically associated with high prevalence of HAI in HRW. The HAI were microbiologically documented in 35.7% of cases (n=5), among whom, 3 were caused by multidrug resistant germs (60%). Identified germs were *pseudomonas aeruginosa* (2 cases; 40%) *Klebsiella Spp* (2 cases; 40%), and *enterococcus* (1 case; 20%).

### Conclusion

Our findings illustrated alarming prevalence of HAI in South Tunisian HRW. Therefore, general guidance in enhancing hygiene conditions may reduce HAI rates and especially outbreaks in HRW admitting particular patients.

**Keywords:** Health-care associated infections; High risk wards; Prevalence; Associated Factors.

**THE BURDEN OF HOSPITAL-ACQUIRED BLOOD STREAM INFECTIONS IN SOUTH-TUNISIAN UNIVERSITY HOSPITALS**

*Nouha Ketata, Maissa Ben Jmaa, Wissal Ghamgui, Yosra Mejdoub, Jihene Trabelsi, Sourour Yaich, Jamel Damak*

*Community Health and Epidemiology Department, Hedi Chaker University Hospital*

**Introduction**

Hospital-Acquired Blood Stream Infections (HABSI) are major causes of morbidity and mortality all over the world. Most studies of HABSI were carried out in developed countries and, there are few data providing the specificities of these infections from developing countries of the world. We therefore conducted this survey to describe the epidemiological, clinical and bacteriological features of HABSI in South-Tunisian university hospitals.

**Methods**

We included all patients admitted in the two university hospitals of Sfax, Southern Tunisia, for at least 48 hours in February 2023. An adapted protocol derived from the second national HAI prevalence survey “NOSOTUN 2012”, the “WHO Methodology for Point Prevalence Survey on healthcare-associated infections in Hospitals 2018”, and the European Centre for Disease Prevention and Control (ECDC) was used. HABSI were defined according to the CDC/NHSN case definitions.

**Results**

A total of 1028 hospitalized patients were included in this study. The prevalence of healthcare associated infection was 8.4% (n=86). Of whom, 21 cases (24.4%) had HABSI giving a global HABSI prevalence of 2% (95% CI= [1.3-3.2]). Diagnoses at admission of patients with HABSI were lower respiratory tract infection, catheter related infection (n=3; 14.2%), and urinary tract infection in 2 cases (9.5%). The highest prevalence of HABSI was noted in adult medical wards (n=10; 47.6%) followed by intensive care units (n=8; 38.1%). The sex-ratio was of 0.75. The median age was 43 years old with interquartile range (IQR)= [28-63] years. The median length of stay was 23 days with IQR= [9.5-30] days. The McCabe index was  $\geq 1$  in 7 cases (33.3%). Diabetes was the most frequent associated comorbidity in 5 cases (23.8%), followed by hypertension (n=3; 14.3%), neutropenia (n=2; 9.5%) and dyslipidemia (n=2; 9.5%). Eight patients (38.1%) were immunocompromised and 6 cases (28.6%) had undergone surgery since admission. Suggestive symptoms for HABSI were fever in 9 patients (42.9%) and hypotension in 3 patients (14.3%). A blood culture was requested in 13 cases (62%) and pathogens were recognized in 8 cases (61.5%), of whom 4 were multidrug resistant (MDR) germs (50%). *Pseudomonas aeruginosa*, *Klebsiella spp*, and *proteus mirabilis* were the main isolated germs in 2 cases for each one (25%).

**Conclusion**

In conclusion, HABSI was associated with a substantial burden of hospitalization in South-Tunisian hospitals with high rate of MDR germs. Lower respiratory tract infection and catheter related infection were likely to be the main sources of infection leading to HABSI. Thus, attention should be paid to these patients with underlying conditions to avoid occurrence of such burden.

## KINEMATICS OF THE DRIVE CONVEYOR OF PAD PRINTING MACHINE

*Dmytro Hrytsenko*

*National Technical University of Ukraine "Igor Sikorsky Kyiv Polytechnic Institute", 1/37 Yangel Str.,  
Kyiv 03056, Ukraine*

*ORCID ID: 0000-0002-9857-9166*

### ABSTRACT

Nowadays, pad printing machines have become widespread, making it possible to decorate industrial products of three-dimensional shape using printing methods. Various conveying devices are used to feed products into the printing contact zone. Among them are carousel and conveyor type devices (for example, in a block processing unit).

Taking into account the specifics of pad printing, when printing takes place during the idle period, plate-type conveyors are used, where a device for fixing a printed product is placed on the plate and serves as a support surface during printing. The features of the structure of construction of such conveyors were analyzed and calculation of such conveyors was conducted. The conducted analysis of existing mechanisms of periodic rotary motion shows that it is reasonable to use cam mechanisms of periodic rotation to drive the conveyor.

We propose a device for periodic rotational movement of the driven link, containing a housing, a drive shaft with a cam mounted on it, a main gear connected to the driven link shaft, rollers mounted on it interacting with the cam, a balancing mechanism including an elastic element and an additional gear, interacting with the main gear, wherein one end of the elastic element is connected to an eccentrically mounted pin on the additional gear, and the other end is connected to an eccentrically mounted pin on the cam, the working profile of the cam is made open along the minimum radius vectors. The advantage of such a mechanism is the possibility of any ratio between the working and idle strokes, which is important for versatility when printing products of various dimensions on pad printing machines.

To sum up, this study considers the method of synthesis of the cam mechanism and power calculation of the conveyor for pad printing machines. The construction structure and kinematics of the drive conveyor of pad printing machines is analyzed. The synthesis of the cam gear of periodic rotation for the drive conveyor is conducted.

**Keywords:** pad printing, printing machine, rotary motion, periodic motion, cam mechanism.

*2 - Center for Scientific and Technical Research in Physico-chemical Analyzes CRAPC, BP 384, Bou-Ismaïl, RP 42004, Tipaza, Algeria.*

### ABSTRACT

Clay has many unique characteristics that can be used to make many types of catalysts; its large surface area and cation exchange capability allow it to bind a wide range of organic molecules.

3-aminopropyltriethoxysilane (APTES) molecule is a widely used chemical agent as a grafting bridge for the functionalization of many molecules on the clay support. The addition of ligands on the amine APTES end is necessary to install metals in the form of complexes. The use of these organic molecules on the clay surface allows the development of catalysts for the degradation of organic pollutants release in water sources.

This study concerns the preparation of a hybrid catalyst based on montmorillonite K10 modified with 3-aminopropyltriethoxysilane (APTES), followed by the immobilisation of the triglycine peptide (3Gly) and finally the immobilised peptide is complexed with iron ions. The success of each synthesis step was proven by the different characterisation methods (FTIR, BET, DRX, ATG). The final product was examined in the degradation of Congo Red azo dye by three advanced oxidation processes, namely: Fenton, photocatalysis and photo-Fenton. The results obtained after the catalytic tests show that the prepared catalyst is efficient for the degradation of Congo Red by the Photo-Fenton process, this was concluded thanks to the good yield obtained (96%). Also, the reusability of the catalyst shows that the activity is maintained for three catalytic cycles.

**Keywords:** clay, iron, functionalization, ligands, photo-Fenton.

## OCCURRENCE OF *ESCHERICHIA COLI* AND *KLEBSIELLA* SPECIES IN THE URINE OF UTI PATIENTS ATTENDING BARAU DIKKO TEACHING HOSPITAL, KADUNA

*Ahmad Imam Idris, Fatima Mohammed Musa*

*Department of Microbiology, Kaduna State University*

### ABSTRACT

Urinary tract infections (UTIs) constitute a significant global health concern due to their widespread and contagious nature. These infections often target vital human organs such as the bladder, ureters, and urethra, leading to severe complications. Left untreated, asymptomatic bacteriuria can progress into cystitis or pyelonephritis, resulting in increased treatment costs and morbidity. The absence of a comprehensive national antibiotic resistance surveillance system, coupled with non-evidence-based prescriptions and insufficient data, has hampered effective intervention strategies. This study focuses on assessing the prevalence of *Escherichia coli* and *Klebsiella* species within the urinary tracts of patients receiving care at Barau Dikko Teaching Hospital, Kaduna. Urine samples from 132 individuals suspected of UTIs were analyzed, with 98 (74.24%) being female and 79 (59.85%) males. Notably, the 21-30 age group exhibited the highest prevalence, accounting for 37 (37.37%) of the 79 (79.80%) specimens within the group. Among the 61 (30.50%) isolated pathogens, *Escherichia coli* emerged as the predominant uropathogen, comprising 29 (14.50%) isolates, followed by *Klebsiella* species with 16 (8.00%) isolates. Notably, these pathogens exhibited resistance to common antimicrobials such as Amoxicillin, Ampicillin, Ciprofloxacin, Cefixime, Cefuroxime, Ceftriaxone, Co-Trimoxazole, and Doxycycline, while displaying sensitivity to Amikacin, Nitrofurantoin, and Imipenem. This study underscores the prevalence of UTIs caused by *Escherichia coli* and *Klebsiella* species, encompassing both Gram-positive and Gram-negative bacteria. The alarmingly high resistance rates of these infections to commonly used antimicrobials pose a significant challenge for clinicians, limiting available empirical treatment options. Addressing this challenge requires a multifaceted approach, including robust surveillance systems, evidence-based prescribing practices, and judicious use of antimicrobials.

**Keywords:** Antibiotics, *Escherichia coli*, *Klebsiella*, Urinary Tract Infection.

## H<sub>2</sub>O<sub>2</sub> GENERATING CHEMODYNAMIC AGENTS FOR THE THERAPY OF CANCER

*Gupta Swati Sanjaykumar\*, Rishabha Malviya*

*Department of Pharmacy, School of Medical and Allied Sciences, Galgotias University*

*Greater Noida, Uttar Pradesh, India*

### **Abstract**

With 1.2 million fatalities in 2020, carcinoma was the second most common cause of death, accounting for 23.0% of all fatalities. Due to the great selectivity, chemodynamic treatment (CDT), which uses Fenton-Fenton like catalysts for transforming hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>) into hazardous hydroxyl radicals (OH) to destroy cancer cells, has a lot of potential for tumour therapy. The most important aspect of Chemodynamic Therapy (CDT) is the application of Fenton chemistry in the tumour microenvironment (TME) for treatment for cancer. The advantages of CDT include good selectivity and few side effects because to the particular properties (weak acidity and high H<sub>2</sub>O<sub>2</sub> level) found in the tumor microenvironment. The anticancer impact of CDT is directly correlated with the catalytic performance of Fenton nanocatalysts (F-NCs). However, due to the low concentration of endogenous H<sub>2</sub>O<sub>2</sub>, the effectiveness in combating cancer is inadequate.

**CLASSIFICATION OF SECOND ORDER ORDINARY DIFFERENTIAL EQUATIONS  
USING LAMBDA SYMMETRIES**

*Maliha Gohar*

*Institute of Natural Sciences (INS)*

*Kohat University of Science and Technology (KUST) Kohat KPK Pakistan*

**ABSTRACT**

This research investigates the application of differential equations (DEs) in modeling dynamic phenomena across scientific domains. Nonlinear DEs, common in natural processes, pose significant challenges, but Lie symmetries offer effective solutions by transcending order, linearity, and homogeneity constraints. Identifying symmetries simplifies both partial and ordinary DEs, streamlining problem-solving. The study also delves into  $\lambda$ -symmetries, which extend Lie symmetries and provide new avenues for tackling nonlinear ODEs and PDEs. It conducts a comparative analysis of Lie and  $\lambda$ -symmetries, focusing on categorizing second-order linear and nonlinear ODEs through symmetry identification. By solving equations using both approaches, the research enhances our understanding of the interplay between Lie and  $\lambda$ -symmetries in solving complex differential equations.

**Keywords:** Lie symmetries; Lambda Symmetries; Nonlinear Dynamics; Classification.

## CONTEMPORARY AND TRADITIONAL METHODS AND TECHNIQUES THEIR ROLE FOR EFFECTIVE LEARNING IN THE LOWER CYCLE

*Dr. Alketa Caushi*

*Sports University of Tirana*

*Faculty of Movement Sciences*

*Department of Individual Sports*

*Mcs Reinaldo Gjerazi*

### ABSTRACT

The purpose of this study is to ascertain how much modern methods and techniques take place in relation to the teacher's students. Identify the most useful methods in a lesson.

The most effective evidenced in a lesson as well as the contemporary impact in these methods of thinking methods, communication skills, research, independent, creative thinking, problem solving, initiative, etc.

For the realization of the study, the use of quantitative (questionnaire) and qualitative (interviews, conversations) methods. For the needs of the study in the application of two questionnaires (questionnaire 1 for teachers and questionnaires 2 for students), the interview carried out by the right structures of the schools, unstructured interviews, conversations with the teachers of the students of the schools taken in the study. Finally, 100 students were collected for questionnaire 1 and 15 teachers for questionnaire 2. Interviews were conducted with 3 principals of the schools included in the study, as well as unstructured interviews with the teacher of primary school students.

Where the study was carried out in 3 9-year schools in the city of Tirana, namely "Emin Duraku", "Edit'h Durham" and "Skënder Luarasi" schools. The study population is students of the fourth to fifth grades, the teacher who exercises their activity in the primary cycle classes as well as the principals of these schools.

From the collected data we come to the conclusion that: Contemporary teaching methods bring important and significant changes in learning, as a result of the improvement of teachers for their teaching. Contemporary methods aim to put the teaching and learning process on a contemporary basis, as well as the timely improvement of the teaching and learning process. The implementation of student-centered learning models is a necessity for contemporary and quality learning. These true positive facts about contemporary teaching – knowledge in education saying the hypothesis created.

Contemporary methods are practiced in our schools, but we must not forget that our teachers, especially those with many years of work in education, are still a little traditional in the classroom. While for new teachers, more trainings, talks, open subject lessons should be organized so that Basque methods should remain 100% and learning for students should be a desire of the department within, not only.

**Keywords:** contemporary method, traditional method, quality in education, cooperation.

## CHARACTERIZING BINARY LINEAR CODES BY PERMUTATION AUTOMORPHISM GROUPS

*Fatma ALTUNBULAK AKSU*

*Asist.Prof, Mimar Sinan Güzel Sanatlar Üniversitesi, Fen Edebiyat Fakülte, Matematik Bölümü,  
İstanbul, Türkiye.*

*ORCID ID: <https://orcid.org/0000-0002-6940-4666>*

### ABSTRACT

A binary linear code  $C$  of length  $n$  is a subspace of a finite dimensional vector space  $(F_2)^n$ . The Hamming weight of a codeword  $c$  in  $C$  is the number of non-zero coordinates of  $c$ . The code  $C$  is called constant weight code if each non-zero codeword in  $C$  has the same Hamming weight. This specific family of codes has many applications in design theory. One can approach the problems in coding theory by using group theory, representations of groups and ring theory. The connection between these subjects starts with the action of symmetric groups on finite dimensional vector spaces. The symmetric group  $S_n$  acts on the vector space  $(F_2)^n$  by permuting the coordinates of vectors. The stabilizer of  $C$  under this action is called the permutation automorphism group of  $C$  and denoted by  $\text{PAut}(C)$ . For a linear code  $C$  whenever  $\text{PAut}(C)$  is nontrivial we get many algebraic properties of  $C$  such as being  $F_2G$ -module where  $G$  is a non-trivial subgroup of  $\text{PAut}(C)$  or being a group code or being a quasi group code. Whenever the parameters of  $C$  is getting larger, determining the structure of  $\text{PAut}(C)$  is getting complicated. In this talk, for a binary constant weight code  $C$ , I will give a complete formula for the order of  $\text{PAut}(C)$  in terms of parameters of  $C$ . For the order of  $\text{PAut}(C)$ , such formulas in terms of parameters of the code is not common. As an application of this formula, we calculate  $\text{PAut}(C)$  for some specific infinite families of constant weight codes. These results are a part of the paper [Altunbulak M., Altunbulak Aksu F., On the binary linear constant weight codes and their automorphism groups, [2208.10267.pdf \(arxiv.org\)](#)]

**Keywords:** binary linear codes, constant weight codes, symmetric groups, permutation automorphism groups

## THE IMPACT OF CRISIS MANAGEMENT IN TELE WORKING DURING THE PANDEMIC OUTBREAK -COVID-19

*Dr. Alerta Basha<sup>1</sup>*

<sup>1</sup> *Department of Mathematics and Informatics, Faculty of Economic and Agribusiness,  
Agricultural University of Tirana, Albania*

### ABSTRACT

The pandemic outbreak began in Wuhan, Hubei province, China in 2019, and then spread to almost the rest of the world (W.H.O, 2020). The spread of the virus very quickly encouraged social distancing, reflected next with the closure of borders, the cancellation of flights, the closure of financial markets, corporations, businesses, institutions, universities, schools, also quarantine at home. Covid-19 influenced lifestyle, human health, and above all, a considerable impact on the global economy. The crisis is affecting how and where we work, it has led to a sharp drop in employment and hours worked and it affects workers' incomes, job security and job prospects for young people arriving on the labor market (ILO 2020i). The different trends in the Covid-19 effects are partially explained by the ability of businesses to go digitalization<sup>1</sup>. This research is focused on the outbreak of the pandemic, its impact on the economy, industry, medicine, agriculture, tourism, etc., the challenges and opportunities of teleworking, how to develop work online from home in the future. Understanding the value of working online is to increase the development of businesses towards digitalization, more employment opportunities, increase income and minimize the cost of living. However, there are several practical challenges and associated risks of valuing teleworking that affect its application in practice.

To reach this overall objective, the specific objectives will be:

- Framing the valuations problems in the context of crisis management at the government level, including administration, businesses.
- To evaluate the effectiveness of online work (degree of accomplishment of employment functions, degree, and quality of performance of tasks, possibility, and effectiveness of online communication), limiting / promotional factors.
- An assessment of the development of sectors, the degree of continuity or stay in the online system, as a framework of measures that must be implementing (who, what, when, how?). To promote or keep employment online and in the future.

### ABSTRACT

Science cannot be separated from human life. The human mind was created to think, as mentioned by Him in the Koran. The purpose of writing this paper is to explain the classification of science from an Islamic perspective. This writing method uses a literature review sourced from online journals regarding the classification of Islamic sciences. The definition and meaning of science is the result of interpretation by Muslim thinkers in interpreting the word in question based on their respective perspectives. The absence of specific mention of the concept, definition, meaning or nature of science in the Qur'an is caused by several things. First, that the word science had become a word that could be understood by the Arab community when the Koran was revealed to the point that it no longer needed to specifically mention its meaning in the Koran. According to Islamic philosophers such as al-Kindi, al-Farabi, Ibnu Sina, Al-Ghazali, and Ibn Khaldun, the classification and hierarchy of sciences adhere to the Al-Qur'an and Hadith, namely in choosing between basic or main sciences and those that are not main or not main. The nature of Islamic perspective science is holistic or Rabbani. It means in line with Islamic philosophy regarding natural and human issues, especially regarding issues of natural science as well as social and humanitarian knowledge. Science is comprehensive and integrated in an effort to explain issues between the natural and supernatural realms, namely between the physical and metaphysical realms, or between issues of the world and the hereafter (religion). So from an Islamic perspective, the nature of science takes into account the role of religion or the role of God.

**Key words:** classification, science, and Islam

**ABSTRACT**

**Background and aim:** Peritoneal fluid increase is common in benign and malignant diseases called ascites. Drainage of the existing fluid may be necessary for diagnosis, treatment, and palliation. For this purpose, the catheter procedure can be performed using the Seldinger or Trocar technique. This study aims to evaluate the efficacy and safety of percutaneous ascite drainage using the Trocar technique.

**Material and methods:** A total of 40 patients who were inserted percutaneous ascites drainage catheter using the Trocar technique in our center between January 2021 and August 2023 were included in the study. The procedure was performed under the guidance of ultrasonography, under standard sterile conditions, and local anesthesia.

**Results:** The mean age of the patients was 62±9.5. 18 patients (45%) were male, and 22 (55%) were female. An 8F catheter was inserted in 28 patients (70%), and a 10F catheter was inserted in 12 patients (30%). There was malignant effusion in 35 patients (87.5%) and benign effusion in 5 patients (12.5%). The procedure was performed in 6 patients using an antiaggregant (15%). The nature of the effusion was serous in 25 patients (62.5%), and hemorrhagic in 15 patients (27.5%). No major complications developed in any of the patients. Minor complications were present in 2 patients (5%). There was leakage around the catheter in 1 patient, and an infection developed around the catheter in 1 patient.

**Conclusion:** Percutaneous ascites drainage with the Trocar technique is effective and safe for both malignant and benign diseases.

**Keywords:** ascites, catheter, trocar technique.

**ABSTRACT**

This research aims to examine the integration-interconnection approach. This research is library research with a qualitative approach. The data sources used in this research come from various literature journal articles that are relevant to the research topic. The data analysis method used is content analysis of the literature sources used in the research. The result of this research is that the unification of science is based on four approaches. First, the conflict approach is a belief that basically science and religion cannot be reconciled. Religion relies on wild imagination, while science relies on observed facts. Second, the contrast approach is a statement that there is no real conflict because religion and science respond to very different problems. Many scientists and theologians do not find any contradiction between the two valid even though the limits of the scope of their own investigations are clear. Third, the contact approach, an approach that seeks dialogue, interaction and the possibility of adjustments between science and religion, especially seeking ways in which science influences religious and theological understanding. This approach believes that without interfering with the methods typical of a scientist, religious beliefs thrive alongside science, so that they can produce a shared meaning, a meaning that is brighter than the meaning that can be given by either of them. Fourth, the confirmation approach is a quiet but very important perspective, this perspective highlights the ways in which religion at a deep level supports and animates all scientific activity. The universe is a finite, coherent, rational and orderly totality.

IN-SILICO AND RETROSYNTHESIS APPROCHE FOR 1,2,3-TRIAZOLE-QUINOLINE AS  
POTENTIAL INHIBITORS AGAINST SARS-COV-2 VIRUS

*Yassine Koubi<sup>a,\*</sup>, Youness Moukhli<sup>a</sup>, Halima Hajji<sup>a</sup>, Oumayma Abdessadak<sup>a</sup>, Marwa Alaqarbeh<sup>b,\*</sup>, Mohammed Aziz Ajana<sup>a</sup>, Hamid Maghat<sup>a</sup>, Tahar Lakhli<sup>a</sup>, Mohammed Bouachrine<sup>a,c</sup>*

**ABSTRACT**

Sars-Cove-2 has become a serious problem that motivates researchers to find new antiviral drugs as effective therapies. A computational study was carried out for disubstituted 1,2,3-triazole-quinoline molecules as Sars-Cov-2 inhibitors, where 3D-QSAR approach investigated the quantitative structure-biological activity as Mpro protease inhibitors. The study of the 3D-QSAR approach was performed for Comparative Molecular Field Analysis (CoMFA) and Comparative Molecular Similarity Index Analysis (CoMSIA), where CoMFA model values ( $Q^2 = 0.53$ ;  $R^2 = 0.97$ ) and the best values of the CoMSIA model ( $Q^2 = 0.67$ ;  $R^2 = 0.93$ ).

Molecular docking and a molecular dynamics analysis were carried out to study the stability of the ligands inside the biological Mpro active site, and an insilico ADMET study explored the pharmacological and physicochemical properties of the proposed molecules as a new anti-viral agent. These exploits good predictability. Subsequently, the CoMFA and CoMSIA models were evaluated by an external validation using the creditors of A. Goldparikh and A. Tropsha. A molecular docking study was carried out for the 18 derivatives of 1,2,3-triazole-quinoline and the five new candidates proposed with the biological target Mpro. MD molecular dynamics assess the reliability of this proposition and ADMET physicochemical properties and drug similarity.

A retrosynthesis routes was suggessted using two online platforms to show the possible synthesis route. The results help researchers to synthesize new candidates against Sars-Cove-2.

**ABSTRACT**

This research paper aims to introduce the concept of lacunary ideal Cauchy sequences of fuzzy variables in a credibility space. We establish the interrelationships between this notion with lacunary ideal convergent sequences in the same structure from several aspects of credibility. Also, we investigate the ideas of strongly lacunary Cauchy, strongly  $\mathcal{J}$ -lacunary Cauchy and strongly  $\mathcal{J}$ -lacunary Cauchy sequences of fuzzy variables in credibility and look into the relationship among them.

**SENSOR-BASED DRONE**

*M. Keerthiga, First Year – CSE*

*RMK Engineering College, RSM Nagar,*

*Gummidipoondi Taluk, Kavaraipettai, Tamil Nadu 601206*

**ABSTRACT**

A sensor-based drone is a cutting-edge technology that utilises various sensors to enhance its capabilities and functionality. These sensors can include, but are not limited to, GPS, cameras, LiDAR, thermal imaging, and obstacle detection sensors. By integrating these sensors into the drone's system, we can operate this drone without human intervention. This sensor-based drone can be used in many areas, like agriculture and video recording, etc. A person cannot always pilot a drone. A person operating a drone can't cover the events properly; there may be ups and downs. Having a sensor-based drone eliminates the need for constant human supervision and allows for autonomous operation. So, by using sensors in the drone and setting the boundaries, it enables the drone to move around the given area and record the events. This is not only saving time and effort but also ensures that no important moments are missed. Additionally, the sensor-based drone can be programmed to follow specific patterns or paths, providing consistent and accurate footage or data collection. It can be programmed to follow a predetermined route during a sports event, capturing all the action from different angles. This feature is particularly useful in situations where a single camera angle may not be sufficient to capture all the important moments. By autonomously navigating through the designated area, the sensor-based drone can provide a comprehensive view of the event, ensuring that every vital moment is recorded. Moreover, the drone's ability to follow specific patterns or paths also allows for efficient data collection in various fields. For example, in agriculture, the drone can be programmed to fly over fields, collecting data on crop health and growth.

### ABSTRACT

This study aims to examine how two contemporary female writers, Lola Shoneyi and Ayobami Adebayo portray the social phenomenon of male sexual impotence and sterility in their novels entitled respectively *The Secret Lives of Baba Segi's Wives* (2010) and *Stay With Me* (2017). Drawing its theoretical insights from womanism, the Hallidayan Transitivity theory and the qualitative research method, the study intends to unravel the Yoruba worldview with regard to male impotence and sterility; i.e. how the Yoruba society apprehends and treats male impotence and sterility. It also foregrounds the female writers' perception of this phenomenon, which is considered as a male secret or taboo and their attitudes towards it. The findings reveal, for instance, that the Yoruba society does not consider male sexual problem as a major problem in a marital home but it ontologically encourages men and women to find a solution to it. In fact, as this analysis indicates, the two female writers under study here have captured some approaches of solution to male impotence and sterility. These approaches are undergirded and marked by secret keeping, dialoguing, deconstructing some Yoruba beliefs referring to the female gender as being incapable of keeping secrets, and complementarity or gregarious way of life, as cornerstones, to the interaction between married men and women in the society.

**Keywords:** Female writers; male impotence and sterility; womanism; Transitivity theory; Yoruba ideologies.

## ABSTRACT

Python is a scriptable and interpreted language for both learning and real-world programming. Python is a powerful, high-level language developed by Guido van Rossum. In this paper, we will provide an introduction to the main Python programming software tools used for data science and machine learning techniques. Briefly, this paper will first introduce Python as a language, give an introduction to data science and machine learning, and then describe packages that are popular in the data science and machine learning sectors, such as NumPy, SciPy, TensorFlow, Keras, Matplotlib, Matplotlib etc. From there, we will move on to show the importance of Python for building data science applications. We will use different code examples throughout. To aid the learning experience, execute the following examples contained in this paper interactively using Jupiter notebooks.

### ABSTRACT

Our innovative project aims to revolutionize the healthcare industry by introducing an Automatic Drug Dispenser system designed for hospitals and clinics. Recognizing the common challenges faced by patients, including long queues and wait times to purchase essential medications, we have developed a solution that leverages cutting-edge technology to streamline the entire process. Each patient is assigned a unique QR code containing comprehensive prescription data. When presented to our Automatic Drug Dispenser, the QR code is swiftly scanned, triggering the display of a confirmation screen on an LED interface, providing patients with assurance and clarity regarding their prescription. With a simple touch or scan on the same LED display, patients can proceed to collect their medications, eliminating the need for lengthy waits and cumbersome manual interactions. Payment for the medications is seamlessly integrated into the process, as patients can conveniently settle their bills by scanning the QR code displayed on the LED screen. This system not only enhances the patient experience by reducing queue times but also minimizes the risk of errors associated with manual dispensing. Moreover, it promotes contactless transactions, contributing to overall safety, particularly in the context of healthcare. Our Automatic Drug Dispenser represents a significant advancement in patient care, efficiency, and convenience, offering a promising solution for healthcare facilities seeking to enhance their service delivery.

## WHAT DOES A NEW BOOK ABOUT SAKARTVELO/ GEORGIA REPUBLIC/GURCISTAN BEING A MARITIME REPUBLIC SAY?

*Dr. Natela Borisovna POPKHADZE*

*Head of Scholarly Information Center at Phassis Academy in Tbilisi*

*ORCID ID; 0000-0003-1552-7860*

### ABSTRACT

I shall talk about what I like mostly in the huge new book written, compiled and published by Merab ADEISHVILI in Tbilisi in 2022. He thanks over twelve persons for aiding him in preparation of that book. I like most the title of that book. Secondly, I like the layout of that book. I shall talk about the historical overview of the maritime activity of our nation in Sakartvelo/Georgia Republic as rendered in that book and compare it with another book published by Emeritus Professor Mose Giorgievich Janashvili that died in 1934 and is buried at the Pantheon on the Mtatsminda hill in Tbilisi. Professor Merab Adeishvili was the Transport Minister of Sakartvelo/Georgia Republic for several years and was deeply involved in the idea of making a mega port Anaklia near Poti at the Sea. With my background of decades of the critical investigation of most publications concerning the historical geography of the area for which I learned the ancient languages Sumerian, Akkadian, Luvian and Kimet language (*Kimet* was the name of the country/land ruled by the pharao in the lowland area of the river Nylos in Africa at the Javakhishvili University in Tbilisi I can say that M. Janashvili's publications *Chrdiloet Sakartvelo* (Northern part of Sakartvelo- written to be published in 1916 in Tbilisi and M. Janashvili's book *Istoria Sakartvelosi uudzvelesi droidan* published in 1906 -both in the Kartuli language- are necessary materials to anyone overiewing the topic what is Aia-Kolkheti that is officially called Georgia Republic nowadays. In my opinion, the historical overview printed in Merab Adeishvili's book is badly written and needs to be improved. In my opinion, it is better to return lands with seashore in the north that were historically Aia-kolkheti and that would mean that the port called now Novorossiisk will be part of Aia-kolkheti called now Georgia Republic in English. M. Adeishvili's book considers that there is the Abkhaz ethnicity and we- the Qartvels//the Georgians must be reconciled with the Abkhaz ethnicity. Contrary to that supposition, I am of the opinion that the creation of the so-called Abkhaz ethnicity was distortion of the reality and the truth must be rehabilitated. Having all these facts in mind, I may conclude that it is good that Merab Adeishvili partly wrote, partly compiled the book entitled- *Sakartvelo sazghvao kveqhanaa* ( in English it means that Sakartvelo is a maritime republic), but there are ideas reprinted from other persons' publications that contain mistakes and incorrect suppositions that distort the truth and are bad to readers.

**Keywords:** Sakartvelo, Georgia , Maritime Republic, Anaklia port.

## SAFE BANKING MADE SIMPLE: QR ATM ACCESS

*Tharani.R<sup>a</sup> SRI SIVA KAVYA.R<sup>a</sup> AKSHAYA.S<sup>a</sup>*

*<sup>a</sup> II Year students, R.M.K Engineering college, Kavaraipettai-601206, India*

### ABSTRACT

Traditional ATM systems relying on physical ATM cards pose significant challenges, including card theft risks, physical contact with machines, and the need for frequent card replacements due to wear and tear. In response to these challenges, we propose an innovative ATM system designed to enhance both transaction safety and convenience. This paper outlines the core features and security measures of our proposed system while emphasizing user-friendliness and accessibility. To ensure that only authorized account holders can use the system, we implement a two-step verification process. Users are required to scan a QR code displayed on the ATM screen using their bank's mobile app, effectively verifying their identity and eliminating the need for physical cards. This approach streamlines transactions, making them touchless and secure. To enhance security further, we incorporate device location verification, comparing the user's device location with that of the ATM. This additional layer of protection prevents fraudulent attempts originating from remote locations, reinforcing the system's overall security. Furthermore, we employ a One Time Password (OTP) sent to the user's mobile device to confirm their identity and bolster security during transactions. The OTP mechanism ensures that only authentic account holders can complete transactions, providing an additional layer of protection against unauthorized access. Our primary objective is to seamlessly integrate these security measures while giving top priority to user-friendliness. We are dedicated to creating an inclusive and accessible system that accommodates users without smartphones, ensuring that all customers can enjoy the benefits of a touchless and secure ATM experience. By addressing these challenges and incorporating these innovations, we aim to develop an ATM system that is both highly secure and user-friendly. This system has the potential to significantly enhance the overall banking experience for customers while mitigating the risks associated with traditional ATM card-based transactions.

## ESTIMATION OF GLOBAL SOLAR RADIATION USING FIVE SUNSHINE BASED MODELS FOR ILORIN, NORTH-CENTRAL NIGERIA

*Ibrahim B. B<sup>1</sup>, Usman A<sup>1</sup>*

*Department of Science Laboratory Technology, Physics/ Electronic, Institute of Applied Sciences,  
Kwara State Polytechnic, Ilorin.*

*ORCID NO: 0000-0003-3679-6111*

### ABSTRACT

Estimation of global solar radiation using five sunshine hour models in Ilorin, north-central, Nigeria (8.54°N, 4.54°E) was developed using the Angstrom type regression equation. The solar radiation ( $W/m^2$ ), hours of bright sunshine were collected from achieve of Nigeria Metrological Centre, Oshodi, Lagos, for a period from (1992-2022). The constants of the Angstrom-type regression equation (Models) were determined by plotting the clearness index ( $H/H_0$ ) against the fraction of sunshine hours ( $n/N$ ) to obtain the line of best fit. The result of the correlation were also tested for error using statistic test methods of the mean biased error, MBE, root mean square error, RMSE, and mean percentage error, MPE to assess the performance of the models. It was observed that out of all models used, modes III and IV gave the best prediction for global solar radiation using sunshine hour.

**COVID-19 DETECTION WITH DEEP LEARNING TECHNIQUES USING 3D CT SCAN  
IMAGES**

*Mrs.S.Sivasakthi*

*G. Venkataswamy Naidu College, Kovilpatti, Tamilnadu, India.*

*ORCID ID: <https://orcid.org/0000-0001-8550-2226>*

**ABSTRACT**

The COVID-19 pandemic has posed an unprecedented global health challenge, necessitating rapid and accurate diagnostic methods. Computed Tomography (CT) imaging has emerged as a valuable tool for detecting COVID-19 due to its ability to reveal characteristic pulmonary abnormalities associated with the disease. This paper presents an innovative approach for COVID-19 detection using deep learning techniques applied to 3D CT scan images. We leverage the power of convolutional neural networks (CNNs) and three-dimensional image processing to develop a robust and efficient COVID-19 detection system. The proposed model is trained on a large and diverse dataset of 3D CT scan images, including samples from COVID-19 positive and negative cases, to ensure its generalization across different populations and imaging systems. Our deep learning architecture incorporates three key components: feature extraction, feature fusion, and classification. Feature extraction is achieved through a combination of 3D convolutional layers, which capture spatial patterns within the CT scans. Feature fusion combines information from multiple scales to enhance the network's ability to discriminate COVID-19-related abnormalities from other lung conditions. Finally, a softmax classifier is employed to make the binary classification decision of COVID-19 positive or negative. Extensive experimental results demonstrate the superiority of our proposed approach compared to traditional methods and other state-of-the-art deep learning models. The system exhibits high accuracy, sensitivity, and specificity in COVID-19 detection, even in cases with subtle radiological features. Furthermore, it demonstrates robustness across different CT scanners and imaging protocols, making it suitable for widespread clinical adoption. The implementation of our deep learning-based COVID-19 detection system holds significant promise for expediting diagnosis and reducing the risk of disease transmission. With its ability to rapidly and accurately identify COVID-19 cases using 3D CT scan images, it can complement existing testing methods and aid healthcare professionals in making informed decisions for patient care and resource allocation during the ongoing pandemic and potential future outbreaks.

## SENSOR-BASED APPLICATIONS IN ASSESSING HEAT STRESS RESPONSE IN GRAZING ANIMALS

*Deepika, A.<sup>1\*</sup>, Yamini, S.<sup>1</sup>, Abarna, R.<sup>1</sup>, Kalaignazhal, G.<sup>1</sup>, Silpa, M.V.<sup>2</sup> and Sejian, V.<sup>1</sup>*

<sup>1</sup>*Rajiv Gandhi Institute of Veterinary Education and Research, Kurumbapet, Pondicherry-605008,  
India*

<sup>2</sup>*Institute of Animal Breeding and Genetics, Justus-Liebig-Universität Gießen, Gießen, Germany*

### ABSTRACT

In the changing climatic scenario, livestock are subjected to different kinds of stress which affects their production, health, and reproduction. Among them, heat stress is the most detrimental factor hampering the livestock production on a major scale. Therefore, it is of paramount importance to accurately quantify the heat stress response in livestock for defining suitable and accurate amelioration strategies to sustain their production. Non-invasive methods of detecting heat stress magnitude for livestock are gaining momentum especially the real-time automated measurement of physiological and behavioural traits using sensor-based technologies is the new arena to explore for researchers across the globe. These promising technologies allows to closely monitor the vital variables in animals and aids in the early prediction of heat stress and diseases without human interference, keeping animal welfare standards at the highest level. Various remote sensing technologies such as ear canal sensors, rumen or reticular boluses, rectal and vaginal probes, infrared thermography (IRT) or thermal imaging and implantable microchips can be employed in grazing animals to assess the heat stress. Behavioural responses and activity alterations to heat stress can be monitored using accelerometers, Global Positioning Systems (GPS), or Global Navigation Satellite Systems (GNSS). Thus, sensor-based technologies aim to provide the accurate and real-time measurement of grazing animal's behavioural and physiological alterations to heat stress. These technologies are non-invasive and provide precise, continuous, remote, and real-time data. Animal welfare takes the highest priority in these approaches, as handling and restraining is negligible while applying these technologies at the farm level. However, these technologies are mostly adopted in developed countries and it is necessary to extend their usage in developing countries as they host the major proportion of livestock population and are more prone to the adverse environmental challenges. These pools of sensor-based technologies along with automation and big data analytics are the future perspectives of quantifying heat stress response in farm animals.

**Keywords:** Animal welfare; Heat stress; Non-invasive; Sensors

### ABSTRACT

PVC pipe clips are essential components used in various industries to securely fasten and organize PVC pipes. This project aimed to develop a cost-effective and efficient manufacturing process to produce high-quality PVC pipe clips with consistent dimensions and superior performance. This research initially focused on understanding the requirements and specifications of the PVC pipe clips and analyzing existing molds used for similar purposes. Design and fabrication of injection molding molds play a crucial role in modern manufacturing processes, enabling the mass production of intricate plastic components used in various industries. My research study presents a comprehensive investigation into the design and fabrication of an injection molding mold, focusing on optimizing its performance, efficiency, and quality. So, the initial phase of the study involved an in-depth analysis of the requirements and specifications of the target plastic component. Through computer-aided design (CAD) software, a precise and innovative mold design was developed, considering factors like material compatibility, part geometry, and mold complexity. Special attention was given to the selection of appropriate materials for the mold to ensure durability and longevity under the demanding conditions of the injection molding process. The fabrication process employed advanced machining techniques, such as computer numerical control (CNC) machining, to manufacture the mold components with high precision and accuracy. The use of modern manufacturing technologies allowed for the rapid production of complex mold geometries, reducing lead times and enhancing overall production efficiency. Investigated various aspects of mold design and fabrication, including cooling system optimization, venting solutions, and surface treatments, to minimize defects and improve the quality of molded parts. The researchers also explored the integration of conformal cooling channels to enhance heat dissipation outcomes of this research contribute to the advancement of injection molding technology by providing insights into the best practices for mold design and fabrication. The developed methodologies and findings can serve as valuable guidelines for manufacturers seeking to optimize their production processes, improve product quality, and reduce production costs and reduce cycle times.

### Introduction

Injection molding is a widely used manufacturing process for plastic components, and the mold for the injection molding machine is its core element. This introduction highlights the mold's significance and key factors in design and operation. The mold shapes molten plastic into the desired form, consisting of cavity and core halves precisely machined to create the product's negative impression. Proper mold design considers geometry, materials, cooling systems, and gate placement to ensure smooth filling and minimal defects. Material selection involves using steel or aluminum to withstand high pressures and temperatures. Different mold types accommodate varying production needs, from single-cavity molds for low volume to multi-cavity and family molds for higher output. Regular maintenance and innovative technologies, such as CAD/CAM, contribute to enhancing mold performance and prolonging its lifespan, enabling the production of high-quality plastic products efficiently. **Aims and objectives** To design and manufacture the PVC drainage cover die.

For making of PVC pipe holding clip die will be designed by first we have to know the peak pressure and temperature of the injection molding machine on the basis of temperature and pressure the material selection will be done by testing all calculation in Ansys software so that in result all the percentages and composition of materials will be clarified with precautions. **Historical Background**

Die is believed to have had its humble birth sometime during the middle of the 19th century. According to records, the first die equipment was invented in 1838 with the sole purpose of manufacturing parts for the moveable type machines responsible for the printing industry. Now a day the die is installed in the injection molding machine so that that speeds up the process and no man power is used during this process.

### **Design Components**

The design components of an injection molding machine mold can vary depending on the specific requirements of the product being manufactured. However, here are some essential design components commonly found in injection molding machine molds:

#### **Cavity and Core:**

These are the main components that form the shape of the final product. The cavity is the female part of the mold, and the core is the male part. When the mold is closed, the cavity and core come together to create the desired shape of the product.

#### **Runner System:**

The runner system is responsible for guiding the molten plastic from the injection nozzle into the cavities. It consists of channels and gates that distribute the plastic evenly to each cavity.

#### **Gating System:**

The gating system includes the sprue, runners, and gates that direct the flow of molten plastic from the injection machine nozzle to the cavity. The design of the gating system affects the flow, cooling, and quality of the molded part.

#### **Ejector System:**

The ejector system is used to push the finished part out of the mold after it has cooled and solidified. It typically consists of ejector pins or plates that move the part away from the core.

#### **Cooling System:**

Efficient cooling is crucial in the injection molding process to ensure proper solidification and minimize cycle time. Cooling channels are incorporated into the mold to remove heat from the molten plastic and the mold itself. **Venting System:**

To prevent air traps and ensure complete filling of the mold, vents are included in the design. These vents allow air and gases to escape during the injection process.

#### **Guiding and Alignment Mechanisms:**

These components ensure precise alignment and proper closure of the mold during the injection process. They help maintain the correct position of the cavity and core.

#### **Ejector Pin Retainers:**

These components hold the ejector pins in place during the molding process and allow for easy replacement if needed. **Sprue Puller System:**

The sprue puller is a mechanical device that helps to separate the sprue (the excess material connected to the runners) from the molded part.

#### **Heating System:**

Some molds, especially for certain types of materials, may include a heating system to aid in maintaining proper mold temperature and optimize the molding process.

**Mold Base:**

The mold base is the main structural support for all the components and provides the interface to the injection molding machine.

**Ventilation System:**

The ventilation system allows for proper air circulation during cooling and can also aid in exhaust management.

**Overflows and Parting Lines:**

These are essential features in the mold design that account for material shrinkage during cooling and enable easy removal of the finished part from the mold.

**Methodology**

**Theoretical Studies**

Acquiring dimensions-The dimensions of the existing die were acquired by manually by measuring with a scale and Vernier scale. Also, more accurate dimensions were acquired by scanning with a CMM at Accurate.

**Experimental Setup**

Creating a CAD model of existing die - By using the dimensions we obtained we could create a CAD model using software like CATIA, Creo, Solid Works, etc.

If the product is scanned by a CMM we would obtain a CMM data sheet which contains the coordinate points plotted in a 3D plane with the help of a computer integrated software like Arco software or other assistant software. By using laser scanner, we could directly generate a 3D CAD model of the product as it is scanned.

**Material Selection for die**

A suitable material is selected under the guidance of guide, research papers and support from a local injection company. The below comparison helps us to select the material for die based upon our requirements. As per our requirement.

**Design of CAD model for new product**

A design of product is modeled using a modelling software such as CATIA using the constraints obtained after measuring the dimensions of existing die and molding machine.

**RESEARCH PAPERS Practical applications of taguchi method for optimization of processing parameters for plastic injection molding: a retrospective review** NgChina Fei,Nik Mizamzul Mehat, Shahrul (2013)

This paper presents a review of research in the optimization of processing parameters for injection moulding. A number of research works based on standalone Taguchi method and the integration of Taguchi method with various approaches, including numerical simulation, grey relational analysis (GRA), principal component analysis (PCA), artificial neural network (ANN), and genetic algorithm (GA), have been discussed. In a volatile and fiercely competitive global market, the practice of the trial-and-error approach which relies heavily on the experience of the moulding personnel is no longer sufficient to meet the challenges of globalization especially at the point where the disadvantages outweigh its advantages. (1)

**Productivity enhancement in dies and molds manufacturing by the use of C1 tool path** M Boujelbene, A Moisan, N Tounsi, B Brenier (2004)

The challenge of die and mold milling is to achieve the specified dimensional and geometrical accuracy, and improve the surface roughness, in order to minimize polishing operations, still necessary to meet the tight tolerances required by the automotive industry and the plastic injection sector. Surface finish analysis given by 3D measurements and data processing techniques shows that microgeometrical defects generated by C<sup>1</sup> continuous tool path are definitely less serious than those obtained by classical tool

paths driven via linear interpolation. Also, polishing time saving is more than 30%. Thus, a substantial productivity enhancement is achieved in dies and molds manufacturing. (3)

**Modern machining of die and mold tools. J mater process technol**

Krajanik P, Kopac J (2004)

Modern production of die and mold tools is quite different in comparison with conventional machining. The basic theory of cutting process and cutting geometry is similar, but the techniques and technology is quite different. High-speed cutting (HSC) principles are not applicable with conventional machinetools. Difference between conventional and high-speed cutting velocity is analyzed on chip formation. The comparison between EDM and HSM has been made and shows great HSC benefits. Usage of modern software (CAM) optimizes tool production and helps us to save unnecessary additional machining time and costs. (4)

**Investigating the cutting phenomena in free-form milling using a ball-end cutting tool for die and mold manufacturing**

Adriano Fagali de Souza, Anselmo Eduardo Diniz, Alessandro Roger Rodrigues & Reginaldo Teixeira Coelho

(2014)

This paper presents an investigation of no planar tool-work piece interactions in free-form milling using a ballend cutting tool, a technique that is widely applied in the manufacturing of dies and molds. The influence of the cutting speed on the cutting forces, surface quality of the work piece, and chip formation was evaluated by considering the specific alterations of the contact between tool-surface along the cutting time. The experimental results demonstrated the negative effect of the engagement of the tool tip into the cut on machining performance. The length of this engagement depends on the tool and work piece curvature radii and stock material. When the tool tip center is in the cut region, the material is removed by shearing together with plastic deformation. Such conditions increase the cutting force and surface roughness and lead to an unstable machining process, what was also confirmed by the chips collected. (5)

**Application of Taguchi method in the optimization of injection molding parameters for manufacturing products from plastic blend** S. Kamaruddin, Zahid A. Khan and S. H. Foong (2010)

This paper presents a study in which an attempt has been made to improve the quality characteristic (shrinkage) of an injection molding product (plastic tray) made from blends plastic (75% polypropylene (PP) and 25% low density polyethylene (LDPE)) by optimizing the injection molding parameters using the Taguchi method. The analysis of the results shows that the optimal combination for low shrinkage are low melting temperature, high injection pressure, low holding pressure, long holding time and long cooling time. Using Taguchi method for design of experiment (DOE), other significant effects such as interaction among injection molding parameters are also investigated. (6)

**A CAD/CAE-integrated injection mold design system for plastic products**

Ivan Matin, Miodrag Hadzistevic, Janko Hodolic, Djordje Vukelic & Dejan Lukic (2012)

Mold design is a knowledge-intensive process. This paper describes a knowledge-based oriented, parametric, modular and feature-based integrated computer-aided design/computer-aided engineering (CAD/CAE) system for mold design. Development of CAx systems for numerical simulation of plastic injection molding and mold design has opened new possibilities of product analysis during the mold design. The proposed system integrates Pro/ENGINEER system with the specially developed module for the calculation of injection molding parameters, mold design, and selection of mold elements. The system interface uses parametric and CAD/CAE feature-based database to streamline the process of design, editing, and reviewing. Also presented are general structure and part of output results from the proposed CAD/CAEintegrated injection mold designs. (7)

**Shear viscosity measurements of polymer melts using injection molding machine with adjustable slit die** Johanna Aho Seppo Syrjala (2011)

Rheological properties of polymer melts were studied using a slit die attached to an injection molding machine. The die has three exchangeable inserts to set the slit height to 0.75, 1.0, or 1.5 mm. The modular design eases the die cleaning, and measurements with variable slit heights enable the detection of possible wall slip. This suggests that a simple slit die construction can be used as an inexpensive rheometer to measure rheological properties of polymer melts for processing purposes. The thermomechanical history of the investigated melt in the in-line slit die experiments resembles that in actual melt processing and, therefore, determination of rheological properties under true processing conditions is possible. (8)

**Quality monitoring of micro-shrinkage defects in thick-walled injection molded components**

Jian-Yu Chena Jia-Xiang Zhuangb Ming-Shyan Huangb (2019)

Sink mark defects are commonly observed in thick-walled injection molded components as a result of underpacking in the hot-spot areas and an insufficient compensation of the polymer melt as the plastic begins to cool. These defects degrade the surface quality of the molded parts and are a reliable indicator of excessive volume shrinkage during the molding process. The experimental results obtained under various values of the holding pressure show that the five injection molding process quality indexes are all highly correlated with the microshrinkage. The correlation is particularly strong for the pressure-based quality indexes and hence, it is suggested that these indexes provide a viable means of predicting the formation of sink mark defects and excessive microshrinkage in thick-walled injection molded component. (9)

**A framework for analyzing energy efficient injection-molding die design**

J. Mattis; P. Sheng; W. DiScipio; K. Leong (1996)

Significant part of the development of electronics products is the design of injection molded thermoplastic parts ranging from chassis panels and enclosures (I/O connectors). While much effort has been spent on analyzing the end-of-life issues associated with thermoplastic parts, such as disassembly, separation, and recycling, a primary driver for design-for-environment of plastic parts is the energy expended in the forming process. As well as process parameters selection on the process energy efficiency through a framework that integrates a 3-d solid modeling environment, numerical analysis of the filling and postfilling behavior, and an energy-based process model. The process model that is presented describes the modes of energy utilization in injection molding processes as they relate to design-for-environment concerns. Case studies are performed on a center-gated plastic disk, and a small plastic enclosure to illustrate the use of this framework (10)

**Determination of process parameters based on cavity pressure characteristics to enhance quality uniformity in injection molding**

Jian-Yu Chena Ping-Han Hung b Ming-Shyan Huangb (2021)

An appropriate choice of the process parameters is essential to ensure the precision and uniformity of the molded parts. The flow length-to-wall thickness ( $l/t$ ) ratio for most molded components lies in the range of 100-200. For higher values of the  $l/t$  ratio, the flow resistance increases dramatically at the end of the molded part and the injection pressure propagates less easily through the mold cavity. Consequently, the geometric dimensions of the molded parts in the near-gate region are frequently different from those in the far-from-gate region as well as resulting in lower uniformity molded components. With a large  $l/t$  ratio, the  $v/p$  switchover point should be determined based on the quality requirement for the part in the far-from-gate region in order to avoid insufficient (1)

**DESIGN AND FABRICATION      List of Components**

- Ejector pin
- Ejector retaining plate
- Ejector plate
- Mold core
- Ejector box
- Support plate
- Guiding pins
- Locating ring
- Springs
- Clamping plates (fixed plate)
- Cooling channels

**Components Detail    Ejector Pin**

Ejector pins are vital in creating parts. They are an integral component of the ejection system in mold, which determines the final outcome of products in an injection molding process. Injection molding is a manufacturing process that involves injecting molten plastic in a metal mold to assume the shape of the mold.

**Ejector Pin 3D Model**

*Figure 3: Ejector Pin 3D Model*

**Ejector Retaining Plate**

An ejector retainer plate holds the heads of ejector pins in place. The main function of this plate is to lock the heads of the pins so they don't come out during the injection molding process. The ejector bar plate has almost the same role as an ejector retainer plate. **Ejector Retaining Plate 3D Model**

*Figure 5: Ejector Retaining Plate 3D Model*

**Ejector Plate**

In an ejection system in mold, ejector plates function alongside the ejector pins. It holds the head of the pins to prevent them from coming out during the ejector pins injection molding process.

**Ejector Plate 3D Model**

*Figure 7:*

*Ejector Plate 3D Model*

**Mold Core**

The Mold Core & Cavity are the shaped sections in either half of the mold tool which give the plastic product its final shape. The hot molten material is injected into the core & cavity and then sets hard into shape. The design of the core & cavity is essential in the correct formation of the product.

**Mold Core 3D Model**

*Figure 9: Mold core 3D Model*

**Support Plate**

The backup plate or support plate is used to support the cavity plate, attach the hole for the return pin's spring, and cooling channel when in cavity plate cannot make it.

**Support Plate 3D Model**

*Figure10: Support Plate 3D Model*

**Guiding pins**

Guide pins are cylindrical rods used in an assembly to align components. The mechanical fastener may help ensure stability, limit contact damage, and maintain precise positioning

**Guiding Pin 3D Model**

*Figure 13: Guiding Pin 3D Model*

**Locating Ring**

A locating ring is a circular member fitted on to the front face of the mold over the sprue bush. Its purpose is to register (or locate) the mold in the correct position on the injection machine, to ensure proper alignment between the nozzle and the sprue bush, thereby eliminating leakage

*Figure 15: Locating Ring 3D Model*

**Spacer Block**

Spacer Block is mounted between the movable clamping plate and the movable cavity plate to give space and allow the ejector plate to move when ejecting the part.

**Spacer Block 3D Model**

*Figure 17: Spacer Block 3D Model*

### Springs

A spring is a device consisting of an elastic but largely rigid material (typically metal) bent or molded into a form (especially a coil) that can return into shape after being compressed or extended. The most common use of springs in an injection mold is to retract the ejector plates. **Springs 3D Model**

Figure 18: Springs 3D Model

### Conclusion & Future Recommendation

#### Future Recommendations

##### Industry 4.0 Integration:

Injection molding machines and molds may become more interconnected with Industry 4.0 technologies, enabling real-time data collection, process optimization, and predictive maintenance to enhance productivity and reduce downtime.

##### Sustainable Molding Solutions:

As sustainability becomes a more prominent concern, there might be a push towards eco-friendly molding processes and biodegradable or recycled plastics, leading to greener plastic products.

##### Precision and Micro-Molding:

The demand for smaller and more intricate plastic parts may drive the development of precision and micro molding technologies, requiring highly specialized molds and machines.

##### Multi-Material and Hybrid Molding:

Advancements in multi-material injection molding and hybrid molding techniques may lead to the production of more complex and functional plastic products, requiring molds capable of handling multiple materials.

##### Additive Manufacturing for Molds:

The adoption of additive manufacturing for mold-making could enable more design flexibility, faster prototyping, and cost-effective production of custom molds.

##### Smart and Functional Plastic Products:

Future plastic products may incorporate smart functionalities, such as sensors, actuators, and communication capabilities, opening up new applications and markets.

### **Improved Part Quality and Consistency:**

Continuous advancements in mold design, process control, and material technology could result in higher part quality, tighter tolerances, and greater consistency across production runs.

### **Reduced Waste and Energy Consumption:**

Innovations in injection molding processes and mold designs may help reduce material waste and energy consumption, contributing to a more sustainable and efficient manufacturing industry.

### **Advanced Mold Materials:**

Advancements in materials science may lead to the development of new mold materials with improved durability, thermal conductivity, and wear resistance. These materials could result in longer mold lifetimes and better part quality.

### **Innovative Cooling Solutions:**

Further research into conformal cooling, advanced cooling channel designs, and the integration of cooling technologies like micro-fluidics could significantly reduce cycle times and improve part quality.

### **Conclusion**

#### **Quality Assurance:**

A well-designed and precisely engineered injection machine mold is essential for ensuring high-quality plastic parts. Proper mold design, material selection, and fabrication techniques contribute to achieving consistent and accurate part dimensions and surface finishes.

#### **Productivity and Efficiency:**

Optimal mold design and efficient cooling systems can significantly reduce cycle times, resulting in increased productivity and cost savings. Mold designs with advanced cooling solutions, such as conformal cooling, can enhance heat dissipation and shorten the overall production time.

#### **Versatility and Complexity:**

Modern injection machine molds are increasingly capable of handling complex geometries, multi materials, and over-molding processes. This adaptability opens up opportunities for producing diverse and innovative plastic products.

#### **Sustainability:**

Emphasis on sustainable manufacturing practices has led to the development of eco-friendly mold materials and processes. Sustainable molds contribute to reduced waste generation and energy consumption, aligning with environmental goals.

#### **Integration and Automation:**

Injection machine molds are becoming more integrated with Industry 4.0 technologies, enabling real time monitoring, data analytics, and predictive maintenance. Increased automation in mold handling and setup enhances operational efficiency and reduces human errors.

#### **Precision and Miniaturization:**

Advancements in mold-making technologies support precision molding and micro-molding, catering to the demand for smaller, intricate plastic components used in various industries, including medical and electronics.

#### **Customization and Rapid Prototyping:**

Additive manufacturing (3D printing) is increasingly utilized for mold prototyping, offering faster iterations and customization options. This capability accelerates the product development cycle and facilitates the testing of various design iterations.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

## Continuous Innovation:

The injection machine mold industry continues to evolve, driven by ongoing research, material advancements, and customer requirements. Mold designers and manufacturers must remain open to innovation and adopt new techniques to stay competitive in the market.

## Low Production Cost

Scrap material is used for the production of plastic parts that reduces production cost.

In conclusion, the injection machine mold serves as the backbone of the injection molding process, impacting the quality, productivity, and versatility of plastic product manufacturing. By embracing technological advancements, sustainable practices, and innovative designs, the injection machine mold industry will continue to shape the future of manufacturing, contributing to the development of efficient, high-quality, and environmentally conscious plastic products.

## Safety Precautions

- **Personal Protective Equipment (PPE):** Wear appropriate PPE, such as safety glasses or goggles, face shields, gloves, and protective clothing, to protect against potential hazards like molten plastic, flying debris, or chemical exposure.
- **Machine Safety:** Familiarize yourself with the specific safety features and procedures of the injection machine. Ensure that emergency stop buttons, safety interlocks, and guards are in place and functioning correctly. Follow lockout/tagout procedures when performing maintenance or servicing the machine. **Training and Knowledge:** Receive proper training on the operation, maintenance, and safety procedures of injection machine molds. Understand the potential risks and hazards associated with the process, as well as the safe handling of materials, tools, and equipment.
- **Material Handling:** Handle plastic resins and additives safely. Follow proper storage and handling guidelines to prevent exposure to hazardous chemicals or substances. Be aware of the potential for fires or explosions in case of mishandling or overheating of materials.
- **Mold Inspection:** Regularly inspect the injection machine mold for any signs of damage, wear, or defects. Replace or repair any damaged parts promptly to avoid potential hazards during operation. **Tool and Equipment Safety:** Use tools and equipment properly and safely. Ensure that they are in good working condition and appropriate for the task at hand. Avoid using damaged or malfunctioning tools and equipment.
- **Heating and Cooling Systems:** Take precautions when dealing with the heating and cooling systems of the injection machine mold. Follow the manufacturer's guidelines for proper temperature control, and be cautious of hot surfaces or fluids to avoid burns or scalds.
- **Housekeeping:** Maintain a clean and organized work area to minimize tripping hazards and prevent clutter around the injection machine. Clean up any spills or debris promptly to maintain a safe working environment.
- **Ventilation:** Ensure adequate ventilation in the work area to prevent the accumulation of fumes or gases that may be released during the injection molding process.
- **Emergency Preparedness:** Know the location and proper use of emergency equipment, such as fire extinguishers and first aid kits. Be familiar with emergency procedures and evacuation routes.

ERKEN BAŞLANGIÇLI İDİYO PATİK SKOLYOZDA SCHROTH BEST PRACTİCE  
EGZERSİZLERİNİN ETKİNLİĞİ: OLGU SUNUMU  
EFFECTIVENESS OF SCHROTH BEST PRACTICE EXERCISES IN EARLY ONSET  
IDIOPATHIC SCOLIOSIS: A CASE REPORT

*Burçin AKÇAY<sup>1</sup>*

<sup>1</sup>Doktor Öğretim Üyesi, Bandırma Onyedi Eylül Üniversitesi, Sağlık Bilimleri Fakültesi, Fizyoterapi ve Rehabilitasyon Bölümü, Balıkesir, Türkiye

<sup>1</sup>ORCID ID: <https://orcid.org/00000-0002-0883-0311>

**ÖZET**

**Amaç:** Bu çalışmanın amacı erken başlangıçlı idiyopatik skolyozda Schroth Best Practice (SBP) egzersizlerinin etkinliğini belirlemektir.

**Yöntem:** 6 yaşında idiyopatik skolyoz tanısı almış erkek hasta fizyoterapist süpervizörlüğünde uygulanan SBP egzersizleri ile 2020-2023 tarihleri arasında üç yıl boyunca takip edilmiştir. Hekim tarafından yapılan rutin kontrollerinde röntgen çekilmiştir. Cobb açısı ve gövde rotasyon derecesi (ATR) değerleri kaydedilmiştir.

**Bulgular:** Üç yıl boyunca Cobb açısı değişimi sırası ile 9°, 9°, 8°, 19°, 9°, 10°, ATR değeri değişimi ise 6°, 5°, 6°, 6°, 4°, 4°'dir. Üç yıllık takip boyunca eğrilik paterninde değişiklikler gözlenmekle birlikte sonuçta Cobb açısında 1° artma, ATR değerinde 2° azalma gözlenmiştir.

**Sonuç:** Erken başlangıçlı idiyopatik skolyozda Schroth Best Practice egzersizleri eğriliğin progresyonunu azaltmada etkili olabilir. Erken başlangıçlı skolyozda geniş örneklem grubunun dahil edilerek Schroth Best Practice egzersizlerinin uzun dönem etkilerinin incelendiği çalışmalara ihtiyaç vardır.

**Anahtar kelimeler:** Skolyoz, erken başlangıçlı skolyoz, egzersiz, konservatif tedavi

**ABSTRACT**

**Purpose:** The aim of this study was to determine the effectiveness of Schroth Best Practice (SBP) exercises in early onset idiopathic scoliosis.

**Methods:** A 6-year-old male patient diagnosed with idiopathic scoliosis was followed up for three years between 2020 and 2023 with SBP exercises performed under the supervision of a physiotherapist. X-rays were taken at routine controls performed by the physician. Cobb angle and trunk rotation degree (ATR) values were recorded.

**Results:** Cobb angle changes during three years were 9°, 9°, 8°, 19°, 9°, 10°, ATR value changes were 6°, 5°, 6°, 6°, 4°, 4°, respectively. Although changes in the curvature pattern were observed during the three-year follow-up, a 1° increase in Cobb angle and a 2° decrease in ATR value were observed.

**Conclusion:** Schroth Best Practice exercises may be effective in reducing the progression of curvature in early-onset idiopathic scoliosis. There is a need for studies including a large sample group and examining the long-term effects of Schroth Best Practice exercises in early-onset scoliosis.

**Key words:** Scoliosis, early onset scoliosis, exercise, conservative treatment

## DESCRIPTIVE STUDY TO ASSESS THE PREVALENCE OF OBESITY AMONG FEMALE BACHELOR NURSING SCIENCE STUDENTS OF NORTHERN BORDER UNIVERSITY

*Dr. Bindu Bharathi<sup>1</sup>, Wesam Menwer,<sup>2</sup> Wajd Nawaf,<sup>2</sup> Rayana Fayez,<sup>2</sup> Amjad Ayed<sup>2</sup>*

*Assistant Professor, College of Nursing, Northern Border University, Saudi Arabia<sup>1</sup>*

*Interns in Bachelor Nursing Science Students, College of Nursing, Northern Border University, Saudi Arabia<sup>2</sup>*

### ABSTRACT

**Background of the Study:** Obesity is an abnormal or excessive fat accumulation that presents a risk to the health. Over the past decades, Saudi Arabia is becoming more and more westernized and is now one of the highest peaks of the prevalence of obesity and overweight. Obesity is now a global crisis that affects 650 million people worldwide. Overweight and obesity are linked to more deaths worldwide than underweight (WHO, 2022).

**Aim** of the study was to assess the prevalence of obesity among Female Bachelor Nursing Science Students of Northern Border University (NBU). An objective of this study was to assess the socio-personal variables, and to assess the Prevalence of Obesity among Bachelor Nursing Science Students of NBU.

**Materials and Methods:** Quantitative research approach with Descriptive Survey Design was used in this study. Stratified Random Sampling Techniques was the sampling technique used for this study. College of Nursing, Female section, NBU were the Setting of this Study. All Bachelor Saudi Nursing Science Students of College of Nursing, (Female Section) NBU were the sample, with the sample size of 220.

**Data Collection Process:** Ethical Consideration: The researchers obtained written Consent from the participants of the study. Structured questionnaire was the research tool used for data collection.

**Results:** 63.2% of the subjects were having Normal Body Mass Index (BMI), but the prevalence rate of over weight is 17.3 % and obesity I and II contribute to 14.8%. Majority (88%) of the participants were having the family history of obesity. About 27.3 percent of the subjects were not doing any physical activity. Majority of the participants were having the habit of taking normal intake of food and water, whereas most of them are always taking fast food (74%) and they are always watching TV or using smart phone (87.4%). About 91% of the participants were between the age group of 18-23 years and 66.7% of the participants were from the province of Arar. More than fifty (58.6%) percent of the subjects were single, but 16.4 percent of them were married.

**Conclusions:** This study influenced the clarification of the effects of obesity and work on educating students in the College of Nursing about the need to be careful in eating food and drinks that cause obesity, in addition to enriching the research on the reality of university life, which has a great impact on the quality of food and how to follow the instructions that contribute to reduce the effects of obesity and its repercussions. Making a change in our lifestyle that you have lived with for many years may be difficult. Therefore, you must change the activities and the way you eat, and you must avoid the temptations that contribute to weight gain and that contribute to losing weight. Make sure they understand how important weight loss is to your health. You may also want to join a weight loss support group.

**Recommendations:** Constantly following the weight and working to lose weight; stay away from fast food and follow a balanced diet; Stay away from drinks that contain sugars; and work on conducting sports activities.

**Key words:** Descriptive Study; Prevalence; Obesity

### ABSTRACT

The quinoline scaffold has become an important construction motif for the development of new drugs. The quinolones and their heteroannulated derivatives have high importance due to their diverse spectrum of biological activities as antifungal, anti-inflammatory, anti-diabetes, anti-Alzheimer's disease, antioxidant and diuretic activities. This review summarizes the various new, efficient and convenient synthetic approaches to synthesize diverse quinolone-based scaffolds and their biological activities. We also dealt with the important mechanism, the route and type of reactions of the obtained products. The biological activities of some heteroannulated quinolones were also discussed.

**Keywords:** Pyrroloquinolones · Thienoquinolones · Oxazoloquinolones · Pyranoquinolones · Furoquinolones · Heteroannulation · Biological activities.

### ABSTRACT

The general aim of this study is to examine the Pauline concept of ministry in 2 Corinthians 4:1-15 and the religious celebrity in the Nigerian Church. The phenomenon of celebrity has become intricately woven into the cultural tapestry of Nigerian society. The ideal of becoming rich and famous has risen to dimensions that can rightly be termed a syndrome. The level of frustration in society occasioned by the privileges and regard that the rich and wealthy, the famous and the celebrated enjoy vis-à-vis the contempt accorded the ordinary people has heightened the desire for the status image by whatever means. In Corinth, Paul came in contact with a society that was adapted to class and status distinction. There were the Romans, the freed men and slaves. This status consciousness found incursions into the community of believers. The gulf between the rich and the poor was noticeable in the community. In contemporary times, Christian ministry in Nigeria has become the platform for seeking popularity and fame. Methods and techniques that are alien to Biblical approach to ministry have been employed in the promotion of this invading trend and the church seems to be helpless in the circumstance. The pericope analyzed in this study was profoundly critical in handling the problem of the quest for celebrity among Christian ministers and the tendencies that promote its incursions in Christian ministry. The perspective developed in this study argued that the inability of Christian (religious) ministers to extricate (themselves) itself from celebrity (celebrity mindset) in ministry has resulted to a distorted view of Christian ministry both within the church and in the society at large.

## FUEL SHORTAGES IN LATIN AMERICA IN THE 21ST CENTURY, THE CUBA CASE

*Pérez Gamón Carolina Margarita*

*Universidad del Nordeste- Facultad de Humanidades-Argentina*

*<https://orcid.org/0000-0002-4600-1039>*

### ABSTRACT

In this work we recreate the situation that part of the region is going through due to fuel shortages. Regarding the decline of Venezuela, the president of Cuba Díaz Canel heads to Mexico and Russia in search of oil. We propose to investigate the causes and consequences that led the Cuban regime to this situation and how it affects society. It is interesting to be able to identify the elements that lead to scarcity, since oil is undoubtedly an important natural resource in the industrialized world in which we live, hence its relevance, which is why it is called Black Gold. The first findings, the Cubans, date back to the 1990s, with the fall of the Soviet Union, when the island went through an economic crisis known as the Special Period. Conclusion The most reasonable scenarios indicate that a lot of oil will still be consumed in the coming years. Therefore, the countries that will be able to continue producing and making the business profitable are those that manage to be more efficient by reducing production costs and reducing the intensity of greenhouse gases. Meanwhile, the political measures taken by governments and in particular Cuba must look for the common good of the citizenry.

### ÖZET

Kuramsal fizikçilerin en büyük hayallerinden bir tanesi tam olarak çalışan kuantize olmuş kütle çekim kuramını oluşturmaktır. Genel görelilik kuramının kuantize edilmesiyle kütleçekim, elektromanyetik, güçlü ve zayıf etkileşmelerin tek bir kuram ile ifadesi yolunda önemli bir engel ortadan kalkacaktır. Einstein tarafından oluşturulan elektromanyetik etkileşmeler ile kütleçekimsel etkilerin etkileşimlerini açıklayan mutlak paralelizm kuramını genel görelilik kuramına alternatif bir kuram olmuştur. Hem Einstein genel görelilik kuramı hem de mutlak paralelizm kuramsal fizikte pek çok problemin çözümü noktasında bilim insanlarına ışık tutmuştur. Öte yandan evrenimizin ivmeli genişliğinin anlaşılması, kütleçekimsel dalgaların varlığının keşfi sonucunda genel görelilik kuramının bazı noktalarının eksik kaldığı görülmektedir. Kuramsal fizikçiler genel göreliliğin bize sunduğu sağlam temellerden kaçmak yerine genel göreliliği modifiye etmeyi tercih ettiler. Bu bağlamda son zamanlarda kuantum gravite kuramlarından biri olan kütleçekimin gökkuşağı formalizmi önem kazanmıştır. Bu formalizmde ele alınan test parçacığının enerjisi uzay-zamanın dokusunda bir etki yaratmaktadır. Dolayısıyla uzay zamanı betimleyen metrik tensör yazıldığında test parçacığının enerjisini niteleyen gökkuşağı fonksiyonları adı verilen fonksiyonlar ile modifiye edilmelidir. Bu çalışmada Gibbons-Maeda-Garfinkle-Horowitz-Strominger (GMGHS) kara delik modeli için Möller enerji momentum gösterimi kullanılarak Rainbow gravitede enerji yoğunlukları hesaplanmaktadır. GMGHS kara delik modeli için Einstein ve Sicim Çerçevesi alt durumları için hesaplamalar ayrıntılandırılacaktır.

**Anahtar Kelimeler:** Enerji momentum yerelleşmesi, gökkuşağı kütleçekim kuramı formalizmi, GMGHS kara delik modeli.

### ABSTRACT

One of the biggest dreams of theoretical physicists is to create a fully working quantized theory of gravity. Quantizing the general theory of relativity will remove a critical obstacle to expressing gravitational, electromagnetic, strong, and weak interactions with a single theory. Absolute parallelism theory, which explains the interactions of electromagnetic interactions and gravitational effects created by Einstein, has been an alternative theory to the general theory of relativity. Both Einstein's general theory of relativity and absolute parallelism shed light on the solution to many problems in theoretical physics. On the other hand, as a result of the understanding of the accelerated expansion of our universe and the discovery of the existence of gravitational waves, it is seen that some points of the general theory of relativity are missing. Theoretical physicists preferred to modify general relativity rather than avoid the successful approaches that general relativity offers us. Hence, the rainbow formalism of gravity, one of the quantum gravity theories, has recently gained importance. The energy of the test particle considered in this formalism affects the fabric of space-time. Therefore, when the metric tensor describing space-time is written, it must be modified with functions called rainbow functions that characterize the energy of the test particle. In this study, energy densities are calculated in rainbow gravity using the Möller energy momentum prescription for the Gibbons-Maeda-Garfinkle-Horowitz-Strominger (GMGHS) black hole model. Calculations for the Einstein and String Frames subcases for the GMGHS black hole model are detailed.

**ASPERGILLUS INFECTION AMONG HIV/AIDS PATIENTS ATTENDING GENERAL  
HOSPITAL, MINNA, NIGER STATE, NIGERIA**

*Ibiloye A.S. and Galadima, M.*

*Department of Microbiology, School of life science, Federal University of Technology, Minna Niger State.*

**ABSTRACT**

*Aspergillus* infection in human is increasingly becoming important especially in those with impaired immunity and HIV/AIDS. This study was carried out to determine the prevalence of *Aspergillus* infections in patients attending the General Hospital, Minna, Niger State, Nigeria. Out of 116 patients administered with questionnaires, 73 consented to provide sputum samples. Early morning sputum samples were collected from individual participants. The samples were inoculated on Sabouraud Dextose Agar. *Aspergillus* species isolated were *Aspergillus niger* (45.6%), *Aspergillus nidulans* (5.3%), *Aspergillus flavus* (29.8%) and *Aspergillus fumigatus* (19.3%). Subjects aged 26-35 years had the highest prevalence (31.0%), whereas those between 45-65 years, had the least prevalence. Number of males infected accounted for (52.5%) whereas number of females infected (20.5%).

## BIOSORPTION OF $\text{Ni}^{2+}$ AND $\text{Pb}^{2+}$ FROM WASTE WATER USING DOUM PALM NUT SHELL ACTIVATED CARBON

*\*Sulaiman S.Y. and Hafsat M.*

*Author Correspondence: Department of Pure and Industrial Chemistry, Umaru Musa Yar'adua  
University, P.M.B 2218, Katsina, Nigeria.*

### ABSTRACT

The search for cheaper and environmentally friendly methods of waste treatment using natural products has taken a central stage in the recent past. Doum palm nutshell activated carbon (DPSAC) was investigated with a view of using it as a low cost biosorbent for the removal of toxic heavy metals from wastewater. The activated carbon was prepared from raw doum palm nutshell which was used for the adsorption of  $\text{Ni}^{2+}$  and  $\text{Pb}^{2+}$ . The effect of contact time, adsorbent dosage and pH of solution were studied by batch adsorption experiment, in which maximum removal of  $\text{Ni}^{2+}$  was recorded at 50min and maximum removal of  $\text{Pb}^{2+}$  was recorded at 30min of contact time. Contact of  $\text{Ni}^{2+}$  with 0.5g of DPSAC adsorbent, there is 99.87% maximum adsorption capacity while  $\text{Pb}^{2+}$  with 0.6g of DPSAC adsorbent, there is 99.81% maximum adsorption capacity. The amount of metal ion adsorbed was optimum at solution pH of 9 of both the two metal ions.

**Keywords:** biosorption, waste water, nutshell, and activated carbon

## IN SILICO ADME- TOX PREDICTION IN EARLY DRUG DISCOVERY

*M.Mohamed Ashik Ali, R.Devi , Dr.R.Srinivasan,A.Aswin ,M.Akash.*

*Bharath Institute Of Higher Education And Research, Faculty Of Pharmacy*

### ABSTRACT

In silico ADMET models have progressed significantly over the past 4 decades, but still, the pharmaceutical industry is vexed by the late-stage toxicity failure of lead molecules. This problem of late-stage attrition of the drug candidates because of adverse ADMET profile motivated us to analyse the current role and status of different in silico tools along with the rise of machine learning (ML) based program for ADMET prediction. Application of in silico ADME-Tox models has further enhanced discovery support, enabling virtual screening of compounds and thus, application of ADME-Tox at every stage of the discovery process. Ultimately, effective and efficient ADME-Tox support of discovery will depend on a complementary and synergistic use of experimental and in silico ADME-Tox.

**Keywords:** ADME/Tox in silico, in vitro drug Discovery, ADME-tox prediction.

### Introduction:

Absorption ,Distribution, metabolism, and excretion (ADME) properties play a significant role in drug development. In fact, around 40% of all drug failures are, overall, due to ADME problems. Despite the fact that preclinical ADME studies have led to a reduction of failures caused by pharmacokinetics (PK), drug toxicity remains a problem. Both, nonoptimal ADME and toxicity can end up with late-stage failures, responsible for a large unproductive investment of time and money. Toward the improvement of ADME prediction, in silico models are contributing to drug optimization. Due to the complexity of the ADME process, it is not possible to make decisions based on a single descriptor. Big data and machine learning implementations promise a hopeful landscape in ADME and toxicity prediction.

### Classification:

#### Experimental ADME-Tox tools in drug discovery:

The goal of in vitro ADME-Tox characterization is to provide, with reasonable accuracy, a preliminary prediction of the in vivo behaviour of a compound to assess its potential to become a drug. Many factors combine to determine this, therefore, a variety of experimental assays have been developed to characterize each aspect of the processes . The tools involved include physicochemical methods and biological assays using subcellular fractions, primary cell culture, immortalized cell.

#### The emergence of in silico ADME-Tox tools:

Despite the increased throughput provided by the simplified in vitro ADME-Tox assays, throughput capacity remains low in comparison with that of HTS activity assays or combinatorial chemistry, consequently limiting the application of these assays to only a fraction of compounds evaluated in discovery. The need for increased ADME-Tox throughput to fully meet the demands of discovery has led to renewed and increasing interests in computational or in silico models that make predictions .

#### The integration of in vitro and in silico ADME-Tox tools:

Both experimental and computational ADME-Tox have been used in support of the discovery process and each has its own unique advantages and uses but also distinct limitations. The adoption and use of experimental ADME-Tox is almost universal across all companies, whereas the application of in silico ADME-Tox is less widespread and the extent to which the results obtained from it are used in decision-making is unclear.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

## Materials and Methods:

### ADME Descriptors:

Only when the ADME/Tox properties of a drug like compound are of sufficiently high quality, and when the target has been validated, the compound could be developed into new medication. This is why diverse methods have been integrated into web servers to predict drug-likeness of molecules. For instance, Jia et al. recently reviewed freely accessible online resources to evaluate drug-likeness of compound data sets. It was concluded that comprehensive databases that collect and offer high-quality and up-to-date data are essential for constructing rules or models for in silico drug-likeness evaluation. It was also found that online ADME/Tox resources provide useful guidelines to extract rational compounds that match the desirable PK properties or to filter compounds that are not likely to be drugs. Finally, it was concluded that NP databases are attractive sources for selecting novel scaffolds with promising bioavailability properties. Some physical properties have a strong correlation with ADME endpoints. For example, log P<sub>w/oct</sub> (the partition coefficient of a compound between water and 1-octanol) has a strong association with the permeability of compounds. In the past several decades, a significant amount of in vitro and in vivo assay data has been accumulated as a byproduct of pharmaceutical development. This accumulated data enabled the development of models and software to predict ADME properties with high reliability and accuracy.

### Toxicity Descriptors:

Determining the toxicity of chemical compounds is necessary to identify their harmful effects on humans, animals, plants, or the environment. In vivo animal tests are constrained by time, ethical considerations, and financial burden. Therefore, computational methods for estimating the toxicity of chemicals are considered useful. In silico toxicology aims to complement existing toxicity tests to predict toxicity, prioritize chemicals, guide toxicity tests, and minimize late-stage failures in drug design.

### Conclusion:

A goal of introducing ADME-Tox in discovery was to increase the success rate of drug development projects by addressing ADME-Tox issues, one of the major causes of project failure, at the early stages of discovery and at a relatively low cost. This effort has been ongoing over the past few years. The application of experimental ADME-Tox tools is now almost universal and has progressed with significant improvements in throughput and turnaround time that have been achieved through assay.

**INDONESIA NATIONAL BUDGET AS A VACCINE TO RESTORATION OF  
CONTRACTION IN NATIONAL TOURISM SECTOR**

*Laurensius Farel Dwi Putranto<sup>1</sup>, Yuvensius Sri Susilo<sup>2</sup>, Jonathan Ersten Herawan<sup>3</sup>*

*<sup>1,2,3</sup> Development Economics Study Program, Faculty of Business and Economics, Universitas Atma  
Jaya Yogyakarta*

**ABSTRACT**

The contraction in the national tourism sector was caused by the COVID-19 pandemic that hit the international world. Several variables that show the performance of the national tourism sector have shown a significant decline during this pandemic. The variables of foreign tourist visits and Room Occupancy Rate (TPK), for example, experienced a contraction due to a lack of trust of destination from foreign tourists. Government policy, especially fiscal policy, is designed to focus on stimulus for economic actors in the tourism sector. However, the author sees that the government's fiscal policy also needs to focus on labor aspects and long-term plans for efforts to restart the tourism sector.

According to the author, the problem in this paper needs to be discussed because this issue is very relevant to the current conditions of the contracting national tourism sector. The 2021 RAPBN has also determined several priority sectors for national development, one of which is the tourism sector. Apart from that, the problems discussed in this paper are also in accordance with the fact that international expectations regarding Indonesia's tourism potential are very promising.

The solution that the author offers through this paper is the provision of a job loss insurance program, specifically for tourism industry workers, called the Job Loss Insurance Program in the Tourism Sector (PAKTA) which focuses on efforts to secure the financial aspects of employment in the tourism sector. The second solution that the author offers is the Integrated Ecotourism Area Infrastructure (IKAT) program which focuses on long-term efforts to restart Indonesian tourism based on infrastructure provision.

Jaya Yogyakarta*

### ABSTRACT

One of the characteristics of the Indonesian nation, namely the attitude of mutual cooperation, is one of the differentiating factors that plays an important role in the resilience of the national economy which is based on Pancasila to continue to grow. The attitude of mutual cooperation in the Indonesian economy is reflected in the existence of cooperatives which are considered the cornerstones of the national economy. The recovery of the national economy and the increasing trend of cooperative growth is a signal and momentum to utilize cooperatives as an alternative route for economic recovery. This condition is in accordance with efforts to realize an inclusive APBN, where APBN instruments must pay attention to growth (pro-growth), absorbed workforce (pro-job), poverty alleviation (pro-poor), and environmental insight (pro-environment). Referring to the background of the topic raised, this paper aims to describe the potential and obstacles faced by cooperatives to support national economic recovery. Apart from that, this paper also aims to offer applicable recommendations for policy makers in developing economic recovery schemes that are more inclusive and adaptive to existing dynamics.

The recommendation offered by the author is the formation of an authority that handles cooperatives in an integrated manner called Indonesia Crowdfunding Cooperatives (IC Coop). IC Coop is a Government agency, with the status of a Public Service Agency (BLU) under the coordination of the Ministry of Cooperatives and SMEs, which is tasked with integrating the development of the national cooperative system starting from the licensing (legal), operation (operation), supervision (supervision), assistance (mentoring) stages. ), and increasing the class of cooperatives in supporting the national economy. This goal will be achieved through sapta tantra (seven basic things) carried out by IC Coop, such as acceleration and efficiency of cooperative licensing, integration and classification of cooperatives based on type of business, delegation of supervisory task forces, preparation of Basic Standard Operating Procedures (SOPD) for cooperative services, collection and allocation of cooperative reserve funds as investment capital, issuing bonds for integrated cooperatives, and connecting cooperatives with banking and other financial institutions.

**ABSTRACT**

Varicose veins are twisted, enlarged veins. vein that is close to the skin's surface (superficial) can become varicose. Varicose veins most commonly affect the veins in the legs. Varicose veins and spider veins are both types of venous disease. Spider veins are smaller and thinner than varicose veins. It causes standing and walking increase the pressure in the veins of the lower body. Varicose veins are usually caused by weak vein walls and valves. As blood pressure in your vein increases, the weakened walls allow your vein to get bigger. As your vein stretches, the valves that keep blood moving in one direction in your vein can't work like they should. Sluggish blood backs up or pools in your vein, causing your vein to swell, bulge and twist. The most recognizable sign of varicose veins is a gnarled, blue or purple vein just under your skin's surface. Bulging veins, Heavy legs, Swelling and Skin discolorations and ulcers. Varicose veins can usually be diagnosed by a simple physical examination; however, the cause of the varicose vein requires the use of Doppler ultrasound. Treatment for varicose veins may include self-care measures, compression stockings, and surgeries or procedures such as **Sclerotherapy, Laser treatment, High ligation and vein stripping**. Improving blood flow and muscle tone might reduce the risk of developing varicose veins. The same measures that treat the discomfort from varicose veins can help prevent them.

**Keywords:** spider veins, sclerotherapy, Doppler ultrasound

### ABSTRACT

Respiratory system diseases of horses are caused by predisposing factors, maintenance conditions, viruses, bacteria and fungi. The most important bacterial disease agents associated with the horse industry are *Streptococcus equi*, *Bulkorderia mallei* and *Rhodococcus equi* in foals. Gurm disease, also known as gourd, is the most common upper respiratory disease in horses. It is especially spread around by the discharge of infected horses. The most common symptoms are runny nose, cough, loss of appetite, and in later periods, lymph nodes grow and open out as abscesses. One of the most important diseases for foals is *Rhodococcus Equi* (*R. equi*), which causes bronchopneumonia and lung abscess. Mortality can be seen at a rate of 50%, especially in immunocompromised foals. The agent is carried in the intestines of adult animals and can be found widely in all environments, including manure, contaminated soil in contaminate areas and farm materials. Preventive medicine rules are very important for *R. equi* infections, especially for foals. It is important to monitor the body temperature of the foals daily, separate the patients, and remove them from dusty environments while cleaning the environments in which they are barns. These measures can be saving activities especially for horse breeders. Finally, the most dangerous disease in the industry, glanders, is known as *Bulkorderia mallei*. This disease requires global eradication programs, especially since it is known to be zoonotic. Malleus disease is very important for both humans and animals. It causes deaths and poses a risk, especially for horse breeders. The disease manifests itself as nasal glanders, lung glanders and skin glanders. Diagnosis is made with an allergic test called the Mallein test, and animals found to be sick are killed immediately.

The horse industry suffers great losses all over the world and in our country due to these highlighted diseases. This situation, which is especially important for race horses and foals, reveals to us the importance of preventive medicine. The care, hygiene and feeding conditions of horses should be at optimum standards, and it is possible to prevent diseases by taking vaccination schedules into consideration.

*ORCID: 0000-0002-0753-3569*

<sup>3</sup> *Managing Director of a Geotechnical Engineering and Laboratory Office, Ain Defla, Algeria*

### ABSTRACT

This article presents a comprehensive comparative study between two commonly used methods for assessing soil settlement in geotechnical engineering. The traditional method relies on consolidation measurements, while the AZAOKA method utilizes real-time data collected by settlement gauges. The study evaluates various aspects including accuracy, speed, cost, adaptability, and reliability of each approach. The results highlight the advantages and limitations of each method, providing crucial information to guide geotechnical engineers in selecting the most suitable method for their specific needs. This research contributes to the improvement of settlement calculation practices in geotechnical engineering by emphasizing the benefits of real-time settlement gauges in certain scenarios, while also underscoring the ongoing relevance of consolidation measurements in other cases. In summary, this article offers essential insights for geotechnical practitioners and researchers working on soil settlement issues, assisting them in making informed decisions regarding the most appropriate method to use based on project-specific requirements.

### ABSTRACT

The ongoing medical implants are being created utilizing materials like Co-Cr, stainless steel, and titanium alloys. These traditional embed materials prompt a stress shield effect. This leads to secondary operations, which are done to remove the implant. Biodegradable magnesium metal matrix composites are advanced materials designed for various applications, primarily in the biomedical and environmental fields. These composites combine magnesium (Mg) as the matrix material with biodegradable reinforcements, creating a material that possesses desirable mechanical properties while also being capable of breaking down naturally over time. Magnesium composites are exposed to various designing methodologies, for example, supporting components, surface treatment, and changing synthesis processes to increase their biocompatibility and mechanical properties. This paper aims to provide researchers with a comprehensive understanding of biodegradable Mg-MMC used in biomedical implants.

### ABSTRACT

This study seeks to address the need for curriculum review for research method course, particularly in the context group assignment, to better align with the needs of 21st century learners. Previous research has highlighted the importance of rethinking assessment practices to promote deeper learning and critical thinking skills. However, existing studies have primarily used cross-sectional data, making it difficult to identify changes in the use of individual versus group assessments. To address this gap, Tyler's Expanded Model was applied as a curriculum review model and used mixed methods to perform a needs analysis. This study included interviews with educators and surveys with students to gain insights into their experiences with assessment practices. The data was analyzed using a theme analysis method and a descriptive analysis. The findings suggest that there is a need for more collaborative and student-centered assessment practices in research methods courses, particularly in the use of group assessments. Students expressed a desire for more opportunities to work in teams and develop their teamwork skills, which they believed would better prepare them for the workplace. Educators also highlighted the importance of developing students' critical thinking skills and ability to work collaboratively in groups. Overall, this study underscores the need for a more student-centered and collaborative approach to assessment in research course, particularly in research methods subjects. By incorporating the insights gained from this study, educators can better prepare their students for success in the 21st century workforce.

**Keywords:** 21<sup>st</sup> century learners, curriculum review, Tyler's Expanded Model, needs analysis, assessment practices. Research methodology

## STRONG MOMS, FRAGILE BONES: OSTEOPOROSIS IN PREGNANCY

*Dr. Amber Nawab, Dr. Javeria Rafiq Sheikh, Fakhra Mehar, Nuzhat Naimatullah*

*Jinnah University for Women*

### ABSTRACT

#### **Background:**

Osteoporosis is a common disease characterized by a systemic impairment of bone mass due to the deficiency of Vitamin-D those results in fragility fractures. With an aging population, the medical and socioeconomic effect of osteoporosis, particularly Osteoporosis poses unique challenges for pregnant individuals, necessitating specialized care to ensure maternal and fetal well-being.

#### **Aim:**

The study focuses on the development of osteoporosis in women which can be a silent killer especially in Pregnant women and worsens the life style of their wellbeing. The conduct study is representing the idea in comprehensive literature research and evidence-based interventions, to reduce the risk of fracture and improve bone health during pregnancy.

#### **Methodology:**

This study analyzes the complex relations between pregnancy and osteoporosis, highlighting the demand for individualized treatment strategies. The factors examined were physiological alterations, hormonal swings, and probable side effects of this dual diagnosis. The conducted research was divided in two parts in which detailed review of the literature of last 5 years and using those evidence the cross-sectional survey was implemented. The study offers evidence-based therapies such as dietary supplements, exercise advice, and medication.

#### **Result:**

The evaluated results show that 60% of the random women who participated in survey were found to be deficient in vitamin D. This was comparable to the percentages of pregnant women (53%) and nursing moms (58%), respectively, who were vitamin D deficient. Additionally, our study revealed that vitamin D shortage in mothers increases the likelihood of neonatal vitamin D deficit and puts nursing moms at a higher risk of developing osteoporosis. We advise frequent supplementation with calcium and vitamin D, as well as monthly monitoring of vitamin D levels, for all women, including those who are expecting or nursing.

#### **Conclusion:**

By addressing this under-researched intersection, healthcare providers can enhance the quality of care for pregnant individuals with osteoporosis, safeguarding both maternal and fetal health.

**Keywords:** Osteoporosis, Pregnancy, Vitamin-D deficiency, Women Health

2. *Department of Clinical Medicine and Surgery, University of Agriculture, Faisalabad, 38040, Pakistan.*
3. *Department of Parasitology, University of Agriculture, Faisalabad, 38040, Pakistan.*

### ABSTRACT

This comprehensive review examines the potential of non-surgical approaches, namely electrical stimulation and exercise, in promoting the regeneration of injured peripheral nerves. Peripheral nerve injuries pose significant challenges in treatment, often resulting in disrupted communication between the central nervous system and the periphery. Current surgical techniques have limitations, particularly in cases involving adjacent spinal cord injuries or significant gaps between nerve stumps. Therefore, exploring alternative therapies that can enhance axonal regeneration is of great importance. Recent studies have demonstrated that the combination of electrical stimulation and exercise produces a synergistic effect on nerve repair. This combined therapy enhances the expression of growth factors, promotes angiogenesis, increases nerve conduction velocity, and improves functional recovery. Furthermore, it augments the number of regenerating axons and facilitates the maturation of regenerated nerve fibers.

**ABSTRACT**

In the domain of microgrid (MG) inverters, one of the most intricate challenges is orchestrating a seamless transition from the conventional grid-connected (GC) mode to the autonomous stand-alone (SA) operation mode. This transition necessitates a delicate balance to sustain the inverter's frequency and voltage parameters within specified tolerances, particularly in islanded grid configurations. To overcome this challenge, the implementation of a precise and adaptive frequency and voltage droop control mechanism is crucial. The proposed control methodology is a multifaceted approach encompassing two pivotal components, meticulously tailored to ensure a smooth transition from GC to SA. Firstly, a fixed voltage reference generation algorithm, inspired by the well-established droop technique, ensures versatility across all operational modes, facilitating effortless shifts between grid-connected and stand-alone operation. Secondly, an innovative modified voltage-current controller incorporates a Luenberger observer to provide real-time voltage reference estimations during SA mode. This feature is critical for maintaining system stability under varying conditions. To substantiate the effectiveness of the proposed control strategy, a comprehensive evaluation was conducted, with a primary focus on current measurement at the point of common coupling (PCC). This assessment considered a spectrum of scenarios, thereby affirming the efficiency and robustness of the control strategy across various microgrid inverter operations. The outcomes of this study not only underscore the strategy's reliability but also enhance the resilience of microgrid systems.

**Key words:** Microgrid; Droop controller; Grid-connected; Stand-alone; Observer.

## ÜRİK ASİT/ALBÜMİN ORANININ COVID-19 TANISIYLA TAKİP EDİLEN HASTALARDA PROGNOZA ETKİSİ

### THE EFFECT OF URIC ACID/ALBUMIN RATIO ON PROGNOSIS OF PATIENTS FOLLOWED UP WITH COVID-19 DIAGNOSIS

*Başak ÇAKIR GÜNEY<sup>1</sup>*

<sup>1</sup>Doktor Öğretim Üyesi, Sağlık Bilimleri Üniversitesi, İç Hastalıkları, İstanbul, Türkiye.

<sup>1</sup>ORCID ID: <https://orcid.org/0000-0003-2389-2833>

#### ÖZET

**Giriş/Amaç:** Bu çalışmada yoğun bakım ünitesinde ve servislerde takip edilen COVID-19 hastalarında UAR'nin prognoza etkisinin araştırılması amaçlandı.

**Gereç ve Yöntem:** 01.05.2020-01.05.2020 tarihleri arasında Sağlık Bilimleri Üniversitesi Sultan Abdulhamit Han Eğitim ve Araştırma Hastanesi'nde yatan 204 COVID-19 hastasının (>18 yaş) UAR değerlerinin gözlemlenmesi amacıyla tek merkezli, retrospektif bir çalışma düzenlendi. 01.04.2022. UAR için optimal kesim değerini belirlemek üzere ROC eğrisi analizi kullanılarak hastalar UAR'a göre düşük ve yüksek UAR grupları olarak iki gruba ayrıldı. Katılımcıların yatışları sırasındaki demografik-klinik özellikleri ve laboratuvar parametreleri hastanenin elektronik tıbbi kayıtlarından geriye dönük olarak elde edildi.

**Bulgular:** Yüksek UAR'li ( $\geq 1,63$ ) hastaların yoğun bakıma daha uzun süre yatması gerektiği (%14,5 vs %51,  $p<0,001$ ) ve hastane içi mortalitenin daha yüksek olduğu görüldü (%0,05 vs %43,5,  $p<0,001$ ).

**Sonuç:** Bu çalışmada, diğer parametrelerden bağımsız olarak yoğun bakım ünitesi ve servislerde takip edilen COVID-19 tanılı hastalarda UAR'nin hastane içi mortaliteyi öngörmeye yararlı bir araç olduğu sonucuna varıldı.

**Anahtar Kelimeler:** UAR (Ürik Asit/Albumin Oranı), covid-19, Prognoz, Mortalite

#### ABSTRACT

**Background/aim:** In this study, it was aimed to investigate the effect of UAR on prognosis in COVID-19 patients followed in intensive care unit and on wards.

**Materials and methods:** A single-centered, retrospective study was arranged to observe the UAR values of 204 COVID-19 patients (>18 years old), hospitalized at the University of Health Sciences Sultan Abdulhamit Han Education and Research Hospital between 01.05.2020-01.04.2022. The patients were divided into two groups according to UAR, as low and high UAR groups using ROC curve analysis to determine optimal cut-off value for UAR. The demographic-clinical characteristics and laboratory parameters of the participants during their hospitalization were retrospectively obtained from the hospital's electronic medical records.

**Results:** Patients with high UAR ( $\geq 1.63$ ) required a longer lasting intensive care unit admission (14.5% vs 51%,  $p<0.001$ ) and demonstrated higher in-hospital mortality (0.05% vs 43.5%,  $p<0.001$ ).

**Conclusions:** In this study, it was concluded that UAR is a useful tool to predict in-hospital mortality in patients diagnosed with COVID-19 followed up in the intensive care unit and wards, independently from other parameters.

**Keywords:** UAR (Uric Acid/Albumin Ratio), Covid-19, Prognosis, Mortality

### ABSTRACT

This research aims to explain the study of the relationship between Islam and science. The research method uses qualitative research with a library research approach. This research concludes that science is understood in a short sense as objective, structured and orderly knowledge. Science cannot be separated from religion. He is a reference source for religion and all developments in science. He is the main source of inspiration for Muslims' views regarding the integration of science and religion. Humans obtain knowledge from various sources and through many ways and paths, but all knowledge ultimately comes from God. Muslim philosophers and scientists believe that in the act of thinking and knowing, the human mind obtains enlightenment from God who knows something that is not yet known and will be known because of the model and how to obtain it. Science needs religion to provide a moral foundation for the application and usefulness of science for human life and the environment. Because science, apart from having a positive impact, can also have a negative impact on human life. Science in Islam is seen as a human need to achieve prosperity in life in the world and make it easier to know God. Islam is not only open to innovations carried out by science, but also encourages the achievement of this progress.

### ABSTRACT

The aim of this research is to describe the implementation of Islamic education/science from a literature review perspective. The writing method uses a library research approach sourced from authoritative journals and books regarding the implementation of Islamic education/science. The results of the research conclude that Scientific Research between Religion and Science as Models, Patterns and Paradigms If we talk about core concepts in the Islamic religion, it is easy to say that the issue of basic beliefs is the basis of mother of science in the Islamic religion. In general, the core concept of the Islamic religion is based on inspiration regarding Allah SWT, nature and humans, physically and metaphysically. This means something related to the essence based on these three things, of course it is indirectly attached to the study of the mother of science in Islam. As the most fundamental foundation based on knowledge in the Islamic religion, it certainly conveys the most fundamental viewpoint in the Islamic religion.

## SELF -CONCEPT, MISTRUST AND ANTI-SOCIAL BEHAVIOR IN WORKPLACE INDIVIDUALS: A CORRELATIONAL STUDY

*Adeena Zakir\* and Aiman Shahzad*

*Department of Applied Psychology, School of Professional Psychology*

*University of Management and Technology, Lahore.*

### ABSTRACT

The aim of this comprehensive research was to analyze the relationship between self-concept, mistrust and anti-social behavior in workplace individuals. The main hypothesis of this study is that there is a positive relationship between mistrust and anti-social behavior in workplace individuals. The study used a purposive sampling technique, involving a representative sample of 151 people (N = 51), with 93 male participants and 58 female participants. The age distribution of the participants exhibited an average age of (M = 29.63, SD = 8.25). The data was collected through assessment instruments that displayed good internal reliability, such as the Personal Self-Concept Questionnaire (Goñi *et al.* 2011), Brief Anti-Social Behavior Scale (Laura *et al.* 2021), Paranoid Tendency Scale (Shahzad & Jabeen, 2021 unpublished). These scales were used to collect data from public and private institutes of Lahore. Along with this a customized scale was used to acquire demographic data. The results of the correlational analysis used in this study revealed that anti-social behavior has a low positive relationship with all the factors of positive self-concept and a moderate positive relationship with mistrust. Similarly, mistrust has a low positive relationship with a factor of personal self-concept. In conclusion, self-concept and mistrust both have a positive relationship with anti-social behavior in workplace and hence both play a role in disrupting the work environment dynamics, given that they are not maintained appropriately. This study will be useful to study and understand the social vulnerability of workplace individuals.

**Keywords:** Self-Concept, Mistrust, Anti-Social Behavior and Workplace Individuals

### ABSTRACT

Quality of Experience (QoE) assesses the large level of a customer's gratification and practice with a consequence or services and the purveyor provided products and customised services. We constantly involve in improving the system efficiency and the outcome productivity that effects the frequent modification in cloud landscape. Since the previous decades, the business models relocated away from building up own on-premise computational and information centre in the domains of cloud infrastructure. Now, the sphere of cloud computing is experiencing the self-transformation with the flourishing Internet of Things (IoT) [1-4]. IoT consists of several interrelated computational devices that offered with inimitable identifiers and the capability to transmit data over the Internetwork without necessitating human-human or human-machine collaboration [1-2]. With IoT, trivial devices which have their identifiable processing power, and generate more and more scaled information [1-4]. It's habitually not effectual to transmit all information to the cloud for computation and processing: that practice, no worry how rapid, can surge the response latency at the device's geospatial position. Furthermore, it's contingent on Internet accessibility and can cause confronts of security, information protection, and data privacy. This is why many businesses and organisations which have disseminated IoT operations have initiated assigning administering accomplishments turn to local on-site schemas [4-5]. Although they are not assembling local information centers repeatedly. Rather they are leveraging the capabilities of the IoT devices on-sites already. By embracing the computing on the edge approach, Numerous businesses are healthier proficient to implement prompt modernisation and warrant excessive obtainability for real-time applications. Impelling analyse to the peripheral devices on the Internetwork is usually called as the edge computing or computation at the edge [4-5]. Fundamentally another expression for distributed rather than the centralized computing. The IoT is the most operational when the computational tasks take place on-site for the instantaneous requirements of the location, but the cloud can be utilised to accumulate information from the multiple locations for the bigger enterprises. Being influenced such types of local computational frameworks, we are to integrate the containerised peripherals to the music composition, reconstruction, and generation with a distributed network domain for providing the music computing services, distributed music-making, smart auto-tuning of the instruments, and analysing the qualitative rhythmic behaviours [6-7].

**ABSTRACT**

Regional expenditure is all regional obligations that are recognized as a deduction from the value of net assets in the relevant fiscal year period. Regional spending consists of operational spending including personnel spending, goods and services spending, interest spending, subsidy spending, grant spending and social assistance spending. Capital Expenditures include capital expenditures for land, equipment and machinery, buildings and structures, roads, irrigation and networks as well as other fixed assets. This research aims to explain the importance of Central Java regional shopping. This research is library research with a qualitative approach. The data sources used in this research come from various literature in journal articles that are relevant to the research topic. The method used to analyze the data is content analysis from the literature sources used in the research. The results of the research show that the aim is to formulate an appropriate strategy for the Central Java Provincial Government in improving the quality of regional spending. The regional expenditure component is a manifestation of regional government spending money on public services. There are four main posts in regional expenditure, namely the Personnel Expenditure post, the Goods and Services Expenditure post, the Capital Expenditure post, and other expenditure posts. Regional expenditure is used in the context of implementing government affairs which fall under the authority of the province or district/city, which consists of mandatory affairs and optional affairs which are determined by statutory provisions.

### ABSTRACT

Community-based ecotourism is the development of a place, one of which is Banjaran Village, Pesawaran Regency, Lampung Province through the tourism sector. This development utilizes the potential of natural and cultural resources owned by the community as tourist objects and attractions. This research aims to map tourist objects and attractions in order to provide an overview to tourists as a form of travel guide to tourist locations. The data collection method uses starting point retrieval with the Avenza Maps and ArcGIS applications. Next, it is analyzed using a qualitative descriptive method. The results of research in conducting mapping show that there are important elements during the search such as settlements, bridges, mosques and agroforestry land, all of which are used as development objects and tourist attractions. This research provides basic knowledge and guidance for tourists or the public in preserving the environment and developing community-based ecotourism so that it can strengthen its objects and attractions.

**ABSTRACT**

Today the quest for fast money has driven many people to carry out different illegal acts and signature counterfeiting is identifiable among this acts. Financial institutions including banks also fall victim because of lack of effective technology to verify signatures. Digital signature has been used over the past years in several industries to ensure authentication, non-repudiation, data integrity and reduce the risk of fraudulent transaction. The term digital signature is synonymic to electronic signature (e-signature). According to Sur & Roy (2011), digital signature has the potential that can safeguard valuable information over differing types of networks. This paper presents digital signature verification system as a means to enhance customers' data security in the banking industry. The paper discussed the basic concept and characteristic feature of digital signature. Some of the advantage and challenges of using digital signature in the banking sector were also highlighted in the paper work. In order to collect important information for the paper write-up, online Google form questionnaire instrument was used to collect vital information from respondents. The data retrieved were collated and subjected to reliability analysis. Conclusively, the paper inferred that digital signature is based on encryption methods that create a unique signature for each user. The technology ensures the security of the documents in the digital environment, guaranteeing their authenticity and integrity.

Jaya Yogyakarta*

### ABSTRACT

Best policy eradication of the Corona Virus Disease-19 (COVID-19) pandemic in Indonesia has brought about real recovery of the Indonesian economy in society, but the challenges for the Indonesian economy in the future will not only revolve around the health crisis caused by the COVID-19 pandemic but there are new challenges, namely food and energy crises are driving inflation in many countries. Many countries are experiencing a spike in inflation, including advanced countries such as the United States, which recorded inflation of 8.5% in July 2022. The United States is also faced with the challenge of an economic recession which will lead to stagflation, as evidenced by Q-2 2022 experiencing an economic contraction of 0.9%. Not only the United States, Indonesia also experienced a spike in inflation, but Indonesia was relatively successful in controlling it, as evidenced by the inflation rate of 4.69% (YoY) in August 2022 and this figure is much more moderate than inflation in ASEAN countries and other G-20 member countries. However, it should be noted from these inflation figures that the Government is still administering energy prices by providing subsidies and compensation from National Budget, which amounted to 502 Trillion Rupiah this year and is the largest subsidy and compensation figure in the last 10 years.

At a time when many countries are experiencing stagflation or economic recession caused by the energy and food crisis, Indonesia's economic growth can grow impressively in Q-2 2022 by 5.44% beyond market expectations and consensus. This means that the role of the National Budget in absorbing economic shocks is very real and supportive. community economic recovery by providing subsidies and energy compensation funds. Even though inflation from the administrated price indicator in August 2022 has decreased from the previous month, namely 0.33% (mtm) from the previous month's 1.17%, Indonesia needs to be alert and careful considering that Indonesia is an importer of fuel raw materials from abroad which in The last 10 years have experienced a significant surge in import numbers due to decreased exploration. On the state spending side, changes in oil prices will affect fuel and electricity subsidies from profit sharing funds due to crude oil procurement which has the effect of increasing subsidies from the National Budget. In the Indonesia Economic Prospects report released by the World Bank, it also notes that there is potential for Indonesia's economic growth to slow to 4.6% (YoY) in 2022 in line with pressure related to the decline in global economic conditions. This means that Indonesia must remain alert to VUCA ( volatility, uncertainty, complexity, and ambiguity).

### ABSTRACT

Antimicrobial resistance (AMR) records a serious global health alarm, posturing ample challenges to the effectual treatment of bacterial infections. As the predominance of drug resistant bacteria continues to rise, the improvement and implementation of advanced techniques for AMR detection have become essential. This review offers a broad overview of the up-to-date methodologies employed in the identification and classification of antimicrobial resistance in bacteria. In recent years, genomic approaches have revolutionized AMR detection, allowing for rapid and accurate evaluation of resistance genes and mutations. Whole genome sequencing, coupled with bioinformatics tools, has enabled the chasing of resistance evolution and transmission dynamics. Additionally transcriptomics and proteomics have explained the underlying mechanisms of AMR, assisting in the development of targeted therapies. Furthermore, advanced phenotypic assays, such as microfluidic systems and mass spectrometry based techniques, have improved our skill to assess bacterial susceptibility to antibiotics. The addition of artificial intelligence and machine learning algorithms has simplified data analysis and expectation of resistance profiles with high precision. This review highlights the benefits and restraints of each technique and reflects their potential for clinical and public health applications. The continuing challenges in AMR detection, including the emergence of novel resistance mechanisms and the need for regulation, are also addressed. The review concludes that more accurate, precise and economical methods are needed to understand exact situation of resistance to adjust the management strategies accordingly.

**ABSTRACT**

Nanomedicine is the branch of study that uses nanotechnology to support and improve molecular levels of human health. Applications of nanotechnology in medicine today and in the future include research on diagnostic tools, medication delivery systems to boost gene therapy, and tissue engineering technologies. Nano toxicology is now-a-day inadequate in helping academia, managing bodies in illuminating the mechanism of action, maintaining its hazards and benefits, in consequence increasing the benefit of these material in medicine without dealing public health and environmental honor. Nanoparticles effect the plant growth, their impregnation and releases harmful ions. Nano medicines provide benefit to human being but can also causes damage to various essential organs of the organisms.

## ADVANCED NON-INVASIVE METHODS TO QUANTIFY HEAT STRESS RESPONSE IN FARM ANIMALS

*Yamini, S.<sup>1\*</sup>, Deepika, A.<sup>1</sup>, Abarna, R.<sup>1</sup>, Kalaignazhal, G.<sup>1</sup>, Silpa, M.V.<sup>2</sup> and Sejian, V.<sup>1</sup>*

<sup>1</sup>*Rajiv Gandhi Institute of Veterinary Education and Research, Kurumbapet, Pondicherry-605008,  
India*

<sup>2</sup>*Institute of Animal Breeding and Genetics, Justus-Liebig-Universität Gießen, Gießen, Germany*

### ABSTRACT

In the changing climatic scenario, heat stress is considered to be a major concern to livestock owners as it affects the livestock production drastically. There are number of approaches to quantify heat stress responses in farm animals. From an animal welfare point of view, it can be categorised as invasive and non-invasive approaches. Non-invasive methods assess animal's behavioural (postural adjustments, rumination time, drinking frequency) and physiological (respiration, heart, pulse rate and body temperature) responses to heat stress that can be monitored without interference of human or additional stress on the animal. Bioclimatic thermal indices are used by researchers across the globe to characterize the environmental conditions to which animals are exposed depending on the species, breed, and production type. Temperature humidity index and heat load index are among the widely used bioclimatic indices for heat stress studies. Stress markers such as cortisol can be measured in the feces, urine, hair, saliva and milk to assess the level of heat stress in farm animals. Some of the next generation sequencing methodologies, like metagenomics, can aid in quantifying and assessing the heat stress induced alteration in the fecal biome non-invasively. Advanced technologies applied for the real-time analysis of cardinal signs such as sounds through microphones, behavioral images, videos through cameras, and data stalking body weight and measurements might provide deeper insights towards improving biological metrics in livestock exposed to heat stress. Sensor-based technologies like ear canal sensors, rumen boluses, rectal and vaginal probes, infrared thermography (IRT), and implantable microchips can be employed in grazing animals to assess the quantum of heat stress. Among these, IRT is considered to be the widely adopted methodology that records the surface body temperature. Behavioral responses and activity alterations in heat stressed animals can be monitored using accelerometers, bluetooth technology, global positioning systems (GPSs) and global navigation satellite systems (GNSSs). Machine learning offers a scalable solution in determining the heat stress response in farm animals by utilizing data from different sources like hardware sensors. Most of these non-invasive approaches have the potential to assess the impact of heat stress on livestock effectively. However, these methodologies should be standardized with their uses extended to the developing and tropical countries which experience higher risks due to climate change.

**ABSTRACT**

In this study, we explored the quantitative correlation between the anti-NSCLC (Non-Small Cell Lung Cancer) biological activity and the molecular structure within a series of 38 derivatives of cyclohexane-1,3-dione-dimidone. To achieve this, we utilized molecular descriptors computed through DFT-B3LYP/6-31G, along with topological and physicochemical analysis. The outcomes of the QSAR models developed herein using MLR and MNLr techniques exhibit the robust predictive capability of these models. Specifically, the linear model yielded an R<sup>2</sup> value of 0.913 (R<sup>2</sup>CV = 0.85, R<sup>2</sup>test = 0.934), while the nonlinear model achieved R<sup>2</sup> values of 0.991 (R<sup>2</sup>CV = 0.82, R<sup>2</sup>test = 0.997). Leveraging the predictions derived from the QSAR model, novel molecular structures were designed and subsequently assessed for their anti-NSCLC activity. Furthermore, significant interactions between these molecules and the human c-Met protein were forecasted. Integrating projections from the QSAR models, molecular docking analyses, and in silico ADMET property evaluations, we pinpointed one out of the 16 newly developed molecules as a potential drug candidate for NSCLC.

### ABSTRACT

Health services are one component of the national health system that has direct contact with the community. Health service facilities are places used to provide promotive, preventive, and curative health service efforts. One of aspects of health services is to support the Universal Health Coverage (UHC) Programme. The form of implementation from the Indonesian government in the context of realizing the UHC program is the establishment of the National Health Insurance (NHI) program or what is known as the National Health Insurance (JKN) in Indonesia which is managed by the Social Security Administration Agency (BPJS). This study aimed to know the description of health services. The research was conducted on July 12-26, 2023 in Kanreapia Hamlet, Indonesia. This research was a qualitative study using a descriptive approach. The sample was 80 respondents. The result showed that most of respondents used health facility (52;65%). On 52 respondents who used health facility, most of them choose health primary care (35;67%). Respondents usually went to health facility used their own transportation. In terms of distance traveled, the hospital distance for 5 respondents was more than 10 km. Meanwhile, for community health centers and medical practitioners, the majority of travel distances are less than 10 km (54%, 67%). For travel time, if respondents have hospitals and health centers, then they need more than 30 minutes (100%, 60%). Meanwhile, to go to a doctor's office, the majority of respondents took less than 30 minutes (58%). Based on the JKN membership variable, the majority of respondents have joined as JKN members (53.66%). The government in Gowa Regency should carry out health outreach and National Health Insurance so that people can have health insurance.

### ABSTRACT

Inhibition of Janus kinase 3 (JAK3), a member of the JAK family of tyrosine kinases, remains an essential area of research for developing treatments for autoimmune diseases, particularly cancer and rheumatoid arthritis. The recent discovery of a new JAK3 protein, PDB ID: 4Z16, offers exciting possibilities for developing inhibitors capable of forming a covalent bond with the Cys909 residue, thereby contributing to JAK3 inhibition. A powerful prediction model was constructed and validated using Monte Carlo methods, employing various internal and external techniques, including. This approach resulted in the prediction of eleven new molecules, which were subsequently filtered to identify six compounds exhibiting potent pIC<sub>50</sub> values. These candidates were then subjected to ADMET analysis, molecular docking (including reversible-reversible docking with tofacitinib, an FDA-approved drug, and reversible-irreversible docking for the newly designed compounds), molecular dynamics (MD) analysis for 300 ns, and calculation of free binding energy. The results suggested that these compounds hold promise as JAK3 inhibitors. In summary, the new compounds have exhibited favorable outcomes compared to other compounds across various modeling approaches. The collective findings from these investigations provide valuable insights into the potential therapeutic applications of covalent JAK3 inhibitors, offering a promising direction for the development of novel treatments for autoimmune disorders.

## RELATIONSHIP BETWEEN LINGUISTICS AND LITERATURE: A NEW CONFIGURATION

*LAMAAZI Fatima Zohra*

*P.h.d Student, Ibn Zohr University, Faculty of letters and Human Sciences, Agadir, Morocco*

*ABOUTARIK ABDELMAJID*

*Dr, Ibn Zohr University, Faculty of letters and Human Sciences, Agadir, Morocco*

### ABSTRACT

By this paper, we try to review the relationship between linguistics and literature, which knows highs and lows, rejection and adhesion, openness and enclosure, marking moments of rupture or discontinuity. Maingueneau has traced the historical evolution of these constantly reconfiguring relationships. While linguistics has provided tools for interpreting literary texts, it has subsequently closed in on itself, as literature has come to see itself as a particular use of language, the interpretation of which refuses a linguistic analysis deemed unable to account the complexity of the literary fact perceived as a prestigious act transcending any linguistic description. The aim of our contribution is to show that developments in the sciences of language have helped build new bridges between linguistics and literature. The latter benefits from advances in linguistics of enunciation, among other fields. We have thus moved from linguistics of the sentence to linguistics of the discourse, unifying all verbal activities under the label "discourse" while admitting discursive diversity. Literature, apprehended as literary discourse, opens up to devices able to interpret it in a way that is no longer elementary or fragmentary, but rather global and in-depth.

**Key words:** linguistics-literature- discourse- literary discourse-linguistics of enunciation

### ABSTRACT

Epilepsy is not one condition, but is a diverse family of disorders, having in common an abnormally increase predisposition to seizure. It is a group of disorders of the CNS Characterized by paroxysmal cerebral dysrhythmia, manifesting as brief episodes(seizure) of loss or disturbance of consciousness

Seizure is a sudden, uncontrolled burst of electrical activity in the brain. The present research was designed to investigate the antiseizure and antioxidant properties of ethanol fraction of aerial part of *Borreria ocymoides* on isoniazid-induced seizure in rats model. The effect of ethanol fraction of aerial part of *Borreria ocymoides* on seizure latency, percentage protection against seizure, percentage protection against lethality, anti-oxidant status and neurotransmitters, were investigated in PTZ seizure-induced rats using standard biochemical methods. The qualitative and quantitative phytochemical results of the ethanol fraction of aerial part of *Borreria ocymoides* constitute respectively; Saponins, flavanoids, tannins, Terpenoids alkaloids, steroids, Cardiac glycosides. The acute toxicity test results of ethanol fraction of aerial part of *Borreria ocymoides* showed that the extract was not toxic at the highest dosage (5000 mg/kg body weight) administered. The results showed a significant ( $P < 0.05$ ) reduction in GLU, and DOP with a corresponding increase in GABA and GABA-T of the group treated with 200, 400 and 600 mg/kg b.w when compared with positive control in seizure induced rats.

**Keyword:** Seizure, Neurotransmitter, antioxidants, electrolytes and ethanol fraction.

**ABSTRACT**

Nickel molybdate is among the most studied ternary oxides in the family  $AMoO_4$  (A is a transition element or a divalent metal from the alkaline earth column). According to the literature,  $NiMoO_4$  possesses five allotropic forms  $\alpha$ ,  $\beta$ ,  $\gamma$ ,  $\delta$  and  $\epsilon$  depending on the synthesis conditions, the temperature and the pressure. Indeed, under atmospheric pressure, the nickel molybdate can be detected in two crystalline forms. In fact, it can be in the stable form located at a medium high temperature,  $\alpha$ - $NiMoO_4$ , in which Mo is tetrahedrally coordinated, or it can have an octahedral coordination in the metastable low temperature (below 190K) form,  $\gamma$ - $NiMoO_4$ .

In this work, we synthesized  $\alpha$ - $NiMoO_4$  in the solid state utilizing a new and simple process, without resorting to any solvent at relatively low temperature. The as-prepared nickel molybdate nanopowders were readied through calcination of an oxalate complex in static air at 550°C. The oxalate complex was investigated by TGA and FTIR spectroscopy. The as-readied  $\alpha$ - $NiMoO_4$  was characterized by XRD, and BET technique. Its catalytic effectiveness was verified in the reduction reaction of the nitrophenol isomers. The nickel molybdate exhibits exceptionally high reduction reaction of the three isomers of nitrophenol to the three corresponding aminophenol isomers.

**Keywords:** ternary oxides, oxalate complex, nickel molybdate nanopowders, Reduction of nitrophenol

### ABSTRACT

This summary highlights the fact that cultural diversity remains a reality that raises a number of questions for teachers of heterogeneous groups.

This volume asserts that the foreign language teacher cannot escape this reality. Cultural differences, a process in which the school is now at the root of a number of cultural phenomena. The teacher must face up to these in order to shape tomorrow's society and develop the ability to live together despite all differences.

However, our paper examines the role of culture in the teaching of a foreign language. It focuses on the definition of culture, and would be an opportunity to take stock of a set of fundamental concepts concepts that are fundamental to understanding our work.

Our theme focuses on the process of cultural mediation as a gateway to foreign culture in a heterogeneous language classroom where cultural diversity is very clear. cultural diversity reigns, and addresses the various theories theories related to the same subject, we study the phenomenon of heterogeneity as a source of heterogeneity as a source of richness for both partners in the teaching

Our article aims to persuade educators that culture is a way of solving the problems we face. It focuses on the teaching of FLE, which has played and continues to play a key role, given that this foreign language is a second language, for the simple reason that it has become an educational device where the practitioner of this profession will adopt a spirit of mediation to produce common ground between several cultures in a closed social space. While remaining within the same framework, we must consider the teacher as a major element in the institutional learning process.

**Key words:** Intercultural teaching, culture, cultural diversity, heterogeneity, mediation.

### ABSTRACT

The objective of this study was to perform a comparative analysis of physiological, biochemical responses and yield parameters of durum wheat (*Triticum durum* Desf.) in the semi-arid region. Thirteen INRA-Morocco durum wheat lines were evaluated under rain conditions during two cropping seasons (2019/20, 2020/21). The trials were conducted in the experimental field of the National Institute of Agricultural Research of Douyet Fès (34°2 N, 5°W, 416 m). Various agro-physiological and biochemical parameters were studied: relative water content, chlorophyll content, leaf surface, leaf temperature, proline content, yield and yield components. A rainfall deficit was found to significantly increase proline content and leaf temperature and decrease relative water content, chlorophyll content, leaf area and yield ( $P < 0.01$ ). According to these parameters and rainfall indices, our results indicated that field-induced precipitation variations caused contradictions in the response of assessed traits to drought-related interactions between the two growing seasons (2020-2021) the identification of genotypes in the presence and absence of precipitation using a combination of drought-related traits.

**Keywords:** Durum wheat, drought, proline, relative water content, yield.

### ABSTRACT

In this work, we examine the performance of novel dyes, namely MC20, MC28, MZ173, MZ175, and MK162, as photosensitizers in dye-sensitized solar cells. We use density functional theory calculations to explore the energy levels, absorption wavelengths, and photovoltaic characteristics of these dyes. The calculated energy levels show appropriate alignment with electron transport layers, guaranteeing efficient charge injection and reducing energy losses. These dyes also exhibit absorption wavelengths in the visible range, indicating that they are capable of efficiently harnessing solar energy. Analysis of their photovoltaic properties has demonstrated their potential in terms of the open circuit voltage. The dyes show favorable properties, making them potential candidates for efficient light absorption and electron transfer in dye-sensitized solar cells. These results underline the need to include them in future dye-sensitized solar cells research and provide interesting pointers for the design and optimization of efficient photosensitizers

**Keywords:** TD-DFT, organic dyes, photovoltaic, dye-sensitized solar cells.

### ABSTRACT

Although construction industry plays a vital role towards accomplishing social and fiscal developmental goals that are greatly lacking in the north central states of Nigeria, however the industry is afflicted with a number of difficulties, One of the major difficulties hindering the management of construction projects is the unethical professional practices; which include lack of standard services, unruliness, lack of decency, weak accountability, carelessness and lack of transparency, These undesirable trends affects the management of construction projects and the role of the industry in enhancing the economic, Social and fiscal growth of the research area. The main aim of this study is to examine the causes and effects of unethical professional practice on management of construction projects in the North central part of Nigeria. The study will adopt a sequential explanatory mixed methods (MM) research design, which is the most straightforward among the mixed methods to explore the causes and effect of unethical professional practice on the management of construction projects in this research area, in addition to the initial phase of quantitative data collection and analysis and using qualitative results in explaining and interpreting the findings of the quantitative phase,

## INTERNATIONAL ORGANIZATIONAL COMMUNICATION IN DIGITAL AGE

*OUBRAIM Ibtissam*

*PhD student, Ibn Zohr university, Faculty of Letter and Human Sciences, Agadir, Morocco*

*EL ACHMIT Jamal*

*Professor, Ibn Zohr university, Faculty of Letter and Human Sciences, Agadir, Morocco*

### ABSTRACT

Since its inception, human beings have felt the need to communicate. Over the years, communication has developed to encompass various aspects of life, starting with basic communication that ensures survival and extending to communication within an organization. The latter, as an organized structure, relies on internal communication, which is a crucial factor for its success and sustainability.

To this end, some organizations are increasingly placing internal communication at the heart of their activities. This trend began in the 1980s when the first roles in internal communication began to take shape, and human resources managers started to establish communication departments within their companies. Towards the end of the 20th century, the intranet made its appearance in organizations, making it easier for managers to communicate via a closed, company-specific network.

The objective of this communication is to explain and define various concepts related to communication, digital technology, and digitalized communication methods. It underscores the role of digital transformation in enhancing internal communication within organizations, drawing upon the findings of research conducted by theorists and researchers in the field of internal communication. This work also explores how companies are embracing new approaches to facilitate effective communication among employees, particularly through the use of digital platforms and online communication tools. It highlights and sheds light on the growing significance of internal communication for organizational success, elucidating how communication and human resources professionals must adapt to technological advancements to ensure the success and sustainability of their organizations.

## LA COMMUNICATION INTERNE DES ORGANISATIONS A L'ERE DU DIGITAL

*OUBRAIM Ibtissam*

*Doctorante, Université Ibn Zohr, Faculté des Lettres et des Sciences Humaines, Agadir, Maroc*

*EL ACHMIT Jamal*

*Professeur, Université Ibn Zohr, Faculté des Lettres et des Sciences Humaines, Agadir, Maroc*

### RESUME

Depuis sa création, l'être humain a ressenti le besoin de communiquer. Au fil des années, la communication s'est développée pour englober des divers aspects de la vie, en commençant par la communication de base qui assure la survie et en s'étendant à la communication au sein d'une organisation. Cette dernière en tant que structure organisée, s'appuie sur la communication interne qui est un facteur crucial de son succès et sa pérennité.

Pour ce faire, certaines organisations se mettent de plus en plus à placer la communication interne au cœur de leurs activités, Cette tendance a débuté dans les années 1980 lorsque les premiers métiers de la communication interne ont commencé à prendre forme, et les responsables des ressources humaines ont entamé l'implantation des départements de communication au sein de leurs entreprises. Vers la fin du 20ème siècle, l'intranet a fait son apparition dans les organisations et a offert la possibilité aux acteurs des organisations de communiquer via un réseau fermé, propre à l'entreprise.

L'objectif de cette communication est d'expliquer et citer en premier lieu les différentes notions de la communication, le digital, et les moyens de communication digitalisé, elle met l'accent sur le rôle de la transformation digitale dans l'amélioration de la communication interne dans les organisations, en se basant sur les résultats des recherches menées par les théoriciens et les chercheurs en communication interne. Ce travail examine également comment les entreprises adoptent de nouvelles approches afin de favoriser une communication efficace entre les employés notamment grâce à l'utilisation des plateformes numériques et d'outils de communication en ligne. Il souligne et met en lumière l'importance croissante de la communication interne pour le succès organisationnel et explique comment les professionnels de la communication et des ressources humaines doivent s'adapter aux progrès technique pour garantir le succès et la pérennité de leurs organisations.

## GENOME WIDE ANALYSIS OF UBIQUITIN CARBOXYL TERMINAL HYDROLASES IN RICE: THEIR ROLE IN GROWTH AND STRESS RESPONSE

*Chippala Naga Swapna, K. Harika, M. Vani & K Gnaneswari*

*Department of Applied Microbiology, Sri Padmavati Mahila Visvavidyalam, Tirupati*

### ABSTRACT

Ubiquitination is the third most frequent, reversible and extremely diverse post-translational modification (PTM) occur in plants. Ubiquitin carboxyl terminal hydrolase's (UCHs) are a class of deubiquitinating enzymes (DUBs), that are responsible for cleaving ubiquitin molecules from target proteins, they typically contain a catalytic domain that hydrolyses the isopeptide bond between ubiquitin and the target protein. In the present investigation, in a genome wide survey, a total of 59 putative rice UCH's genes have been identified and located in the rice genome, distributed throughout the 12 chromosomes at different densities. All 59 candidate genes were selected, for a detailed characterization of their gene structures, protein properties, cis-regulatory elements, and comprehensive analysis. Ubiquitin Carboxyl terminal hydrolases appear to be involved in the interactions with other ubiquitin and de-ubiquitin proteins and their encoded proteins have higher content of alpha-helices in their predicted secondary structures. Majority of Ubiquitin Carboxyl Terminal Hydrolase (UCH's) have binding sites for metal and non-metal ligands. Analysis of exon-intron junctions and sequence motifs in each candidate genes has revealed high levels of conservation within and between phylogenetic groups. The putative promoter regions of these genes also carry cis-regulatory elements that respond specifically to stress and signalling molecules. It shows that the ubiquitin carboxyl terminal hydrolase protein family is valuable for manipulation of stress tolerance in rice and other crops. A primer was designed for UCH 10 gene for future molecular studies. This genome wide study provides valuable information of chromosome organisation, gene structure, protein secondary structures, evolutionary and expression analysis of 59 rice UCH, as well as determined their potential involvement in growth development and stress responses. In this genome wide study bioinformatics tools and huge databases like NCBI, RGAP-DB, ORY-GENES DATABASE, PHYTOZOME, PFAM and many other software tools are used, it shows how impact they gonna be creating in future for creating transgenic plants with upregulated genes and instantaneously respond to several biotic and abiotic stresses independently.

**Key words:** Rice, Ubiquitin carboxyl terminal hydrolase's, Bioinformatics tools, NCBI, DUBs and Transgenic plants

## 3D-QSAR, ADME-TOX IN SILICO PREDICTION AND MOLECULAR DOCKING STUDIES FOR MODELING THE ANALGESIC ACTIVITY AGAINST NEUROPATHIC PAIN OF NOVEL NR2B-SELECTIVE NMDA RECEPTOR ANTAGONISTS

*Mohamed El fadili, Mohammed Er-rajy, Hamada Intara, Mohammed Kara, Sara Zarougui,  
Najla Altwaijry, Omkulthom M. Al kamaly, Aisha Al Sfouk and Menana Elhallaoui*

*LIMAS Laboratory, Faculty of Sciences, Sidi Mohamed Ben Abdellah University, Fez, Morocco*

A new class of selective antagonists of the N-Methyl-D-Aspartate (NMDA) receptor subunit 2B have been developed using molecular modeling techniques. The three-dimensional quantitative structure–activity relationship (3D-QSAR) study, based on comparative molecular field analysis (CoMFA) and comparative molecular similarity index analysis (CoMSIA) models, indicate that steric, electrostatic and hydrogen bond acceptor fields have a key function in the analgesic activity against neuropathic pain. The predictive accuracy of the developed CoMFA model ( $Q^2 = 0.540$ ,  $R^2 = 0.980$ ,  $R^2_{pred} = 0.613$ ) and the best CoMSIA model ( $Q^2 = 0.665$ ,  $R^2 = 0.916$ ,  $R^2_{pred} = 0.701$ ) has been successfully examined through external and internal validation. Based on ADMET in silico properties, L1, L2 and L3 ligands are non-toxic inhibitors of 1A2, 2C19 and 2C9 cytochromes, predicted to passively cross the blood–brain barrier (BBB) and have the highest probability to penetrate the central nervous system (CNS). Molecular docking results indicate that the active ligands (L1, L2 and L3) interact specifically with Phe176, Glu235, Glu236, Gln110, Asp136 and Glu178 amino acids of the transport protein encoded as 3QEL. Therefore, they could be used as analgesic drugs for the treatment of neuropathic pain.

### ABSTRACT

**Context:** In response to a wide range of institutional, political and financial pressures, substantial progress has been made in upgrading the public hospital. However, the latter suffers from major dysfunctions with the effectiveness of its leadership and governance being questioned.

**Objective:** In order to assess the effectiveness of governance boards, we propose a translation and cross-cultural adaptation of the Board Self Assessment Questionnaire (BSAQ).

**Methods:** The BSAQ was translated following the methodology of cross-cultural adaptation of measurement scales. In addition, psychometric properties were assessed on 82 board members representing 13 hospitals. Reproducibility and internal consistency were measured by intraclass coefficient (ICC) and Cronbach's  $\alpha$  tests.

**Results:** During the adaptation process, some items were modified to adapt the questionnaire to the Moroccan hospital context. Reliability analysis of the scale showed an excellent internal consistency of 0.942. Moreover, the reproducibility represented by the ICC intra-class coefficient was largely satisfactory for all dimensions. Construct validity analysis showed that the majority of items correlated well with their dimensions.

**Conclusion:** This study provides policy makers and researchers with a validated tool to describe, understand and assess the roles and functioning of hospital governance boards in a structured way. Such an assessment is considered a key step towards excellence in hospital governance.

**Keywords:** Cross-cultural adaptation, BSAQ, Board governance, skills, public hospitals.

**VERIFICATION OF THE AUTHENTICITY OF OLIVE OIL**

*Doç. EL MORABIT Yassmin*

*Abdelmalek Esaadi University*

*Prof. AHARI M'hamed ;Dr. EL MAADOUDI Mohammed;*

*Abdelmalek Essaadi University*

**ABSTRACT**

Olive oil stands as a multifaceted product, playing a pivotal role in the Mediterranean diet and garnering endorsement from numerous nutritionists. Moreover, it holds significant prominence in scientific research, owing to its medicinal and cosmetic attributes.

Over 96 percent of Morocco's olive groves primarily comprise the Picholine Marocaine variety group, a fact documented by the Ministry of Agriculture and Marine Fisheries in 2006. This variety group is known for its adaptability and the exceptional quality of its olives, serving a dual purpose in both oil production and olive canning. The quality of olive oil is contingent not only on fluctuations in soil and climatic conditions but also on a multitude of factors entwined within the olive and olive oil production, processing, and marketing cycles, as outlined by the International Olive Council in 2011.

In our endeavor to assess the quality of olive oil produced and marketed in northern Morocco while concurrently developing identification methodologies, we intend to employ a comprehensive two-pronged approach, involving both field research and laboratory analysis.

In the context of field research, we will identify representative artisanal units among modern and semi-modern oil mills situated in the primary olive production regions of northern Morocco. The field survey will encompass an evaluation of the material produced, delve into the technological facets of olive crushing units, and scrutinize the techniques associated with olive oil processing, packaging, and storage.

In parallel, laboratory analysis will concentrate on assessing the quality of oils extracted from crushed olives and discerning the factors that influence the qualitative attributes of olive oils throughout the entire spectrum, ranging from olive harvesting to oil storage.

**Keywords:** Olive oil, Picholine Marocaine, quality.

### ABSTRACT

One of the most disastrous and destructive events that is extremely difficult to model are hydrocarbon leaks. Research on the development of hydrocarbon leak detection models has helped to minimize risk, recommend policy changes, save loss of life, and lessen property damage caused by leaks. Machine learning (ML) techniques have greatly advanced prediction systems over the past two decades, offering higher performance and more affordable solutions by simulating the intricate mathematical expressions of physical processes of leakage. The popularity of ML among operators of hydrocarbon pipelines has significantly expanded as a result of its immense advantages and possibilities. Researchers seek to develop more precise and effective detection models by incorporating fresh ML techniques and hybridizing already existing ones. This paper's major contribution is a demonstration of the state-of-the-art in ML models for leak detection and a discussion of the best models. In order to give a thorough overview of the many ML algorithms utilized in the area, the literature where ML models were benchmarked through a qualitative examination of robustness, accuracy, efficacy, and speed is specifically explored in this work. The performance comparison of ML models offers a thorough grasp of the various methodologies within the context of a thorough assessment and debate. The most promising detection techniques for both long-term and short-term leaks are thus introduced in this study. Investigated are also the key trends in raising the standard of leak detection models. The most successful ways for enhancing ML methods are claimed to include model optimization, algorithm ensemble, data decomposition, and hybridization.

## BUILDING PARTNERSHIPS TO ADDRESS POVERTY ALLEVIATION: A MULTISECTORAL APPROACH

*Dr. Bushra Sumaiya*

*Assistant Professor, Faculty of Education, Integral University, Lucknow, Uttar Pradesh, India*

*<https://orcid.org/0000-0002-2622-1552>*

### ABSTRACT

Addressing poverty requires a multifaceted and collaborative approach that transcends the boundaries of traditional sectors. This paper delves into the critical role of cross-sectoral partnerships in effectively combating poverty at the grassroots level. This paper examines the profound impact of collaboration among governments, civil society organizations, and the private sector on alleviating poverty and achieving Sustainable Development Goal 1.

The paper begins by highlighting the pressing need for multisectoral partnerships, given the complex and interconnected nature of poverty. It presents case studies and success stories from various regions, showcasing instances where collaborative efforts have yielded tangible results in poverty reduction. These examples underscore the significance of aligning resources, expertise, and goals across sectors to maximize impact.

Furthermore, the paper delves into the key principles that underpin successful multisectoral partnerships, emphasizing factors such as shared vision, mutual trust, and effective communication. It also explores the challenges and barriers that can hinder collaboration, offering insights into strategies to overcome these obstacles.

By drawing lessons from both developing and developed contexts, this paper provides a comprehensive framework for policymakers, practitioners, and stakeholders interested in fostering partnerships to combat poverty. It underscores the importance of integrating poverty alleviation efforts with broader development agendas and highlights the potential for such collaborations to address not only immediate economic challenges but also the root causes of poverty, including inequality and social exclusion.

In an era where global challenges demand collective action, this paper offers valuable guidance on how partnerships can serve as a powerful catalyst for achieving sustainable and inclusive development, ultimately paving the way for a world with reduced poverty and improved well-being for all.

**Key Words:** Poverty alleviation, Multisectoral Partnerships, Collaboration, Sustainable Development Goal 1, Grassroots Development

## PROFLECTION OF CHRISTIAN RELIGIOUS EDUCATION MANAGEMENT AND THE PHILOSOPHY OF STATE LEADERS IN MINAHASA, INDONESIA

*Christar Arstilo Rumbay, Lince Sihombing, Elisamark Sitopu*

*Institute Agama Kristen Negeri, Tarutung*

### ABSTRACT

Christian Religious Education (PAK) aims at empowering religion and culture. However, religion commands a disproportionately large part compared to culture, with its elements often dominating the latter. The Minahasa leadership philosophy is full of innovative ideas that can help drive the development and management of this subject in the future. This study aimed to identify the management values of the Minahasa leadership philosophy that could contribute to PAK management. A descriptive-analytic approach was used to build ideas from books, articles, and interviews. Conclusively, the leadership system in Minahasa has the potential to manage PAK due to its synergistic and communal value proactively.

**Keywords:** Religion, Culture, Management, Minahasa, PAK (Christian Religious Education)

### Introduction

Academic studies on leadership philosophy in Minahasa have been mainly ignored. A few references, such as Renwarin (2006), explored the concepts of *matuari* and *tona'as* in relation to the cultural dynamics of the *Tombulu* sub-ethnic group. In 2019, Pinontoan wrote a book about *walian* and *tuang pandita*, discussing the interaction between culture and Dutch colonial Christianity. Furthermore, Rumbay tried to bring together the concept of Paul's leadership with the leader of the Minahasa country. These three examples illustrate the community's understanding of leadership values from a socio-anthropological and religious perspective. The existing academic knowledge falls short of its leadership philosophy. For example, old laws and titles such as "walak head" and "*pakasaan*" have not received serious academic attention.

Karudeng (2021) observed that Minahasa's rich cultural values had been seriously degraded by secularism and immigrant religions that claim local traditions as part of their original identity, including leadership concepts such as the role of *walian* and *tona'as*. The public interprets Minahasa from religious and cosmological concepts, while the secular world and modern religion interpret it from a socio-political perspective and western theology. It is essential to revitalize traditional leadership values to keep the area's ancestral heritage alive. Efforts must be made to align the concept of leadership with the local education system to create a more sustainable future.

Christian Religious Education (PAK) is offered at the senior secondary education level. Senior High Schools (SMA) and Vocational High Schools (SMK) are required to include lessons on religious and socio-cultural values as part of their curriculum. The content is largely focused on religion rather than cultural values. Although the Minister of Religion and Culture Regulation number 37 (2018:340-345) states that PAK lessons should have spiritual and social attitude competencies, cultural values are still declining today. Additionally, offering education promotes the implementation of community-based education, which adheres to local social and cultural customs (as outlined in Law Number 23 of 2003, article 55). The government's 'free learning' education initiative has relaxed the assessment standards for determining learning design to give teachers more freedom to select basic and core competencies in a more straightforward manner (Circular Letter of the Minister of Education and Culture, number 14 of 2019). It is vital to utilize all available opportunities to ensure local cultural values form part of the PAK elements. Although various studies showed that religion is not necessarily superior to culture, the former is dominant in PAK syllabus, and there has been little effort to incorporate local culture into the country's construction. Tobing (2020) explained that the PAK curriculum emphasizes Christian values, aiming to spread the faith with Christian attributes. The main focus of this subject is on developing Christ-like

character. Tubulau (2020) argued that the primary aim of PAK is to ensure that everyone becomes a disciple of Christ. This emphasizes the religious aspects while ignoring the local culture.

Involving cultural elements in the construction of PAK demands the concept of projective education management. Jonathans et al. (2022:26-28) argued that the government's 'freedom learning' program provides new opportunities for educators to manage their schools and curricula more effectively. Additionally, the program promotes collaboration between educators, leading to more innovative and effective educational practices. This means the PAK management should be open and flexible to accommodate religious and cultural values. Although the cultural elements are not well represented, there is expectation that this will change in the future.

One way to address this disparity is to incorporate the noble values of Minahasa state leaders into the PAK management. Leadership concepts such as the old law, *walak* head, *walian*, *tona'as* and *pakasaan* have management values that can be implemented. Though various studies were conducted on leadership in Minahasa, none of them addressed the leadership element of culture. Furthermore, the management value of the leadership model has not been explored. For instance, Rompas et al. (2018) examined various leadership management models for the transportation service in the Southeast Minahasa District. Rumondor (2013) explored the relationship between discipline issues and work motivation and how leadership can impact work motivation. Suryo (2010) investigated transformational leadership in Minahasa. The studies focused only on how the government bureaucracy and education are run. Dumanauw (2018) discussed change management in the office, while Koso (2018) examined management in regionally owned enterprises. Potangan (2021) looked at rural government management, and Rumbay et al. (2021a) studied the potential for total quality management in Christian education. Furthermore, Rumbay et al. (2021b) examined education administration management and its relevance to structure and bureaucracy.

The lack of attention to the philosophical reflections of state leaders in Minahasa and PAK management deserves exploration. This leads to the question: How will the leadership philosophy in Minahasa contribute to the management of Christian Religious Education (PAK)?

### Method

This study employed a qualitative approach with a descriptive-analytic methodology. Books and journal articles were the primary sources in constructing the concept of leadership philosophy in Minahasa and PAK elements. Through interviews with a teacher at the Manado State Christian Institute specializing in Tribal Religion in Minahasa, a lecturer at the Faculty of Cultural Sciences at Samratulangi University, a practitioner of indigenous Minahasa beliefs, and a community leader were conducted to gain a comprehensive understanding of the topic.

### Discussion

#### *Reflection towards PAK Management*

Reflecting on past events can help one understand the current events and develop a more comprehensive understanding of what is occurring. Suharna et al. (2013:280) argued that reflection is one of the highest levels of thinking. It involves analyzing past actions and their consequences, considering different alternatives, and thinking about the way things could be done differently. According to Kusumaningrum and Saefudin (2012: 575), reflective thinking is an important part of education, contributing to social development through experience and problem-solving skills. Its patterns consider everything before concluding (Phan, 2008:578). Suharna et al. (2013:281) emphasized the aspects of analysis, evaluation, motivation, and appropriate strategies. Sunaryo (2011:5), on the other hand, concluded that reflection is an intellectual link that involves investigation and conclusion.

There are only two main elements to the definition of reflection: retrospective and response. According to Choy & Oo (2012), retrospective thinking is a process of looking back at past experiences and using them to inform present situations. Suharna et al. (2013: 283) argued that a reflection is a response to past and current events. Therefore, when people reflect on something, they always consider what has occurred and what is currently happening. Such an approach focuses too much on the past and does not contribute to the future.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

When reflecting on the management of PAK, it is necessary to evaluate the patterns and systems conducted in the past or are currently being carried out. If necessary, the management must be deconstructed and reconstructed. Reflecting on PAK management is not enough, implying that educational institutions need to go one step further and engage in proflection. Hansen (2016) found that the term "proflection" was first used by Peter Rod, who later became known as the "originator" of the word. According to Rod (2010), proflection is the process of focusing on the future and using certain theories or materials with futuristic meaning. It involves looking forward to something unknown and discovering something new. This process can have different outcomes depending on the route one takes. Curiosity is what drives people to experiment and test new things to see what the future might hold (Rennison, 2013).

The objective of PAK management is to help people move on from past events and be open to future possibilities. Reflections on leadership philosophies in Minahasa are an important part of the cultural evaluation, but past events are not as crucial as the foretaste of the future. The ideas and values of local culture can be preserved with exemplary leadership in place. The Minahasa leadership philosophy is a real implementation of the PAK management proflection. This combination and harmonization of different cultures, religions, and education systems offer promising results and future discoveries. Therefore, reflection should lead to proflection, which can contribute to the advancement of culture, religion, and education.

### *Hierarchy towards Synergy*

Minahasa's leadership system is hierarchical but does not recognize the royal system such as other regions in the archipelago. A leader governs a group by upholding established customs and traditions. At the lowest level, a leader is also called the head of the *taranak*. This position is comparable to the head of the household in a large family. Wowor (2022) revealed that a large family is comprised of several small families living together. This is evident from the original house setting of the Minahasa tribe, called *walewangko*, which had several bedrooms and a kitchen. Several small families lived together in one house under the leadership of a *taranak* head, and the old term used is *ukung*, currently translated as the old law. According to Sual (2022), the term emerged after the Dutch's involvement in the Minahasa social system. The current concept views the old law as the head of a village who presides over political, social, and cultural functions (Ratar, Pangemanan, & Rimpoporok, 2021; Waworundeng, 2017; Teiwilang, Lapian, & Sendow, 2017; Pendong, Pioh, & Kairupan, 2017; Chalim, Gosal, & Waworundeng, 2021).

The old *ukung* is a deliberate process carried out by the heads of the *taranak*. Aspirations and inputs from small families are conveyed to the head of the *taranak*, who is involved in the selection of *ukung* elders at a higher level. Demographically, the old *ukung* covers the territorial area of one or several villages. Pinontoan (2022) asserted that before colonial rule, *ukung* referred to the notion of a head or leader, while old is a term for an elderly person with a wealth of experience regarding economic and social life. Responsibilities bestowed to this person included overseeing the opening of new plantation lands and coordinating various community rituals in collaboration with priests (Sual, 2022). Pinontoan (2022) noted that an old *ukung* is responsible for coordinating the village security guards. In the ancient Minahasa communities, disturbances and threats from outside the village typically included attacks by wild animals, enemies from outside, and occult sciences. Overall, security coordination and regulation is one of the main tasks of an old *ukung*.

There is a specified leadership hierarchy, with the *taranak* being the lowest, followed by the old *ukung*, and then the *walak* head. However, a thin line exists between old *ukung* and *walak* heads. This has been attributed to data destroyed in the late 18th and early 19th centuries when Christianity and secularism were essential parts of society. Initially, this tradition relied heavily on the collective memory of village elders and secondary data from libraries. Sual (2022) argued that *walak* head is another term for the law of *wangko* or *tona'as wangko*, which controls several hamlets or villages. A *walak* is a chief with a higher position (equivalent to the head of a sub-district) compared to an old *ukung* who only controls a particular village. Pinontoan (2022) further indicated that the Dutch colonials selected him due to political interests to provide taxes and carry out forced cultivation.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

The head of the *walak* elected by the Dutch could intervene politically against the old *ukung*. Although initially elected by representatives of the *taranak* and old *ukung* through village meetings, colonialism shifted society's vital role to its political interests. The actual process required that each *taranak* or extended family gather together and submit one name to be vetted for the leadership position. Representatives would also gather in an open field to participate in the election activity. Several names would be proposed, but people with special abilities were the most preferred candidates. The selection of the heads had a similar pattern and system. Furthermore, the two leadership positions had the same social and political duties, making it difficult to distinguish their roles and responsibilities.

The confusion in using the terms old *ukung* and *walak* heads arose due to the inclusion of colonial political intervention and the secular system (Wowor, 2020). Although the word "ukung" has changed over time, it is still possible to distinguish between the old and new meanings. The head oversees a sub-district that consists of multiple villages. This meant that the leadership system was organized in layers, with the *taranak* at the bottom, followed by the old *ukung*, then the head of the *walak*, and finally the *pakasaan*, or equivalent to the regent who oversees a district consisting of several sub-districts and villages. However, *pakasaan* has not gained popularity with the public compared to other terms.

The terms *pakasaan* and *walak* refer to specific areas and leadership roles within regions, respectively. According to (Saumana et al., 2015), *pakasaan* refers to the territorial denotation, while residents under the leadership of a *walak* are usually blood-related and have the same lineage (Kimbal, 2015). Therefore, *walak* is a genealogical and territorial expression that promotes the emergence of the term *pakasaan*. Due to the increasing population, there is a potential for conflict within *walaks*. In the event of disputes, some *taranak* may leave the *walak* area to find a new home. This process is known as *tumani* or *matani*, where the new community maintains kinship ties with their original community. Their growth and spread created an extensive network among the community, referred to as *pakasaan* and led by a chief (Japar et al., 2021:56).

The leadership hierarchy is firm and expressive of synergy in its tactics. The different levels of leadership within a community are aspirational for the groups they represent and are socially connected through the heads of *taranak*, old *ukung*, and *walak* to *pakasaan*. Synergic structural management was considered where selection of a leader was done through a process that brought all community groups together under one social organization, hence, individual interests become communal interests. Furthermore, each leader was assigned a significant role in reconciling any horizontal conflicts. The head of *pakasaan* was responsible for maintaining peace among the *walak*, which demonstrated the synergistic relationship between the two groups. Moreover, the leaders determined the relationship between the community and the immigrants, including the Dutch colonialists. This means the political function of an old *ukung* was to act as a bridge uniting two different interests. The primary socio-economic function involved ensuring the welfare and safety of the *taranak*. Each individual had unique socio-economic interests that an elected leader synergized. Even at the lowest level of leadership, they were tasked with balancing the aspirations of their family with the public interest and the old *ukung* and *walak* heads.

Hierarchy-synergy management was an essential value in the leadership system in the community. Integrating this value into PAK management contributed to the development of the area. Therefore, various patterns that had been practiced and implemented needed to be reflected in the current context. It is crucial to consider how PAK will be managed from a proactive perspective in the future. The value of leadership came from tradition and culture, which offered a visionary future for PAK management. PAK could adopt a hierarchical-synergy system, which would open up future development and management opportunities.

## *Individual to Communal*

The tradition recognized the terms *tonaas* and *walian* in addition to the head of *taranak*, old *ukung*, *walak* and *pakasaan*. A *tonaas* is a person who has magical abilities and can be matched with another person who has similar abilities. Renwarin (2006) discovered that the term "*tounahas*" was derived from the word "tou", meaning people, and "nahas" or "ta'as", meaning palm fruit. The palm fruit has a strong outer shell but a soft inner core. This understanding meant strength, greatness, ability, experience, and victory. It was concluded that *tonaas* was someone who had supernatural powers above the average of

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

other people in a certain area of expertise. The term *tonaas* was also associated with the hardwood used to build houses. Types of wood such as forest *cempaka* or *cempaka mareno* are used extensively in construction due to their strength.

According to (Sual, 2022), *tonaas* was responsible for political, social, and economic functions. Sual asserted that there was a representation of individual abilities, where a community leader could be elected or appointed by people considered *tonaas*. (Pinontoan, 2022) argued that they could be categorized as a title but not a position in the structure of society. Therefore, a person who was an expert in hunting (*panumaan*), farming (*mangundang*), and astrology, and could detect the sounds of birds (*manalingga*), was considered a *tonaas*. In addition, the individual had to demonstrate a deep understanding of the community's spiritual values.

Karundeng and Sual (2022) outlined several traits of an individual who could be considered *tonaas*. Firstly, a *tonaas* should be wise and reasonable. *Tonaas* comes from the root word *ngaasan*, which can also mean "brained". Therefore, a person could be considered a *tonaas* if they exhibited wisdom and intellectual knowledge. Secondly, one needed to have strength, or *tumawai*, indicating wood's strength and hardness. It implies that one was expected to have the power of wood balanced with the sensitivity of the heart or intention. Finally, the individual had to possess formidable skills in combat and security to be considered for the role. This was referred to as '*mawayi*', or supernatural powers. The leaders needed to possess the necessary skills to coordinate village arrangements, such as opening new plantation land. The workers were assigned to groups based on their expertise, including clearing the land, managing the soil, and planting seeds. At harvest time, *tonaas* had the expertise to ensure that the harvest was adequately managed. This was because the next planting season was closely related to the harvest, as well as hunting for wild animals for consumption. Collaboration was critical to a successful hunt, and the leaders were required to interpret astrological signs and the calls of birds to be successful. They ensured that everyone was on the same page and that the hunt was successful. In practice, hunting activities were consulted with the old *ukung* or *walak* heads to get their experienced input on the best application method to be successful.

The leadership of a *tonaas* was not a socio-political position, but rather a person's ability. Although the individual may have possessed supernatural powers that sometimes won him the trust of the *Taranak* heads, occupying public positions was not an obligation. Therefore, the title of *tonaas* was a gift that society gave to an individual, and with it came certain expectations and responsibilities. If the individual violated social norms, the community could reduce or withdraw privileges.

However, the managerial system was the most noteworthy in regulating work. *Tonaas* was an integral part of the community, and they worked together to make things occurs. For example, in agriculture, they cooperated with the old *ukung* and *walian* to carry out rituals and land clearing. On the other hand, a *walian* was a religious leader recognized by the local community and possessed early unique signs. They were often associated with the health sector, but anyone could become a *walian* with the right signs and recognition. In addition, when someone showed unique characteristics, the elders would give them special guidance to stop them from straying from village rules and customs. They were expected to have the ability to heal the sick, give birth at odd hours, have unique hand lines, perform certain supernatural powers such as flying in trees, and not get hurt when hit by sharp objects (Sual, 2022). According to (Pinontoan, 2022), a religious leader categorized as a shaman in a modern perspective was known as a *walian*. However, the term shaman had a negative connotation from a secular perspective, making it necessary to understand the term from a cultural point of view. The term referred to a priest who led traditional rituals from a shamanistic perspective.

In certain activities, both *tonaas* and *walians* are required to perform joint tasks. Individuals with social and religious mandates often gathered communally to carry out activities together. For instance, when agricultural fields were ready, a *walian* would lead prayers and rituals, asking the Creator to give fertility and success at harvest time. Wowor (2022) found that a *walian* would set out a container and recite a prayer so the seeds from the sky could fall into the designated area. Furthermore, those who understood astrology could provide instructions for the right time to plant and harvest. They were assisted by people with expertise in cultivating the land. This indicates community mobilization was led directly by old *ukung* or *walak* heads. The work carried out by the Minahasa community was a chain that described

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

every leader and individual who moved into the public sphere and presented collaborative work. Management was transferred from private to communal.

The harmonious integration of communal work could also be explicitly seen in the duties of a *walian*. Sual (2022) reported that a companion or assistant typically supported the work of the *walian*. The community entirely entrusted those selected by their elders to coordinate and run ceremonial rituals smoothly. In making offerings, *kasule* was responsible for creating threads, betel nut, making umper or offerings, slaughtering sacrificial animals, praying for sick people, reading signs on animals, and other ritual matters. The interaction and integration of individual leaders and proletarian society was essential for social chain and field coordination. The various *tonaas*, *walian*, *kasule*, old *ukung*, *walak* heads, and *pakasaan* heads had their expertise and ways, but they all came together in social spaces to work together.

These opportunities allowed PAK to improve the quality of management, each value and element can be better managed and coordinated in the future. Incorporating the philosophical values of leadership contributes to the development of PAK management. It also helps preserve the original cultural values eroded by the times and the secular system. Hence, each stage of transformation should be guarded to maintain the purity of cultural heritage.

## Conclusion

The leadership philosophy of Minahasa has valuable information that could be used to improve the management of PAK. Synergy and communal values are essential elements that can be an alternative for the management of the subject. Incorporating cultural aspects into the management process could preserve local cultural heritage and infuse PAK with a unique feature. In addition, the leadership was used as a solutive alternative to government regulations regarding the construction of culture and religion in PAK. The management's understanding of local cultural patterns opened up the possibility of creating a religious and cultural PAK in the future.

### ABSTRACT

The dimensions and elements of law in social life in Indonesia are stuck under colonialism legacy. Civil law, explicitly speaking, contract law in Indonesia, is one of the legacies that reflects the vital characteristics of colonialism. As a result, the implementation of contract law differs from local principles and has the potential to share legal uncertainty. The Minahasan tradition of making agreements is one of the local cultural values that can be a source of law concerning contract law. Adopting local values can be an alternative contribution to the decolonization of contract law. This research uses a qualitative descriptive analysis method where references such as books, articles, and other sources will be the main backbone. In sum, the anthropological values of equality, trust, and loyalty are significant elements of the Minahasan tradition of contract-making that can contribute to the decolonization of contract law in Indonesia

## İMAM HATİP ORTAOKULLARINDA HAFIZLIK PROJESİ (BATMAN ÖRNEĞİ) HAFIZ PROJECT IN IMAM HATIP SECONDARY SCHOOLS (BATMAN EXAMPLE)

*Dr. Mehmet Nezir CEYLAN*

*Batman İl Milli Eğitim Müdürlüğü, Gazi Anadolu İmam Hatip Lisesi, Merkez, Batman*

*ORCID ID: 0000-0003-0314-3309*

### ÖZET

Son yıllarda ülkemizde İmam Hatip ortaokullarında İngilizce dil odaklı eğitime benzer bir şekilde hafızlık projesi uygulanmaktadır. Öğrenciler akademik sınavı geçtikten sonra tatil sürecinde eğitim alır ve Eylül ayında yetenek sınavına tabi tutulurlar. Başarılı olan öğrenciler beşinci sınıftan itibaren eğitimlerine başlarlar.

Bu eğitimde öğrenciler, okul gününün belirli saatlerinde hafızlık eğitimi alırken diğer zamanlarda akademik derslere katılırlar. Beşinci sınıfta öğrenciler hafızlık için temel eğitim alırlar. Altıncı sınıfta ise akademik derslerden bağımsız olarak sadece hafızlık eğitimine yönlendirilirler. Yedinci ve sekizinci sınıflarda ise öğrenciler hafızlık eğitimlerini pekiştirmeye odaklanırken aynı zamanda akademik eğitime de önem verirler.

Bu proje, Diyanet İşleri Başkanlığı ve Din Öğretimi Genel Müdürlüğü tarafından yürütülmektedir. İmzalanan protokole göre, il müftüleri ve il milli eğitim müdürlükleri bu iki kurumu il düzeyinde temsil eder. Bu proje başarıyla uygulanırken zaman zaman bazı aksaklıklar ortaya çıkmaktadır. Bu proje, devlet tarafından din eğitiminin yeraltından verilmesini önlemek ve öğrencilerin hem sağlam ve sahih din eğitimi almasını hem de akademik başarı elde etmelerini sağlamayı hedeflemektedir.

Son yıllarda bu eğitimi alan öğrencilerin LGS sınavında başarılı oldukları, hatta Türkiye dereceleri elde ettikleri ve birçoğunun fen liseleri gibi sınavla öğrenci alan nitelikli liselere kabul edildikleri gözlemlenmiştir. Ancak Batman ilinde, bu projenin istenen seviyede olmadığı söylenebilir.

Bu proje, Batman ilinde üç okulda uygulanmaktadır. Proje, merkezdeki Gazi Anadolu İmam Hatip Lisesi ve Kozluk ilçesindeki Tepecik İmam Hatip Ortaokulu'nda erkek öğrencilere yönelik gerçekleştirilmektedir. Kız öğrenciler ise merkezdeki Fatma Zehra Anadolu İmam Hatip Lisesi'nde eğitim almaktadır.

Bu çalışma, Batman ilinde İmam Hatip ortaokullarında uygulanan hafızlık projesini açıklamaktadır. Çalışma, projenin başarılı yönlerini ve üzerinde durulması gereken alanları ele alınmıştır. Çalışmada, Türkiye'deki İmam Hatip okullarının tanıtımı ve diğer yönlerine girilmemiştir. Bu çalışmanın amaçlarından biri, Batman İmam Hatip ortaokullarında gerçekleştirilen hafızlık projesinin genel bir bakışını sunmayı, diğeri ise ilimizde bu projenin zayıf yönlerini tespit etmek ve ilgililer tarafından giderilmesini sağlamayı amaçlamıştır.

**Anahtar Kelimeler:** Batman, Din Eğitimi, Hafızlık, İmam Hatip

### ABSTRACT

In recent years, a memorization project similar to English language-focused education has been implemented in Imam Hatip middle schools in our country. After students pass the academic exam, they undergo education during the holiday period and are subjected to a talent exam in September. Successful students start their education from the 5th grade.

In this education, students receive memorization training at certain times of the school day while also attending academic classes at other times. In the fifth grade, students receive basic training for memorization preparation. In the sixth grade, they are directed exclusively towards memorization

training, independent of academic subjects. In the 7th and 8th grades, students focus on reinforcing their memorization training while also emphasizing academic education.

This project is carried out under the responsibility of the Presidency of Religious Affairs and the General Directorate of Religious Education. According to the signed protocol, provincial muftis and provincial directorates of national education represent these two institutions at the provincial level. While this project is being successfully implemented, occasional shortcomings may arise. The aim of this project is to ensure that religious education is provided by the state, preventing it from being provided underground, and enabling students to receive both religious education in a healthy manner and to achieve academic success.

In recent years, it has been observed that students who receive this education have been successful in the LGS exam, even achieving national rankings, and many of them have been admitted to prestigious high schools that admit students through exams, especially science high schools. However, in Batman province, it can be said that this project is not yet at the desired level.

This project is implemented in three schools in Batman province. The project is conducted for male students at Gazi Anadolu Imam Hatip High School in the center and Tepecik Imam Hatip Middle School in Kozluk district. Female students, on the other hand, receive education at Fatma Zehra Anadolu Imam Hatip High School in the center.

This study explains the memorization project implemented in Imam Hatip middle schools in Batman province. The study will address the successful aspects and the areas where there are shortcomings in this project. The study will not delve into the introduction and other aspects of Imam Hatip schools in Turkey. One of the aims of this study is to present an overview of the memorization project carried out in Batman Imam Hatip middle schools, while the other aim is to identify the weaknesses of this project and ensure that they are rectified by those concerned.

**Keywords:** Batman, Religious Education, Memorization, Imam Hatip

## GİRİŞ

Ülkemizde yaklaşık 165 okulda, örgün eğitimle birlikte yürütülen hafızlık projesi, MEB Din Öğretimi Genel Müdürlüğü ve Diyanet İşleri Başkanlığı iş birliğiyle 2014-2015 eğitim-öğretim yılında hayata geçirilmiştir.<sup>1</sup> Bu proje, öğrencilerin hafızlık eğitimleri ve sonrasındaki eğitim-öğretim süreçlerinin etkin, verimli ve sistematik bir şekilde gerçekleştirilmesini, mesleki, akademik, sosyal, kültürel, sportif ve ahlaki gelişimlerinin desteklenmesini hedeflemektedir. Projenin en önemli paydaşlarından biri, Diyanet İşleri Başkanlığına bağlı Kur'an kurslarıdır. Bu kurslara kayıt yaptıran öğrenciler, hafızlık eğitimlerinin yanı sıra MEB'e bağlı imam hatip ortaokullarında akademik derslerini de almaktadırlar.<sup>2</sup> 2019 yılında imzalanan protokol ve okul-Kur'an kursu işbirliği usul ve esaslarıyla, proje daha da güçlendirilmiştir.<sup>3</sup>

Bu proje, öğrencilerin Kur'an-ı Kerim'i ezberlemeleri ve Kur'an'ın ana konularını öğrenmeleri için okul tatili olmadan ve sınıf tekrarı yapmadan fırsat sağlamayı amaçlamaktadır. Ayrıca, öğrencilerin bir üst öğrenime hazırlanmalarına yardımcı olmak, sorumluluk bilincini geliştirmek ve düşünen, tartışabilen,

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

sosyal ilişkileri gelişmiş ve evrensel değerlere sahip bireyler olarak yetişmelerini sağlamak hedeflenmektedir.<sup>4</sup>

Hafızlık eğitimi, ortaokul düzeyinde yapılmaktadır. Bu sayede öğrenciler, hafızlık eğitimine erken yaşta başlayarak, eğitimlerinin ortaokul düzeyinde yapılması ve ilgi, istidat ve kabiliyetleri doğrultusunda seçilmeleri gibi faktörler sayesinde, hafızlık eğitimini daha kolay ve kalıcı hale getirebilmektedirler. Hafızlığa 5. sınıfta başlanması, 6. sınıflarda tamamlanması, 7. ve 8. sınıflarda pekiştirilmesi gibi bir süreç izlenmektedir. Bu süreçte öğrenciler, okul ortamından, aileden ve sosyal çevreden uzak kalmadan örgün eğitimden azami düzeyde yararlanarak hafızlık eğitimi almaktadırlar.<sup>5</sup>

Hafızlık eğitimi sürecinde, öğrencilerin millî, mânevî, ahlâkî, kültürel ve insânî değerleri içselleştirmeleri amaçlanmaktadır. Bu amaç doğrultusunda, Kur'an ayetlerinin anlamından ve hafızlık eğitiminin kazanımlarından yararlanılmaktadır. Ayrıca, öğrencilerin, ortaokul düzeyinde din eğitim ve öğretimi ile ilgili temel becerileri edinmeleri ve Kur'an'ın ana konuları hakkında bilgi sahibi olmaları hedeflenmektedir. Hafızlık eğitimi sürecinde, öğrencilerin kişisel becerilerinin ve sosyal yeteneklerinin geliştirilmesi için çeşitli sosyal-kültürel etkinlikler düzenlenmektedir. Öğrenciler, hafızlık eğitimi vesilesiyle kazandıkları çalışma disiplini, zaman yönetimi gibi becerilerinin geliştirilmesi ve pekiştirilmesi için de desteklenmektedirler.<sup>6</sup>

Örgün eğitim ile birlikte yürütülen Hafızlık Projesi kapsamında, proje okullarında 6.251 ve program okullarında 9.818 öğrenci öğrenim görmektedir. Böylelikle toplam öğrenci sayısı 16.069'dur. 2023 yılında öğrenci sayısı yaklaşık 20.000 civarındadır.

2020 Mart ayı verilerine göre, proje ve program okullarında 5.171 öğrenci okumakta, 8.484 öğrenci hafızlık eğitimi almaktadır. Ayrıca, 2.414 öğrenci hafızlık eğitimini tamamlamıştır. Son üç yılda bu sayının 5.000 olduğu tahmin edilmektedir.

2015-2019 yılları arasında, en yüksek yılsonu başarı ortalamasına sahip öğrencilerin, Hafızlık Projesi kapsamında öğrenim gören tüm sınıf düzeylerindeki öğrenciler olduğu görülmektedir. Ayrıca, 2015 yılında öğrenime başlayan öğrencilerin başarı ortalaması 83.75 iken, 2019 yılında bu ortalamaları 88.2'ye yükselmiştir. Proje kapsamındaki öğrencilerin, TÜBİTAK, TEKNOFEST, ODTÜ, İTÜ gibi çeşitli üniversitelerin mühendislik alanlarında düzenlenen projelerden elde ettikleri dereceler, MEB liselere geçiş sınavında gösterdikleri başarılar, akademik açıdan üst düzeyde gelişimin sağlandığının en büyük göstergelerini oluşturmaktadır. Ayrıca, yüzme, okçuluk gibi ulusal alanda sportif yarışmalardan elde edilen dereceler, ebru, hat, musiki korolar gibi sanatsal çalışmalar da bu proje kapsamındaki öğrencilerin tüm yönleriyle gelişimine katkı sağlamaktadır.<sup>7</sup>

Batman ilinde ilk olarak Batman Kız Anadolu İmam Hatip lisesi bünyesinde 40 kız öğrencinin katılımıyla uygulanan bu proje 2020 yılında 15 Temmuz İmam Hatip Ortaokulunda erkek öğrencilere uygulanmıştır. Aynı yıl ilimiz Kozluk ilçesinde Tepecik İmam Hatip Ortaokulunda hem kız hem de erkek öğrencilere uygulanmıştır.

Kız öğrencilere uygulanan proje 2020 yılından itibaren TP. Fatma Zehra İmam Hatip Fen ve Sosyalbilimler proje lisesinin bünyesine alınmış 2021 yılında ise erkeklere uygulanan proje Gazi Anadolu İmam Hatip Lisesi bünyesine alınmıştır. Tepecik İmam Hatip Ortaokulu ise ilk günkü gibi aynı fiziki mekanda uygulanmaya devam etmektedir.

Batman ilinde ilk olarak Batman Kız Anadolu İmam Hatip Lisesi bünyesinde 40 kız öğrencinin katılımıyla gerçekleştirilen proje, 2020 yılında 15 Temmuz İmam Hatip Ortaokulu'nda erkek öğrencilere uygulanmıştır. Aynı yıl, Kozluk ilçesindeki Tepecik İmam Hatip Ortaokulu'nda ise hem kız hem de erkek öğrencilere proje uygulanmıştır.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Kız öğrencilere yönelik proje, 2020 yılından itibaren TP. Fatma Zehra İmam Hatip Fen ve Sosyalbilimler Proje Lisesi bünyesine alınmıştır. Erkek öğrencilere yönelik proje ise 2021 yılında Gazi Anadolu İmam Hatip Lisesi bünyesine alınmıştır. Tepecik İmam Hatip Ortaokulu ise ilk günkü yerinde ve fiziki mekanında proje uygulamalarına devam etmektedir.

Yukarıda bahsi geçen projenin Batman ilindeki uygulaması, istenilen seviyede olmadığına dair birçok sebep bulunmaktadır. Bununla birlikte, proje Batman ilinde birçok olumlu yanı da barındırmaktadır. Bu olumlu yönler arasında, proje kapsamında öğrencilerin sosyal ve kültürel açıdan gelişimlerine katkı sağlanması, öğrencilerin özgüvenlerinin artırılması, öğrencilerin akademik başarılarının yükseltilmesi gibi faktörler yer almaktadır. Bu nedenle, proje Batman ilindeki eğitim sistemi için önemli bir adım olarak değerlendirilebilir.

Bu çalışmada, Batman ilindeki İmam Hatip Ortaokullarında uygulanan hafızlık projesinin zayıf yönleri ele alınacak ve çözüm önerileri sunulacaktır. Ayrıca, projenin güçlü yanlarına da değinilerek, değerlendirmeler yapılacaktır. Bu çalışma, saha gözlemlerine dayanarak, projenin uygulandığı bir okulda gerçekleştirilmiştir. Tarihsel gelişim ve uygulama yöntemleri gibi konulara değinilmeyecek, sadece Batman ilindeki bu projenin güçlü ve zayıf yönlerine odaklanılacaktır. Projenin zayıf yönlerinin giderilmesi için öneriler sunulacak ve bu sayede yöneticilerin sorunlu alanları çözme konusunda adımlar atması hedeflenmektedir.

## BATMAN İMAM HATİP ORTAOKULLARINDA HAFIZLIK PROJESİ

İmam Hatip ortaokulları ve normal ortaokullar, genel olarak benzer derslerin öğretildiği okullardır. Her iki okulda da haftalık 36 saat ders işlenmektedir. Ancak, Hafızlık projesi uygulanan İmam Hatip ortaokullarında kendine özgü bir müfredat bulunmaktadır. Bu okullarda da haftalık 36 saat ders işlenmektedir, ancak 10 saatlik bir bölümü seçmeli Kur'an-ı Kerim dersi oluşturmaktadır. Bu durum, yabancı dil ağırlıklı proje okullarında yabancı dil için uygulanan projeye benzer. Yabancı dil ağırlıklı okullarda öğrenciler, 10 saatlik seçmeli yabancı dil dersi alırken, kalan ders saatleri diğer derslerin haftalık ders saatlerini oluşturmaktadır.

### Çizelge :1 İmam Hatip Ortaokullarında Haftalık Ders Saatleri

\* Örgün eğitimle beraber hafızlık projesini uygulayan imam hatip ortaokullarında öğrenciler pasif olup Kur'an kurslarında hafızlık eğitimi almaktadırlar.

\*\* son yapılan değişiklikle beraber örgün eğitimle beraber hafızlık projesini uygulayan okullarda 1 ders saati 5. Sınıfa getirilmiştir.

Yukarıdaki tablo, normal İmam Hatip ortaokullarında haftalık ders saatlerini göstermektedir. Bu okullarda, 5, 6 ve 7. sınıflarda 36 saatlik zorunlu bir ders programı uygulanmaktadır. Bu ders programı içerisinde seçmeli dersler de yer almaktadır. 8. sınıflarda ise 34 saatlik zorunlu bir ders programı ve 2 saatlik seçmeli ders programı uygulanmaktadır. Ancak, hafızlık projesi uygulanan ortaokullarda haftalık ders saatleri değişmektedir. Son yapılan değişiklikle birlikte, 5. sınıflarda 26 saatlik zorunlu bir ders programı uygulanmaktadır. Milli Eğitim Bakanlığı'nda çalışan öğretmenler tarafından verilen derslerin yanı sıra, Peygamberimizin hayatı dahil Kur'an-ı Kerim dersleri de toplamda 10 saatlik bir programda Kur'an Kursunda görevli öğretmenler tarafından verilmektedir. 6. sınıfta okuyan öğrenciler, pasif öğrenci konumunda olup tamamen hafızlık eğitimini almaktadırlar. 7. sınıfa geçen öğrenciler ise hafızlık eğitimini tamamlamış bir şekilde öğrenimlerine kaldıkları yerden devam etmektedirler. 8. sınıfa geçen öğrenciler ise normal ortaokullardaki müfredatı uygulamaktadırlar. Bu öğrenciler, LGS sınavına girerek son yıllarda Türkiye dereceleri almaktadırlar.<sup>8</sup>

### **1. Batman İlindeki İmam Hatip Ortaokullarında Hafızlık Projesinin Güçlü Yönleri**

Batman ilindeki İmam Hatip ortaokullarında yürütülen hafızlık projesi, başlangıcından itibaren büyük bir ilgiyle karşılanmıştır. Bu durum, proje için en güçlü desteklerden biridir. Bu ilginin arkasında, halkın dinî duygularının hala güçlü olması yatmaktadır. Ayrıca, vatandaşlar, çocuklarının örgün eğitimlerine devam etmelerini isterken, aynı zamanda manevî duyguları güçlü bir birey yetiştirme arzusunu da taşımaktadır. Bu nedenle, vatandaşlar, yaz aylarında çocuklarının yaz Kur'an kurslarına gitmek yerine, daha disiplinli ve düzenli bir kursta eğitim almalarını tercih etmektedirler. Bu proje, vatandaşların somut taleplerini karşılamakta ve öğrencilerin velileriyle birlikte büyük bir hevesle katılmalarını sağlamaktadır.

Bu proje, hem dini açıdan eğitim almak isteyen bireylerin hem de akademik başarıya önem veren öğrencilerin ihtiyaçlarını karşılayabilmesiyle güçlü bir yön sergiliyor. Düşük sınıf mevcutları ve seçici kabul süreci sayesinde, her iki yönden de öğrencilerin de gelişimine katkı sağlayacak. Ayrıca, kız ve erkek öğrencilerin ayrı sınıflarda veya okullarda eğitim almaları, Batman'da yaşayan vatandaşlar için önemli bir güvenlik önlemi olarak görülüyor. Müteaddiyin vatandaşlar, çocuklarının karma eğitim almalarını istemediklerinden, bu projeye büyük destek vermektedirler.<sup>9</sup>

Projenin diğer güçlü yönlerinden biri, bölgede güçlü bir medrese kültürünün var olmasıdır. Eğer medrese ve hafızlık eğitimi projeye dahil edilirse, bu proje için büyük bir katkı sağlayabilir. Öğrencilerin, haftanın belirli günlerinde Diyanet İşleri Başkanlığına bağlı resmi Kur'an kurslarına gitmeleri, velilerin projedeki eğitim-öğretime olumlu bakmalarını sağlayabilir. Ayrıca, bazı günler klasik Arapça derslerinin verilmesi, öğrenci ve velilerin projeye olan güvenini artırabilir. Bu nedenle, medrese kültüründen en iyi şekilde yararlanması gerekmektedir.

### **2. Batman İlindeki İmam Hatip Ortaokullarında Hafızlık Projesinin Zayıf Yönleri: Sorunlar ve Çözüm Önerileri**

Batman ilindeki İmam Hatip ortaokullarında uygulanan hafızlık projesi, birçok zayıf yönü içermektedir. Bu zayıf yönler, eğitimin aksamasına ve öğrencilerin geleceği hakkında bazı şüphelerin oluşmasına neden olmaktadır. Özellikle belirlediğimiz önemli zayıf yönler, projenin eğitim sürecindeki aksamalara sebep olması ve öğrencilerin gelecekteki kariyerleri hakkında belirsizlik oluşturmaktadır.

Eğitim-öğretim süreci, öğrenci, öğretmen, veli ve okul yöneticileri gibi dört önemli unsura dayanmaktadır. Bunların yanı sıra, fiziki imkanlar ve eğitim araç gereçleri de önemli bir rol oynamaktadır. Batman ilindeki örgün eğitim sistemiyle birlikte yürütülen hafızlık projesinde, bu temel

<sup>8</sup> Bu Bilgiler Milli Eğitim Bakanlığı Din Öğretimi Genel Müdürlüğü Web Sayfasından alınmıştır.

<sup>9</sup> Adem Güneş, "Hafızlık Eğitiminin Öğrencilerin Sosyal ve Öz güven Gelişimlerine Etkisi -Örgün Eğitimle Birlikte Hafızlık Yapan İHO Öğrencileri Üzerine Bir Araştırma", *İlahiyat Tetkikler Dergisi* 53/1 (2020), 270.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

unsurlar arasındaki uyumsuzluk veya tamamlanmama durumları nedeniyle projenin geleceğini belirsiz hale getirmektedir.<sup>10</sup>

Projenin öğrenci ayağında zayıflık gözlemlenmektedir ve bu durum, öğrencilerin hafızlık eğitimine ilgisiz olmalarından kaynaklanmaktadır. Öğrencilere sadece hafızlık yapmaları telkin edilerek, LGS gibi önemli sınavlardan habersiz bir şekilde sadece Kur'an-ı Kerim'i ezberlemeleri istenmektedir. Bu durum, öğrencilerin istidat ve kabiliyetlerine göre geleceklerini planlamalarını engellemektedir. Eğitimin temel amacı, milli ve manevi duyguları güçlü bireyler yetiştirmektir. Ancak Batman ilindeki bu proje, öğrencilerin çoğunlukla hafızlık eğitimi veren hocalarla zaman geçirmeleri nedeniyle bu duyguların zayıf olduğunu ortaya koymaktadır. Ayrıca, öğrenciler TÜBİTAK gibi projelerden habersiz bir şekilde eğitimlerine devam etmektedirler. Bu durum, projenin gelecek kuşaklara aktarılması ve güncel koşullara uygun hale getirilmesi açısından ciddi bir tehdit oluşturmaktadır.<sup>11</sup>

Projenin öğretmen ayağında zayıflık, eğitim-öğretim sürecinin Milli Eğitim Bakanlığı'nda çalışan öğretmenler ve Diyanet İşleri Başkanlığı'na bağlı Kur'an kurslarında çalışan öğretmenler tarafından yürütülmesi nedeniyle ortaya çıkmaktadır. Bu durum, zaman zaman taraflar arasında ciddi tartışmalara neden olmaktadır. Örneğin, Türkçe dersine giren bir öğretmen, öğrencilerin derslerine odaklanmadığını ve hafızlık eğitimi veren öğretmenlerin daha çok hafızlık eğitimine odaklanmaları gerektiğini söylediğini belirtmiştir.<sup>12</sup> Ayrıca, hafızlık eğitimi veren öğretmenlerin pedagojik eğitim almamış olmaları, eğitimin güncel durumlarından habersiz olmaları ve daha çok klasik medrese eğitimiyle bu projenin yürütüleceğine inanmaları gibi sebeplerden dolayı projenin öğretmen ayağındaki zayıf yönlerden biri olarak gösterilebilir.<sup>13</sup> Bununla birlikte, Milli Eğitim Bakanlığı'nda çalışan öğretmenlerin de böyle bir projenin farkında olmamaları ciddi bir olumsuz durum olarak sunulabilir. Bunun sebebi, böyle bir projenin okullarda ilk kez veriliyor olmasıdır.

Eğitim ve öğretimin veliler tarafından da desteklenmesi gerekmektedir. Batman ilinde yürütülen hafızlık projesine öğrenci gönderen velilerin, bu projeyi tam olarak anlamadıkları gözlemlenmiştir. Veliler, bölgede bulunan medreseler gibi okulu tasarlamakta ve çoğu zaman akademik derslerden rahatsızlık duymaktadır. Ayrıca, velilerin herhangi bir sorunu büyüterek ilgililere ulaştırması, okul yöneticilerinin eğitime odaklanmasını olumsuz yönde etkileyebilmektedir. Bunun yanı sıra, her velinin öğrencisinin hafız olmasını istemesi doğal bir istektir. Ancak, her öğrenci istenilen zamanda eğitiminin bu safhasını tamamlayamayabilir ve bu durum velileri ciddi şekilde etkileyebilir. Veliler, bu durumda öğretmenleri, okul yöneticilerini veya projede görevli diğer yetkilileri suçlama eğiliminde olabilmektedir. Velilerin öğrencilerine karşı ilgisiz davranmaları, evde ders çalıştırmamaları ve bunun sonucunda öğrencilerin zamanında ezber verememeleri, veli ayağındaki projenin zayıf yönleri olarak değerlendirilebilir.<sup>14</sup>

Okul yöneticileri, eğitim liderleri olarak önemli bir rol oynarlar ve eğitim ve öğretimin bir parçasını oluştururlar. Her okulun kendine özgü bir kültürü ve yönetimi vardır. İmam Hatip okulları da kendine özgü kuralları ve kültürü olan okullardır. Batman'daki bazı İmam Hatip ortaokulları, hafızlık projesini uygulamaktadır ancak bu projeyi tam olarak anlamayan yöneticiler tarafından yönetilmektedir. Örneğin, hafızlık projesine bakan okul müdür yardımcısı, projenin amacını anlamamaktadır. Merkez ilçede bulunan iki lisede de hafızlık projesini yürütecek müdür yardımcısı mevcut değildir. Okul yöneticileri, branş bazında liseleri temsil ederler ve bu durum hafızlık projesinde takip edilecek iş ve mevzuatı

<sup>10</sup> Bu konuda geniş bir şekilde bkz. Pakize Yetimova, *Ortaokula Devam Eden Öğrencilerin Hafızlık Eğitiminde Yaşanan Sorunlar Ve Çözüm Önerilerine Yönelik Bir Araştırma*. # INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

güçleştirmektedir. Bu nedenle, okul yöneticileri enerjilerini boşa harcamaktadırlar. Örneğin, Gazi Anadolu İmam Hatip Lisesi'nde hafızlık projesini yürütecek müdür yardımcısı yoktur ve okul yöneticileri fizik, tarih, coğrafya ve matematik branş öğretmenlerinden oluşmaktadır. Bu durum, yöneticilerin okullarını tanıtmada sorun yaşamasına ve velilerle iletişimde sorunların oluşmasına neden olmaktadır. Örneğin, hafızlık eğitimiyle ilgili bir etkinlik düzenleneceğinde, okul yöneticileri bu etkinliği nasıl yürütecekleri konusunda bilgi sahibi değildirler. Okul yöneticileri ilgili okulları normal bir ortaokul veya lise olarak düşünmektedirler, ancak bu durum hafızlık eğitimi için sağlıklı bir durum değildir.

Örgün eğitimle birlikte hafızlık projesiyle ilgili veli, öğrenci, öğretmen ve okul yöneticisiyle anlatılan zayıf yönlerine ek olarak şunlar da dile getirilebilir:

Batman ilinde yürütülen hafızlık projesi, bölge insanı ve toplumda sözü geçen kimseler tarafından henüz tam olarak anlaşılammıştır. Bu durumun nedeni, bölgenin daha çok medrese eğitimine önem vermesidir. Medrese eğitimi, İslami ilimler açısından önemli olduğu için hafızlık eğitimi ikinci planda kalmaktadır. Medrese eğitiminde daha çok klasik Arapça ders kitaplarına önem verilirken, hafızlık eğitimi yeterince ilgi görmemektedir. Bu nedenle, hafızlık projesinin bölgede daha iyi anlaşılması ve benimsenmesi için farkındalık çalışmaları yapılması gerekmektedir.

Örgün eğitimle birlikte yürütülen hafızlık projesinin zayıf yönlerinden biri, okulların fiziki olarak bu eğitimi verecek kapasitede olmamasıdır. Örneğin, Gazi Anadolu İmam Hatip Lisesi bünyesindeki hafızlık projesi, yatılı bölge okulundan dönüştürülen bir binada verilmektedir. Ulaşım açısından şehir merkezine uzak olduğu gibi okul alt yapısı bina olarak bu projenin yürütülmesi için yeterli değildir. Ayrıca, Fatma Zehra İmam Hatip Lisesi'nin birden fazla projeyi barındırmasından dolayı hafızlık projesine yeterince ilgi gösterilmemektedir. Bu okulda ayrıca hafızlık yapacak kız öğrencilerinin yatılı olarak kalacakları bir pansiyonları da bulunmamaktadır. Bu nedenle, hafızlık projesinin yürütülmesi için uygun fiziki koşulların sağlanması gerekmektedir.

Kozluk ilçesi Tepecik hafızlık projesi, başka bir ortaokulla beraber iç içe eğitim faaliyetini yürütmektedir. Ancak, okulun pansiyonu eski olup öğrencilerin kalmasına uygun değildir. Okulda hem kız hem de erkek öğrenciler hafızlık görmektedirler. Okul ilçe merkezine uzak olduğu için ulaşım açısından da sıkıntı oluşturmaktadır. Bu nedenle, hafızlık projesinin yürütüleceği okulların fiziki koşullarının iyileştirilmesi ve ulaşım sorununun çözülmesi gerekmektedir.<sup>15</sup>

Bu proje, Diyanet İşleri Başkanlığına bağlı Kur'an kurslarına kayıt yaptıran öğrencilere yönelik olarak tasarlanmıştır. Ancak ilimizde, ortaokullar arasında yatılı Kur'an kursu bulunmamaktadır. Bu durum, 6. sınıf öğrencilerinin hafızlık eğitimlerini sağlıklı bir şekilde almalarına engel teşkil etmektedir. Çünkü 6. sınıf öğrencilerinin hafızlık eğitimlerini okullarda tamamlamaları, hem fiziksel hem de maddi açıdan mümkün görünmemektedir. İl müftülüğü, bu sorunun farkında olarak, okul bünyesinde C tipi Kur'an kursu açma yoluna gitmiştir. Ancak, bu sorunun çözümü, Ankara ilinde olduğu gibi bağımsız öğrencilerin yatılı kalabileceği ve iaaşe masraflarının karşılanacağı il müftülüğüne bağlı Kur'an kurslarının açılmasıdır.<sup>16</sup>

Batman ilindeki hafızlık projesi okullarında, bilimsel proje yürütecek bilişim teknolojisi ve yazılım sınıfları bulunmamaktadır. Bu durum, öğrencilerin geleceğe hazırlanması açısından önemli bir eksikliklerdir. Bilimsel proje yürütmek, öğrencilerin araştırma, analiz ve problem çözme becerilerini geliştirmelerine yardımcı olur. Ayrıca, bilişim teknolojisi ve yazılım sınıfları, öğrencilerin teknolojiye hakimiyetlerini artırarak, dijital çağın gereksinimlerine uygun bir eğitim almalarını sağlar. Bu nedenle, hafızlık projesi okullarında da bilimsel proje yürütecek bilişim teknolojisi ve yazılım sınıflarının açılması, öğrencilerin daha donanımlı bir eğitim almalarına katkı sağlayacaktır.

<sup>15</sup> Abdullah Adıgüzel vd., "Hafız İmam Hatip Ortaokullarındaki Hafızlık Eğitimine İlişkin Öğretici Ve Öğrenci Görüşler", 1471. Ayrıca bkz. Adem Güneş, "Hafızlık Eğitiminin Öğrencilerin Sosyal ve Özgüven Gelişimlerine Etkisi -Örgün Eğitimle Birlikte Hafızlık Yapan İHO Öğrencileri Üzerine Bir Araştırma", 273.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Batman ilinde yürütülen örgün eğitimle birlikte hafızlık projesinin zayıf yönlerinin güçlendirilmesi için aşağıdaki öneriler sunulabilir:

1. Öğrencilerin sınavlar hakkında farkındalık kazanmaları ve eğitimin sadece Kur'an ezberlemekle sınırlı kalmayacağı konusunda bilinçlendirilmeleri için, rehberlik ve kariyer planlama derslerine öncelik verilmesi gerekmektedir.

2. Projenin önemli bir parçası olan hafız öğretmenleri, görevleri ve sorumlulukları hakkında bilgilendirilmek üzere hizmet içi eğitimlerden geçirilmelidir. Bu eğitimler, hafız öğretmenlerinin projenin amacına hizmet etmelerini sağlamak için önemlidir. Ayrıca, il müftülüğü tarafından aylık olarak denetlenmeleri ve projenin amacına hizmet etmeyen öğretmenlerin görev yerlerinin değiştirilmesi gerekmektedir.

Benzer şekilde, Milli Eğitim Bakanlığı'nda çalışan öğretmenler de mahalli veya merkezi hizmet içi eğitimlerden geçirilerek, projenin önemi konusunda bilgilendirilmelidir. Her iki öğretmen grubunun da birbirlerini tamamlayan bir unsur olduğu vurgulanmalıdır. Bu sayede, hafız öğretmenleri ve öğretmenler arasında işbirliği ve koordinasyon sağlanarak, projenin amacına daha etkili bir şekilde hizmet edilmesi mümkün olacaktır.

3. Veliler, projenin amacı hakkında basit bir şekilde bilgilendirilmeli ve bu projenin yabancı dil ağırlıklı sınıflar oluşturan okullar gibi olduğu açıklanmalıdır. Bu sayede, velilerin büyük beklentiler içine girmesi önlenmiş olacaktır. Ayrıca, velilere bu projenin sağlıklı bir şekilde yürütülebilmesi için evde de eğitimin devam etmesi gerektiği hatırlatılmalıdır. Bu konuda, veliler profesyonel ekipler tarafından eğitilmelidir.

4. Bu okulların yönetim kadrosunda, hafızlık eğitimini tamamlamış bir öğretmenin bulunması tercih edilmelidir. Bu mümkün olmadığı takdirde, ortaokul müfredatını bilen ve hafızlık eğitimine hakim olan adaylar arasından müdür yardımcısı seçimi, mülakat yöntemiyle gerçekleştirilmelidir. Bu seçim sürecinde, okul müdürünün görüşü de dikkate alınmalıdır.

5. Fiziksel açıdan geliştirilmiş okulların oluşturulması ve hafızlık projesinin uygulanacağı ortaokulların kurulması, hem kız hem de erkek öğrencilerin örgün eğitim alabileceği ayrı okulların oluşturulması gerekmektedir. Hafızlık eğitimi verilecek lise de belirlenmeli ve projeye dahil edilmelidir. Bu amaçla, Gazi Anadolu İmam Hatip Lisesi, uygun bir mekan olarak seçilebilir. Bu okul, arazi olarak birçok eğitim fonksiyonunu barındıracak şekilde tasarlanabilir. Okul, külliye şeklinde yeniden inşa edilerek, kız ve erkek öğrencilerin yatılı olarak eğitim görebileceği bir yapıya dönüştürülmelidir.

6. Yatılı öğrencilere rehberlik edecek hafız öğretmenler, Milli Eğitim öğretmenleri gibi belletmenlik görevinden faydalanmalıdır. Bu sayede, hafız öğretmenler, öğrencilerini akşam saatlerinde de takip etme imkanına sahip olacaklardır. Ayrıca, külliye şeklinde inşa edilecek okula lojmanlar yapılmalı ve bu öğretmenlere lojmanlarda ikamet etme seçeneği sunulmalıdır.

7. Bu okullara teknoloji ve bilişim sınıfları oluşturulmalı ve bu sınıflarda yarışmalara katılacak kadar eğitim verilmelidir.

8. Bu okullarda görev yapacak öğretmenlerin mümkün olduğunca hafız olan öğretmenlerden seçilmelidir. Bu konuda yönetmelik değişikliğine gidilerek atamalarda kolaylık sağlanmalıdır.

9. Hafızlık eğitimi veren okulların öğrencilerine, hafızlık eğitimi dışında da çeşitli sosyal ve kültürel etkinlikler sunulmalıdır. Bu, öğrencilerin genel olarak gelişimlerine katkıda bulunacak ve motivasyonlarını artıracaktır.

10. Son olarak önerimizlerden biri de Diyanet İşleri Başkanlığına bağlı yatılı Kur'an kurslarının, okullarla eşleştirilmesi ve bu konunun resmi bir yazıyla belgelendirilmesidir. Bu sayede, öğrencilerin 6. sınıftan itibaren akademik derslerini okullarda tamamlamayacakları vurgulanacak ve hafızlık eğitimlerini daha sağlıklı bir şekilde almaları sağlanacaktır.

## SONUÇ

Batman ilindeki imam hatip ortaokulları, örgün eğitimle birlikte yürütülen hafızlık projesinin güçlü ve zayıf yönlerini incelemişlerdir. Araştırma sonuçlarına göre, örgün eğitimle birlikte yürütülen hafızlık projesinin en ufak bir olumsuzluğunun bile eğitim öğretime negatif yönde yansıtılabileceği ortaya çıkmıştır.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Araştırmada, Batman ilindeki İmam Hatip ortaokullarında yürütülen hafızlık projesi, halkın dinî duygularının güçlü olması ve manevi duyguları güçlü bir birey yetiştirme arzusunun birleşimiyle büyük bir ilgiyle karşılandığı saptanmıştır. Proje, hem dini açıdan eğitim almak isteyen bireylerin hem de akademik başarıya önem veren öğrencilerin ihtiyaçlarını karşılayabilmesiyle güçlü bir yön sergilemektedir. Ayrıca, düşük sınıf mevcutları ve seçici kabul süreci sayesinde, her iki yönden de öğrencilerin gelişimine katkı sağlamaktadır. Kız ve erkek öğrencilerin ayrı sınıflarda veya okullarda eğitim almaları, müteaddiyin vatandaşların desteğini kazanmıştır. Projenin diğer güçlü yönlerinden biri, bölgede var olan güçlü medrese kültürüdür. Medrese ve hafızlık eğitimi projeye dahil edilirse, projeye büyük bir katkı sağlayabilir. Bu nedenle, medrese kültüründen en iyi şekilde yararlanılması gerekmektedir. Tüm bu faktörler, Batman ilindeki İmam Hatip ortaokullarında yürütülen hafızlık projesinin başarısını desteklemektedir.

Araştırmada, veli, öğrenci, öğretmen ve idareci olmak üzere eğitimi oluşturan dört önemli unsur incelenmiş ve bunların birbirleriyle uyumlu bir şekilde çalışmaları gerektiği saptanmıştır. Bu dört unsurun birinin aksaması veya diğerlerine karşı olumsuz bir tutum sergilemesi, örgün eğitimle birlikte yürütülen hafızlık projesinin başarısını olumsuz etkileyebilir.

Batman ilindeki hafızlık projesinin zayıf yönleri, eğitim-öğretim sürecindeki aksamalar, öğrencilerin geleceği hakkında belirsizlik oluşturması, öğrenci, öğretmen, veli ve okul yöneticileri arasındaki uyumsuzluklar ve fiziki imkanların yetersizliği gibi faktörlerden kaynaklanmaktadır. Bu zayıf yönlerin giderilmesi için, farkındalık çalışmaları yapılması, okulların fiziki koşullarının iyileştirilmesi, öğrencilerin teknolojik gelişmelere ayak uydurabilmeleri için bilişim teknolojisi ve yazılım sınıflarının açılması gibi önlemler alınması gerekmektedir.

Araştırmada Batman ilinde yürütülen hafızlık projesinin zayıf yönlerinin güçlendirilmesi için öneriler sunulmuştur. Bu öneriler arasında öğrencilerin bilinçlendirilmesi, hafız öğretmenlerinin eğitimi, velilerin bilgilendirilmesi, okul yönetim kadrosunun seçimi, fiziksel açıdan geliştirilmiş okulların oluşturulması, teknoloji ve bilişim sınıflarının oluşturulması, öğretmenlerin seçimi, sosyal ve kültürel etkinliklerin sunulması ve yatılı Kur'an kurslarının okullarla eşleştirilmesi yer almaktadır. Bu önerilerin uygulanması, hafızlık projesinin amacına daha etkili bir şekilde hizmet etmesini sağlayacaktır.

**ÖZET**

Türkiye'de ilk defa kamu sektörü tarafından uçak üretimi, 1926 yılında Kayseri'de kurulan tayyare fabrikasında gerçekleştirilmiştir. Bu çalışma, 1926 ile 1942 yılları arasında Kayseri Tayyare Fabrikası'nda üretilen uçakları ve gelişimini değerlendirmektedir. Bilindiği üzere cumhuriyetin kurulduğu ilk yıllar da dâhil olmak üzere havacılık sektörü, bir gelişim süreci içerisine girmiş ve ülkelerin üstünlük referansı haline gelmiştir. Bu araştırma, dünyada gelişen havacılık sektöründe yer almak için Türk devleti tarafından kurulan Kayseri Tayyare Fabrikası'nda üretilen uçaklar ile meydana gelen gelişim sürecini ortaya koymayı amaçlamaktadır. Döneme ait arşiv kaynakları yanında Türk havacılığına ilişkin akademik araştırmalar temel referans noktasını oluşturmaktadır. Bu çerçevede ilk defa 1926'da Kayseri'de Tayyare Motor Türk Anonim Şirketi (TOMTAŞ) tarafından kurulan ve daha sonra 1931'de Milli Müdafaa Vekâleti tarafından idare olunmaya başlayan Kayseri Tayyare Fabrikası ve bu tesislerde üretilmiş uçaklar ile gelişim süreci ele alınmıştır. Böylece, 1926-1942 yılları arasında uçak üretim faaliyetlerine devam eden Kayseri Tayyare Fabrikası'nın Türkiye'nin ulusal havacılık gelişim çizgisine katkısı tespit edilmeye çalışılmıştır.

**Anahtar kelimeler:** Havacılık, Uçak, Uçak Fabrikası, Teknoloji, Gelişme.

**ABSTRACT**

For the first time in Türkiye, the production of aircrafts by public sector was carried out in the aircraft factory that is established in Kayseri in 1926. This study evaluates the aircrafts that are manufactured in aircraft factory in Kayseri which are established by public sector between 1926 – 1942 and their developments. As it is known, including the first years of the establishment of the republic, the aviation industry has entered a development process and become the reference of superiority of countries. This study aims to reveal the development process with the aircrafts that are produced in Kayseri Aircraft Factory which is established by the Turkish state in order to take part in the aviation sector which started to develop in the World. In addition to archived sources of the period, the academic studies on Turkish aviation constituted the main reference point. In this context, Kayseri Aircraft Factory, which was first established in Kayseri in 1926 by Tayyare Motor Türk Anonim Şirketi (TOMTAŞ) and then started to be administered by the Ministry of National Defense in 1931, and the development process with the aircrafts produced in these facilities are discussed. In this way, the contribution of Kayseri Aircraft Factory, which continued its aircraft production activities between 1926-1942, to the national aviation development line of Türkiye was tried to be determined.

**Keywords:** Aviation, Aircraft, Aircraft Factory, Technology, Development.

**GİRİŞ**

Bu çalışmada 1926-1942 yılları arasında uçak üretimi gerçekleştiren Kayseri'deki Tayyare Fabrikası'nın ne tür çalışmalar yaptığı, bu fabrikada hangi uçak modellerinin üretildiği, gerekli

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

teknolojik olanakların nasıl sağlandığı, sürecin nasıl şekillendiği ve Türk havacılığının gelişimine ne ölçüde fayda sağladığı gibi sorulara cevap aranmıştır.

Çalışma, içerik bakımından yukarıda belirtilen dönemde Kayseri'deki Tayyare Fabrikası'nın gelişim aşamalarını, gerek üretim teknolojisi gerekse uçak teknolojisi bakımından ulaşılan noktayı, personel ile ilgili gelişmeleri kapsamaktadır. Makalenin kronolojik çerçevesi belirlenirken, TOMTAŞ tarafından 1926 yılında Kayseri'de kurulan Tayyare Fabrikası başlangıç olarak belirlenmiştir. Fabrikanın uçak üretim faaliyetlerinin durma noktasına geldiği ve bakım ikmal merkezine dönüştüğü 1942 yılı ise incelemenin son tarihi olarak belirlenmiştir.

Cumhuriyet döneminde gelişim gösteren bir çok sektör gibi havacılık sektörü de ayrı bir öneme sahip olmuştur. Yirminci yüzyıl, devletlerin savunma sanayiini güçlendirmek, hava üstünlüğü sağlamak ve teknolojilerini geliştirmek için büyük yatırımlar yaptığı bir dönemdir. Bu dönemde havacılık alanında faaliyet gösteren Amerikan The Curtiss Aeroplane and Motor Company Inc., Alman Junkers Flugzeugwerke A.G, Alman Gothaer Waggon Fabrik A.G., İngiliz Philips And Powis Aircraft Ltd., ve Polonya Panstwowe Zakłady Lotnicze gibi firmalar en önemli örneklerdendir. Hızla gelişen dünya havacılık faaliyetleri içerisinde, Türkiye Cumhuriyeti de bu alanda yerini almak, gelişim sağlamak ve çağı yakalamak için dâhili ve harici tüm imkânları kullanmaktan geri kalmamıştır. Bu amaçla kurulan fabrikalardan bir tanesi de Kayseri'deki tayyare fabrikasıdır. Bu çalışma, Kayseri'deki fabrikada uçak üretimi için ortaya konulan çabaları, yabancı ülkeler ile kurulan bağlantıları, bu bağlantılar kurulurken takip edilen yolları ve yapılan tercihlerin sebeplerini ortaya çıkarmış olması bakımından önemlidir. Havacılık sanayiinin gelişmesi için ortaya konulan çabalar, ulusal kalkınmanın bir parçası olarak değerlendirilmiştir.

Bu çalışmada, Türkiye Cumhuriyeti Cumhurbaşkanlığı Devlet Arşivleri ana kaynağı teşkil etmektedir. Arşivlerden incelenen kaynaklarda, anlaşma yapılan ve ülke dışında faaliyet gösteren firmalar ile ilgili bilgiler, fabrikanın faaliyetine başlama süreci, ülke dışından getirilen teknik personel hakkında bilgiler, fabrika faaliyetleri hakkındaki raporlar incelenmiştir. İstanbul Hava Kuvvetleri Müzesi ile Ankara Paraşüt Kulesi ve Türk Hava Kurumu Müzesi ziyaret edilerek, Türk havacılığının tarihsel gelişimi içerisinde kullanılan uçaklar ve malzemeler incelenmiştir. Osmanlı Devleti ve Milli Mücadele döneminde yapılan havacılık faaliyetleri ile ilgili bilgilere, Yavuz Kansu, Yılmaz Öztuna, Sermet Öztuna tarafından hazırlanan *Havacılık Tarihinde Türkler I* ve İrfan Sarp'ın *Türk Hava Kuvvetlerinin Doğuş Yılları* isimli kitaplardan ve diğer telif eserlerden ulaşılmıştır. Bu eserler, Türkiye'de havacılık faaliyetlerinin başlangıcından Cumhuriyetin kuruluş dönemlerine kadar yapılan çalışmaların ortaya konulması bakımından çalışmaya önemli katkı sağlamıştır. Fabrikanın faaliyetlerine ilişkin bilgiler öncelikle arşiv kaynaklarından temin edilmeye çalışılmış, TOMTAŞ ve Amerikan The Curtiss Aeroplane and Motor Company Inc., firması ile yapılan anlaşmalar dışında, yapılan diğer lisans anlaşmalarına rastlanmamıştır. Fabrika ve üretilen uçakların teknik özellikleri ile ilgili bilgiler, Osman Yalçın'ın *Türk Hava Harp Sanayii Tarihi*, İsmail Yavuz'un *Mustafa Kemal'in Uçakları Türkiye'nin Uçak İmalat Tarihi (1923-2012)*, Neslihan Altuncuoğlu vd'nin *Kayseri Uçak Fabrikası*, Rifat Bayrak'ın *Kayseri Tayyare Fabrikası Havacılık Tarihi* ve Tuncay Deniz'in *Türk Uçak Üretimi* gibi eserlerden ve dönemin gazetelerinden faydalanılmış çalışmanın çatısı oluşturulmuştur.

Kayseri'deki tayyare fabrikasının faaliyet gösterdiği 1926-1942 yılları arasındaki uçak üretimi ve gelişimini kapsayan çalışmamız yapılırken öncelikli olarak literatür taraması yapıp, elde edilen bilgilerin analizi yapıldı. Elde edilen bilgiler ile arşiv bilgileri karşılaştırmalı olarak değerlendirildi.

Bu çalışmada, Osmanlı Devleti'ndeki havacılık faaliyetlerine kısaca değinilerek, Türkiye Cumhuriyeti'nin kuruluşundan sonra, Kayseri'de 1926 yılında Tayyare Motor Türk Anonim Şirketi (TOMTAŞ) tarafından açılan ve daha sonra 1931 yılında Milli Müdafaa Vekâleti'ne devredilen, Kayseri Tayyare Fabrikası'nın ürettiği uçakların, ilerleyen süreçte teknolojik gelişimleri ve özellikleri ayrıntılarıyla belirtilip, ülkenin havacılık alanındaki etkileri ortaya konuldu.

## ARAŞTIRMA VE BULGULAR

### Türkiye Cumhuriyeti'nin Kuruluşundan Önce Havacılık İmkânları

Osmanlı Devleti, 1903 yılında Amerika Birleşik Devletleri'nde motorlu bir uçağın kısa süre havada kalmayı başarması ile başlayan havacılık alanındaki gelişmelere kayıtsız kalmayarak yeniliği

kullanmaya teşebbüs etti. Devletin ilgisi daha çok askeri alandaki açığı kapatmak içindi. Harbiye Nazırı olan Mahmut Şevket Paşa, o dönemde Erkan-ı Harbiye ikinci Şube başkanı Süreyya Bey'i 1911 yılında askeri havacılık çalışmalarını başlatmak üzere görevlendirdi<sup>1</sup>. Havacılık alanında bilgisi olan ve Fransızca bilen iki kişi eğitim için Fransa'ya gönderilme kararı alındı. 1911 yılında süvari Yüzbaşı Fesa Bey ve İstihkâm Teğmeni Kenan Bey Fransa'ya gönderildi. Aynı zamanda, havacılık hakkında yayınlanan kitap ve dergilerin Genel Kurmaya gönderilmesi için Berlin, Paris ve Viyana elçiliklerine yazılar gönderildi<sup>2</sup>. 1912 yılında Fransa'dan iki uçak satın alındı. Bu uçakların iniş-kalkışları için Yeşilköy'de bir havaalanı, uçak bakım-tamir bölümü gibi kısımların yapımına başlandı. 1912 yılı sonuna kadar uçak sayısı 17'yi buldu<sup>3</sup>. I. Dünya Savaşı'nda Osmanlı Hava kuvvetleri, Alman Hava kuvvetleri ile işbirliği yaparak, uçak ve pilot eksikliğini Almanya'dan karşıladı<sup>4</sup>. Ancak savaşta Osmanlı Devleti askeri olarak zor duruma düştü. Fransız ve İngilizlerin Osmanlı topraklarını işgale başlamasıyla, işgal edilen cephelerde bulunan uçaklar İstanbul'da toplandı<sup>5</sup>.

Milli Mücadele döneminde hava desteği sağlamak için Osmanlı envanterinde bulunan ve işgale uğramamış cephelerde bulunan uçaklar ile düşman kuvvetlerinden ele geçirilen uçaklardan faydalanıldı. Konya, Afyon ve Eskişehir'de tamirhaneler oluşturularak bakımsız ve arızalı uçakların uçar hale getirilmesi için yoğun çaba sarf edildi. İhtiyaç duyulan yedek parça ve emayit, ülke içerisinde üretilemediğinden dolayı I.- II. İnönü ve Sakarya Savaşlarında ancak birkaç uçakla mücadele edilebildi<sup>6</sup>. Büyük Taarruzda ise Almanya'dan satın alınarak Rusya üzerinden Karadeniz yoluyla Anadolu'ya getirilen uçaklar<sup>7</sup> ile Fransız ve İtalyanlardan satın alınan uçar haldeki toplam 17 tane uçakla mücadele edildi<sup>8</sup>.

### **Türkiye Cumhuriyeti'nin Kuruluşundan Sonra Havacılık**

Türkiye Cumhuriyeti yöneticileri, devletin kuruluşunun ilk yıllarından itibaren, ülkenin savunmasının güçlendirilmesi için havacılık alanını da göz ardı etmediler. Bu amaçla dönemin şartlarına uygun hava savunma sistemlerini ülkeye kazandırmak için çalışmalara başlandı.

Büyük Taarruzdan sonra İzmir'e intikal eden Hava Kuvvetleri Müfettişliği, Kurmay Albay Muzaffer Bey'in (Ergüder) komutasında 1923 yılı Temmuz ayı itibarıyla uçuş okulu, ikmal tesisleri ve muharip unsurlardan oluşmaktaydı. Birlik bünyesindeki uçuş okulu Gaziemir'de, uçaksavar bölüğü Halkapınar'da, uçak bölükleri, İzmit, Erzurum, İzmir/Gaziemir, Bandırma ve Deniz Uçak Bölüğü de İzmir'de bulunmaktaydı. Hava ikmal birimleri ise Afyon ve Ankara'daydı. Deniz uçak bölüğü ile birlikte toplam 38 uçak, 12 pilot bulunmaktaydı. Gaziemir'e yerleşen uçuş okulu, faaliyetine 8 yardımcı pilotu eğitime alarak hava kuvvetlerinin pilot eksikliğini gidermeyi amaçlandı<sup>9</sup>.

Hava Kuvvetleri Müfettişliği, yurt savunması için vazgeçilmez olan havacılık endüstrisini geliştirmek ve bu kapsamda hava harp sanayisinin ulaştığı teknolojik seviyelerini yakından görmek ve araştırmalar yapmak üzere 20 Aralık 1923'de Alb. Muzaffer Bey başkanlığında Hava Müfettişliğinde görevli Bnb. Fesa Bey, Makine Yzb. Murat Bey, Astsb. Pilot Vecihi Bey, Pilot Halim Bey ve Deniz Yzb. Cemal Bey'in katılımında bir yurt dışı gezisi düzenledi. Fransa, İtalya, İngiltere ve Almanya'yı kapsayan

araştırma gezisinde uçak alımı, üç Fransız uçuş öğretmenin Türkiye’de çalışması, Fransa’ya öğrenci gönderilmesi gibi hususlarda ön anlaşmalar yapıldı.<sup>10</sup>

Havacılığın sadece askeri yönde değil, modern batılı ülkelerde olduğu gibi sivil alanlarda da gelişmesini isteyen Mustafa Kemal Paşa, Yaveri Cevat Abbas (Gürer) Bey’e verdiği emirle 16 Şubat 1925 günü Ankara Türk Ocağı’ndaki toplantıda Türk Tayyare Cemiyeti’nin (T.T.C.) kurulmasını sağladı.<sup>11</sup> Cemiyetin amacı, yurt savunmasında göklerin öneminin her kesim tarafından bilinmesi, askeri ve sivil havacılığın gelişmesine destek verilmesi, gençlerde havacılık alanında ilgi uyandırılması oldu. Türk Tayyare Cemiyeti, kuruluşunun üzerinden geçen 4 ay gibi kısa bir zamanda 25 Haziran 1925’te 320 şubeye ulaştı. Cemiyet halktan gelecek yardımları da kabul etmek amacıyla bağış kampanyaları düzenledi, elde edilen bağışlarla Ankara’da bulunan otuzbin dönümlük Ahi Mesut Çiftliğini tayyare okulu kurmak için satın aldı.<sup>12</sup> 1935 yılında yurt genelinde T.H.K. için başlatılan yardım kampanyasına Atatürk on bin lira bağışta bulunmuş ve “*Bu ulus en zor zamanlarda memleket ödevlerine canla başla koşturmuş. İstediklerinden daha fazlasını başaracaklardır. Tuttukları yol doğrudur.*” sözü ile düşüncesini ifade etmiştir.<sup>13</sup> Cemiyetin faaliyetleri bunlarla sınırlı kalmadı. Kayseri ve Eskişehir’de TOMTAŞ tarafından kurulan uçak fabrikalarına maddi destek sağladı. Hava kuvvetlerinin tamir bakım personelinin yetiştirilmesini sağlamak için 23 Nisan 1926’da Yeşilköy’de, Uçak Makinist okulunu açtı ayrıca uçak mühendisliği eğitimi almak üzere 8 öğrenciyi de yurtdışına gönderdi.<sup>14</sup> 24 Mayıs 1935 tarihinde yapılan büyük kongrede alınan kararlarla Türk Tayyare Cemiyeti’nin ismi Türk Hava Kurumu (T.H.K) olarak değiştirilmiş, aynı yıl kurumun kendi bünyesinde 3 Mayıs 1935’te Türkkuşu adı ile yeni bir birim oluşturularak gençlerin paraşütle atılması, planör ve uçak kullanması ve model uçak yapması için kurslar düzenledi.

### **Tayyare Motor Türk Anonim Şirketi (TOMTAŞ) Uçak Fabrikası**

Türkiye Cumhuriyeti’nin kuruluşundan itibaren ülkenin güvenliğini sağlama düşüncesiyle milli hava sanayiini kurma çalışmaları başladı. Kurulacak Milli Hava Sanayii için uçak endüstrisinde önde gelen ülkelerde araştırma yapılmasına karşın, Lozan’da İngiltere ve Fransa ile çözümlenemeyen sorunların etkisi ile Almanya’da araştırma yapılması yoğunluk kazandı.<sup>15</sup> 3 Mart 1924’de Almanya ile imzalanan Dostluk Antlaşması’nın<sup>16</sup> devamı olarak, 08 Mayıs 1924’de Almanya’nın Ankara Büyükelçiliğine Rudolf Nadolny, 08 Ekim 1924’de Türkiye’nin Berlin Büyükelçiliğine Kemaleddin Sami Bey atandılar.<sup>17</sup>

Kemaleddin Sami Bey,den Türkiye’nin kurmak istediği fabrika için Türkiye’ye yardımcı olabilecek Alman firmalar üzerinde incelemelerde bulunması istendi. Kemaleddin Sami Bey, Telefunken, A.E.G, Siemens ve Junkers Flugzeugwerke A.G tayyare fabrikalarında konu ile ilgili yaptığı araştırmalar sonucunda, 18 Aralık 1924’de bir rapor hazırladı. Raporunda Junkers Flugzeugwerke A.G şirketi ile ilgili olarak, bir ay içerisinde iki kişilik 100 adet bombardıman uçağı yapabilecek kapasiteye sahip olduğunu, 250 mühendis ve 3.000 işçisiyle tamamen alüminyum ve demir aksama sahip uçaklar üretebildiğini, firma yetkililerinin de Türkiye’de bir uçak fabrikası kurmaya istekli olduklarını

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

belirtmiştir.<sup>18</sup> Bunun üzerine, 4 Mayıs - 18 Haziran 1925 tarihleri arasında Avrupa seyahatinde bulunan Cumhurbaşkanlığı Genel Sekreteri Tevfik Bey, Berlin’de Alman sanayicilerle görüşerek, Türkiye’de yapacakları yatırımlar için kolaylık sağlanacağını bildirmiştir.<sup>19</sup>

Türkiye ile Junkers Flugzeugwerke A.G şirketinin kurucusu Hugo Junkers’in karşılıklı isteği ve Almanya’nın Ankara Büyükelçisi Rudolf Nadolny’nin çabaları neticesinde, Junkers firması yöneticisi Sachsenberg, Türk Genelkurmay yetkilileri ile görüşmek üzere 15 Ağustos 1925’te Ankara’ya geldi. Yapılan görüşmeler neticesinde uçak fabrikasının ortaklaşa olarak kurulması için mutabakata varıldı. Türkiye Cumhuriyeti adına Maliye Vekili Hasan Bey,<sup>20</sup> 07 Eylül 1925 tarihinde Junkers Firması yetkilileri ile antlaşmayı imzaladı. Antlaşma uyarınca, ortak kurulacak şirketin sermayesi, taraflar arasında eşit pay olacak şekilde 7 milyon mark (yaklaşık 3.5 milyon TL) olarak belirlendi. Kayseri’de ve Eskişehir’de üretimin yanında uçak bakım ve onarımının da gerçekleştirilebileceği birer fabrika kurulmasına karar verildi.<sup>21</sup> Bakanlar Kurulu’nun 25.10.1925 tarihli onayıyla, Türkiye – Alman Junkers Firması ortaklığında TOMTAŞ kuruldu.<sup>22</sup> Genel merkezi Ankara’da olan şirketin yöneticiliğine Refik Koraltan<sup>23</sup> atandı. Şirket, uçak üretim fabrikası olarak Anadolu’nun merkezinde ve savunmaya uygun jeostratejik konumda olan, bölgenin ticaret yolları üzerinde, lojistik bakımdan askeri imkânları sağlayacak düzeyde ve daha önceden askeri güherçile ve barut fabrikaları bulunan Kayseri tercih edildi.<sup>24</sup>

TOMTAŞ’a bağlı Kayseri Tayyare Fabrikası, uçak üretmek ve bakım yapmak üzere 6 Ekim 1926 tarihinde açılışı gerçekleştirilerek 6 hangar’da, toplam 500 Kw’lık güç santrali ve 50 Türk, 120 Alman olmak üzere toplam 170 personelle çalışmaya başladı.<sup>25</sup>

Fabrikada üretilen uçak sayıları hakkında bazı kaynaklarda farklı rakamlar belirtilmekle beraber 1926 - 1927 yılları arasında Osman Yalçın ve Neslihan Altuncuoğlu 30 adet Junkers A-20 L’nin ve 3 adet de F-13 tipi uçağın montajının gerçekleştirildiğini<sup>26</sup> belirtmişler genel kanaatte bu yönde bulunmaktadır. Bunun yanında fabrikada, Türk Hava Kuvvetleri’nin envanterinde bulunan Junkers A-20, F-13, G-23 uçakları ve kullanımda bulunan diğer uçakların bakım ve onarımları yapılmıştır.

Montajı yapılan Junkers A 20 modeli uçaklar, alçak kanatlı olup, kanatları dâhil tamamen metaldir. Tekerlek şasisi, şamandıra veya yer kızıağı ile değiştirilebilir özelliği ile su ve kar üzerine inebilme kabiliyetindedir.<sup>27</sup> Junkers F-13 modeli uçaklar ise nakliye uçağıdır, dört yolcu kapasiteli, tek kanatlı, önden tek motorlu ve tamamen metaldir.<sup>28</sup>

October 13-14, 2023

**Tablo 1.** TOMTAŞ Uçak Fabrikasında Üretilen Uçakların Özellikleri<sup>29</sup>

Fabrikanın Adı	Uçak Modeli	Tipi	Motor sayısı	Motor Gücü	Azami hız	Uzunluk	Yükseklik	Kanat Açıklığı
TOMTAŞ Uçak Fabrikası	Junkers A 20	Keşif-Hafif Bombardman	Tek	185 hp	170 Km/saat	8,35 m	3,05 m	15,34 m
	Junkers F-13	Yolcu	Tek	230 hp	176 Km/saat	9,6 m	4,1 m	17,80 m

Büyük ümitlerle kurulan TOMTAŞ, Alman ortağı Junkers Firması'nın, ekonomik krize girmesi, anlaşma şartlarını süresi içerisinde yerine getirememesi, Türk tarafında teknik yeterliliğe sahip eleman eksikliği gibi sebeplerle ümit edilen üretim ve satış gerçekleştirilemediğinden, 03 Mayıs 1928'de üretim durduruldu ve 28 Mayıs 1928'de fabrika kapatıldı.<sup>30</sup> Milli Savunma Vekaleti ile Junkers firması arasında ortaklığın sonlandırılması için 24.11.1929'da yapılan protokol ve 27.11.1929 tarihli Bakanlar Kurulu Kararı ile Türk Tayyare Cemiyeti, 520.000 TL Junkers firmasına ödemesi karşılığında tüm hisselerini ve haklarını satın alarak fabrika tamamen Türkiye Cumhuriyeti'nin oldu.<sup>31</sup>

Türkiye'de TOMTAŞ ile temeli atılan ilk yerli uçak fabrikası, başlangıçta yeniden bir uçak üretim tesisi olmayıp, fiilen montaj fabrikasıdır. Dolayısıyla o günkü Türkiye'nin sanayisine doğrudan katkı yapacak nitelikte olmayıp, havacılık teknolojisinin gelişmesine, havacı teknik personelinin yetişmesine ve bölge ve civarının ekonomik kalkınmasına katkı sağlamıştır.

## 2. 2. Kayseri Tayyare Fabrikası

Kayseri'deki tayyare fabrikası, TOMTAŞ'ın tasfiye sürecinin tamamlanmasından sonra 1930 yılında Milli Müdafaa Vekâlet'ine devredildi. 1931 yılında ise Hava Müsteşarlığı'na bağlanarak daha önce temeli atılan beş hangarın inşaatları tamamlandı ve toplamda onbir hangarla yeniden faaliyetlerine başladı.<sup>32</sup>

Fabrika idareciliğine atanan Hv.Bnb. Murat Başaran ve ekibi göreve geldikten sonra havacılık sanayiini geliştirmek, hava kuvvetlerinin ihtiyacı olan uçakları üretmek için havacılık alanında gelişmiş ülkelerde bulunan uçak yapım şirketleri ile temasa geçti.<sup>33</sup> Yapılan araştırmalar neticesinde Mart 1929'da Türkiye'yi ziyaret eden Curtiss-Wright Şirketi'nin temsilcisi Mr. Mario Calderera ile yapılan görüşmeler ve uçak üreten firmaları incelemek üzere Amerika'ya giden Binbaşı Şefik Çakmak'ın görüşleri, lisans anlaşması ile uçak üretimi yapılmasında etkili oldu. Şirket, Türkiye temsilcisi olarak gazeteci Ahmet Emin Yalman ile anlaşmış ve bir program hazırlamıştır. Bu çerçevede, Curtiss uçaklarının ve Wright motorlarının Türkiye'ye satışı, Türk hava yollarının ve bir hava meydanı şebekesinin kurulması, Türkiye tarafından satın alınacak uçakların bir kısmının, Kayseri'de Amerikan ustaları ile Türk işçileri tarafından yapılması, Kayseri'deki fabrikanın tam bir uçak fabrikası haline gelmesi ve Wright uçak motorlarının da burada üretilmesi için Curtiss-Wright Şirketi ile Türk Hükümeti arasında devamlı iş birliğinin sağlanması kararlaştırıldı.<sup>34</sup>

Fabrikada üretilecek uçakların patenti, "Amerikan The Curtiss Aeroplane and Motor Company Inc." firmasına ait olup lisans anlaşması ile Curtiss Hawk II ve Fledgling 2-C1 modeli uçaklarının üretimi

kararlaştırıldı. Sözleşme imzalamak üzere Milli Müdafaa Vekâleti'ne yetki verilerek,<sup>35</sup> 23 Kasım 1931 tarihinde sözleşme imzalandı.<sup>36</sup> Sözleşme çerçevesinde 1933-1939 yılları arasında 22 adet imalat ve 24 adet montaj olmak üzere toplam 46 adet Curtiss Hawk ve 8 adet Fledgling modeli uçak üretildi.<sup>37</sup>

Fabrikada imal edilen Curtiss Hawk II modeli uçaklar, çift kanatlı, tek motorlu, ön gövdesi çelik kaplamalı, kanatları, kanatçıkları, arka gövde ve kuyruk kısmı ise bez kaplamalıdır.<sup>38</sup> Fledgling 2-C1 modeli uçaklar ise, çift kişilik, çift kanatlı, tek motorlu, gövdesi çelik borudan, kuyruğu alüminyum malzemeden, kanatları ise ahşap malzeme üzerine bez kaplama olarak imal edilmiştir.<sup>39</sup> Fabrikada imal edilen ilk 8 uçaktan biri olan 1401 no'lu Fledgling modeli eğitim uçağı, 26 Haziran 1934 tarihinde Atatürk'ün isteğiyle, İran Şahı Rıza Pehlevi'ye hediye edilerek Plt.Yzb. Enver Akoğlu ve Makinist Nihat Kayalı tarafından Tahran'a götürülmüştür.<sup>40</sup>

Türk Hükümeti, Türk Hava Kuvvetlerinin eğitim uçağı ihtiyacını karşılamak üzere 1936 yılında ikinci kez Alman firmaları ile temasa geçti. Yapılan araştırmalar neticesinde Gothaer Waggon Fabrik A.G. firması ile 46 adet Gotha 145 tipi uçağı üretmek üzere lisans anlaşması yaptı. Gotha firması önce üç adet uçağı ait parçaları Türkiye'ye göndererek montaj şeklinde örnek olarak imal etmiş, kalan 43 adedi ise Kayseri Tayyare Fabrikasında Alman ve Türk personellerin ortaklaşa çalışması ile imal edilmiştir.<sup>41</sup> Uçaklar, çift kanatlı çift kişilik, çift kumandalı ve tek motorlu eğitim uçaklarıdır. Gövdesi çelik borudan üretilen uçağın kanatları ahşaptır. Çift ahşap sparlı olan kanatlarda N şeklinde kanat dikmeleri bulunmaktadır. Kuyruk, kanatçıklar, gövde, yön ve irtifa dümenleri bez kaplamalı olan uçağın, kanatları ise kontraplak üzerine bez kaplamadır. Eğitim için en önemli özelliği öğrenci ve öğretmenin beraber binebileceği ve çift kumandalı oluşudur. Gotha 145 tipi uçaklar, Türk Hava Kuvvetleri'nde 1947 yılına kadar kullanılmıştır.<sup>42</sup>

Türk Hava Kuvvetleri'nin avcı uçağı ihtiyacını karşılamak üzere arayışlarda bulunan Türk Hükümeti'nin yapılan araştırma neticesinde Fransız firma imalatı Dewoitine D.510T modeli uçak uygun görülmüştür. Uçak için sipariş verilmiş, ancak Fransa ile Hatay sorunu devam ettiğinden dolayı imal edilen 12 uçağı Fransa Hükümeti Mayıs 1935'te el koymuştur.<sup>43</sup> Bu olayın üzerine Türk Hükümeti, Polonya Tayyare Fabrikası "Panstwowe Zakłady Lotnicze" imalatı olan ve üzerinde Gnôme-Rhône 14 Kfs motoru bulunan 28 Haziran 1934'te Polonyalı pilot Boleslaw Orłowski'nin 414 km/s hıza ulaşarak radyal motorlu savaş uçakları hız rekorunu kırdığı P-24/II. modeli uçağı yönelmiştir. Türkiye, Polonya firmasına 1936 yılı başında uçak alımı ve imalatı için resmi talepte bulunarak 24 Nisan 1936'da sözleşme imzalamıştır. Firma, Türkiye'de görevlendireceği ekibin başkanlığına da daha önce 400 civarı metal avcı uçağı üretimini gerçekleştiren ekibin başında bulunan Wilhelm Gibalka'yı görevlendirmiştir. 23 Ekim 1936'da Kayseri'ye gelen Wilhelm Gibalka, lisans sözleşmesine ilişkin tüm konularda PZL'nin Türkiye'deki tek yetkilisi olarak göreve başlamıştır. İlk üretim P-24'ün deneme uçuşu 29 Mayıs 1937 tarihinde saat 18.00'de Eskişehir Hava Üssü Pilotu Üsteğmen İrfan Bey tarafından başarı ile gerçekleştirilmiş,<sup>44</sup> 1937 yılından itibaren 6 adet P.Z.L. P-24 A, 19 adet P.Z.L. P-24 C ve 2 adet P.Z.L.

<sup>35</sup> BCA, 30.18.1.2 /24.72.17/03.11.1931.

<sup>36</sup> Şirket, mukavele taslağını 7 Ekim 1931 tarihinde gönderdi. Curtiss-Wright Şirketi ile Kayseri Tayyare Fabrikası'nda tayyare ve motor imali, hava hatları ve genel havacılık işleri için yapılan müzakereler neticesinde beş-on senelik her türlü detayı içeren kapsamlı bir proje üzerinde uzlaşmamıştır. Çünkü her iki taraf da kendilerini güvenceye almadan bir taahhütte bulunmaktan kaçınmıştır. Teknik işleri, tayyare maliyet fiyatlarını, motor imal imkânını ve hava hatları işlerini incelemek üzere 1 senelik bir deneme sürecinin uygun olacağı üzerinde mutabakat sağlanmıştır. Konu Bakanlar Kurulu'nun 3 Kasım 1931 tarihli toplantısında görüşülmüş, 23 Kasım 1931 tarihinde imzalanmıştır.

P-24 G tiplerinde olmak üzere toplam 27 tane P.Z.L tipi uçak fabrikada imal edilmiştir.<sup>45</sup> Bu uçakların motorlarının imal tarzını görmek üzere Polonya'ya Almanya'ya<sup>46</sup> ve Fransa'ya<sup>47</sup> personeller gönderilmiştir. Bu dönemde fabrika, ayda dört uçak üretecek kapasiteye ulaşmıştır. P.Z.L. P-24 A modeli uçaklar, tek motorlu, tek kişilik, üstten tek kanatlı, gövde ve kanatları tamamen metal kaplamalı, kanatları martı tipinde ve destekli olarak dizayn edilmiştir. Uçağın iniş takımları sabit olup, amortisörlüdür. Uçakta kuyruk kazığı mevcuttur. Pervanesi metal olup üç pallidir. Uçaklar Türk Hava Kuvvetlerinde 1945 yılına kadar hizmette kalmıştır.<sup>48</sup>

Türkiye, İkinci Dünya Savaşı'nın başlaması ile Polonya ve Almanya'dan temin ettiği yedek parça ithalatında oluşan sorunlar ve aynı ülke teknik personellerin yurtlarına dönmelerinden dolayı eğitim uçağı ihtiyacını karşılamak için, İngiliz "Philips And Powis Aircraft Ltd." firması ile 1940 yılında lisans anlaşması imzalanmıştır. 1941 yılında 5 tane, 1942 yılında da 21 tane olmak üzere toplam 26 tane Miles Magister modeli uçaklar imal edilerek Türk Hava Kuvvetlerinin hizmetine verilmiştir.<sup>49</sup> Uçaklar, tek motorlu, alttan tek kanatlı, iki kişilik, çift kumandalı bir eğitim uçağıdır. Uçağın kanatları, kuyruğu ve gövdesi ahşap olup, kontrplak kaplamalı, yön ve irtifa dümenleri ise bez kaplamalıdır. Uçağın her iki kanadının içinde 47 litrelik yakıt tankı bulunmaktadır. Uçaklar üzerinde tadilat yapılarak, gece uçuşlarında, ilaç naklinde ve zirai mücadelede kullanılabilir. <sup>50</sup>

Kayseri Tayyare Fabrikası yurt içinde ve yurt dışında oldukça ilgi görmüş, Cumhurbaşkanı Mustafa Kemal Atatürk,<sup>51</sup> Başbakan İsmet İnönü,<sup>52</sup> yabancı devlet görevlileri,<sup>53</sup> öğrenciler ve izci grupları <sup>54</sup> tarafından ziyaret edilmiştir.

Fabrikada üretilen uçakların menşesine göre Türk işçilerini yetiştirmek ve görev yapmak üzere Amerikalı personel,<sup>55</sup> İngiliz uyruklu mühendisler,<sup>56</sup> Polonyalı mühendisler,<sup>57</sup> teknikerler,<sup>58</sup> motor uzmanları,<sup>59</sup> teknik Erbaşlar,<sup>60</sup> makinistler<sup>61</sup> ve diğer personel,<sup>62</sup> görevlendirilmiştir. 1938 yılında ise uçak tiplerini tetkik etmek üzere daha önce uçuş tecrübesi olan, İran şahına hediye edilen uçağı da götüren Yüzbaşı Enver Akoğlu, İngiltere ve Almanya'ya gönderilmiştir.<sup>63</sup> Kayseri Tayyare Fabrikası'nda, 1931 yılından 1942 yılına kadar dört farklı ülkenin markasına ait yedi ayrı modelde uçak imalatı yapılmıştır.<sup>64</sup> Uçak imalatı dışında, 1937-1947 yılları arasında 24 tip uçağı FASBAT (Fabrika Seviyesi Bakım Tamir) ve 14 tip motor revizyonu (RN) gerçekleştirilmiştir.<sup>65</sup> Fabrika, II. Dünya Savaşı'ndan dolayı 1942 yılından itibaren personel ve yedek parça teminindeki güçlükler nedeniyle uçak üretimini durdurmuştur. Hava

Kuvvetlerine ait pervaneli uçakların fabrika seviyesi bakım, ikmal, onarım ve üretim işlemlerini yapan hava ikmal bakım merkezine dönüştürülmüştür.<sup>66</sup>

**Tablo 2.** Kayseri Tayyare Fabrikasında Üretilen Uçakların Özellikleri<sup>67</sup>

Fabrikanın Adı	Uçak Modeli	Tipi	Motor sayısı	Motor Gücü	Azami hız	Uzunluk	Yükseklik	Kanat Açıklığı
Kayseri Tayyare Fabrikası	Curtiss Hawk II	Avcı	Tek	600 hp	325 Km/saat	6,88 m	2,96 m	9,60 m
	Fledgling 2-C1	Eğitim	Tek	220 hp	175 Km/saat	8,33 m	3,14 m	11,93 m
	Gotha 145	Eğitim	Tek	240 hp	212 Km/saat	8,70 m	2,90 m	9,00 m
	PZL P-24	Avcı	Tek	930 hp	410 Km/saat	7,50 m	2,69 m	10,71 m
	Miles Magister 14A	Eğitim	Tek	130 hp	212 Km/saat	7,51 m	2,03 m	10,31 m

## SONUÇ

Motor gücü ile havalanan ilk uçaklar yirminci yüzyılın başlarında ortaya çıkmış ve her geçen gün gelişmeye devam etmiştir. Savaşlarda uçaklardan yararlanma düşüncesi ülkeleri havacılık endüstrisinde çalışma yapmaya zorlamış, Türkler de Trablusgarp Savaşı'ndan itibaren havacılığa önem vermişlerdir. Milli Mücadelenin ardından kurulan Türkiye Cumhuriyeti devletinin devlet adamları da havacılık sektörünün hayati önemini saptamış ve yerli kaynaklar ile geliştirilmesi düşünülmüştür.

Kayseri'de ilk olarak 1926 yılında Alman Junkers firması ile TOMTAŞ ortaklığı şeklinde başlayan uçak üretimi, 1931 yılında Milli Müdafaa Vekâleti'ne bağlı olarak lisans anlaşması şeklinde devam etmiştir. Fabrikada dört farklı ülke lisansı ile çok sayıda uçak üretimi yapılarak havacılık sektörüne ve hava kuvvetlerine katkı sağlanmıştır. Farklı ülke lisansları ile üretim yapılması, yabancı uyruklu teknik personelin tecrübelerinden ülkenin havacılık personelinin yetişmesine ve uçak üretim sanayiinin gelişmesine yardımcı olunmuştur.

Kayseri Tayyare Fabrikası'nda ilk defa üretilen avcı ve bombardıman özelliğine sahip Junkers A-20'ler çift kanatlı, 185 hp gücünde ve saatteki hızları 170 km iken, son üretilen aynı özelliğe sahip P.Z.L. P-24 A'lar tek kanatlı 930 hp gücünde ve saatteki hızları 410 km'ye ulaşmıştır. Yine ilk üretilen eğitim uçağı özelliğine sahip Fledgling 2-C1'ler çift kanatlı, 220 hp gücünde ve saatteki hızı 175 km iken son üretilen Miles Magister 14A'lar tek kanatlı, iki kişilik, 130 hp gücünde ve saatteki hızları 212 km'dir. Görüleceği üzere 1926'dan itibaren Kayseri'de üretilen ilk Türk uçakları, kapasite, kullanım ve performans bakımından daha basit modellerde iken, 1942'ye gelindiğinde en son üretilen uçaklar, daha modern, teknolojik bakımdan daha fonksiyonel, motor kapasitesi açısından daha güçlü, döneminin uçakları ile hemen hemen yarışabilecek durumda olan uçaklar haline gelmiştir.

Kayseri Tayyare Fabrikası'nın TOMTAŞ ile başlayan uçak üretim tecrübesi, II. Dünya Savaşı'nda Türk Hava Kuvvetleri'nin ihtiyacı olan faal uçakların her an hazır bulunmasında büyük rol oynamış, halen Türkiye'nin 2. Hava İkmal ve Bakım Merkezi olarak görev yapmaya devam etmektedir.

**ÖZET**

İktisat biliminde son dönemde meydana gelen en önemli gelişmelerden biri, mutluluk kavramının farklı bakış açılarıyla tartışılması sonucu mutluluk ekonomisinin ortaya çıkmasıdır. Mutluluk ekonomisi, iktisat başta olmak üzere sosyoloji, psikoloji, davranış bilimleri ve siyaset bilimi gibi birçok disiplinden yararlanmaktadır. Özellikle 2000'li yıllarla birlikte mutluluk üzerine birçok çalışma kaleme alınmıştır. Çalışmalarda, mutluluk, yaşam doyumu ve öznel iyi oluş (ÖİÖ) kavramlarının birbirinin yerine kullanıldığı görülmektedir. Ancak ÖİÖ kavramının tanımlanmasında mutluluk ve yaşam doyumu terimlerinin çok daha sık kullanıldığı görülmektedir. Bu çalışmada, mutluluk ekonomisine katkı sağlamak düşüncesiyle Türkiye'de bireylerin ÖİÖ düzeylerine etki eden faktörlerin tespit edilmesi amaçlanmıştır. Bu amaç doğrultusunda Dünya Değerler Araştırması'nın (WVS) 2415 denekten elde ettiği anket verileri, genelleştirilmiş sıralı logit modeli kapsamında değerlendirilmiştir. Çalışmada, ÖİÖ düzeyine etki eden faktörlerin test edilmesi için mutluluk ve yaşam doyumu düzeyleri bağımlı değişken olarak alınmıştır. İki modelin kullanıldığı çalışmada, finansal memnuniyet ve sağlık değişkenlerinin ÖİÖ'un çok önemli belirleyicileri olduğu tespit edilmiştir. Özellikle gelirin ÖİÖ üzerinde anlamlı bir etkisi bulunmazken finansal memnuniyetin etkisinin çok yüksek olması, bireylerin tatmin düzeylerinin gelirden ziyade algılanan gelire bağlı olduğunu göstermektedir. Ayrıca, sosyal sınıf, güvenlik, iş endişesi, çocukların eğitimi ile ilgili endişe, özgürlük, yaratıcıya önem verme düzeyi, eğitim, medeni durum ve cinsiyet değişkenlerinin ÖİÖ üzerinde çok anlamlı etkileri olduğu bulunmuştur. Diğer yandan sosyal sınıf bağlamında kendini en alt sınıfta gören bireylerin en yüksek mutluluk düzeyine sahip olduğu; kendini en üst sınıfta görenlerin ise en yüksek yaşam doyumuna sahip olduğu gözlemlenmiştir.

**Anahtar Kelimeler:** Mutluluk Ekonomisi, Öznel İyi Oluş, Genelleştirilmiş Sıralı Logit Modeli, Finansal Memnuniyet.

**ABSTRACT**

One of the most important recent developments in economics is the emergence of happiness economics as a result of discussing the concept of happiness from different perspectives. Happiness economics benefits from many disciplines, especially economics, sociology, psychology, behavioral sciences and political science. Especially in the 2000s, many studies on happiness have been written. It is seen that the concepts of happiness, life satisfaction, and subjective well-being (SWB) are used interchangeably in studies. However, it is observed that the terms happiness and life satisfaction are used much more frequently in defining the concept of SWB. In this study, it was aimed to determine the factors affecting individuals' SWB levels in Turkey with the aim of contributing to the economy of happiness. For this purpose, the World Values Survey (WVS) survey data obtained from 2415 respondents are evaluated within the scope of the generalized ordered logit model. In the study, happiness and life satisfaction levels were taken as dependent variables in order to test the factors affecting the level of SWB. In the study using two models, financial satisfaction and health variables were found to be very important determinants of SWB. In particular, while income does not have a significant effect on SWB, the effect of financial satisfaction is very high, indicating that individuals' satisfaction levels depend on perceived income rather than income. In addition, social class, security, job worry, worry about children's education, freedom, level of importance of God, education, marital status, and gender variables were found to have very significant effects on SWB. On the other hand, in the context of social class, it was observed that individuals who considered themselves in the lowest class had the highest level of

happiness, while those who considered themselves in the highest class had the highest level of life satisfaction.

**Keywords:** Happiness Economics, Subjective Well-Being, Generalized Ordered Logit Model, Financial Satisfaction.

### GİRİŞ

Mutluluk, geçmişten günümüze sosyologların, psikologların, siyasetçilerin ve iktisatçıların ilgi odağı olmuştur. Ancak iktisatçılar, uzun dönem mutluluğu sadece salt iktisadi doktrinlerle açıklamaya yoluna gitmiş ve özellikle psikolojik faktörleri göz ardı etmişlerdir (Stanca, 2010). Son dönemde ise iktisatta mutluluk ve mutluluğu etkileyen faktörler, farklı bakış açılarıyla tartışılmaya başlanmıştır (Haucap ve Heimeshoff, 2014). Özellikle 1974 yılında Easterlin tarafından yayınlanan “*Does the Economic Growth Improve the Human Lot?*” adlı çalışma, iktisat temelinde mutluluğun daha sağlam esaslarla tartışılması yolunu açmıştır (Easterlin, 1974). Davranışsal İktisat altında bir disiplin olarak yerini alan mutluluk ekonomisi, günümüzde birçok çalışmaya konu olmuştur (bkz. Dolan, Peasgood, ve White, 2008; Bjørnskov, Dreher, ve Fischer, 2010; Stutzer ve Frey, 2012; Yu ve Blader, 2020; Ng, 2022).

Mutluluk ekonomisi, iktisat başta olmak üzere sosyoloji, psikoloji, davranış bilimleri, siyaset bilimi gibi birçok disiplinden yararlanmaktadır. Yani mutluk ekonomisinde, ekonomik faktörler yanı sıra sosyo-demografik özellikler, kişisel özellikler, sağlık, güvenlik, adalet, hürriyet, din ve beklentiler gibi faktörlerin mutluluk düzeyi üzerindeki etkisi ele alınmaktadır (Dolan vd., 2008; Barry, 2000; Veenhoven, 2005; Stanca, 2010). Diğer yandan mutluluk ekonomisiyle ilgili çalışmalarda, mutluluk kavramı yerine farklı farklı kavramların kullanıldığı görülmektedir. Özellikle bu çalışmalarda, mutluluk ve yaşam doyumu kavramlarının ÖİÖ kavramının tanımlanmasında çok yaygın kullanıldığına rastlanılmaktadır (bkz. Frey ve Stutzer, 2000; Flouri, 2004; Graham, Eggers, ve Sukhtankar, 2004; Diener ve Chan, 2011; Hong vd., 2022). Bu bağlamda bu çalışmada, ÖİÖ kavramı ana kavram olarak kullanılmıştır.

Mutluluk ekonomisinin önem kazandığı bu son dönemde, dünyanın birçok bölgesinde bireylerin ÖİÖ düzeyleri üzerine çalışmalar kaleme alınmaktadır. Bu çalışmada da Türkiye’de bireylerin ÖİÖ düzeylerine etki eden faktörlerin tespit edilmesi amaçlanmıştır. Bu amaç doğrultusunda Dünya Değerler Araştırması’nın (WVS) 7. dalga araştırması kapsamında 2018 yılında Türkiye’de uygulanan anket verileri, çalışmada kullanılmıştır (Worldvaluessurvey.org, 2019). Diğer yandan literatürde sıralı lojistik regresyon modeli çok kullanılmasına karşı bu çalışmada, paralellik varsayımı karşılanmadığından dolayı genelleştirilmiş sıralı logit modeli (GSLM) kullanılmıştır. Özellikle şuna kadar literatürde bu kapsamda ve bu yöntem çerçevesinde bir çalışmanın kaleme alınmamış olması, bu çalışmanın önemini arttırmaktadır. Ayrıca çalışmanın ikinci bölümde, ÖİÖ ile alakalı literatür özetlenmiştir. Üçüncü bölümde çalışmanın metodolojisi, dördüncü bölümde bulgular ve beşinci bölümde ise sonuç ve önerilere yer verilmiştir.

### LİTERATÜR

Mutluluk ekonomisi üzerine, özellikle 2000 yılından bu yana yapılan çalışmalarda çok büyük bir artış olduğu görülmektedir (Lim, Shaw, Liao, ve Duan, 2020). Yapılan çalışmalarda, ÖİÖ’un belirleyicilerine dikkat çekilmiştir. Bu çalışmalarda, gelir, kişisel özellikler (yaş, cinsiyet, medeni durumu vs.), eğitim, sağlık, sosyal aktiviteler, boş zaman, psikolojik bileşenler (stres deneyimi ve dini inanışlar gibi) ve sosyoekonomik faktörler (ekonomik büyüme, işsizlik ve istihdam oranı) üzerinde durulmuştur (bkz. Easterlin, 1974; Diener, Suh, Lucas, ve Smith, 1999; Flouri, 2004; Ferrer-i-Carbonell, 2005; Newman, Tay, ve Diener, 2014; Dong ve Kübler, 2021; Li ve Lyu, 2022; Yang, Lu, ve Li, 2023).

Yapılan çalışmalarda, gelirin ÖİÖ’un çok önemli bir belirleyicisi olduğu görülmüştür (bkz. Easterlin, 1974; Luttmer, 2005; Dorn, Fischer, Kirchgässner, ve Sousa-Poza, 2007; Beja, 2014). Easterlin(1974) yaptığı çalışmada, bireylerin gelir düzeyleri ile ÖİÖ düzeyleri arasında belli bir gelir düzeyine kadar pozitif bir ilişkinin olduğunu, ancak belli bir noktadan sonra gelirdeki artışın ÖİÖ’u etkilemediğini savunmuştur. Diğer yandan yapılan diğer çalışmalarda ise gelir düzeyi yüksek bireylerin yüksek ÖİÖ düzeyine sahip olduğu tespit edilmiştir (Luttmer, 2005; Ferrer-i-Carbonell, 2005).

Sosyoekonomik göstergeler ile ÖİO arasında önemli ilişkilerin olduğu ve özellikle ülkeden ülkeye önemli farklılıklar gösterdiği yapılan çalışmalarda kanıtlanmıştır (bkz. Easterlin ve Sawangfa, 2010; Stevenson ve Wolfers, 2008; Öztürk ve Suluk, 2020). Hagerty (2000), gelir adaletsizliği ile ÖİO arasında negatif ilişki olduğunu, Haller ve Hadler (2006) ise gelir adaletsizliğinin yaşam memnuniyetini arttırdığını gözlemiştir. Hagerty (2000), gelir adaletsizliğinin ABD’de ÖİO üzerinde olumsuz, Senik (2004) ise Rusya’da olumlu etkiye sahip olduğunu tespit etmiştir. Di Tella, MacCulloch ve Oswald (2001) çalışmalarında, işsizlik oranlarının ÖİO’u azalttığını görmüşlerdir. Wolfers (2003), enflasyonun ÖİO’u azalttığını gözlemiştir. Ayrıca işsizlik düzeyinde meydana gelen bir birimlik artışın enflasyonda meydana gelen bir birimlik artışa göre ÖİO üzerindeki etkisinin daha yüksek olduğunu vurgulamıştır.

Alesina vd. (2004) çalışmalarında, erkeklere nispeten kadınların daha yüksek ÖİO düzeyine sahip olduğunu gözlemlerken Frey ve Stutzer (2000) ise erkeklerin kadınlara göre daha yüksek ÖİO düzeyine sahip olduğunu gözlemiştir. Ancak Louis ve Zhao (2002) ise çalışmalarında cinsiyet bağlamında kadın ve erkek bireyler arasında hiçbir önemli bir farklılığı olmadığı sonucuna varmıştır. Öte yandan yapılan çalışmalarda yaşın ÖİO üzerindeki etkisinin farklı yaş kategorilerine göre değişiklik gösterdiği gözlemlenmiştir. Genç ve ileri yaş düzeylerine sahip bireylerin ÖİO düzeylerinin 32-50 yaş aralığındaki bireylere göre daha iyi seviyede olduğu tespit edilmiştir (Dolan vd., 2008).

Yapılan çalışmalarda medeni durumun ÖİO’un üzerinde önemli bir belirleyici olduğu görülmüştür (Linz ve Semykina, 2012; Andersson, 2008). Ancak bazı çalışmalarda evlilik ve ÖİO arasında anlamlı bir ilişki bulunamazken sadece bazı ülkelerde evliliğin etkisinin anlamlı olduğu görülmüştür (Linz ve Semykina, 2012; Mahama ve Maharjan, 2018). Diğer yandan eğitimin de ÖİO üzerinde önemli etkiye sahip olduğu görülmüştür (Blanchflower ve Oswald, 2004). Hatta eğitim düzeyinin düşük gelirli ülkelerde yaşayan bireyler üzerinde daha yüksek bir etkiye sahip olduğu gözlemlenmiştir (Ferrer-i-Carbonell, 2005).

Fiziksel ve zihinsel sağlığın ÖİO üzerinde önemli bir etkiye sahip olduğu birçok çalışmada kanıtlanmıştır (Andersson, 2008; Dolan vd., 2008; Bowling, Eschleman, ve Wang, 2010). Helliwell (2006), inancı ne olursa olsun dindar insanların dindar olmayan insanlardan daha mutlu olduğunu gözlemiştir. Ayrıca Clark ve Felkles (2005), dini faaliyetlere düzenli katılan bireylerin daha mutlu olduğunu tespit etmiştir.

Bireylerin ÖİO düzeyleri ile ülkelerdeki demokrasi düzeyi arasında önemli bir ilişkinin olduğu birçok çalışmada ortaya konulmuştur (Tsai, 2009; Bjørnskov, 2010; Berggren and Bjørnskov, 2020). Frey ve Stutzer (2000), katılımcı demokrasinin yoğun olduğu ülkelerde bireylerin yaşam memnuniyetlerinin nispeten daha yüksek olduğu gözlemlenmiştir. Diğer yandan bireylerde sosyal güven arttıkça mutluluk düzeyinin daha arttığı hatta intihar olaylarının olma olasılığının daha da azaldığı birçok çalışmada gözlemlenmiştir (Helliwell, 2006; Helliwell and Putnam, 2004; Dolan vd., 2008). Bireylerin komşularla ilgili algılarının yaşam doyumunu önemli düzeyde etkilediği yönünde önemli kanıtlar elde edilmiştir (Dolan vd., 2008). Diğer yandan devlet kurumlarına ve hükümete duyulan güvenin daha yüksek yaşam doyumuna sebep olduğu tespit edilmiştir (Helliwell 2003; Hudson 2006). Ayrıca bireylerin finansal koşullar yönündeki algılarının yaşam doyumunu üzerinde çok önemli etkilere sahip olduğu görülmüştür (Brown, Taylor, ve Wheatley Price, 2005).

## 1. METODOLOJİ

### 3.1. Veri

Bu çalışmada, WVS verileri kullanılmıştır<sup>1</sup>. WVS tarafından yürütülen 7. dalga çalışması kapsamında Türkiye’de 2415 denekten toplanan veriler, bu çalışma kapsamında değerlendirilmiştir. Çalışma kapsamında kullanılan değişkenler ve değişkenlere ilişkin özet istatistik değerlerine Tablo 1’de yer verilmiştir. WVS’nin 7. dalga araştırmasında, yaşam doyumunu, finansal memnuniyet, hürriyet ve yaratıcıya önem verme düzeyi değişkenleri 10’lu likert ölçek bağlamında değerlendirilmesine karşın bu çalışmada, bu değişkenler 5’li likert ölçeğe dönüştürülerek analizlere dâhil edilmiştir.

<sup>1</sup> WVS verileri, uluslararası sosyo-kültürel değerleri ve siyasi değişimleri araştırmayı amaçlayan yüze yakın ülkeyi kapsamaktadır. Örnekler, ulusal düzeyleri temsil etmektedir. Araştırmalarda, sosyo-demografik özellikler, öznel refah, toplumsal değerler, din, politika ve diğer sosyo-kültürel değerleri ölçmek için ortak anket bir kullanılmaktadır (Worldvaluessurvey.org, 2019).

**Tablo 1.** Modellerde kullanılan değişkenlerin tanımı ve özet istatistikleri

Değişken	Ölçüm İndeksi	Kategori sırası	Ort.	S.S.	Gözlem sayısı
Mutluluk	1-4	Azalan	1,94	0,65	2415
Yaşam Doyumu	1-5	Azalan	3,49	0,96	2415
Finansal memnuniyet	1-5	Artan	3,20	0,96	2415
Sağlık	1-5	Artan	2,85	0,70	2415
Sosyal sınıf	1-5	Artan	2,94	0,62	2415
Güvenlik	1-4	Artan	2,84	0,62	2415
İş endişesi	1-4	Artan	2,78	1,05	2415
Çocuk eğitim endişesi	1-4	Artan	2,82	1,07	2415
Hürriyet	1-5	Artan	3,56	1,04	2415
Yaratıcıya önem verme düzeyi	1-5	Artan	4,19	1,03	2415
Eğitim	1-5	Artan	2,32	1,92	2415
Medeni durum	1-6	-	2,77	2,33	2415

### 3.2. Metodoloji

ÖİÖ üzerine yapılan çalışmalarda ağırlıklı olarak sıralı lojistik regresyon kullanılmıştır (bkz. Alesina vd., 2004; Besim Akin vd., 2012; Lim vd., 2020; Yang vd., 2023). Ancak sıralı lojistik regresyon kullanılması için bağımlı değişkenin kategorileri ile bağımsız değişkenler arasında paralellik olup olmadığına bakılmalıdır. Eğer paralellik varsayımı ihlal edilirse genelleştirilmiş sıralı logit modeline başvurulur (Williams, 2006; Mahama ve Maharjan, 2018). Bu bağlamda yapılan sıralı lojistik regresyon analizinde, paralellik varsayımının ihlal edildiği gözlemlenmiş ve genelleştirilmiş sıralı logit modelinin kullanılmasına karar verilmiştir.

#### Genelleştirilmiş Sıralı Logit Modeli

Bu model, bağımlı değişkenin sıralı yapısını dikkate alan ve sıralı lojistik modele alternatif kullanılan bir modeldir. Aynı zamanda sıralı logit modelde yer alan paralellik varsayımını gevşetmektedir (Timur ve Akay Çağlayan, 2017). Genelleştirilmiş sıralı logit modeli, Williams (2006) tarafından şu şekilde tanımlanmıştır:

$$P_{ij} = \Pr(Y_i > j) = g(X_i \beta_j) = \frac{\exp(\alpha_j + X_i \beta_j)}{1 + \exp(\alpha_j + X_i \beta_j)}, j = 1, 2, \dots, M - 1 \quad (1)$$

Burada  $Y_i$ , bağımlı değişken ve  $X_i$  ise bağımsız değişkenler vektörünü temsil eder. Diğer yandan  $\alpha_j$  kesişim,  $\beta_j$  tahmin edilecek parametreyi temsil etmekte ve  $M$  ise bağımlı değişkenin maksimum değerini ifade eder. Bu çalışmada bağımlı değişkeni ölçmek için 5'li ve 4'lü likert ölçeği kullanıldığından  $M$  değeri 5 veya 4'e eşit olmaktadır. Yaşam memnuniyeti ve mutluluk bağımlı değişkenlerini ölçmek için likert ölçeği kullanılmıştır. 1 numaralı denkleme göre bağımlı değişkenin ( $Y_i$ ) her bir kesme noktasının olasılığı şu şekilde belirtilebilir:

$$\Pr(Y_i = 1) = 1 - g(X_i \beta_1) \quad (2)$$

$$\Pr(Y_i = j) = g(X_i \beta_{j-1}) - g(X_i \beta_j), j = 2, \dots, M - 1 \quad (3)$$

$$\Pr(Y_i = M) = g(X_i \beta_{M-1}) \quad (4)$$

Eğer  $M=2$  olursa genelleştirilmiş sıralı logit modeli, standart ikili logit modeli olur. Eğer  $M>2$  olursa binary logit model olarak yorumlanır.

#### BULUGULAR

Araştırma kapsamında ankete katılan 2415 katılımcının cinsiyet dağılımına bakıldığında erkek ve bayan dağılımının neredeyse aynı olduğu gözlemlenmiştir. Medeni durum bakımından bakıldığında katılımcıların %62,1'inin evli, %32,4'ünün bekâr ve geri kalanlarının ise dul ve ayrı yaşadıkları görülmüştür. Eğitim düzeyi bakımından bakıldığında %11,5'inin hiç okula gitmediği, %36,6'sının ilkökul, %10,6'sının ortaokul, %24,2'sinin lise ve 17,1'inin ise üniversite mezunu olduğu gözlemlenmiştir. Ayrıca katılımcıların ortalama 38,8 yaşında oldukları görülmüştür.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

**Tablo 2** Paralel Doğrular Varsayımı için Olabilirlik Oran Testi Sonuçları

<i>Bağımlı Değişken</i>	<i>Test</i>	<i>-2 Log Likelihood</i>	<i>X<sup>2</sup></i>	<i>df</i>	<i>p&gt;Chi2</i>
Yaşam Doyumu	Null Hypothesis	4890,515	569,836	96	0,000
	General	4320,679			
Mutluluk	Null Hypothesis	2890,013	83,538	44	0,000
	General	2806,475			

Çalışma kapsamında ilk olarak bağımlı değişkenlerin kategorileri ile bağımsız değişkenler arasında paralellik olup olmadığının test edilmesi için olabilirlik oran testi uygulanmıştır. Tablo 2’de her iki modelle ilişkin olabilirlik oran testi sonuçları verilmiştir. Sonuçlara bakıldığında her iki model için paralellik varsayımının ( $p < 0,00$ ) ihlal edildiği görülmektedir. Paralel doğrular varsayımının bozulması durumunda sıralı lojistik model ile tahmin edilen parametreler gerçeği yansıtmayacağından dolayı genelleştirilmiş sıralı logit modeli kullanılmıştır.

Çalışmanın birinci modelinde, mutluluk bağımlı değişken; finansal memnuniyet, sağlık, sosyal sınıf, güvenlik, iş endişesi ve eğitim düzeyi ise bağımsız değişken olarak analize dâhil edilmiştir. Diğer yandan bağımlı değişken azalan, bağımsız değişkenler ise artan kategorik sıralı olarak modelde kullanılmıştır.

Tablo 3’te birinci model için genelleştirilmiş sıralı logit modeli sonuçları verilmiştir. Birinci modelin sonuçlarına göre en yüksek finansal memnuniyet değeri referans alındığında, en düşük finansal memnuniyete sahip olan bireylerin hiç mutlu olmama olasılıklarının 4,156 kat daha fazla olduğu görülmüştür. Ayrıca finansal memnuniyet kategorilerine bir bütün bakıldığında, bireylerin finansal memnuniyet düzeyleri arttıkça hiç mutlu olmama olasılıklarının doğru orantılı olarak azaldığı gözlemlenmiştir. Yani birlerin finansal memnuniyet düzeylerinin önemli düzeyde mutluluk üzerinde pozitif bir etkiye sahip olduğu tespit edilmiştir.

**Tablo 3.** Birinci Model Kapsamında Elde Edilen Genelleştirilmiş Sıralı Logit Modeli Sonuçları

<b>Bağımsız Değişkenler</b>		<b>Bağımlı Değişken: Mutluluk (4-1) Çok mutluyum (4), Biraz mutluyum (3) Pek mutlu değilim (2), Hiç mutlu değilim (1) Referans Değer: Hiç mutlu değilim (1)</b>

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Bireylerin sağlık durumları göz önüne alındığında, sağlık durumu çok iyi olan bireylere kıyasla sağlık durumu çok kötü olan bireylerin hiç mutlu olmama olasılıklarının 446,386 kat fazla olduğu, ayrıca sağlık durumu kötü olanların da hiç mutlu olmama olasılıklarının 54,285 kat fazla olduğu gözlemlenmiştir. Diğer yandan sağlık durumu iyi olanların çok iyi olanlara kıyasla hiç mutlu olmama olasılıklarının bile 6,308 kat daha fazla olduğu görülmüştür. Bu sonuçlar, Türkiye toplumunda sağlığın mutluluk üzerinde çok yüksek derecede anlamlı ve pozitif etkiye sahip olduğunu göstermektedir.

Bireylerin kendilerini kabul gördükleri sosyal sınıf düzeyleri göz önüne alındığında, kendini en üst sınıfta tanımlayanlara kıyasla kendini en alt sınıfta tanımlayanların hiç mutlu olmama olasılıklarının 3,316 kat fazla olduğu görülmüştür. Kendini işçi sınıfında gören bireylerin kendini en üst sınıfta tanımlayanlara kıyasla hiç mutlu olmama olasılıklarının 1,798 kat fazla olduğu; kendini orta sınıfın altı ve üstü olarak tanımlayanların kendini en üst sınıfta tanımlayanlara kıyasla sırsıyla hiç mutlu olmama olasılıklarının 1,874 ve 1,334 kat daha fazla olduğu gözlemlenmiştir. Sosyal sınıfla ilgili sonuçlara bir bütün bakıldığında, Türkiye toplumunda sosyal sınıfın mutluluk üzerinde önemli düzeyde etkili olduğu söylenebilir.

Güvenlik düzeyi sonuçlarına bakıldığında, kendini çok güvenli hissedenlere kıyasla kendini hiç güvenli hissetmeyenlerin hiç mutlu olmama olasılıklarının 1,772 kat daha fazla olduğu; kendini pek güvenli hissetmeyenlerin de hiç mutlu olmama olasılıklarının 2,099 kat daha fazla görülmüştür. Bu sonuçlar, Türkiye’de bireylerin kendini güvende hissetme düzeylerinin önemli düzeyde mutluluk düzeyi üzerinde etkili olduğunu göstermektedir.

Bireylerin iş endişesi düzeyleri göz önüne alındığında, hiç iş endişesi olmayanlara kıyasla çok endişeli olanların hiç mutlu olmama olasılıklarının 2,227 kat fazla olduğu ve bireylerin iş endişe düzeyleri azaldıkça hiç mutlu olmama olasılıklarının giderek azaldığı görülmüştür. Sonuç olarak, Türkiye toplumunda iş endişesi düzeyi azaldıkça mutluluk düzeylerinin arttığı söylenebilir.

Son olarak eğitim düzeyine bakıldığında, üniversite mezunlarına kıyasla hiç okula gitmemiş bireylerin hiç mutlu olmama olasılıklarının 0,468 kat daha az olduğu; ilkökul mezunlarının hiç mutlu olmama olasılıklarının ise 0,745 kat daha az olduğu tespit edilmiştir. Bu sonuçlar, Türkiye’de eğitim düzeyi düşük olan bireylerin mutluluk düzeyinin daha yüksek olduğunu göstermektedir.

Çalışmanın ikinci modelinde, yaşam doyumu bağımlı; finansal memnuniyet, sağlık, sosyal sınıf, güvenlik, eğitim endişesi, hürriyet, yaratıcıya önem verme düzeyi ve medeni durum ise bağımsız değişken olarak değerlendirilmiştir.

Tablo 4’te ikinci model kapsamında elde edilen genelleştirilmiş sıralı logit modeli sonuçları verilmiştir. Bu sonuçlar bağlamında bakıldığında, en yüksek finansal memnuniyet düzeyine sahip olan bireylere kıyasla en düşük finansal memnuniyetine sahip olanların en düşük yaşam doyumu düzeyine sahip olma olasılıklarının 52,377 kat fazla olduğu gözlemlenmiştir. Ayrıca bireylerin finansal memnuniyet düzeyi arttıkça en düşük yaşam doyumu düzeyine sahip olma olasılıklarının çok sert azaldığı görülmüştür. Bu durum da Türkiye toplumunda, finansal memnuniyet düzeyinin yaşam doyumu üzerinde yüksek düzeyde anlamlı ve pozitif bir etkiye sahip olduğunu gösterdiği ifade edilebilir. Diğer yandan bireylerin sağlık durumu göz önüne alındığında, Türkiye toplumunda sağlığın yaşam doyumu üzerinde anlamlı ve pozitif etkiye sahip olduğunu görülmektedir.

Çalışmada, kendini en üst sınıf olarak tanımlayanlara kıyasla kendini en alt sınıfta tanımlayanların en düşük yaşam doyumu düzeyine sahip olma olasılıklarının 2,098 kat fazla olduğu görülmüştür. Kendini pek güvenli hissetmeyenlerin kendini çok güvenli hissedenlere kıyasla en düşük yaşam doyumu düzeyine sahip olma olasılıklarının 1,809 kat fazla olduğu gözlemlenmiştir. Çocuklarının eğitimlerinden hiç endişe duymayanlara kıyasla çok endişe duyanların en düşük yaşam doyumu düzeyine sahip olma olasılıklarının 1,767 kat fazla olduğu tespit edilmiştir. Ayrıca bireylerin çocuklarının eğitiminden endişe duyma düzeyleri azaldıkça en düşük yaşam doyumu düzeyine sahip olma olasılıklarının giderek azaldığı görülmüştür.

	Dul	-0,085	0,257	0,919	0,743

Türkiye toplumunda bireylerin hürriyet ve yaratıcıya önem verme düzeyleri arttıkça en düşük yaşam doyumu düzeyine sahip olma olasılıklarının giderek azaldığı gözlemlenmiştir. Bu sonuç, Türkiye’de bireylerin yaşam doyumu düzeyleri üzerinde hürriyet ve yaratıcıya önem verme düzeyinin önemli bir belirleyici olduğunu göstermektedir.

Evli olan bireylerin bekârlara kıyasla en düşük yaşam doyumu düzeyine sahip olma olasılıklarının 0,799 kat daha az olduğu görülmüştür. Yani Türkiye’de kadınların erkeklere nispeten daha yüksek yaşam doyumuna sahip oldukları söylenebilir.

## SONUÇ VE DEĞERLENDİRME

1970’li yıllardan bu yana iktisadın psikoloji başta olmak üzere diğer ilgili bilimlerle yaklaşması sonucu, mutlulukla ilgili çalışmalar mutluluk ekonomisi adı altında kendine bir yer bulmuştur. Dünyanın dört bir tarafında yapılan saha çalışmalarında elde edilen anket verilerinin ve ilgili makroekonomik verilerin kullanıldığı çalışmalarda, ekonomik faktörler yanı sıra sosyo-demografik özellikler, kişisel özellikler, sağlık, güvenlik, adalet, hürriyet, din ve beklentiler gibi faktörlerin ÖİO üzerinde önemli belirleyiciler olduğu orta konulmuştur. Türkiye genelini kapsayan bu çalışmada ise hem literatürdeki sonuçlara paralel hem de farklı sonuçlar elde edilmiştir.

2415 anket verisinin kullanıldığı bu çalışmada, genelleştirilmiş sıralı logit modeli kullanılmıştır. Çalışmada, Türkiye’de bireylerin gelir düzeyi ile mutluluk düzeyleri arasında bir ilişki bulunmazken bireylerin finansal memnuniyet düzeylerinin mutluluk düzeyi üzerinde çok önemli düzeyde anlamlı ve pozitif bir etkiye sahip olduğu tespit edilmiştir. Ayrıca bireylerin finansal memnuniyet düzeylerinin yaşam doyumu üzerinde de çok önemli düzeyde anlamlı ve pozitif bir etkiye sahip olduğu gözlemlenmiştir. Bu sonuçlar, Betsey ve Justin (2008), Deaton (2008) ve Diener vd. (2013) ifade ettiği gibi gelir ile ÖİÖ (mutluluk ve yaşam doyumu) arasında pozitif bir ilişki bulunmamıştır. Ancak bireylerin algıladıkları gelir düzeyleri yani finansal memnuniyet düzeyi ile ÖİÖ arasında çok önemli düzeyde anlamlı ve pozitif bir ilişki bulunmuştur.

Türkiye’de bireylerin sağlık düzeyi ile ÖİÖ düzeyleri arasında çok önemli düzeyde pozitif ve anlamlı bir ilişki gözlemlenmiştir. Bu sonuç, Dolan vd. (2008) ve Yang vd. (2023) yaptığı çalışmayı destekler niteliktedir. Ayrıca yaratıcıya önem verme düzeyi ile ÖİÖ arasında önemli düzeyde pozitif ve anlamlı bir ilişki görülmüştür. Bu ilişki, Helliwell (2006)’in yaratıcıya inancı yüksek olan bireylerin yüksek yaşam doyumlarına sahip olduğu görüşünü destekler niteliktedir. Diğer yandan Dolan vd. (2008), Helliwell ve Putnam (2004) ve Bjørnskov vd. (2010)’nin elde ettiği sonuçlara paralel olarak Türkiye’de sosyal sınıf düzeyinin ÖİÖ düzeyi üzerinde çok önemli bir belirleyici olduğu görülmüştür.

Çalışmada güvenlik ve hürriyet düzeyinin ÖİÖ üzerinde önemli belirleyici olduğu ve bu sonucun, Paleologou (2022), Berggren and Bjørnskov (2020), Helliwell (2006) ve Ott’un (2010) ifade ettiği gibi insanların kendini hür hissedip özgür seçimler yapmasının mutluluğu arttırdığı görüşü, bu çalışmada kanıtlanmıştır.

Çalışmada, bireylerin eğitim düzeyleri ile medeni durumlarının ÖİÖ üzerinde önemli düzeyde etkili olduğu gözlemlenmiştir. Bu sonuçlar bağlamında bakıldığında, Blanchflower and Oswald (2004b) ifade ettiği gibi eğitim düzeyi ile ÖİÖ arasında pozitif bir ilişki olduğu söylenebilir. Ayrıca Gazioglu and Tansel (2006) çalışmalarının aksine evli olan bireylerin bekâr olanlara kıyasla daha yüksek ÖİÖ düzeyine sahip olduğu görülmüştür.

Çalışmadaki sonuçlara bir bütün olarak bakıldığında, Türkiye’de bireylerin ÖİÖ düzeyini etkileyen birçok faktörün olduğu görülmektedir. Özellikle bu faktörler içerisinde, finansal memnuniyet ve sağlık düzeyi payının çok yüksek olduğu söylenebilir. Türkiye’de ilk defa Tablo 1’de yer verilen değişkenlerin literatürde yaygın olarak kullanılmayan genelleştirilmiş sıralı logit modeli çerçevesinde değerlendirilmesi ve çok önemli sonuçların elde edilmesi, mutluluk ekonomisi alanına önemli katkılar sağladığı düşünülmektedir. Ayrıca bu çalışma kapsamında kullanılan modellerin farklı ülkelerden elde edilen veriler bağlamında değerlendirilmesi önerilmektedir.

#### ABSTRACT

The term Internet of Behaviors (IoB) as a growing trend over the world, is an extension of the Internet of Things (IoT) and Artificial Intelligence (AI). This new paradigm aims to revolutionize the way we interact with the world around us by using valuable data from connected devices to monitor, analyze, and influence human behavior. IoB paradigm attempts to understand the data collected from users' online activity from a behavioral psychology perspective. The concept is based on the idea that every digital interaction of a person with their devices -such as smartphones, smartwatches, other wearables - generates data that can be analyzed in order to create a behavioral profile. Afterwards, this behavioral data can be used to predict and influence the future behavior of a person. It seeks to address how to understand the data and apply this understanding to create valuable services or market new products, all from a human psychology perspective. By incorporating AI into IoB models, marketers can better predict consumer behavior and tailor their marketing efforts accordingly. AI algorithms can analyze vast amounts of data quickly, identifying patterns and trends that humans may not have spotted. This study aims to understand the power of IoB paradigm in digital marketing and how different technologies of IoB can impact the recent tools of digital marketing. We will explore the importance of IoB paradigm in relation to the four leading digital marketing tools: chatbots, interactive content tools, programmatic advertising, and voice search optimization. As the research design on IoB and its implementations in literature is still developing, this study will provide a valuable insights for development of IoB based digital marketing models and also for the stakeholders including businesses, and policymakers.

**Keywords:** Internet of Behaviors, IoB, Digital Marketing, Chatbots, Interactive Content Tools, Programmatic Advertising, Voice Search Optimization, Implications

#### ÖZET

Davranışların İnterneti (Internet of Behaviors, IoB) terimi, dünya çapında büyüyen bir trend olarak, Nesnelerin İnterneti (Internet of Things, IoT) ve Yapay Zekanın (Artificial Intelligence, AI) bir uzantısı olarak tanımlanır. Bu yeni paradigma, insan davranışını izlemek, analiz etmek ve etkilemek için bağlı cihazlardan gelen değerli verileri kullanarak çevremizdeki dünyayla etkileşim biçimimizde devrim yaratmayı amaçlamaktadır. IoB paradigması, kullanıcıların çevrimiçi aktivitelerinden toplanan verilerini davranışsal psikoloji perspektifinden anlamaya çalışır. Konsept, bir kişinin akıllı telefonlar, akıllı saatler ve diğer giyilebilir cihazlar gibi cihazlarıyla her dijital etkileşiminin, davranışsal bir profil oluşturmak için analiz edilebilecek veriler ürettiği fikrine dayanmaktadır. Daha sonra, bu davranışsal veriler, bir kişinin gelecekteki davranışını tahmin etmek ve etkilemek için kullanılabilir. Verilerin nasıl anlaşılacağını ve bu anlayışın değerli hizmetler oluşturmak veya yeni ürünler pazarlamak için nasıl uygulanacağını insan psikolojisi perspektifinden ele almayı amaçlamaktadır. Dijital pazarlama uzmanları, yapay zekayı IoB modellerine dahil ederek tüketici davranışını daha iyi tahmin edebilir ve pazarlama çabalarını buna göre uyarlayabilir. AI algoritmaları, insanların fark etmemiş olabileceği kalıpları ve eğilimleri belirleyerek çok büyük miktarda veriyi hızlı bir şekilde analiz edebilir. Bu çalışma, dijital pazarlamadaki IoB paradigmasının gücünü anlamayı ve IoB'nin farklı teknolojilerinin

dijital pazarlama araçlarını nasıl etkileyebileceğini araştırmayı amaçlamaktadır. IoB paradigmasının önemini, önde gelen dört dijital pazarlama aracı olan sohbet robotları, etkileşimli içerik araçları, programlı reklamcılık ve sesli arama optimizasyonu ile nasıl ilişkilendirdiğini inceleyeceğiz. IoB üzerine araştırma tasarımı ve literatürdeki uygulamaları hala gelişmekte olduğundan, bu çalışma IoB tabanlı dijital pazarlama modellerinin geliştirilmesi ve ayrıca işletmeler ve politika yapımcılar dahil olmak üzere paydaşlar için değerli bilgiler sağlayacaktır.

**Anahtar Kelimeler:** Davranışların İnterneti, IoB, Dijital Pazarlama, Sohbet Robotları, Etkileşimli İçerik Araçları, Programlı Reklamcılık, Sesli Arama Optimizasyonu, Çıkarımlar

## INTRODUCTION

The Internet of Behaviors (IoB) is rapidly becoming a worldwide trend, building upon the foundations of the Internet of Things (IoT) and Artificial Intelligence (AI). This innovative paradigm has the capacity to transform our engagement with the digital world; by using data from interconnected devices, it can track, study, and even influence human behavior (Al-Fuqaha et al., 2015; Elayan et al., 2022; Zhao et al., 2023). IoB distinguishes itself by viewing user information through the lens of behavioral psychology, recognizing that each digital engagement -whether via smartphones, smartwatches, or other wearable technology- produces crucial behavioral data. This data can be utilized to craft detailed behavioral blueprints as behavioral profiles. By peering into these behavioral profiles, IoB endeavors to not only understand past behaviors but also predict and shape future actions (Sun et al., 2023; Zhao et al., 2023). The incorporation of AI into the IoB approach offers particularly striking possibilities for practitioners. With AI algorithms, IoB-driven systems can handle massive amounts of data with incredible speed, and also reveal concealed patterns and trends that frequently go unnoticed by human analysts. It seeks to decipher the complex network of human psychology interconnected with our digital interactions.

IoB paradigm derives its transformative power from diverse technologies that collectively enable the collection, analysis, and utilization of behavioral data (Figure 1). At its core, IoB capitalizes on IoT devices, encompassing sensors, wearables, and smart appliances, to gather data from physical environments and human interactions. Advanced data analytics and machine learning algorithms decipher complex patterns within these datasets, while AI automates decision-making processes and paves the way for predictive insights. Biometric technologies verify users and reveal behavioral indicators linked to physical traits. Location tracking, virtual reality (VR), augmented reality (AR), blockchain, cloud computing and wearable devices all converge to provide a holistic understanding of human behavior (Al-Fuqaha et al., 2015; Afor et al., 2022; Sun et al., 2023). IoB's distinct advantage stems from its capacity to integrate these technologies, providing organizations with a data-driven guide to enhance products, services, marketing approaches, and user experiences, all while maintaining strict privacy and ethical standards.

Figure 1: From IoT to IoB (Sun et al., 2023; Zhao et al., 2023)

In this context, this study sets out to explore the value of the IoB paradigm within the world of digital marketing. The main purpose is to highlight the importance of IoB approach in leading digital marketing tools which are particularly chatbots, interactive content tools, programmatic advertising, and voice search optimization; and to understand how IoB paradigm may reshape digital marketing practices, customer engagement, and user experiences in different ways.

## **BACKGROUND**

Digital marketing encompasses a broad range of marketing activities and strategies that leverage digital channels and technologies to promote products, services, or brands to a target audience. It involves online platforms such as websites, social media, email, search engines, and various digital advertising channels to connect with customers, engage with them, and ultimately drive sales or achieve other marketing goals (Gkikas et al., 2019; Saura et al., 2020; Nguyen et al., 2021). Currently, some of the recent and leading tools in digital marketing include: chatbots, interactive content tools, programmatic advertising platforms, and voice search optimization tools (Palos-Sanchez et al., 2019; Nguyen et al., 2021; Omarov et al., 2022; Al-Tuama et al., 2022):

(1) Chatbots are software applications designed to simulate human conversation, either via textual or auditory methods. It can interact with users using pre-defined scripts or more advanced algorithms, and some are enhanced with AI to better understand and respond to user input. AI-driven chatbots are popular in digital marketing in order to facilitate real-time interactions on digital platforms. These tools enable businesses to provide instant, 24/7 responses to customer inquiries, enhancing user experience by streamlining interactions, driving sales, and offering automated customer support, thus reshaping the way brands engage with their audience online.

(2) Interactive content tools are modern digital marketing instruments that allow creators to produce content that requires active engagement from the audience. Examples include quizzes, polls, interactive infographics, and calculators. Such tools are designed to increase user engagement and provide a more immersive experience compared to passive content.

(3) Programmatic advertising platforms refers to the automated buying and selling of online advertising space using software and algorithms. Instead of traditional manual ad buying, programmatic advertising uses machines and algorithms to purchase display space, allowing for real-time auction ad buying, targeting specific audiences, and optimizing based on data-driven decisions. With the help of data-driven insights, these platforms optimize ad relevance and drive higher return on investment for marketers.

(4) Voice search optimization tools are designed to help businesses ensure their content is discoverable through voice searches. With the rise of digital assistants like Amazon's Alexa, Google Assistant, or Apple's Siri, optimizing for voice search has become increasingly important. These tools can help analyze voice search queries, provide insights on voice-friendly keywords, and guide content strategy to align with voice search behaviors. This shift in optimization underscores the evolving user behavior, where verbalizing a query is fast becoming more prevalent than traditional typed searches.

In this study, we seek to provide an in-depth understanding of the dynamic relationship between IoB and digital marketing. The impacts of IoB approach on four popular trending tools are assessed in order to understand the transformative potential of the IoB within the realm of digital marketing. As illustrated in Figure 2, the potential of each digital marketing tool is examined in terms of behavioral data sensing capability and behavioral insights generation. The potential of these marketing tools to act as catalysts in developing IoB-driven digital marketing strategies has been assessed.

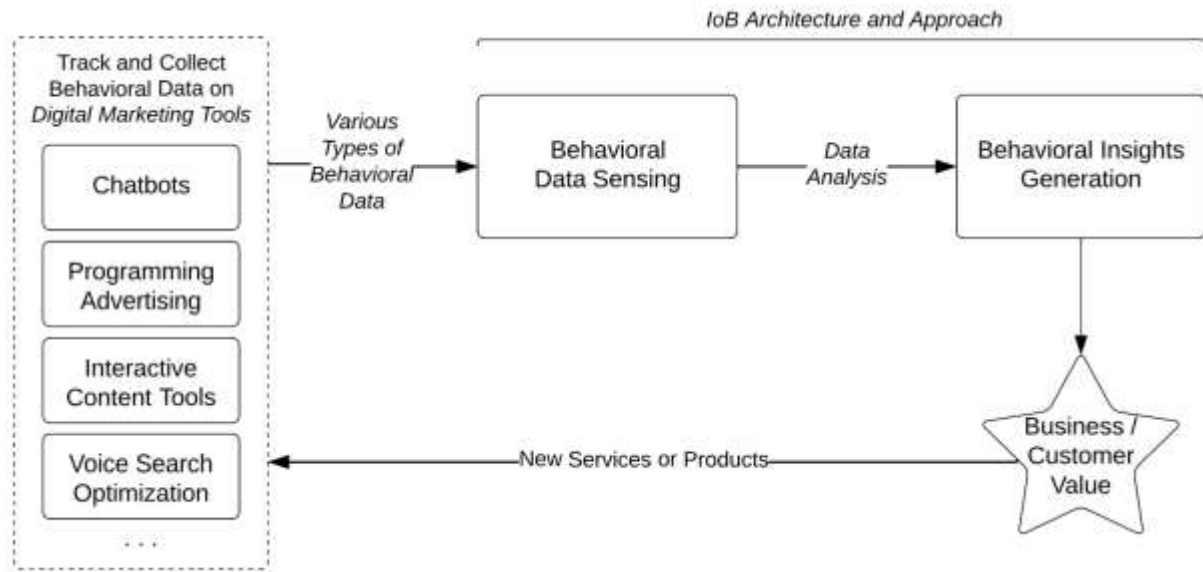

Figure 2: The Potential of IoB-driven Digital Marketing

**FINDINGS**

The integration of IoB with digital marketing world has significant implications, as it enhances marketers' ability to understand, target, and engage with consumers based on their behaviors and preferences. This section assesses the potential of each digital marketing tool to act as a catalyst for the IoB-driven digital marketing.

**Chatbots**

The integration of IoB approach with chatbots offers a promising evolution in user interactions. Table 1 presents some examples of behavioral data and behavioral insights that can be generated by chatbots.

Accordingly, chatbots can act as a part of IoB technology and provide real-time data collection and immediate response based on user behaviors. By harnessing and analyzing behavioral data from users, chatbots can deliver more personalized experiences, understand the user needs in real-time. Such data-driven behavioral insights allow chatbots to respond contextually, predict user queries and adjust their tone based on the user's emotional state. For instance, if a user searches for a specific topic or shows interest in a particular issue frequently, the chatbot can use this behavior data to offer relevant products; if a user shows dissatisfaction after a certain response, the chatbot can adjust its future interactions accordingly.

Furthermore, IoB paradigm can help for a continuous feedback mechanism. As chatbots interact with users, the behavioral data can be fed back into the system, which allows chatbots to constantly refine and improve their interactions. With the use of behavioral data analytics, chatbots can provide an additional layer of security to enhance the user trust and confidence within the system. For instance, if a user's behavior or typing pattern appears different, the chatbot can introduce additional security checks or flag the interaction for review. By incorporating biometric and other advanced IoB technologies, chatbot interactions, especially those involving sensitive information, can be made more secure.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Table 1: IoB Approach on Chatbots with Examples

Behavioral Data	Behavioral Insights	Services for Customers
Text-based conversations	Specific areas of interest, concerns, or knowledge gaps of the user base	Developing knowledge hubs addressing these areas which optimizes online content and directs traffic to that specific content
Interaction frequency	Degree of user dependence on the chatbot, and reliance on the chatbot	Offering loyalty programs or discounts for frequent users, which encourages repeat business and brand loyalty
Interaction duration	User's level of engagement, potentially revealing whether they find conversations satisfying or lacking in depth	Introducing progressive challenges/rewards based on user engagement time
Interaction timing	Patterns about user habits, such as peak activity hours or preferred times to seek information, aiding in targeted service delivery	Providing scheduled promotions or live events during times when users are most active, which enhances click-through rates
Sentiment analysis	Emotional well-being or mood of users, helping in tailoring conversational tone and approach	Providing personalized responses or offers based on detected sentiment; such as offering discounts or solutions when negative sentiment is detected
Clickthrough rates	User preferences and decision-making behavior, indicating which reflects content relevance	Introducing campaigns based on items or services users showed interest in but didn't finalize, which means recapturing potential lost sales
Drop-off points	Specific stages or issues that cause user dissatisfaction or confusion	Introducing a "Save for Later" feature at stages where users tend to drop off, especially in e-commerce platforms, which allows users to quickly mark items of interest

### Interactive Content Tools

By integrating the principles and technologies of IoB approach, interactive content tools can also offer more personalized, data-driven experiences, leading to deeper user engagement and more informed decision-making for marketers. Table 2 presents some examples of behavioral data and behavioral insights that can be generated by interactive content platforms.

Accordingly, interactive content tools, when synergized with the IoB approach, can offer a deep insights into user engagement, preferences, and decision-making patterns. By capturing behavioral data during interactions -such as a user's choices in quizzes or time spent on specific sections- these tools can dynamically adapt content to suit individual preferences. For example, if a user frequently interacts with content related to sustainable products, subsequent content can be used to spotlight eco-friendly choices.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Table 2: IoB Approach on Interactive Content Tools with Examples

Behavioral Data	Behavioral Insights	Services for Customers
User engagement duration	Interest level and depth of engagement with content; how long users engage with content	Introducing personalized, dynamic content suggestions based on the time spent; such as for short engagements, providing concise summaries or infographics; or for long engagements, recommending in-depth articles or videos
High-interest areas	Topics or sections that resonate most with users; identified through choices in quizzes or surveys	Introducing popular topics or sections and creating spin-off content based on them, which drives more traffic to high-engagement areas
Hover and click heatmaps	Visual representations of attraction or interest within the content	Reorganizing content layout based on areas users hover or click on the most; placing ads strategically
Content hotspots	Sections or areas with high user activity	Creating weekly or monthly spotlights or features on these hotspots to attract repeat visits
Areas of confusion	Sections or areas that might be unclear, or too complex; areas with unusual or unexpected interaction patterns	Offering timely help or support options when users seem to be confused or spend too long in one area
Completion rates	Percentage of users who complete the content; overall effectiveness and value of content to the user	Introducing badges, certificates or rewards for users who complete specific content; performing gamification strategies to increase user engagement and interaction
Revisit rates	Frequency of users returning to the content; the lasting impact and relevance of content over time	Rewarding users who frequently return to the platform or purchase products, which drives repeat traffic and potentially increases loyalty

Additionally, integrating blockchain technology can ensure the trustworthiness of this behavioral data and enhance the user confidence. For example, with blockchain integration, each choice made by the user can be securely recorded, ensuring data integrity. Over time, as choices accumulate from various users, the system can recommend products with greater accuracy based on verified, immutable behavior logs. Thus, IoB-driven interactive content not only personalizes user experience but also enhances the transparency and credibility of digital interactions.

### Programmatic Advertising

Incorporating IoB approach into programmatic advertising can provide more precise targeting, optimized ad placements, and enhanced user experiences based on behavioral insights. Similarly, some examples of critical behavioral data and insights that can be generated by programmatic advertising platforms are given in Table 3.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

**October 13-14, 2023**

Table 3: IoB Approach on Programmatic Advertising Platforms with Examples

Behavioral Data	Behavioral Insights	Services for Customers
Ad interactions	Metrics of user engagement, indicating which advertisements resonate with the audience	Introducing personalized ad playlists and showing more of the ads that users have previously engaged
Browsing patterns	User navigation behavior, showing preferred content or sites and the typical order of their browsing	Performing selected content suggestions based on previous browsing patterns; offering products, or videos related to the sites they frequent
Engagement metrics	Depth of user interaction, including how long users view ads and the actions they take post-click	Providing adaptive ad durations, where ads can be shortened or extended based on how long users typically engage with similar content
Peak interaction times	Hours or times when users are most active, aiding in optimal ad delivery scheduling	Scheduling premium content or special offers during peak times
Interactions with sponsored content	Engagement levels with paid advertisements, indicating the effectiveness of specific sponsored content placements	Offering loyalty rewards or discounts for users who frequently engage with sponsored content; encouraging further interaction

By integrating programmatic advertising metrics and insights with IoB approach, these platforms can reach and interpret a richer set of behavioral data. For instance, if a user's smartwatch reports frequent visits to a gym and their smart home system indicates a preference for cooking healthy meals, programmatic advertising platforms, enhanced by IoB technologies, can understand the user's inclination towards a healthy lifestyle. Consequently, the user might be targeted with ads for fitness equipment, organic food products, or wellness apps, ensuring that the advertisements are not only contextually relevant but also aligned with their real-world behaviors and preferences.

This precision in targeting ensures also higher conversion rates and better ROI for advertisers. Marketers can achieve a structured understanding, allowing for more effective strategy formulation and campaign adjustments. Behavioral data collected from user interactions allows advertisers to more accurately define their target audiences and optimize targeting strategies.

### **Voice Search Optimization**

By integrating the principles and technologies of IoB, voice search optimization tools can better predict search intentions and deliver more personalized and relevant search results. In Table 4, some examples of behavioral data and behavioral insights that can be generated by voice search optimization tools are presented.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Table 4: IoB Approach on Voice Search Optimization with Examples

Behavioral Data	Behavioral Insights	Services for Customers
Voice search queries	Preferences in search terms, commonly asked questions, topics of interest	Developing content that aligns with the most frequently used search terms or address common questions
Time and day of voice searches	Peak times for user activity, days when users are most active	Performing ad campaigns during peak search times for increased visibility
Emotional tone during search	Mood-based search intent, emotion-driven needs	Providing ads tailored to detected emotions, such as relaxation ads during stressed voice tones.
Duration of interaction	Engagement levels, topics of high interest to users	Providing marketing strategies based on which topics/content keep users engaged the longest
Voice commanded purchases	Purchasing habits, product preferences of users	Suggesting related products and discounts based on past voice-commanded purchases
Location during voice search	Geo-specific interests, local needs or queries of users	Providing location-specific ads or promotions

For digital marketers, IoB integrated with voice search optimization tools can provide valuable insights from customers behavior and hyper-personalized marketing strategies. This integration offers detailed and accurate data, and also pave the way for truly personalized marketing strategies. For instance, a user's emotional tone during a voice search can be an indicator of their buying intent. If they sound stressed, they might be looking for immediate solutions or comfort products. IoB insights into user interactions with voice platforms can refine the voice shopping experience. Such a personalization can improve user experience and boost engagement.

Furthermore, using contextual data like geolocation and user activity, IoB approach helps voice search algorithms offer more relevant results tailored to the user's current situation. Based on a user's past behaviors, IoB can customize voice search results, presenting answers more aligned with individual preferences. With geolocation and behavioral patterns, IoB enables voice search to better prioritize local results pertinent to the user's context. Also, voice biometrics, an aspect of IoB, can ensure user identity verification during voice interactions which can enhance security of systems.

## CONCLUSION

Within the rapidly evolving landscape of digital marketing, the IoB paradigm emerges as one of the most promising innovations. As consumer behaviors and preferences grow more integrated with digital interactions, IoB emerges as a powerful approach for marketers seeking to connect with their audiences on a deeper level. IoB harnesses data-driven insights from user behaviors, to not only understand the present but also predict and influence future actions. Its importance in digital marketing lies in its ability to offer a more profound understanding of customers, enabling businesses to develop highly personalized marketing strategies, deliver more relevant content, and enhance the overall customer experience.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

In this study, the potential of leading digital marketing tools (i.e., chatbots, interactive content tools, programmatic advertising platforms, and voice search optimization tools) to act as catalysts for the IoB-driven digital marketing is examined in terms of behavioral data sensing capability and behavioral insights generation. It is obvious that marketers can make behavioral data-driven decisions, optimize their strategies, and create more engaging and effective campaigns that align with the behaviors and preferences of their target audience by using IoB principles. Some potential research issues are defined as well which can serve as a foundation for extensive studies for the evolving nature of IoB-driven digital marketing:

- How will the integration of IoB into digital marketing tools and platforms influence user data confidentiality and privacy?
- What are the ethical concerns and how can they be addressed?
- With the increased flow of behavioral data, what security measures need to be in place to protect user data from breaches on digital marketing platforms?
- How do consumers perceive and accept IoB-driven digital marketing?
- Are there concerns about over-personalization?
- As the role of IoB expands in digital marketing, what regulations might govern its use, and how will marketers ensure compliance?

*ORCID NO: 0000-0002-3133-3620*

**ÖZET**

Kibir, tüketicilerin kendilerini diğerlerinden üstün görme olarak açıklanabilen bir kişilik özelliğidir. Kibirli tüketiciler; narsist özellikler taşırlar, kendilerini çok severler, fiziksel görünüşe önem verirler ve başarı odaklı yaşarlar. Bu özellikler, satın alma davranışına da yansımaktadır. Tüketici kibri olarak tanımlanabilecek bu eğilim, satın alınan ürünlerle kendilerini üstün gösterme çabası olarak tanımlanabilir. Kibirli tüketiciler, satın aldıkları ürünlerle bir bağ kurmaktadır. Onlara göre satın alınan ürünler, statü veya prestij gibi sembolik anlamlarla diğer tüketicilere karşı üstünlük sağlamaktadır. Her ne kadar olumsuz bir kişilik özelliği olsa da kibirli tüketiciler işletmeler için hedef kitle haline dönüşebilir. İşletmeler, tüketici kibrini kendi lehlerine kullanarak müşteri yaratabilirler. Ayrıca tüketici profilinin tüm yönleriyle değerlendirilmesi tüketici odaklı pazarlama anlayışının bir gerekliliğidir. Dolayısıyla bu çalışma tüketici kibrinin demografik değişkenlere nasıl farklılaştığını ele alarak kibirli müşteri profilinin daha spesifik değerlendirilebilmesini hedeflemektedir. Bu amaçla, 713 tüketiciye anket uygulanmıştır. T testi, 2 gruplu demografik değişkenlerin analizinde kullanılırken ANOVA gruplu değişkenlerin analizinde kullanılmıştır. Analiz sonuçlarına göre tüketici kibri, yaş ve medeni duruma göre farklılık göstermektedir. Genç yaşta tüketicilerin ve evli tüketicilerin tüketici kibri puanları daha yüksektir. Tüketici kibri, pazarlama literatüründe çok yeni bir kavramdır ve yapılan araştırmaların sınırlı sayıda olduğu görülmektedir. Ayrıca tüketici kibrinin demografik değişkenlerle ilişkisinin değerlendirildiği bir çalışmaya rastlanılmamıştır. Bu özellikleriyle bu çalışma ilgili literatüre katkıda bulunmakta ve işletmelere çeşitli öneriler geliştirmektedir.

Anahtar Kelimeler: Kibir, Tüketici kibri, Demografik değişkenler.

**ABSTRACT**

Arrogance is a personality trait that can be explained by consumers perceiving themselves as superior to others. Arrogant consumers, who have narcissistic characteristics, love themselves very much, give importance to physical appearance, and live in a success-oriented manner. These characteristics are also reflected in the purchasing behavior. This tendency, which can be defined as consumer arrogance, can be defined as an effort to show oneself superiority through purchased products. Arrogant consumers form bonds with products they buy. According to them, products purchased are superior to other consumers with symbolic meanings, such as status or prestige. Although arrogant consumers have a negative personality trait, they can become target audiences for businesses. Businesses can create consumers by using consumer arrogance to their advantages. In addition, evaluating consumer profiles in all aspects is a requirement for a consumer-oriented marketing approach. Therefore, this study aims to evaluate arrogant consumers profiles more specifically by considering how consumer arrogance differs according to demographic variables. A questionnaire was administered to 713 consumers. The t-test was used to analyze demographic variables between the two groups, while ANOVA was used to analyze more group variables. According to the analysis results, consumer arrogance differs according to age and marital status. Younger and married consumers had higher arrogance scores. Consumer arrogance is a very new concept in the marketing literature, and it seems that the research is limited. In addition, no study has evaluated the relationship between consumer arrogance and the demographic variables. With these features, this study contributes to the relevant literature and develops various business suggestions.

**Keywords:** Arrogance, Consumer arrogance, Demographic variables.

## **GİRİŞ**

Tüketim, günümüzde kendini tanımlama ve ifade etme şeklinde dönüşmüştür. Sosyal medya ve internet gibi araçların kullanımının yaygınlaşmasıyla birlikte başkalarıyla etkileşimin en yüksek düzeyde olduğu şu günlerde, diğerlerinden farklı olma veya kendisi gibi olanlarla benzer tüketim alışkanlıkları sergileme eğilimi dikkat çekmektedir. Kendilerini başkalarından üstün gören tüketicilerin böylesi bir dönemde, diğerlerinden farklı ve üstün olduklarını gösterme veya kendilerine denk bulduğu diğer tüketicilerle benzer olduklarını kanıtlama çabalarının tüketime yansması olağan bir süreçtir. Bu süreç, birçok faktörden etkilenmekte ve işletmelerin pazarlama stratejilerine ilham kaynağı olmaktadır.

Tüketicilerin satın alma kararlarını yaş, medeni durum, cinsiyet, gelir ve eğitim düzeyi gibi demografik değişkenlerin yanı sıra (Tekvar, 2016; Gümüş, 2019) tüketicilerin kişilik özellikleri (Buluk ve Erdem, 2021), psikolojileri (Cisek vd., 2014) veya yaşam tarzları (Özden, 2019) gibi faktörler etkilenmektedir. Tüketim davranışını etkileyen her bir faktörün tespiti, tüketici odaklı pazarlama stratejilerinin geliştirilmesi açısından elzem bir konudur. Bu nedenle tüketicilerin satın alma kararlarını etkileyen spesifik özelliklerin daha derinlikli incelenmesi gerekmektedir. Kibir, bu spesifik özelliklerden biridir ve pazarlama literatüründe bu kavramın çok sınırlı bir şekilde ele alındığı görülmektedir (Ruvio vd., 2007).

Türk Dil Kurumu kibir kavramını “kendini başkalarından üstün tutma; benlik, böbürlenme, gurur” şeklinde tanımlamaktadır (TDK, 2023). Kibir, hem toplumsal normlarda hem de dini inançlarda tasvip edilmeyen bir kişilik özelliğidir. Örneğin kibir, İslam inancında Şeytani bir tavır olarak görülmektedir (Özkan, 2022). Benzer şekilde Hristiyan inancında kibir, yedi büyük günahın bir tanesidir (Güngör, 2014). Nitekim insanın kendisini aşırı beğenmesi ve sevmesi, başkalarından üstün olduğuna ve bu anlamda her şeyin merkezinde olması gerektiğine inanması bencilliğin bir göstergesidir. Bu özellikleri nedeniyle kibir, tüketici davranışının karanlık yüzü olarak görülmektedir (Dootson vd., 2017; Hirschmann, 1991). Örneğin Bozacı vd. (2018), satış elemanlarının tükenmişlikleri ve işten ayrılma gerekçelerinde kibirli yöneticilerin önemli bir payı olduğunu göstermişlerdir. Kibirli bireylerin davranışları tüketim alışkanlıklarına da yansımaktadır. Kibirli tüketiciler, kendi hayatlarına odaklı yaşamaktadırlar ve başkalarının ilgisine ve onayına ihtiyaç duyabilmektedirler (Ülker, 2021). Narsizm gibi bir kişilik bozukluğu olan tüketicilerde; kibir, üstünlük kurma çabası veya kendini mükemmel görme gibi davranışlar gözlenmektedir (Kubarych vd., 2004) ve kibir, narsizmin bir boyutudur (Lewis, 2000). Awad ve Youn (2018), narsist tüketicilerin kibirli markalara karşı daha olumlu tutumlara sahip olduklarını tespit etmişlerdir.

Sonuç olarak kibir olumsuz bir kişilik özelliği olsa da tüketici profiline bir parçasıdır. Bu anlamda pazarlamanın ilgi alanına girmektedir. İşletmeler, pazarlama stratejilerini geliştirirken her türlü tüketici profiline dikkate almalıdırlar. Nitekim olumsuz bir kişilik özelliği, işletmeler için fark yaratan bir avantaja dönüşebilir. Örneğin kibirli tüketicilerin diğerlerinden daha iyi olma arzuları, ürünlerini satın alan işletmeler için etkili bir reklam unsuruna dönüşebilir (Ruvio ve Shoham, 2016). Bu müşteriler, satın aldıklarıyla böbürlenmeyi sevdiklerinden iyi birer referans olabilirler. Ancak kibirli iletişimin olumsuz içeriği diğer tüketicilerde antipatik duygular da yaratabilir (Ruvio vd., 2007). Örneğin, reklamlarda kibir kullanımı, tüketicinin markayla önceki deneyimlerine bağlı olarak tutumlar üzerinde zıt etkilere sahip olabilmektedir (Brown, 2012). Bu nedenle işletmeler önlem almak zorunda da kalabilirler. Tüketiciler kibirli markaları yüksek statü ve kaliteyi yansıttığı için takdir etse de, kibir tüketicileri aşağılık hissettirebilir (Munichor ve Steinhart, 2016). Farklı bir bakış açısıyla bu tüketiciler “farklı ve özel” olma mesajlarına daha duyarlı olduklarından isabetli bir hedef kitlesi pozisyonunda da olabilirler (Ruvio ve Shoham, 2016). Sonuç olarak işletmelerin hedef kitlelerini tanımaları, stratejilerini müşteri odaklı düzenleyebilmeleri ve tutundurma çalışmalarını daha etkili yapabilmeleri için kibirli tüketici profiline tanımaları gerekmektedir. Halbuki tüketici kibri pazarlama literatüründe yeteri kadar araştırılmamıştır (Nanda ve Coulter, 2018). Bu çalışma, kibirli tüketici profiline demografik değişkenler açısından ele alarak ilgili literatürde boşluğu doldurmada ve ilgili literatüre katkı sağlamaktadır.

## **KAVRAMSAL ÇERÇEVE**

### **Tüketici Kibri**

Kibir, bir kişilik özelliğidir (Ruvio ve Shoham, 2016; Trumbull, 2010). Ancak onaylanan bir kişilik özelliği değildir. Nitekim kibir; bencillik, narsizm, kendini üstün görme veya ukalalık gibi olumsuz

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

kişilik özellikleriyle birlikte anılmaktadır. Tüketici kibri ise tüketicilerin satın aldıkları ürünler aracılığıyla sosyal üstünlüklerini gösterme eğilimi olarak tanımlanmaktadır (Ruvio ve Shoham, 2016). Bu bağlamda değerlendirildiğinde tüketici kibri, kendini başkalarından üstün görme ve böbürlenme gibi kişilik özelliklerinin tüketime yansması olarak ele alınabilir. Kibirli tüketiciler, satın aldıkları ürünler ile kendileri arasında ilişki kurmaktadır (Hayward ve Hambrick, 1997). Bu bakış açısında satın alınan ürünün kalitesi, değeri veya herhangi bir üstün özelliği, o ürünü satın alanı da benzer şekilde diğerlerinden üstün kılmaktadır. Böylece kibirli tüketiciler satın aldıkları ürüne; bir sosyal statü, prestij veya bunlar gibi üst düzey çeşitli sembolik değerler katmaktadır. Kibirli tüketiciler, satın aldıkları ile benlikleri arasında bir bağ kurarak ürün kalitesi ile kendi üstün özellikleri arasında doğrudan bir bağ kurmaktadır (Verbeke vd., 2004).

Tüketici kibrinin, kişinin fiziksel görünümüne ve başarı yönüne dair iki boyutu bulunmaktadır ve her ikisi içinde böbürlenmeyi veya endişe etmeyi içermektedir (Netemeyer vd., 1995; Karapınar ve Dursun, 2021). Fiziksel olarak çekicilik ve başarılı olma durumları, kibirli tüketiciler için bir üstünlük belirtisidir. İş hayatında başarılı olmak, bu başarıları odak noktası haline getirmek ve başarılarla böbürlenmek kibirli bireylerin özellikleri arasındadır. Bunlar, kibirli tüketiciler için aynı zamanda toplumda prestijli bireyler olmanın ve takdir edilmenin kaynaklarıdır.

Dolayısıyla kibirli tüketiciler fiziksel görünümü veya başarılarıyla ilgili ya kendilerini fazla değerli bulurlar ya da yetersiz bulurlar. Kibirli tüketiciler üstün oldukları inancıyla lüks tüketime yönelebilirler (Aksoy ve Çıkmaz, 2022). Uz (2022) yapmış olduğu çalışmada, kibir duygusunun lüks marka satın alma niyeti üzerinde olumlu bir etkisi olduğunu tespit etmiştir. Veyahut kibirli tüketiciler, kendilerini yetersiz buldukları için satın aldıkları ürünlerle eksik yönlerini tamamlama veya gizleme kaygısıyla gösterişli ürünler satın alabilirler. Örneğin Johnson vd. (2010), kibirli tüketicilerin yetersizliklerini gizlemek için kibirli davrandıklarını belirtmektedirler. Bu tüketiciler için üstün olma duygusu o kadar önemlidir ki, düşük kalitede veya pahada değersiz ürünleri satın alanlar da düşük karakterde bireylerdir (Aksoy ve Çıkmaz, 2022). Bu tüketiciler, kendilerini o kadar üstün görürler ki kendilerini bir kanaat önderi veya pazar uzmanı olarak algılayabilirler ve “en iyisini ben bilirim” inancına sıkı sıkıya inanabilirler (Ruvio ve Shoham, 2016).

Ruvio vd., 2007 yılında tüketici kibri üzerine çalışmışlar ve beş boyutlu bir yapı elde etmişlerdir. Bu boyutlar, markayla kendini kanıtlama, teşhirciliğe dayalı satın alma, “en iyisini ben bilirim” zihniyeti, gösteriş temelli satın alma, satın alma üstünlüğü ve gereksiz satın alma olarak isimlendirmişlerdir. Ruvio ve Shoham (2016) sonraki yıllarda yaptıkları çalışmada tüketici kibri dört boyutlu olarak tanımlamışlardır. Bu boyutlar, imaj temelli tüketim, gösteriş temelli satın alma, tüketici övünmesi, tüketici üstünlüğü şeklindedir. İmaj temelli tüketim, bilinen markaların tercih edildiği, eğlenceli ve kaliteli tüketimin tercih edilmesidir. Gösteriş temelli tüketim, satın alınan ürünlerle gösteriş yapmak hedeflenmektedir. Tüketici övünmesi, tüketimdeki başarıların üstünlüğünü diğer tüketicilere sözlü olarak ifade edilmesidir. Tüketici üstünlüğü, daha iyi mal veya mülk edinme amacıyla tüketim yaparak diğerlerinden üstün olma inancını ifade etmektedir.

Tüketici kibri üzerine çalışan bir başka araştırmacı grubu Ansaripur vd. (2020)'dir. Bu araştırmacılar, tüketici kibrinin; imaja dayalı tüketim, teşhirciliğe dayalı tüketim, tüketici böbürlenmesi, tüketici üstünlüğü ve benzersizlik ihtiyacı dâhil olmak üzere beş boyutu olduğunu belirtmektedirler. İlk dört boyut, bu alanda daha önce yapılan araştırmalarla tutarlıdır ancak benzersizlik ihtiyacı bu araştırmacılar tarafından tüketici kibri boyutlarına eklenmiştir (Ansaripur vd., 2020). Bu boyut, insanların ürünlerinin ve mülklerinin benzersizliği ve münhasırlığı hakkında konuştuğu benzersiz olma ihtiyacıdır (Ansaripur vd., 2020).

İlgili literatürde tüketici kibri ile ilgili sınırlı araştırma olduğu görülmektedir. Kibirle ilgili yapılan araştırmalarda genellikle lüks veya gösterişçi tüketim ve materyalizm gibi kibirli tüketicilerin satın alma kararları üzerine odaklanıldığı görülmektedir. Gelibolu ve Balıkcıoğlu (2021) yapmış oldukları araştırmada, tüketici kibrinin yaşam tatmini arttırdığını ve materyalizmin yaşam tatmini üzerindeki etkisinin artmasına neden olduğunu tespit etmişlerdir. Balıkcıoğlu ve Arslan (2019) ise tüketici kibrinin yaşam tatmini üzerinde olumlu etkisi olduğunu göstermişlerdir. Aksoy ve Çıkmaz (2002), tüketici kibri üzerine yaptıkları araştırmada, kibirli tüketicilerin lüks moda ürünleri satın alma eğiliminde olduklarını

tespit etmişlerdir. Benzer şekilde Sedikides vd. (2007), kibirli tüketicilerin lüks moda alışverişi yaparak özgüvenlerini tatmin etme eğiliminde olduklarını ortaya koymuşlardır.

Ruvio vd. (2020), tüketici kibrinin yeterinde araştırılmadığını, tüketicilerin çoğu olumlu ağızdan ağza iletişim kurarken, kibirli tüketicilerin hem olumlu hem de olumsuz ağızdan ağza iletişimi beslediklerini tespit etmişlerdir. Pandari ve Monfared (2022), tüketici kibrinin görünüş ve özgünlük bileşenlerinde pozitif etkili olduğunu göstermişlerdir. Şenyüz ve Hasford (2022), ilişki kurma güdüsü olan tüketicilerin, pazarlama mesajlarında kibir vurgusu yapan ürünlere ve markalara karşı daha olumlu tutumlara ve daha yüksek satın alma niyetlerine sahip olduklarını göstermişlerdir.

Yapılmış araştırmalardan da görüldüğü gibi tüketici kibri, pazarlama literatüründe çok yeni bir kavramdır ve bu konu ile ilgili yapılmış çalışmalar sınırlı kalmaktadır. Bu nedenle tüketici kibri üzerine yapılmış araştırmaların çoğaltılması ve kibirli tüketici davranışının çeşitli değişkenlerle ele alınarak çok yönlü bir şekilde değerlendirilmesi gerekmektedir.

### ARAŞTIRMANIN YÖNTEMİ

#### Araştırmanın Amacı

Bu çalışmanın amacı, tüketici kibrinin demografik değişkenlere göre nasıl farklılaştığını ortaya koyarak ilgili literatüre katkıda bulunmak ve işletmelere öneriler geliştirmektir.

#### Araştırmanın Önemi

İşletmeler, kibirli tüketicileri tespit ederek sosyal medya gibi araçlarla ürünlerinin övülmesini destekleyebilirler (Ruvio ve Shoham, 2016). Bu bağlamda kibir, olumsuz bir kişilik özelliği iken işletmelerin olumlu bir pazarlama stratejisi geliştirmelerine yardımcı olan bir araç haline dönüşebilir. Aynı zamanda tüketici kibri, işletmeler için olumsuz sonuçlar da doğurabilir. Nitekim Ruvio vd. (2020), tüketici kibrinin olumsuz ağızdan ağza iletişimi beslediğini göstermiştir. Bu nedenlerle tüketici kibrinin demografik değişkenlerle ilişkisi tespit edilerek, hangi tüketici profiline daha çok kibirli olma eğiliminde olduğunun tespit edilmesinin önemli olduğu düşünülmektedir. Böylece hedef kitlelere çok daha kolay ulaşılabilir. İlgili literatürde tüketici kibrinin yeteri kadar ele alınmadığı görülmektedir ve tüketici kibrinin demografik değişkenlerle ilişkisine dair bir araştırmaya rastlanılmamıştır. Bu çalışma, ele aldığı konu itibarıyla ilgili literatüre katkıda bulunmaktadır. Aynı zamanda bu çalışma, işletmelere çeşitli öneriler sunarak yönetsel katkılar sağlaması açısından önem taşımaktadır.

#### Araştırmanın Hipotezleri

Chang vd. (2008), gelir düzeyi yüksek genç tüketicilerin fiziksel anlamda daha kibirli bir yapıda olduklarını belirtmektedirler. Workman ve Lee (2012) ise fiziksel görünüşleriyle ilgili kibirli genç tüketicilerde marka duyarlılığı olduğunu tespit etmişlerdir. Bu bağlamda araştırma kapsamında aşağıdaki hipotezler geliştirilmiştir:

H1. Tüketici kibri boyutları, tüketicilerin cinsiyetlerine göre farklılık göstermektedir.

H1a. İmaj temelli tüketim, tüketicilerin cinsiyetlerine göre farklılık göstermektedir.

H1b. Gösteriş temelli satın alma, tüketicilerin cinsiyetlerine göre farklılık göstermektedir.

H1c. Tüketici övünmesi, tüketicilerin cinsiyetlerine göre farklılık göstermektedir.

H1d. Tüketici üstünlüğü, tüketicilerin cinsiyetlerine göre farklılık göstermektedir.

H2. Tüketici kibri boyutları, tüketicilerin yaşlarına göre farklılık göstermektedir.

H2a. İmaj temelli tüketim, tüketicilerin yaşlarına göre farklılık göstermektedir.

H2b. Gösteriş temelli satın alma, tüketicilerin yaşlarına göre farklılık göstermektedir.

H2c. Tüketici övünmesi, tüketicilerin yaşlarına göre farklılık göstermektedir.

H2d. Tüketici üstünlüğü, tüketicilerin yaşlarına göre farklılık göstermektedir.

H3. Tüketici kibri, tüketicilerin eğitim düzeylerine göre farklılık göstermektedir.

H3a. İmaj temelli tüketim, tüketicilerin eğitim düzeylerine göre farklılık göstermektedir.

H3b. Gösteriş temelli satın alma, tüketicilerin eğitim düzeylerine göre farklılık göstermektedir.

H3c. Tüketici övünmesi, tüketicilerin eğitim düzeylerine göre farklılık göstermektedir.

H3d. Tüketici üstünlüğü, tüketicilerin eğitim düzeylerine göre farklılık göstermektedir.

H4. Tüketici kibri boyutları, tüketicilerin gelir düzeylerine göre farklılık göstermektedir.

H4a. İmaj temelli tüketim, tüketicilerin gelir düzeylerine göre farklılık göstermektedir.

H4b. Gösteriş temelli satın alma, tüketicilerin gelir düzeylerine göre farklılık göstermektedir.

H4c. Tüketici övünmesi, tüketicilerin gelir düzeylerine göre farklılık göstermektedir.

H4d. Tüketici üstünlüğü, tüketicilerin gelir düzeylerine göre farklılık göstermektedir.

H5. Tüketici kibri, tüketicilerin medeni durumlarına göre farklılık göstermektedir.

H5a. İmaj temelli tüketim, tüketicilerin medeni durumlarına göre farklılık göstermektedir.

H5b. Gösteriş temelli satın alma, tüketicilerin medeni durumlarına göre farklılık göstermektedir.

H5c. Tüketici övünmesi, tüketicilerin medeni durumlarına göre farklılık göstermektedir.

H5d. Tüketici üstünlüğü, tüketicilerin medeni durumlarına göre farklılık göstermektedir.

#### **Araştırmanın Örnekleme**

Araştırmanın katılımcılarını 18 yaşından büyük tüketiciler oluşturmaktadır. Araştırmanın örnekleme, kolayda örnekleme yöntemi ile belirlenmiştir. Anketler, Ankara ve Samsun'da yüz yüze, dijital platformlarda ise (sosyal medya ve online sohbet ortamları) online olarak uygulanmıştır. 2023 yılının Nisan ve Ağustos ayları arasında uygulanan anketlere 713 tüketicinin katıldığı görülmüştür. Örnekleme büyüklüğünün %95 güven düzeyinde yeterli olduğu anlaşılmıştır (Cohen vd., 2005). Katılımcılara araştırmanın amacı ve araştırmacılar hakkında bilgi verilerek onam formu alınmıştır.

#### **Veri Toplama Yöntemi ve Aracı**

Bu çalışmada, anket yöntemi kullanılacaktır. Anket iki bölümden oluşmaktadır. İlk bölümde Balıkcıoğlu ve Arslan (2019) tarafından "Tüketici Kibri Ölçeğinin Türkiye ve Romanya'da Çapraz Kültürel Geçerliliği" adlı çalışmadan uyarlanan Tüketici Kibri Ölçeği yer almaktadır. Ölçek 16 ifadeden ve dört faktörden oluşmaktadır. Bu faktörler; imaj temelli tüketim, gösteriş temelli satın alma, tüketici övünmesi ve tüketici üstünlüğü şeklindedir. Ölçekte 5'li Likert tipi ölçek kullanılmıştır (1-Kesinlikle Katılmıyorum - 5-Kesinlikle Katılıyorum). Anketin ikinci bölümü tüketicilerin demografik bilgilerine yönelik sorulardan oluşmaktadır. Bu sorular; cinsiyet, yaş, eğitim düzeyi, gelir düzeyi ve medeni durum özelliklerini içermektedir.

#### **Verilerin Analizi**

Verilerin analizi SPSS 24.0 ile yapılmıştır. Ölçek puanları hesaplanan veri analizi sürecinde verilerin normal dağılım gösterdiği basıklık ve çarpıklık katsayıları ile belirlenmiştir. Ölçeklerden elde edilen basıklık ve çarpıklık değerlerinin +3 ile -3 arasında olması normal dağılım için yeterli görülmektedir (Hopkins ve Weeks, 1990). Normal dağılım gösterdiği belirlenen verilerde iki gruplu değişkenler t testi ile ikiden fazla gruplu değişkenler için ANOVA testi kullanılmıştır.

#### **BULGULAR**

Öncelikle ölçeğin güvenirlik analizi yapılmıştır. Güvenirlik analiz sonuçları Tablo 1'de sunulmuştur.

**Tablo 1.** Tüketici Kibri Ölçeği Güvenirlik Analizi

Cronbach's Alpha	Soru sayısı
0,805	16

Cronbach's alfa katsayısı ölçeğin güvenirlik düzeyini vermektedir. Katsayı 0 ile 1 arasında değişmektedir. Alfa ( $\alpha$ ) katsayısına bağlı olarak ölçeğin güvenilirliği şu şekilde yorumlanmaktadır (Nunnally, 1967):

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

- $.00 \leq \alpha < .40$  ise ölçek güvenilir değildir
- $.40 \leq \alpha < .60$  ise ölçeğin güvenilirliği düşük
- $.60 \leq \alpha < .80$  ise ölçek oldukça güvenilir
- $.80 \leq \alpha < 1.00$  ise ölçek yüksek derecede güvenilir bir ölçektir.

Tablo 1'e göre Tüketici Kibri Ölçeği, yüksek derecede güvenilir bir ölçektir.

Ölçeğin çarpıklık ve basıklık değerleri Tablo 2'de sunulmuştur.

**Tablo 2.** Basıklık ve Çarpıklık Değerleri

	n	Çarpıklık	Basıklık
İmaj Temelli Tüketim	713	0,113	-1,481
Gösteriş Temelli Satın Alma	713	0,405	-0,863
Tüketici Övünmesi	713	-0,147	-0,528
Tüketici Üstünlüğü	713	0,049	-1,104
Tüketici Kibri Ölçeği	713	0,315	-0,368

Tablo 2'ye göre değerler incelendiğinde her bir puanın basıklık ve çarpıklık katsayılarının -3 ile +3 arasında olduğu görülmektedir. Puanların normal dağılım göstermesi nedeni ile çalışmada parametrik test teknikleri kullanılmıştır.

Ölçek puanının tanımlayıcı istatistiği Tablo 3'te sunulmuştur.

**Tablo 3.** Ölçek Puanlarının Tanımlayıcı İstatistikleri

	n	Minimum	Maximum	X	ss
İmaj Temelli Tüketim	713	4,00	20,00	11,51	5,40
Gösteriş Temelli Satın Alma	713	4,00	20,00	10,48	4,51
Tüketici Övünmesi	713	4,00	20,00	11,03	3,52
Tüketici Üstünlüğü	713	4,00	20,00	12,52	4,75
Tüketici Kibri Ölçeği	713	19,00	75,00	45,55	12,52

Katılımcıların demografik özellikleri Tablo 4'teki gibidir.

**Tablo 4.** Demografik Özelliklere Yönelik Dağılımı

	n	%	
1. Yaş	18-28 yaş arası	179	25,1
	29-39 yaş arası	197	27,6
	40-50 yaş arası	219	30,7
	51 yaş ve üzeri	118	16,5
2. Cinsiyet	Kadın	396	55,5
	Erkek	317	44,5

	Bekâr	302	42,4

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Tablo 4'e göre katılımcıların yaş aralıklarına göre dağılımı şu şekildedir: Bulgulara göre, katılımcıların çoğunluğu 40 yaş ve altında yer almaktadır. Katılımcıların çoğunluğunu kadınlar oluşturmaktadır. Bulgulara göre, katılımcıların çoğunluğu orta ve üst düzeyde eğitim almıştır. Katılımcıların çoğunluğu orta düzeyde gelire sahip olup, asgari ücretin altında olanlar da önemli bir oranı temsil etmektedir. Evli katılımcıların oranı %57.6 iken bekâr katılımcıların oranı %42.4 olarak belirlenmiştir. Bulgulara göre, katılımcıların çoğunluğu evlidir.

Katılımcıların tüketici kibri düzeylerinin cinsiyetlerine göre farklılıklarına ilişkin veriler Tablo 5'te sunulmuştur.

**Tablo 5.** Tüketici Kibrinin Cinsiyete Göre Farklılıkları

		n	X	ss	t	p
İmaj Temelli Tüketim	Kadın	396	12,09	5,49	3,215	0,001*
	Erkek	317	10,79	5,21		
Gösteriş Temelli Satın Alma	Kadın	396	10,65	4,81	1,148	0,252
	Erkek	317	10,27	4,09		
Tüketici Övünmesi	Kadın	396	10,85	3,93	-1,608	0,108
	Erkek	317	11,26	2,93		
Tüketici Üstünlüğü	Kadın	396	12,33	4,82	-1,200	0,231
	Erkek	317	12,76	4,66		

\*p<0,05 : t test

Tablo 5'e göre imaj temelli tüketim p değerleri 0.05'ten küçüktür ( $p < 0.05$ ). Bu durum, kadınlar ve erkekler arasında anlamlı farklar olduğunu gösterir. İmaj temelli tüketim, kadınlarda erkeklere göre daha yüksek ortalama değerlere sahiptirler. Diğer taraftan, gösteriş temelli satın alma, tüketici övünmesi ve tüketici üstünlüğü için p değerleri 0.05'ten büyüktür ( $p > 0.05$ ). Bu durumda, bu boyutlarda kadınlar ve erkekler arasında anlamlı bir fark olmadığı sonucuna ulaşılmıştır.

Katılımcıların tüketici kibri düzeylerinin yaş gruplarına göre farklılıklarına ilişkin veriler Tablo 6'da sunulmuştur.

**Tablo 6.** Tüketici Kibrinin Yaş Gruplarına Göre Farklılıkları

Tablo 8'e göre tüketici üstünlüğü puanı aylık gelir durumuna göre anlamlı farklılık göstermektedir (p<0,05).Ortalama puanlarına göre gelir düzeyi 22.501-27.500 TL aralığında olanların tüketici üstünlüğü puanı en yüksek iken gelir düzeyi 11.402 - 17.500 aralığında olanların puanı en düşüktür.

Katılımcıların tüketici kibri düzeylerinin medeni duruma göre farklılıklarına ilişkin veriler Tablo 9'da sunulmuştur.

**Tablo 9.** Tüketici Kibrinin Medeni Duruma Göre Farklılıkları

\*p<0,05 : t test

Tablo 9'a göre, imaj temelli tüketim, gösteriş temelli satın alma, tüketici övünmesi, tüketici üstünlüğü ve tüketici kibri ölçeği p değerleri 0.05'ten küçüktür (p < 0.05). İmaj temelli tüketim için bekârların ortalama değeri (X=9.99) evli olanların ortalama değerine (X=12.64) göre daha düşüktür, bu da bekârların imaj temelli tüketimde daha düşük puan aldığını göstermektedir. Gösteriş temelli satın alma için bekârların ortalama değeri (X=8.28) evli olanların ortalama değerine (X=12.10) göre daha düşüktür, bu da bekârların gösteriş temelli satın alma eğilimlerinin daha düşük olduğunu göstermektedir. Tüketici övünmesi için bekârların ortalama değeri (X=9.94) evli olanların ortalama değerine (X=11.83) göre daha düşüktür, bu da bekârların tüketici övünmesi eğilimlerinin daha düşük olduğunu göstermektedir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Tüketici üstünlüğü için bekârların ortalama değeri ( $X=10.36$ ) evli olanların ortalama değerine ( $X=14.11$ ) göre daha düşüktür, bu da bekârların tüketici üstünlüğü eğilimlerinin daha düşük olduğunu göstermektedir.

Elde edilen veriler doğrultusunda araştırma kapsamında geliştirilen hipotez kabul/ret durumları Tablo 10'da sunulmuştur.

## TARTIŞMA ve SONUÇ

Tüketici kibri, özellikle günümüz tüketicileri açısından daha çok dikkate alınması gereken bir unsurdur. Sosyal medya gibi platformların kullanımı yaygınlaştıkça her bir tüketici, kendi sosyal çevresini ve hayranlarını yaratmış, bu durum daha çok kendini seven ve diğerlerinden daha üstün gören bireylerin artmasına neden olmuştur. Buna ek olarak satın alınan ürünlerin sembolik anlamlarıyla kendilerini tanımlayan tüketiciler, satın aldıkları lüks ve pahalı ürünleri dijital ortamlarda daha kolay teşhir

edebildiklerinden kibir duygularının daha da perçinlendiği düşünülmektedir. Nitekim tüketici kibrinin demografik özellikler açısından farklılıklarının incelendiği bu çalışmada, sosyal medyayı daha çok kullandığı gözlenen genç tüketicilerin (Yaşar ve Uğurhan, 2021) daha yüksek tüketici kibri gösterdikleri tespit edilmiştir. Yapılan diğer çalışmalarda benzer sonuçlara ulaşıldığı görülmektedir (Chang vd., 2008, Workman ve Lee, 2012). Bu çalışmada ayrıca evli ve kadın tüketicilerin, tüketici kibrinin tüm boyutlarında daha yüksek puanlara sahip olduğu görülmüştür. Tüketici kibri, ilgili literatürde çok yeni bir konudur ancak gösteriş üzerine yapılan çalışmalarda evli tüketicilerin daha yüksek gösteriş eğilimi olduğu görülmektedir (Kaya ve Yalçın, 2018). Kadın tüketicilerde ise imaj temelli tüketim erkek tüketicilere göre daha yüksektir. İlgili literatürde kadın tüketicilerde, ideal imaja yönelik tüketim davranışlarının daha çok olduğu belirtilmektedir (Doğan vd., 2017; Yanıklar, 2006). Son olarak üst düzeyde geliri olan tüketicilerin tüketici üstünlüğü puanları daha yüksektir. Özdemir ve İnanç (2018) üst düzey gelir grubunda olanların gösteriş tüketimi eğilimlerinin daha yüksek olduğunu belirtmektedirler. Bu sonuçlar, bu çalışmada elde edilen sonuçlarla örtüşmektedir.

Araştırmada elde edilen bulgular doğrultusunda işletmelere ve araştırmacılara şu öneriler geliştirilmiştir:

- İmaj algısı yüksek ürünlerin tutundurma çalışmalarında daha çok kadın tüketicileri hedef alan tutundurma faaliyetleri yapılabilir.
- Evli tüketiciler, bekâr tüketicilere göre daha kibirli tüketim davranışı gösterdiklerinden, işletmeler bu tüketicilere yönelik kendilerini daha üstün ve başarılı hissedecekleri pazarlama stratejileri geliştirebilirler. Örneğin satın alınan ürünün başarı ve üstünlük yarattığı mesajı bu tüketiciler için daha değerlidir ve reklamlarda evli çiftler kullanılabilir.
- Üst düzey gelir grubunu hedef alan işletmeler, bu tüketicilere yönelik başarı ve üstünlük mesajlarına daha çok vurgu yapabilirler.
- Gelecekte yapılacak çalışmalar tüketici kibrinin, satın alma niyeti, benlik algısı ve yaşam tarzı ile ilişkileri üzerine odaklanabilir.

Bu çalışmada, zaman kısıtı ve mali kısıtlar nedeniyle 713 tüketiciye ulaşılmıştır. Daha kapsamlı araştırmalar için farklı kültürleri kapsayan araştırmaların yapılması gerektiği düşünülmektedir. Ayrıca Ankara ve Samsun dışında, Türkiye'nin farklı şehirlerini kapsayan araştırmalar yapılarak daha çok tüketiciye ulaşılmalıdır. Tüketici kibrinin, ilgili literatürde çok yeni bir kavram olmasına rağmen, gelecekte tüketici davranışını şekillendiren eğilimlerden biri olacağı düşünülmektedir. Gelecekteki tüketici davranışını anlamayabilmek için bu alanda yapılacak çalışmaların artması gerekmektedir.

**TARİHİ KIPÇAK TÜRKÇESİNDE AVCILIK TERİMLERİ  
HUNTING TERMS IN HISTORICAL KIPCHAK LANGUAGE**

*Arş. Gör. Dr. Rıza TUNCEL*

*<sup>1</sup>Araştırma Görevlisi Dr., Tokat Gaziosmanpaşa Üniversitesi, Fen Edebiyat Fakültesi, Türk Dili ve Edebiyatı Bölümü, Tokat, Türkiye.*

ORCID NO: 0000-0003-4364-1513

**ÖZET**

Avcılık tarih boyunca yalnızca insanlığın en eski geçim faaliyetlerinden biri olmamış; bunun yanı sıra doğadan kaynak elde etmenin alternatif bir yolu, inanç uygulamasının bir parçası, ticarete hammadde sağlayan bir unsur, savaş taktikleri ve uygulamaları konusunda bir tür deneme alanı ve soyut fikirlerin tuzak adı verilen bir nevi ilkel makineler haline dönüşmesini sağlayan karmaşık düşünsel ve eylemsel bir faaliyet alanı olmuştur. Konar göçer bir hayat sürdürdükleri için besin konusunda kaynakları belli sebeplerle dönem dönem kıtlaşan eski Türk toplulukları için avcılık bazen onları hayatta tutan en önemli besin kaynağı konumundadır. Önemli Türk topluluklarından olan Kıpçaklar da çeşitli nedenlerle av faaliyetleri gerçekleştirmişler ve bu faaliyete değer vermişlerdir. Bu durum, kaçınılmaz olarak Kıpçakların eserlerine de yansımıştır. Türk dilinin Orta Türkçe dönemine tekabül eden 13-15. yüzyıllar arasında Altın Orda Devleti coğrafyasında (bugünkü Rusya, Ukrayna ve Kafkaslar) İtalyan ve Almanların kaleme aldığı Codex Cumanicus ile, 13. yüzyılın ortalarından 16. yüzyılın başlarına kadar Memluk coğrafyasında (Mısır ve Suriye) varlık gösteren Kıpçakların dilinde yazılan eserler, ava dair bilgileri ihtiva etmesi açısından önemlidir.

Çalışmada öncelikle Kıpçakların ilgili dönemleri hakkında bilgi verilecek ve bu dönemlerdeki avcılıkları hakkında tarihî bilgiye yer verilecektir. Ardından tarihî Kıpçak diliyle yazılmış eserlerde bulunan avcılıkla ilgili terminoloji çeşitli kıstaslar göz önüne alınarak sınıflandırılacaktır (ava dair genel eylemler ve adlar, av araçları, avı yakalamada yardım eden hayvanlar vs.). Çalışmada, tarihî Kıpçak Türkçesiyle yazılmış eserlerde bulunan avcılıkla ilgili terminoloji, eğer varsa bağlamı ile birlikte değerlendirilecektir. Böylelikle avcılığa dair bu toplulukların algısı ve anlayışlarının bir bağlama oturtulması daha da kolaylaşacaktır. Nihayetinde, tarihî Kıpçak dilini konuşan toplulukların avcılık faaliyetinin nasıl ve ne şekilde gerçekleştirildiğinin ve hangi hayvanların avlandığının ortaya konması hedeflenmektedir.

**Anahtar kelimeler:** Kıpçak Türkçesi, av, avcılık, terminoloji, sözvarlığı.

**ABSTRACT**

Hunting has not only been one of humanity's oldest livelihood activities throughout history; it has also served as an alternative means of obtaining resources from nature, a component of belief practices, a supplier of raw materials for trade, a testing ground for warfare tactics and practices, and a complex realm of intellectual and practical activity that has transformed abstract ideas into a kind of primitive machinery known as traps. For ancient Turkic communities, who led a nomadic lifestyle and had periodically limited food resources due to various reasons, hunting sometimes served as the most crucial source of sustenance that kept them alive. The Kipchaks, one of the significant Turkic communities, also engaged in hunting activities for various reasons and gave importance on this activity. Indeed, this situation inevitably influenced the written materials of the Kipchaks. The written materials in the Kipchak language during the Middle Turkic period, which corresponds to the 13th-15th centuries in the Golden Horde region (present-day Russia, Ukraine, and the Caucasus) by Italian and German authors in the Codex Cumanicus, as well as the works written in the Kipchak language in the Memluk region from the mid-13th century to the early 16th century (Egypt and Syria), are important in terms of containing information about hunting.

The study will begin by providing information about the relevant periods of the Kipchak people, and historical information about their hunting activities during these periods will be presented. Subsequently, the terminology related to hunting found in historical Kipchak written materials will be classified based on various criteria, including general actions and words related to hunting, hunting tools, animals that help to catch prey, and so on. In the study, the hunting-related terminology found in historical Kipchak material will be evaluated with their context, if available. This will further facilitate contextualizing the perception and understanding of hunting within these communities. Ultimately, the goal is to uncover how and in what manner the hunting activities of the historical Kipchak-speaking communities were conducted and which animals were hunted.

**Keywords:** Kipchak language, hunt, hunting, terminology, vocabulary.

## **GİRİŞ**

*Güncel Türkçe Sözlük*'te (2005, s. 147) *av* maddesi "1. Karada, denizde, gölde veya akarsularda evcil olmayan hayvanları vurma veya yakalama işi. 2. Bir hayvanın bir başka hayvanı yemek için yakalaması. 3. Bu yollarla yakalanan hayvan" olarak açıklanmıştır. En basit ifadeyle çeşitli şekillerde vahşi bir hayvanın yakalanma/öldürülme işi olarak tanımlayabileceğimiz avcılık insanlık için oldukça önemli bir faaliyet olmuştur. Avcılık tarih boyunca yalnızca insanlığın en eski geçim faaliyetlerinden biri olmamış; bunun yanı sıra doğadan kaynak elde etmenin alternatif bir yolu, inanç uygulamasının bir parçası, ticarete hammadde sağlayan bir unsur, savaş taktikleri ve uygulamaları konusunda bir tür deneme alanı ve soyut fikirlerin tuzak adı verilen bir nevi ilkel makineler haline dönüşmesini sağlayan karmaşık düşünsel ve eylemsel bir faaliyet alanı olmuştur.

Konar göçer bir hayat sürdürdükleri için besin konusunda kaynakları belli sebeplerle dönem dönem kıtlaşan eski Türk toplulukları için avcılık bazen onları hayatta tutan en önemli besin kaynağı konumundadır. Önemli Türk topluluklarından olan Kıpçaklar da çeşitli nedenlerle av faaliyetleri gerçekleştirmişler ve bu faaliyete değer vermişlerdir. Bu durum, kaçınılmaz olarak Kıpçakların eserlerine de yansımıştır. Türk dilinin Orta Türkçe dönemine tekabül eden 13-15. yüzyıllar arasında Altın Orda Devleti coğrafyasında (bugünkü Rusya, Ukrayna ve Kafkaslar) İtalyan ve Almanların kaleme aldığı Codex Cumanicus ile, 13. yüzyılın ortalarından 16. yüzyılın başlarına kadar Memluk coğrafyasında (Mısır ve Suriye) varlık gösteren Kıpçakların dilinde yazılan eserler, ava dair bilgileri ihtiva etmesi açısından önemlidir.

Çalışmada öncelikle Kıpçakların ilgili dönemleri hakkında bilgi verilecek ve bu dönemlerdeki avcılıkları hakkında tarihî bilgiye yer verilecektir. Ardından tarihî Kıpçak diliyle yazılmış eserlerde bulunan avcılıkla ilgili terminoloji çeşitli kıstaslar göz önüne alınarak sınıflandırılacaktır (ava dair genel eylemler ve adlar, av araçları, avı yakalamada yardım eden hayvanlar vs.). Çalışmada, tarihî Kıpçak Türkçesiyle yazılmış eserlerde bulunan avcılıkla ilgili terminoloji, eğer varsa bağlamı ile birlikte değerlendirilecektir. Böylelikle avcılığa dair bu toplulukların algısı ve anlayışlarının bir bağlama oturtulması daha da kolaylaşacaktır. Nihayetinde, tarihî Kıpçak dilini konuşan toplulukların avcılık faaliyetinin nasıl ve ne şekilde gerçekleştirildiğinin ve hangi hayvanların avlandığının ortaya konması hedeflenmektedir.

## **YÖNTEM**

Çalışmada Orta Çağ Kıpçak topluluklarının avcılık faaliyetlerinin dil verilerinden hareketle anlaşılması ve yorumlanması hedeflenmektedir. Bu sebeple ilk olarak Orta Çağ Kıpçak devletleri ve coğrafyaları hakkında kısa bir bilgi verilecek ve Kıpçaklara komşu kavimlerin onların avcılık faaliyetleriyle ilgili verdikleri bilgilere kısaca yer verilecektir. Çalışmanın ana inceleme kısmında tarihî Kıpçak Türkçesi dönemine ait metinlerin söz varlıkları incelenecek ve avcılıkla ilgili olan kelimeler saptanacaktır. Sonra bu terimler av faaliyetini ifade eden adlar ve eylemler, bu faaliyeti gerçekleştiren fail adları, avcılığın gerçekleştirilme tarzına göre aktif ve pasif av alet, yöntem ve tekniklerine dair adlar, av ile ilgili mekânlar, avcıya yardım eden avcı hayvanlar ve av faaliyetinin nesnesi olan hayvanlar düşünülerek tasnif edilmişlerdir. Mümkün olduğunda av ile ilgili terimlerin geçtiği bağlamlar da dikkate alınarak ilgili av faaliyetinin tamamlayıcı unsurlarıyla bütünlüklü bir şekilde anlaşılması hedeflenmiştir. Terimlerin buldukları eserlere ve sayfasına atıfta bulunulurken eserler üzerine yapılan çalışmada kullanılan kısaltmalar dikkate alınmıştır.

## VERİTABANI

Tarihî Kıpçak Türkçesiyle ilgili yazılmış sözlük, gramer kitapları ve bu dilde yazılmış eserler çalışmanın veritabanını oluşturmaktadır. Eserler için kullanılan kısaltmalar şu şekildedir:

BM: Kitâbu Bulgatü'l-Müşâtâk fi Lügati't-Türk ve'l-Kıfçak

BV: Baytaratu'l-Vâzih

CC: Codex Cumanicus

DM: Ed-Dürretü'l-Mudiyye fi'l-Lügati't-Türkiyye

GT: Gülistan Tercümesi (Kitâb Gülistân bi't-Türkî)

İH: El-İdrâk Haşiyesi

İM: İrşâdü'l-Mülûk ve's-Selâtn

İN: Kitâb fi İlmi'n-Nüşşâb

KF: Kitâb fi'l-Fıkh

KFT: Kitâb fi'l-Fıkh bi'l-Lisâni't-Türkî

Kİ: Kitâbü'l-İdrâk li-Lisâni'l-Etrâk

KK: El-Kavanînu'l-Küllîyye li-Zabti'l-Lügati't-Türkiyye

MG: Münyetü'l-Guzât

MS: Kitâb-ı Mukaddime-i Ebu'l-Leysi's-Semerkindî

RH: Kitâb fi Rıyâzâtı'l-Hayl

TA: Kitâb-ı Mecmû-ı Tercümân-ı Türkî ve Acemî ve Mugâlî

TZ: Et-Tuhfetü'z-Zekeriyye fi'l-Lügati't-Türkiyye

## Orta Çağ Kıpçak Topluluklarının Avcılıklarıyla İlgili Edinilen Tarihî Bilgiler

Gerdîzî *Zeyn el-ahbâr* adlı eserinde Kimeklerin kökeninden bahsettiği kısımda, Kıpçakların da Kimeklerle aynı soydan türediğini belirtmiş ve bir türeyiş mitinden bahsetmiştir. Bu mite göre Tatarların küçük oğlu Şed (Şâd) ağabeyiyle anlaşamamış ve sevdiği bir câriyesiyle başka bir yere göçmüştür. Göçtüğü yer sulak, ormanlık ve av hayvanlarının bol olduğu bir yerdir. Anlatıya göre Şed ve câriye her gün iki av avlayarak geçinmekteydi. Samur, sincap ve kakım kürkünden giysi yapmaktaydılar. Gerdîzî'ye göre sonra Tatarların yedi çocuğu bu bölgeye gelmiştir. Bu gelen çocuklardan ikisi Kimek ve Kıpçak'tır. Daha sonra Tatar memleketine giden topluluklar, o memleketin harab olduğu haberini getirince bu yedi çocuk ve sülalesi Şed'in memleketinde kalmıştır (Şeşen, 2001, s. 73-74). Anlatılan mitin önemli yanı Kıpçakların köken anlatılarından en azından birinde avcılıkla ilgili bilgi bulunmasıdır. Kıpçaklar geçerek geldikleri bu yerlerinde av hayvanının bulunmasına dikkat etmişler, avcılığı önemsemişlerdir.

İdrîsî *Nüzhet el-müşâtâk fi ihtirâk el-âfâk* adlı eserinde yedinci ikliminin altıncı kısmında İç Kumaniye ile Bulgar ülkesinin bir kısmından bahsetmektedir. Bu kısımda Kumaniye ülkesinin kuzeyinde bulunan Ganûn adında bir gölün bulunduğunu, bu gölde bol balık olduğunu, gölün etrafında bulunan ağaçlıklarda parsaların yaşadığını belirtmiştir (Şeşen, 2001, s. 128-129). Balığa dikkat çekilmesi bu hayvanın yerel halk için geçim kaynağı olmasından, parsa dikkat çekilmesi bu hayvanın tehlikeli olmasından ve belki de bu sebeple ya da kürk elde etmek için avlanabileceğinden kaynaklanıyor olabilir.

Hükümdarların etrafında gerçekleştirilen avlara birbirinden farklı pek çok kültürde ve toplumda rastlanmaktadır (Allsen 2006). Memlûk hükümdarları da, Memlûk tarihçileri tarafından *es-sayd el-mubârek* "mübarek av" olarak adlandırılan bu tür avlar gerçekleştirmişlerdir. Hükümdarların av faaliyetiyle yakından ilgilenmeleri sebebiyle Memlûk sarayında bu konuda uzmanlaşmış görevlilerin de bulunduğu bilinmektedir. *Emîr şikâr* "av emiri" hükümdara av sırasında eşlik eden ve av av hayvanlarından sorumlu, *hâris et-tayr* "kuş bekçisi" kuşluktardan, *bâzdâr* "şahin eğiticisi" avda yardımcı

olan yırtıcı kuşlardan, *havandâr* avlanmak için yetiştirilen kuşlardan, sevvâk avlanan hayvanları tolamaktan, *kilâbzî* av sırasında köpeklerin sevkinden sorumlu olarak sarayda istihdam edilmiş görevlilerdir (Kortantamer, 2008, s. 73-74).

Hükümdarların öncülük ettikleri avlarda avcı kuşların da kullanılışı, bu kuşların bakımlarıyla ve avda kullanımlarıyla ilgili araştırmaları tetiklemiş ve *el-beyzere* adı verilen bu alanla ilgilenen bir araştırma alanı oluşturulmasına sebep olmuştur. Kuş avlarında yardımcı olacak kuşların eğitimi ve avlanacak kuşlara da bakmak için oluşturulan evlerin (*matâ'im et-tayr*) varlığı avda kuşların ne kadar önemli bir yere sahip olduğunu gösteren bir diğer unsurdur (Kortantamer, 2008, s.47).

Avın, Memlûk hükümdarları için iç ve dış diplomatik bağlar kurma ve var olan bağları geliştirme gibi işlevleri de söz konusudur. Bunu, Memlûk hükümdarlarının liderlik ettikleri av faaliyetlerine emirlerin de eşlik etmesi (Kortantamer, 2008, s. 47) bir tür bağlılık sunma biçimi olarak düşünülebilir. Bağlılığı ve karşılıklı anlaşmayı ifade etmenin bir diğer yolu olan hediyeleşmeler de Memlûklerin av faaliyetinde gerçekleştirdikleri bir eylem olmuştur (Kortantamer, 2008, s. 47, 48, 50). Buna ek olarak av sırasında başka ülkelerin elçileri de kabul edilebilmiş (Kortantamer, 2008, s. 49), onlardan da hediyeler kabul edilmiştir (Kortantamer, 2008, 51).

Hükümdarların liderlik ettikleri bu türden avlar Allsen *soylu avı* (royal hunt) olarak ifade etmektedir (2006, s. 14). Soylu avlarına tanıklık etmiş olan pek çok tarihçi, bu avın gerçekleşme biçimini tarif etmiştir. Soylu avının dikkat çeken bir örneği 1250'lerde Cüveynî tarafından kaydedilmiştir. Buna göre av kışın düzenlenmiş ve birkaç ay sürmüştür. Av hayvanlarının yoğunlaştığı bölgeler tespit edildikten sonra ordu geniş bir halka (Moğolca *nerge*) şeklini almıştır. Oluşturulan bu daire bozulmadan daraltılarak av hayvanları rahat bir şekilde avlanabilecek bir alana kısırlanmıştır. Bu halka düzeninde bozukluğa neden olan ve av hayvanlarını halkanın dışına kaçırarak ciddi cezalarla karşı karşıya kalmaktaydı. Halka başarıyla daraltıldığında halka alanı halat bir çitle çevrilip üstü keçe ile örtülmüş, ardından da av başlamıştır (Allsen, 2006, s. 27). Bu tarife benzer bir tarif Memlûk tarihçileri tarafından da yapılmıştır (Kortantamer, 2008, s. 47-48). Bu tarife göre av, katılımcıların *halka* şeklinde av bölgesini çevirmesiyle gerçekleştirilirdi. Avı yapılacak kuşlar salınır, onların yere konmalarını ya da yaklaşmalarını sağlamak için yere yem atılırdı. Kuş avından sonra sultan yabancı hayvanları da belli bir süre avladıktan sonra emirlerine de avlama izni verir (Kortantamer, 2008, s. 48).

Soylu avlarda hükümdarın avı başlatma geleneğinin altında, halklar için bazen zorunlu olan av faaliyetlerinin gerçekleştirilirken hayvanlarının atalarının kızdırılmamasının ve öc vesilesi oluşturulmamasının sağlanması istenmesidir (Roux, 1994, s. 181-182). Bu önemli sorumluluğu ve olası talihsizliği de hükümdarların üstlenmeleri beklenmektedir (Roux, 2005, s. 98, 110).

Allsen'in eserinde dikkat çektiği gibi, önemli doğal tehlikeler de barındıran av faaliyetleri siyasi rakiplerin ortadan kaldırılması için önemli fırsatlar sunmaktadır (2006, s. 207-208). Memlûk tarihçileri de av sırasında öldürülen pek çok üst düzey kişiye yer vermişlerdir. Bu kişiler arasında Sultan Kutuz ve Sultan el-Eşref Halil gibi devrin önemli isimleri de yer almaktadır (Kortantamer, 2008, s. 49-50).

## TERİMLER

### Avla İlgili Genel Adlar

İncelenen metinlerde av faaliyetini etmek için *av* ve *şayd* terimlerinin kullanıldığı tanıklanmıştır. İki terim de av faaliyetinin yanı sıra, avı yapılan hayvanı da ifade edecek bir kullanıma sahiptir.

*av* (I) "1. av (BM, Gİ, GT, İM, KF, KFT, Kİ, MG) krş. *uv*; *av avla-* "avlamak, avlanmak (DM) 2. av hayvanı (BM)

Gülistan Tercümesi'nde yer alan aşağıdaki bağlamda hükümdarla birlikte gerçekleştirilen bir *soylu avından* bahsedilmektedir. Hükümdar ve askerleri bahsi geçen avda geyik şişlemişlerdir. Kullanılan *şişlemek* eyleminden hareketle geyiğin avlanma işinin bir tür mızrakla gerçekleştirilmiş olabileceği düşünülebilir. Ancak bir diğer ihtimal de *şişlemek* eyleminin avda öldürülen geyiğin pişirilme yöntemine işaret etmesidir. Bu görüşü hükümdarın adamlarından birinin tuz aramaya gitmesi desteklemektedir. Dolayısıyla av sırasında, avlanan hayvanlardan bazılarının pişirilerek yendiği düşünülebilir.

GT 60 (30b) 13. satır

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

*hikāyet nūşın revān ‘ādil-ka avda kiyik*

61 (31a)

*şişledi-ler tuz yok idi bir kul kintke bardı*

*kim tuz kitürgey ....* (Karamanlıoğlu, 1989, s. 29-30)

“Hikaye: Nuşın Revan Adil’e avda geyik şişledi(ler). Tuz yok idi. Bir kişi tuz getirmek için köye gitti ...”

Gülistan Tercümesi’nde geçen aşağıdaki bağlamda hükümdarın (melik) askerleriyle avda çıktığı belirtilmiştir. Bahsi geçen avın kış vaktinde olması, soylu avlarının bazen kışın da yapıldığına bir delil olarak görülebilir.

GT 180 (90b) 10. satır

*hikāyet melik adil haş kul(l)arı bilen*

*avğa çıkıp kış künleri ‘imāret-den yırağ tüşüp*

*mağrīb ka yakın idi kim bir ikinci ivin kördi*

*-ler melik ayttı barıp anda tüşelim kim sizge savuk zahmet*

181 (91a)

*birmegey vezirlerden bir vezir ayttı kim melik-niñ* (Karamanlıoğlu, 1989, s. 89-90)

“Melik Adil ve has kullarıyla avda çıkıp kış günleri konaktan (makamından) uzak düşüp geceye yakın idi. Bir ikinci (kul) evi gördü. Melik söyledi: gidip oraya varalım ki size soğuk zahmet vermesin. Vezirlerden biri söyledi: Meliğin ...”

Gülistan Tercümesi’nde yer alan hikmetli sözde *av köpekleri* ve *pazar köpekleri* karşıtlığına yer verilmiştir. Bu ibare av için uzmanlaşmış köpeklerin bulunduğuna dair kanıtlardan biridir.

GT 336 (168b) 3. satır

*hikmet irdem-sizler irdem iyesin köre bilmes*

*niçük kim bāzār it-leri av it-lerin tilemes*

*yırağdın gavgā kılar yakın kilmes* (Karamanlıoğlu, 1989, s. 167).

“Hikmet: Pazar köpekleri(nin) av köpeklerini dilememesi (ve) uzaktan kavga edip yakına gelmemesi (gibi) erdemsizler erdem sahibini göremez”.

*şayd* “Ar. av, avlanma” (GT, İM)

Gülistan Tercümesi’nde av faaliyeti aşk ifadesini somutlaştıracak biçimde benzetme unsuru olarak kullanılmıştır. Burada *şayd* temelde avı yapılan hayvanı, benzetme unsuru olarak aşık olanı ifade etmektedir.

GT 267 (134a) 4. satır

*ol ir aytur bu ma’ñ-den ança sözledim kim sağındım*

*köñlün sözüme bağladı dağı özi maña şayd*

*boldı ol issi yüzli kız savuk hareket kılp*

*attı...* (Karamanlıoğlu, 1989, s. 133)

“O kişi söyler: Bu manadan (hareketle) şöyle söyledim: Gönünü sözüme bağladığımı ve kendinin bana av olduğunu düşündüm. O sıcak yüzlü kız soğuk (bir şekilde) davranıp attı ...”

*kış* maddesine bakınız (GT 195).

GT 245 (123a) 9. satırda *şayd* av faaliyetini ifade edecek bir biçimde kullanılmıştır.

*tüni kün közleriñ meşgul şayda*

*sana biz müştâğil sen ‘amru zayda* (Karamanlıoğlu, 1989, s. 122).

“Gündüz gece közlerin ava (av ile) meşgul, sana biz meşgulüz. Sen Amr ve Zayd’a (meşgulsün).”

*ğara kulağ* maddesine bakınız (GT 46).

### Avla İlgili Genel Eylemler

İncelenen metinlerde av faaliyetinin gerçekleşme tarzına, avlanan hayvana ve avda kullanılan yardımcı hayvanı kışkırtmaya yönelik kullanılan sözlere göre farklı terimler kullanılmıştır. Av faaliyetinin genel adına +IA isimden fiil yapım eki getirilmesi sonucu *av+la-* ve *av+la-n-* eylemleriyle ve buradan gelişen *ulu-* (*avla-* > *\*uvla-* > *\*uvlu-* > *ulu-*) eylemiyle, avın ok ya da benzeri fırlatmalı bir silah ile gerçekleştirilmesi *at-* eylemiyle, avın bir tuzak yardımıyla ya da elle yakalanması *tut-* eylemiyle, avlanan hayvanın türünü ifade eden *balık* kelimesine +IA isimden fiil yapım eki getirilmesiyle oluşan *baluğla-* eylemiyle, av faaliyetinin bir kovalamaca şeklinde gerçekleştiğini ifade eden *huvala-* eylemiyle, avda kullanılan köpeği ava teşvik etmek için kullanılan seslenmeyi ifade eden *kişgir-* eylemiyle kullanıldığı tanıklanmıştır.

*at-* “1. atmak, fırlatmak (...), 2. bırakmak, salmak (...), 3. ok atmak (İN, RH)

*avla-* “avlamak” (BM, DM, GT, İM, KFT, Kİ, RH, TA, TZ)

avcı maddesine bakınız (GT 209).

*avlan-* “avlanmak” (İM, KFT)

*baluğla-* “balık avlamak” (CC)

*huvala-* “Avlanmak, kovalamak, takip etmek” (CC)

*keyikle-* “avlamak, av yapmak” (BM)

*kişgir-* “tazıyı ava teşvik etmek, saldırtmak” (İH)

*tut-* (I) “1. tutmak (BM, BV, CC, Gİ, GT, İN, KF, MG, RH, TZ) krş. *dut-* (1), *tut-* (TA), *tut-* (KK) 2. elde etmek, yakalamak, saklamak (GT) krş. *dut-* II 3. bir şeyi salıvermemek üzere tutmak (İM), 4. dokunmak, el ile tutmak (İM) 5. yakalama (İM, MG)

*ulu-* (I) “avlamak” (Kİ)

### Avcı Anlamındaki Terimler

İncelenen metinlerde av faaliyetini gerçekleştireni ifade etmek için genel olarak avı ifade eden isme, avlanan hayvan ya da avda kullanılan alet adına +çl meslek eki getirilmiştir.

*avçı* “avcı” (GT)

GT 209 (105a) 4. satır’da geçen şiirde avcı kelimesi tanıklanmıştır. Bağlamda avcının avladığı hayvanın geyik olduğu ifade edilmiştir. Ancak bu sırada bir arslana rastlayan avcı korunma ya da arslan derisinin kıymetli olması sebebiyle bu hayvanı da avlamıştır. Avcının arslanı avlaması *tut-* eylemiyle ifade edilmiştir. Bu da arslanın derisine zarar verilmeyecek şekilde avlandığını ve avlanma sebebinin kıymetli dersi olduğu fikrini kuvvetlendirmektedir.

*şi’r təcir ki hemişe meksebitkey bir kün*

*mālın alıban anıñ harāmı yortar*

*avçı çıkıban kiyikler avlar vaktın*

*arslan körüben tutup terisin yırtar* (Karamanlıoğlu, 1989, s. 104)

“Şiir: Haydut her daim kazanç (elde) eden tüccar(ın) malını bir gün alıp kaçır. Avcı(nın) çıkıp geyik avladığı sırada arslan(ı) görüp tutup derisini yırtar.”

*avlavçı* “avcı” (TZ)

*oğçı* “okçu” (CC, İN, TA) krş. *oğçı* (DM, TA)

*baluğçı*: balıkçı (CC I) (CC I, s. 173)

*rāmī* “Ar. (ok) atan” (MG)

*şayyād* “Ar. avcı” (GT)

*ağ* maddesine bakınız (GT 188).

*av* maddesine bakınız (GT 336).

*süñüçi* “sümgü kullanan” (TA) krş. *süñüçi* (MG)

### Kullanılan Av Aletinin Türüne Göre

Avcının av sırasında daha aktif bir rol üstlendiği avlara aktif avcılık, daha pasif bir rol üstlendiği avlara pasif avcılık denmektedir (Jambalova, 1991, s. 28). Tabii ki bu iki avcılık tarzının arasında kalan bölgeler de vardır. Bu gibi durumlarda avcılık yönteminde avcının katılımının derecesi önemsenmiş, tasnif buna göre yapılmıştır.

### Aktif Av Aletleri

İncelenen metinlerde savaşlarda da kullanılan ok, yay, ok atmayı kolaylaştıran aletler ve sümgü anlamlarına gelen kelimelere rastlanmıştır. Bu tür silahların haricinde özellikle belli hayvanların avlanmasında kullanılan *çalış*, *kemān göre* ve *kuşluk* gibi kuş avlamada kullanılan özel ok ve aletler tanımlanmıştır.

*ayrıç* “iki çatallı olan ok, yol, tahta vb.” (Kİ)

*çalış* “okun kalın ve geniş” (İN)

*ebbe* “Ar. ok” (RH)

*kemān göre* “Far. T. içine çakıl koyup kuş vurmaya yarayan av aleti” (İH)

*kuşluk* (II) “kuşları vurmaya özgü geniş ok” (Kİ)

*nav* “Far. içinden ok atılan küçük oluk” (MG) krş. *nāvek* (MG)

*nüş(ş)āb* “Ar. ok” (İN)

*oğ* (I) “ok” (CC, İN) krş. *ok* (I) (DM, GT, Gİ, İM, İN, KF, KFT, Kİ, KK, MG, TA, TZ), *oyuk* (III)

*sümgü* “sümgü, kargı” (KK, TA) krş. *süñi* (DM, Gİ, GT, İM, KF, İN), *süñü* (CC, DM, GT, İM, KFT, Kİ, MG, TZ)

*süñülçe* “küçük sümgü” (CC)

*ya* (I) “yay” (CC, Gİ, İN, Kİ, MG, TA) krş. *yaa* (CC), *yay* (III) (DM, Gİ, İN, KK, MG, TZ), *ye* (CC)

### Pasif Av Alet, Yöntem ve Ürünleri

Avcılar avlarıyla aralarındaki farkları ortadan kaldırmak, kendi beden gücü kullanımından tasarruf etmek gibi sebeplerle en geniş manada tuzak kelimesiyle ifade ettiğimiz çeşitli düzenekler kurarak avlanabilirler. İncelenen eserlerde *ağ*, *av*, *dām*, *fak*, *ırğak*, *ilim*, *kapın*, *karmak*, *sırış*, *tuzak* gibi çeşitli pasif av alet ve yöntemleriyle avlanmışlardır. Bunlardan bazıları özellikle balık avı için özelleşmiş tuzaklardır (*ağ*, *av*, *ırğak*, *ilim*, *karmak*, *sırış*), bazıları da genel olarak “tuzağı” ifade eden araçlardır (*dām*, *fak*, *kapın*, *tuzak*).

*ağ* (II) “ağ, iplik, sicim, tel gibi ince şeylerden kafes biçiminde yapılmış örgü (BM, CC, GT, TA, TZ) krş *av* (III)

GT 188 (94b) 1. satır’da *şayyād*’ın balık tutmak için kullandığı alet ağdır. Burada avcı aktif bir görev üstlense de ağ teriminin geleneklele olarak pasif avla ilişkilendirilmesi uygundur. Bağlamda avcının balık avlamadaki başarısızlığının sebebi talihsizlik ve kader olarak açıklanmıştır.

*hikāyet bir za’if şayyādın-(nı) ağına kavi*

*balık tüşti tuta bilmedi balık şayyād ilinden*

*ağın alıp kitti şî’r*

*kiltürür irdi hemişe ağ balık-nı tutup  
kitti bu nevbet alıp balık ol ir ağın yutup  
özge şayyādlar aña melāmet kılıp ayttılar anıñ  
bigin şayd iline tüşti tuta bilmediñ ayttı  
ay qarındaş-lar nitse bolur çün benim andan  
naşibim yoq dağı anıñ sudan kısmeti bar idi meşel  
-de ayturlar ʔāli'-siz şayyād teñizde balık tuta bilmes dağı ecel-siz balık kuru yirde ölmes şı'r  
anı kim haq halāş itse belādan  
kiter ile (eyle?) alıp şayyād ağın (Karamanlıoğlu, 1989, s. 93)*

“Hikaye: Bir zayıf avcının ağına kuvvetli balık düştü. (Avcı balığı) tutamadı. Balık avcı(nın) elinden ağını alıp gitti. Şiir:

Getirirdi daima ağ balığı tutup.

Gitti bu sefer balık alıp o adamın ağını yutup.

Kendine avcılar ayıplayarak söylediler: Onun

gibi av eline düştü, tutamadın.

Söyledi: Ey kardeşler! Ne yapsa olur (ne yapabiliyordum)? Çünkü benim ondan nasibim yok. Ve onun sudan kısmeti var idi. Atasözünde (şöyle) der: Talihsiz avcı denizde balık tutamaz. Ve ecelsiz balık kuru yerde ölmez. Şiir:

Allah kimi beladan kurtarsa

avcı ağını alıp öylece gider.”

**av** (III) “ağ” (TZ) krş. **ağ** (III)

**dām** “Far. tuzak” (GT, KF)

GT 197’deki şiirde **dām** adı verilen ve güvercin (genel olarak kuş) avlamada kullanılan tuzağa kuşu çekmek için **dāne** “darı” kullanıldığı tanıklanmıştır. Tabii ki buradaki **dāne-i dām** kullanımı biraz da edebî gelenekten kaynaklanmaktadır. Ancak bu edebî gelenek te günlük hayata dair bilgilerden kaynağını alıyor olabilir. Dolayısıyla buradaki bu kullanımın somut bir gerçeğe de işaret ettiğini, kuş tuzaklarına (**dām**) yem olarak çeşitli tahılların konulduğu düşünmekteyiz. Kuşun tuzağa yakalanması bağlamda **każā** “kaza, kader” kavramı ile açıklanmaktadır.

... şı'r

*kime zamāne cefā kılmağa tiler bolsa*

*birür hilāf-i murādın aña kilip eyyām*

*kügerçin öz vatanını yana kaçan körgey*

*każā aña kılur ise naşib dāne-i dām* (Karamanlıoğlu, 1989, s. 98)

“... şiir:

Devir kime eziyet etmeyi diler olsa

Zaman ona istediğinin zıttıdır verir.

Güvercin öz vatanını nasıl görecektir?

Kaza ona tuzakta (bulunan) darıyı nasip kılır ise...”

**fağ** “tuzak” (İH)

**fiğ** “(hayvan yemi olan) fiğ” (İH)

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

*ırgak* “çengel, balık oltası ve benzeri şeyler” (Kİ, TZ) krş. *ıgık* (BM)

*ilim* “balık ağı” (CC)

*kapın* “tuzak” (İH)

*karmak* (CC) “olta”

*sırık* “sırık, olta sırığı” (CC) krş. *suruk* (CC)

*tuzak* “tuzak, ağ (BM, CC, DM, GT, Kİ, TZ) krş. *tuzaq* (TA)

CC 59a/11’de tuzak kelimesi dinî bir benzetmenin parçası olarak bulunmaktadır. Bu bağlama göre şeytan, insanlara tuzaklar kuran bir avcıdır. Kişi şeytanın tuzağına yakalandıktan sonra ne kadar yardım istese ve ağlasa da onu tuzaktan kurtaracak yardım gelmez. Bu bağlamda avcılıkla ilgili yapılacak çıkarım, benzetme unsuru olarak düşünülen tuzağın kendisine *ilin*’ilen (ip vb. ile oluşturulmuş bir düzeneğe düzeneğe ya da ağa takılmak, ilişmek) bir yapıda olduğudur.

*tüşerler yekning tuzak[i]na ilnirler anda ilap asov yoh neçe çağırrsa* (Argunşah ve Güner, 2015, s. 251)

“Şeytanın tuzağına yakalanırlar. O zaman ağlayıp ne kadar çağırırsalar (da) yardım yok”.

CC 69b/5’de tuzak kelimesi yine bir dinî anlatımı pekiştirmek için benzetme unsuru olarak kullanılmıştır. Ancak bu sefer tuzak sevginin tuzağıdır, yani olumlu bir bakışa sahiptir.

*alay bizni ilind[i]rdi sövmekniñ tuzağı* (Argunşah ve Güner, 2015, s. 290)

“O şekilde bizi yakaladı sevmek tuzağı”

*kuş* maddesine bakınız (GT 200 (100b)).

*kuş* maddesine bakınız (GT 226 (113b)).

*av* maddesine bakınız (GT 336).

GT 145 (73a) 11. satır’da tuzak kelimesi bir benzetme unsuru olarak yer almaktadır. Bahsi geçen bağlamın avcılık açısından dikkat çeken unsuru, tuzak ve ayak arasında kurulan ilişkinin doğasında gizlidir. Burada atıfta bulunulan tuzak, esas olarak avın ayağını yakalayan bir mekanizmaya işaret ediyor görünmektedir.

*eyā ehl-i dünya ve şāhib-i ‘iyāl*

*ayağın tuzağı oğul kız irür* (Karamanlıoğlu, 1989, s. 72)

“Hey dünya ehli ve aile sahibi!

Ayağın tuzağı oğul ve kızdır.”

*kuş* maddesine bakınız (GT 140 (70b)).

GT 330 (165b) 11. satır’da avcılık bilgisi açısından ilk dikkat çeken unsur av-savaş faaliyetleri arasında kurulan örtük benzerliktir. Buna göre düşman kişiye hile ile tuzak kuran avcıya benzetilmektedir. Tuzak kelimesiyle birlikte kullanılan *kur-* yardımcı fiili, tuzağın yapısının karmaşık, inşa edilen bir şekilde olduğuna işaret etmektedir.

*düşmen alına aldanmağıl dağı meddāh medhine mağrūr*

*bolmağıl kim ol al tuzağın kurup-turur dağı* (Karamanlıoğlu, 1989, s. 164)

“Düşman hilesine aldanma ve dahi meddahın medhine mağrūr

olma. O hile tuzağını kurmuştur. Ve dahi ...”

*av* maddesine bakınız (GT 336).

*yırgak* “kanca, çengel” (CC)

### Avla İlgili Mekânlar

Av faaliyetlerinde avın gerçekleştirildiği mekân ve bu mekânın düzenlenişi dikkat edilmesi gereken bir konudur. İncelenen metinlerde av faaliyetinin gerçekleştirildiği, av hayvanlarının çokça bulunduğu yerlerin özel olarak *avlağ*, *avlu* ve *kama* gibi özel adlarla dile getirildiği görülmüştür. Bu av yerlerine av faaliyetini kolaylaştıran bir unsur olarak avcıların kalabilecekleri mekânların inşa edildiği ve bu mekânların *avçılar evi*, *gümele* ve *kelik* kelimeleriyle ifade edildiği tanıklanmıştır. Avlanan hayvanlardan biri olan tavşanın yaşadığı yere de özel olarak isim verilmesi (*yağuk*), bu konuda insanların dikkatini göstermesi ve avcılık faaliyetinde kullanılabilir olması açısından önemlidir ve değerli bir bilgidir. Son olarak yaban hayatın var olduğu alanları ifade etmesi açısından *yâbânlık* kelimesine de rastlanması, Kıpçakların bu konudaki dikkatinin bir ifadesi olması açısından önemlidir.

*avçılar evi* “çalıdan, ottan yapılmış küçük kulübe” (İH)

*avlağ* (I) “1. av (TZ) 2. av yeri (TZ)” krş. *avlu*

*avlu* “av yeri” (Kİ) krş. *avlağ* (I)

*gümele* “avcı evi” (İH)

*kama* “Ar. av yeri” (BV)

*kelik* (I) “avcı kulübesi” (İH)

*yâbânlık* “Far. T. sahra, yabanlık, dışarı” (Gİ, KF)

*yağuk* “tavşan yuvası” (TA)

### Avda Yardımcı Hayvanlar

İncelenen metinlerde Kıpçakların av faaliyetlerinde av köpekleri, at ve çeşitli yırtıcı kuşları (kartal, doğan vs.) kullandıkları tanıklanmış ve bu hayvan adlarına çalışmada yer verilmiştir. Av faaliyetinde köpekler iz sürme, avlanan hayvanı korkutma, kovalayarak yorma, vurulan hayvanı avcıya getirme gibi konularda eğitilmişlerdir. At aktif avcılıkta avlanan hayvan ile avcı arasındaki hız farkını kapatması (Polat, 2008, s. 56) ve avcıya avantaj sağlaması konusunda değerli bir yere sahip olmuştur. Ayrıca savaşlarda da kullanılan at ve binicisi arasındaki uyumun gelişmesi konusunda da avcılık önemli bir yer tutmaktadır. Yırtıcı kuşlar özellikle kuş avında, bazen tilki gibi görece küçük cüsseli hayvanların avında avı gerçekleştiren unsur olarak kullanılmıştır. Ayrıca bu gibi hayvanlar avlarını kuş bakışı izleyebildikleri için kovalamacayı da kolaylaştırmaktadır.

*zađđar* “bir tür küçük köpek” (İH)

## Avı Yapılan Hayvanlar

İncelenen metinlerde ve çeşitli tarihî kaynaklarda Kıpçakların çeşitli nedenlerle kara hayvanları, balık ve kuşları avladıkları tespit edilmiştir. Kara hayvanlarından bazıları yırtıcı ve tehlikeli niteliğe sahip olduđu için bu hayvanlar prestij elde etme ya da korunma maksatlı avlanmış olabilirler. Bazı kara hayvanlarının kürklerinin değerli olması, onların avlanması için bir sebep olmuştur. Bazı hayvanlar sırf besin elde etme sebebiyle avlanmışlardır. Kuşların avlanmasının en temel nedeni beslenmek ve zor bir hedefi vurarak yetenek göstermek olabilir. Avlanan hayvanların arasında çeşitli kemirgen türleri de yer almaktadır.

*aķ aş* “as denilen derisi makbul hayvanın ak renklisi, kakum (İH), *aķ pars* “beyaz pars” (Kİ)

*kuş* “kuş” (BM, BV, CC, DM, GT, İM, KFT, KK, TA, TZ)

CC 60a/19-20’de kuş avının taş atma şeklinde gerçekleştirildiği ve kuşun ağaca konduğu sırada avlandığı bilgisi dikkat çekicidir.

CC 60a/19-20

*uzun ağaç başında*

*Urguvul atlı kuş oturur;*

*Anı atma er kerek,*

*yüregine taş kerek. Ol tın.*

“Uzun ağaç başında urguvul adlı kuş oturur; onu vurmaya er gerek yüregine taş gerek. O ruh.”

*balık* maddesine bakınız (GT 43).

GT 336’da bulunan hikmetli sözde kuşun açlık ve yem yeme isteği nedeniyle tuzağa yakalandığı bilgisi tanıklanmaktadır. Kuşun tuzağa yakalanması *tüş-* eylemiyle ifade edilmiştir. Bu eylemin avcılık açısından kullanımı genellikle avın bir tuzak çukuru yardımıyla yakalandığını çağrıştırmaktadır. Ancak tuzağa düşmek eylemi zamanla anlamını genişleterek tuzağa yakalanmayı da ifade eder olmuştur. Buradaki kullanım eylemin anlam genişlemesine uğramış hali olmalıdır. Bağlamda tuzak ile avlanan avcı anlamında *şayyād* kelimesi kullanılmıştır. *Şayyād*’ın tuzağı hazırlaması *kur-* eylemiyle ifade edilmiştir. Dolayısıyla bahsi geçen tuzak karmaşık, kurulan ve inşa edilen bir mekanizma olmalıdır.

GT 336 (168b) 8. satır

*hikmet boğaz belası bolmasa idi kuş tuzak-*

*-ka түşmegey idi şayyād dağı tuzakın kurmağay*

*idi ...* (Karamanlıoğlu, 1989, s. 167)

“Hikmet: Boğaz belası olmasa idi kuş tuzağa

tüşmeyecek idi. Avcı dahi tuzağını kurmayacak

idi...”

GT 226’da tuzağı kuran avcının kuşu yakalamak için sabırlı olması ve beklemesi gerektiği bilgisi yer almaktadır. Dolayısıyla burada avcının tuzak düzeneğini harekete geçirmesi gerekliliği söz konusu olabilir. Yani buradaki tuzak avcının sabırla bekleyip kuş tuzağa girince düzeneği harekete geçirdiği bir yapıda olmalıdır.

GT 226 (113b) 9. satır

(özne bir kim-irse)

*ni kündüz sabrı bar idi ni kiçe kararı bir kuş bigin*

*kim tuzak-ka түşmiş bolğay* (Karamanlıoğlu, 1989, s. 112)

“ne gündüz sabrı ne gece kararı var idi. Bir kuş gibi

tuzağa düşmüş olacak”.

GT 140'ta kuşun tuzağa yakalanması aşkın mecazî bir şekilde ifade edilmesi için kullanılmıştır.

GT 140 (70b) 10. satır

*yoluñda dġn ü dāniř terk itip-men*

*bu mihriñni köñülde berk itip-men*

*men ol kuř-men niçelerden ħutulğan*

*seniñ ‘iřķiñ tuzağına tutulğan* (Karamanlıođlu, 1989, s. 69)

“Yolunda din ve ilmi terk etmişim

Bu sevgini gönülde sağlamlaştırmışım

Ben nicelerinden kurtulan o kuşum

Senin aşkının tuzağına tutulan”.

GT 195'te avcılık bilgisi sevgi kazanmak anlamını somutlaştırmak için kullanılmıştır.

GT 195 (98a) 11. satır

*törtünçi hoř āvāz kirek kim dāvūdġ nağme bilen*

*uçar kuř-nı akar su-nı tıy-ğay dağı ol bu fazilet*

*bilen ħalāyık köñlin řayd ite bilgey* (Karamanlıođlu, 1989, s. 97)

“Dördüncü, Davudi nağme ile hoř sesli (birisi olması) gerek

uçan kuşu akar suyu dahi durduracak bu fazilet (erdem)

ile halkın gönlünü avlayabilecek.”

GT 200'de kuşun açlık sebebiyle, içerisinde yem olan tuzağa yakalandığı bilgisi yer almaktadır.

GT 200 (100b) 1. satır

*közün bađlar derāhim ‘ākil irniñ*

*řama’ salur uçar kuř-nı tuzak-ķa* (Karamanlıođlu, 1989, s. 99)

“Dirhemler (paralar) insan aklının gözünü bađlar.

Uçan kuşu tuzağa doymazlık salar.”

GT 126'da av faaliyeti yine bir anlatımı somutlaştırmak için kullanılmıştır. Bu bağlamdan avcılık açısından yapılabilecek çıkarım, kuş avında ağ kullanıldığıdır.

GT 126 (63b) 3. satır

*düşmen seni körüben iygü ‘amel içinde*

*da’vġ kuřun tuta almas ħurup bahāne ađın* (Karamanlıođlu, 1989, s. 62)

“Düşman seni iyi amel içinde görüp

bahane ađları kurarak dava kuşunu (kendi iddiasını, davasını) tutamaz”

*kuř maddesine bakınız* (GT 140 (70b)).

**ķutan** “bir kuş” (TZ)

**ķutuķ** “yabani eşek yavrusu” (BM, Kġ) krş. *ķoduķ, ķuduķ*

## TARTIŞMA VE SONUÇ

Çalışmada Orta Çağ dönemine ait Kıpçakça eserler taranmış ve eserlerde avcılıkla ilgili olan terimler tespit edilmiştir. Tespit edilen terimler av faaliyetini ifade eden adlar ve eylemler, bu faaliyeti gerçekleştiren fail adları, avcılığın gerçekleştirilme tarzına göre aktif ve pasif av alet, yöntem ve tekniklerine dair adlar, av ile ilgili mekânlar, avcıya yardım eden avcı hayvanlar ve av faaliyetinin nesnesi olan hayvanlar düşünülerek tasnif edilmişlerdir.

İncelenen metinlerden av faaliyetini ifade eden adlar olarak Türkçe *av* ve Arapça *şayd* terimleri tanıklanmıştır. Bu iki terim de “avı yapılan hayvan” ve “av faaliyetinin genel adı” anlamlarına sahiptir.

İncelenen metinlerde av faaliyetinin genel adına +IA isimden fiil yapım eki getirilmesi sonucu *av+la-* ve *av+la-n-* eylemleriyle ve buradan gelişen *ulu-* (*avla-* > \**uvla-* > \**uvlu-* > *ulu-*) eylemi kullanılmıştır. Avın ok ya da benzeri fırlatmalı bir silah ile gerçekleştirildiğini ifade eden *at-* eylemi ve avın bir tuzak yardımıyla ya da elle yakalanmasına işaret eden *tut-* eylemi tanıklanmıştır. Avlanan hayvanın türüne atıf yapan *balık* kelimesine +IA isimden fiil yapım eki getirilmesiyle oluşan *baluqla-* eylemi bulunmuştur. Av faaliyetinin bir kovalamaca şeklinde gerçekleştiğini ifade eden *huvala-* eylemiyle avda kullanılan köpeği ava teşvik etmek için kullanılan seslenmeyi ifade eden *kişgir-* eylemine yer verildiği görülmüştür.

İncelenen metinlerde avcıyı ifade etmek için avı ifade eden isme (*avçı* ve *avlavçı*), avlanan hayvan adına (*baluqçı*), avda kullanılan alet adına (*oşçı* ve *sünüçü*) +çI meslek eki getirildiği tanıklanmıştır. Bunun haricinde Arapça avcı anlamına gelen *şayyād* ve *rāmī* kelimeleri de metinlerde geçmektedir.

İncelenen metinlerde av faaliyetinde kullanılan yöntemin türüne göre av aletlerini aktif ve pasif av aletleri olarak sınıflandırmak mümkündür. Aktif av aletleri olarak ok, yay, ok atmaya kolaylaştıran aletler ve süngü anlamlarına gelen kelimeler kullanılmıştır. Bu tür silahlardan ve silah parçalarından başka özellikle belli hayvanların avlanmasında kullanılan *çalış*, *kemān göre* ve *kuşluk* gibi kuş avlamada kullanılan özel ok ve alet adları tanıklanmıştır. Pasif av faaliyeti çerçevesinde kullanılan tuzak adları olarak *ağ*, *av*, *dām*, *fağ*, *ırğak*, *ilim*, *kaplan*, *karmak*, *sırıh*, *tuzak* gibi çeşitli pasif av alet ve yöntemlerine rastlanmıştır. Bu tuzak adlarından *ağ*, *av*, *ırğak*, *ilim*, *karmak*, *sırıh* özellikle balık avlamada kullanıldığı, *dām*, *fağ*, *kaplan*, *tuzak* adlarının genel manada “tuzak” kavramını ifade ettiği tespit edilmiştir.

İncelenen metinlerde avın gerçekleştirildiği mekânlara özel olarak çeşitli adlar verildiği tespit edilmiştir. Av faaliyetinin gerçekleştirildiği, av hayvanlarının çokça bulunduğu yerler özel olarak *avlağ*, *avlu* ve *kama* olarak adlandırılmaktadır. Bu av yerlerine av faaliyetini kolaylaştıran bir unsur olarak avcılarının kalabilecekleri yapıların inşa edildiği ve bu yapıların *avçılar evi*, *gümele* ve *kelik* kelimeleriyle ifade edildiği tanıklanmıştır. Avlanan hayvanlardan biri olan tavşanın yaşadığı yere de özel olarak isim verilmesi (*yañuk*), bu konuda insanların dikkatini göstermesi ve avcılık faaliyetinde kullanılabilir olması açısından önemlidir ve değerli bir bilgidir. Av hayvanlarının çokça bulunduğu yaban hayatının bulunduğu alanları dile getirmek için *yābānlık* kelimesinin kullanıldığı görülmüştür.

İncelenen metinlerde Kıpçakların av faaliyetlerinde av köpekleri (*barağ*, *basan*, *fehîd*, *kelb*, *kılbarğ*, *köbük*, *parla*, *tazi it*, *zağar*), at ve çeşitli yırtıcı kuşları (*çağan*, *çakır*, *çarlak*, *çekük*, *çoğan*, *çura*, *güçiken*, *karakuş*, *karavaş*, *karçağa*, *kerkes*, *kırgı*, *köçken*, *kurğaş*, *kurugi*, *küçegen*, *laçin*, *sağangus*, *sar*, *soğanguş*, *songgur*, *şahîn*, *taşancıl*, *toruntay*, *tuğrul*, *yağlabay*, *yapalak*) kullandıkları tanıklanmıştır. Av faaliyetinde köpekler iz sürme, avlanan hayvanı korkutma, kovalayarak yorma, vurulan hayvanı avcıya getirme gibi konularda eğitilmişlerdir. At aktif avcılıkta avlanan hayvan ile avcı arasındaki hız farkını kapatması ve avcıya avantaj sağlaması konusunda değerli bir yere sahip olmuştur. Yırtıcı kuşlar özellikle kuş avında, bazen tilki gibi görece küçük cüsseli hayvanların avında avı gerçekleştiren unsur olarak kullanılmıştır.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

İncelenen metinlerde ve çeşitli tarihî kaynakalarda Kıpçakların çeşitli nedenlerle kara hayvanları (*ayrak, ayvuğ, bulan, eçki, elik, erkek, gazâl, ilik, kabak, karaca, keçi, kedik, keşi, keyik, keyik sığır, kiyik, koç, kolan, kutuk, oğlak, ovlak, savan keyik, sığın, sığır, sığır keyik, soğak, sovun, şovur, teke, teys, yaban eşeği*, ), balık (*balık, sazan balığı, sögen balık, toğu, yavri, yayın balığı*) ve kuşları (*ağulağaz, ala yapışkan, angıt, anır, badanağ, batuk, bedene, berbat, bildircin, borgağoy, cırlak, çağa, çapçuk, çarça, çerçe, çırlayık, çil, çiy, çobân aldağuçı, çul, deglüğeç, delice doğan, duğ, durğay, durrâc, enir, evrek, göçek kuşu, göl bağası, güverçin, ıtlâ kaz, ibük, iyiz, karılgaç, karlağaç, kartal, kaz, kejejen, keklük, kelek, keskerî, kılkuyrugu, kış kuşu, kızgaş, kızılça turğay, kiklik, koğı, kögerçin, kuğu, kulakaz, kumkuş, kuş, kutan, kügerçin, küvüldür, leklek, nusûr, oğaz, ördek, sağasğan, sağa, serçe, sığırçık, sövlün, süglün, şıbşık, tardar, til kuş, toğan, toğtoy, toy, turğay, turna, tülüveç, uğar kazı, übük, ügeyik, üptek, yazı gögerçini, yeder, yelve, yirik*) avladıkları tespit edilmiştir. Kara hayvanlarından bazıları yırtıcı ve tehlikeli niteliğe sahip olduğu için bu hayvanlar (*araslan, azıglı kedik, bars, bilçik, böri, bülçek, cānāvar, danguz, donguz, enük, esed, esri, hınzır, kaban, kabılan, kal, kaplan, kara kulak, kolat, kurt, mamrah, memreç, palang, pars, sırtlan, sağal, şir, tağuz, tonguz, vahşî, yabānî*) prestij elde etme ya da korunma maksatlı avlanmış olabilirler. Bazı kara hayvanlarının kürklerinin değerli olması (*ağ aş, ās, beyen, borsuk, davuşağan, delā, dilkü, kara teyin, kara küzen, karsak, kelenü, kıyan, kiş, koyan, köstebek, kunduz, künen, küzen, naman, opea, sağın, savsar, sıçan, silevsün, şugır şavşar, şal, tavşan, teyin, tilkü, yalman, yumran*), onların avlanması için bir sebep olmuştur. Bu hayvanların önemli bir bölümü kemirgendir. Bazı hayvanlar sırf besin elde etme sebebiyle avlanmışlardır. Kuşların avlanmasının en temel nedeni beslenmek ve zor bir hedefi vurarak yetenek göstermek olabilir.

#### ÖZET

Metaverse bireyler, işletmeler ve devlet kurumları için çok çeşitli olası uygulamaları sergiler. Sanal dünyaların işlevselliğinin, kullanımının ve etkisinin zamanla artması beklenmektedir. Metaverse insanlar, şirketler ve devlet kuruluşları için geniş bir potansiyel kullanım yelpazesine sahiptir. Sanal dünyaların beklenen gidişatı, bunların yeteneklerinin, kullanımlarının ve etkilerinin zaman içinde genişleyeceğini göstermektedir. İlk incelemede, tüketici ve şirket eylemlerinin, genellikle "trendler" veya "modalar" olarak adlandırılan, geçici olaylar olarak algılanabilecek özellikler sergilediği sıklıkla görülür. Bununla birlikte, zamanla bu eylemler giderek dünya çapında kalıcı toplumsal öneme sahip olacaktır. Mevcut salgın, metaverse'in benimsenmesinde ve kullanımında önemli bir artışa yol açtı. Metaverse kullanımı, dijital pazarlama ve markalama alanında önemli bir ilerlemeye katkıda bulunmuştur. Metaverse, marka merkezli içeriğin üretilmesi ve yayılması için potansiyele sahiptir. Arttırılmış gerçeklik ve sanal gerçeklik (AR ve VR) gibi gelişen teknolojilerin yapay zekayla birlikte dahil edilmesiyle son derece gerçekçi sanal dünyaların geliştirilme potansiyeli açıkça ortaya çıkıyor. Bu çalışmanın amacı, yapay zekanın akıllı ofisler üzerindeki etkilerini, dijital satış tekniklerini, metaverse pazarlamasını ve metaverse işyerlerinde çalışmayı incelemektir. Ayrıca, bu alanda yürütülen araştırmaların nispeten az miktarda olduğu göz önüne alındığında, metaverse ve yapay zekâ gibi teknolojilerin önemini vurgulamak hedeflenmiştir.

**Anahtar kelimeler:** Yapay Zeka, Dijital Satış Teknikleri, Metaverse, Metaverse Pazarlama, Metaverse Ofis.

#### ABSTRACT

The metaverse exhibits a diverse range of possible applications for individuals, enterprises, and governmental entities. The functionality, utilization, and influence of virtual worlds are anticipated to grow over time. The metaverse has a wide array of potential uses for people, corporations, and governmental organizations. The anticipated trajectory of virtual worlds suggests that their capabilities, use, and influence will expand over time. Upon first examination, it is often seen that consumer and company actions exhibit characteristics that may be perceived as temporary occurrences, typically denoted as "trends" or "fads." Nevertheless, with time, these actions will progressively have lasting societal importance on a worldwide level. The current pandemic has led to a significant increase in the

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

adoption and usage of the metaverse. The utilization of the metaverse has contributed to a significant progression in the domain of digital marketing and branding. The metaverse has potential for the generation and dissemination of brand-centric content. The potential for the development of extremely realistic virtual worlds is evident via the incorporation of developing technologies, namely augmented and virtual reality (AR and VR), in conjunction with artificial intelligence. The purpose of this study is to examine the effects of artificial intelligence on smart offices, digital sales techniques, metaverse marketing, and working in metaverse workplaces. Additionally, the aim is to highlight the importance of technologies such as the metaverse and artificial intelligence, given the relatively small amount of research conducted in this field.

**Keywords:** Artificial Intelligence, Digital Sales Techniques, Metaverse, Metaverse Marketing, Metaverse Office.

## INTRODUCTION

The term "metaverse" denotes a theoretical domain that exists beyond the confines of tangible reality and is distinguished by its perpetual and lasting essence. The environment is characterized by its ability to accommodate multiple users and its seamless integration of components from both the physical world and the digital virtual realm. This phenomenon may be attributed to the integration of many technologies that enable interaction with virtual environments, digital entities, and people through several modes, such as virtual reality (VR) and augmented reality (AR). Hence, the metaverse might be characterized as an intricate network of interrelated immersive encounters inside enduring multiuser platforms. This technology enables continuous physical user engagement in real-time and dynamic interactions with digital entities. The earliest iteration of the system comprised a network of virtual locations, whereby users' avatars possessed the capacity to shift fluidly between them through the use of teleportation. The present iteration of the metaverse comprises socially oriented and immersive virtual reality technologies that enable interoperability with large-scale multiplayer online video games, open game worlds, and augmented reality collaborative spaces (Mystakidis, 2022).

While the concept of telework has been around for a substantial duration, its visibility in the collective consciousness of the public has experienced a notable increase with the occurrence of the pandemic. Moreover, it is important to acknowledge that telework has seen substantial growth in terms of its scope and use in recent years. Prominent corporations, like Microsoft, Google, Siemens, and Meta, have gradually integrated teleworking into their established work protocols and have actively promoted the use of a hybrid office model (Birkinshaw et al., 2021).

The concept of a metaverse office entails offering people the ability to personalize a digital representation of themselves, facilitating the establishment of metaverse offices by companies, and facilitating communication between participants in a virtual environment. The notion of teleworking is currently seeing a shift as it moves towards the metaverse office paradigm. The surge in the use of metaverse office spaces may be attributed to several factors, including the impact of the pandemic, the increasing trend of globalization, advancements in technology, and the excitement of investors, notwithstanding the advantages offered by telecommuting. The use of technology provides organizations with several benefits, including cost-efficient office space, adaptable work arrangements for employees, and a reduction in carbon emissions and energy consumption. In comparison to traditional office arrangements, the metaverse workplace offers notable benefits through its ability to foster heightened levels of peer engagement and greater collaboration. Nevertheless, the notion of a metaverse workplace continues to evoke concerns regarding privacy, security, addiction, equity, and usability (Chen, 2023).

The literature pertaining to working in the metaverse universe in virtual offices was examined. Choi (2022) ran an experiment based on scenarios and posits that the implementation of telework has the potential to alleviate population pressure in megacities by incentivizing citizens to relocate from these densely populated areas. His study focused on the classification of telework into two categories: metaverse telework and non-metaverse telework. Also, he aimed to empirically demonstrate the positive impact of both types of telework on an individual's intention to relocate from a megacity to a non-megacity. This was particularly relevant in light of the increasing number of companies adopting

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

metaverse teleworking offices. Popescu et al. (2022) thoroughly included both theoretical and empirical literature pertaining to virtual workplaces situated inside the metaverse. Given the growing amount of evidence about immersive remote collaboration tools, behavioral predictive analytics, and extended reality technologies, it is important to look into how important remote collaboration tools, metaverse technology, and workplace monitoring systems are in virtual office spaces that include immersive digital environments. Chen (2023) investigated the potential use cases of metaverse offices within organizational contexts. These include examining the impact of immersive work experiences, the limitations of weak social networks, and the effectiveness of virtual meetings. He examined the application scenario and discussed four levels of organizational change that are anticipated to occur as a result of the future metaverse office. These levels include the inter-enterprise ecological collaboration model, distributed autonomous organizations, flexible leadership, and individual belongingness.

## METHODS

The present study utilized document analysis and comprehensive literature research as data collection and analysis methodologies, respectively, to investigate previously published works pertaining to the metaverse environment and the digital sales strategies implemented within virtual workspaces. Furthermore, an examination was conducted regarding the implications of the metaverse in the domains of marketing, office labor, and the ramifications of artificial intelligence on smart work environments. The totality of this research has been concluded. This investigation seeks to address the dearth of knowledge and provide a comprehensive analysis by emphasizing the significance of various technological advancements, such as the metaverse and artificial intelligence. This examination aims to address the existing knowledge gap and contribute to the limited body of research on this topic.

## WORKING IN METAVERSE OFFICE

In fact, working in the metaverse provided a solution that satisfied the needs of employees as well as the requirements of a variety of stakeholders, such as employers and HR managers. This compromise was an attempt to overcome important hurdles that are connected with entirely remote work. These concerns include difficulty in managing workers from the perspective of the organization, as well as issues related to self-discipline, poor performance, and feelings of isolation from the perspective of the worker. Simultaneously, it attempted to reduce the drawbacks of conventional office labor, such as the high expenses involved with renting or constructing expensive office buildings for the firm and the financial burden of dwelling in pricey neighborhoods near the workplace for employees. In other words, it wanted to make traditional office work less of a financial burden. The workplace of the metaverse makes an effort to maintain the beneficial qualities of working remotely while also incorporating the advantageous aspects of working in person and offline. This is accomplished by the implementation of elements such as the enhancement of social ties and collaboration, the facilitation of rapid involvement, and increased visibility of workers and the jobs they perform. One of the most severe challenges that were faced was the uneasiness felt by employees regarding the increased level of monitoring that was made possible by the use of the metaverse as a working environment. This was the case despite the fact that there were a variety of benefits connected with the use of the metaverse as a working environment. The visibility of workers and their work in the metaverse has the potential to make HR management easier and to build an atmosphere that encourages collaborative working relationships in the workplace. However, new employees who are thinking about entering the metaverse but have not yet had direct experience with it may find the increased social interaction and visibility to be challenging. This is because of the greater visibility of the metaverse. In addition, when the workplace moves from a physical area into the metaverse, where there are fewer restrictions on the speech and behavior of workers, there is the possibility that all of their words and acts will be stored as digital recordings. This will take place when the office makes the transfer (Park et al., 2023).

Teleworkers who work in a metaverse office environment may demonstrate greater self-confidence in their capacity to engage in telework tasks effectively, even when they are physically distant from their employer's location, in comparison to teleworkers who operate in a non-metaverse office setting. As a result, it is likely that individuals who participate in metaverse teleworking will demonstrate a higher propensity to move from highly populated metropolitan areas to locations that provide lower living costs and better ecological circumstances, as compared to individuals who do not engage in metaverse

teleworking. Despite the growing use of telecommuting and the challenges faced by densely populated metropolitan areas due to population strain, there is a dearth of studies examining the impact of telework on individuals' propensity to transfer from urban centers to less crowded areas. One prospective strategy for policymakers is allocating financial resources to facilitate research on technologies linked to the metaverse, encompassing virtual reality (VR), augmented reality (AR), head-mounted displays (HMD), sixth-generation mobile networks, and blockchain (Choi, 2022).

### **ARTIFICIAL INTELLIGENCE FACTOR IN SMART OFFICES**

The emergence of Industry 4.0 has introduced a comprehensive framework for the advancement and implementation of intelligent smart offices within the context of the current industrial revolution. In the present day, the utilization of advanced technologies, particularly artificial intelligence (AI), plays a significant role in maximizing office spaces and minimizing electricity-related expenses. The technologies that enable the deployment of AI-powered intelligent work environments include the Internet of Things (IoT), mobile applications, machine learning, and cloud computing. In the present day, individuals are devoting a substantial amount of their time to working in office settings rather than in their own homes. The growing dependence on electricity among office workers is facilitating improved convenience and productivity inside the workplace. Modern industrial facilities are equipped with many types of machinery that require a significant amount of electrical power. The use of an Internet of Things (IoT)-enabled artificial intelligence (AI) framework is utilized to optimize energy consumption in home operations, particularly in the context of lighting and fan usage. Machine learning methodologies are utilized to analyze the aforementioned dataset, with the objective of generating a visual analysis that enhances understanding of power usage trends and indicates possible opportunities for energy reduction. Moreover, cloud computing is a pivotal component that augments the efficiency of the Internet of Things (IoT) and enables the secure retention of significant quantities of data. The platform offers features that allow individuals to contribute to computing resources over the Internet. Hence, it is not unexpected that the origins of cloud technologies may be attributed to several components, including frameworks, efficient computing virtualization, networking, software services, distributed computing, and parallel computing (Swaroop et al., 2023).

### **DIGITAL SALES TECHNIQUES AND METAVERSE MARKETING**

The metaverse facilitates the provision of items that are not accessible in the physical sphere, owing to its wide range of features and technology. The virtual sphere lacks inherent regulations, allowing marketers to employ considerable imagination and innovation. Consequently, they are able to provide unique items that surpass the limitations of the physical world. The virtual aspect of the metaverse provides firms with the potential to effectively interact with a wide range of consumers, thereby providing an enhanced level of immersion. The commercials included inside the metaverse exhibit a significant level of engagement, setting them apart from other media formats. The deliberate construction of advertising's design and attributes can be intentionally devised to surpass the boundaries of reality and provide people with an elevated and transformative encounter. The product's high degree of immersion and interactivity allows customers to engage with it in a virtual fashion, thereby aiding marketers in the development of more complete consumer purchasing behaviors. The core elements of marketing inside the metaverse have similarities to those utilized in the physical realm, with the aim of creating authentic and engaging customer experiences. In order to attain success, it may be important for digital marketing tactics to undergo a process of growth. The need to reevaluate marketing objectives arises when incorporating the metaverse into business operations, despite the prevalent encouragement among marketers to launch activations inside the metaverse (Dwivedi et al., 2023).

The concept of the metaverse, which represents a potential evolution of the Internet, has attracted considerable attention from academic and corporate sectors alike. The metaverse can be imagined as a virtual world that includes three dimensions, providing a very immersive experience. Participants employ augmented reality (AR) or virtual reality (VR) technology to engage in communication with other individuals through the use of digital avatars that function as their visual representations. While initial versions of the metaverse may be observed inside many Massively Multiplayer Online (MMO) games, the full realization of the metaverse is expected to exhibit increased complexity and rely on a diverse array of technological advancements. The use of blockchain technology has the capacity to

generate a substantial influence on the metaverse, resulting in the formation of a decentralized and democratic virtual community that possesses an independent economic and governance structure. The potential implications of the metaverse for the sales and marketing sectors are substantial since it presents the possibility of constructing virtual retail environments inside the digital landscape of the metaverse. Moreover, the integration of virtual factories inside the metaverse has the capacity to greatly enhance operational efficiency for organizations. In addition, digital workplaces offer a streamlined platform that enables efficient communication among individuals. In the context of the metaverse creator economy, individuals are endowed with the capacity to generate user-generated content (UGC) and participate in commercial endeavors inside the designated marketplace. This facilitates the accumulation of bitcoins and tokens as a kind of compensation (Truong et al., 2023).

### **FINDINGS**

Upon examination of the pertinent scholarly literature, it becomes apparent that there is a dearth of studies conducted on the subject of metaverse workplaces. This phenomenon becomes evident upon examination of the pertinent scholarly investigations. Upon examination of the relevant literature, it is evident that this knowledge has been revealed. This information may be acquired through the examination of research conducted on a subject closely similar to the current topic, indicating its source. The advent of virtual workplaces in the metaverse has provided workers with unique opportunities to develop innovative digital sales strategies. These job prospects within virtual settings enable individuals to explore and invent novel techniques for conducting sales transactions in the digital realm. This phenomenon can be attributed to the presence of several virtual workspaces inside these settings.

### **DISCUSSION AND CONCLUSION**

It is becoming more important to understand the function that artificial intelligence (AI) plays in enhancing customer service, driving product innovation, optimizing human resource allocation for creative endeavors, and implementing approaches for cost reduction within a range of organizational frameworks. Moreover, it is becoming increasingly common knowledge that artificial intelligence (AI), commonly referred to as machine learning, is an essential component in the process of moving forward with product creation. Within the context of metaverse marketing, the use of digital selling tactics by means of the building of virtual offices within the metaverse world is of utmost significance. This may be accomplished through the creation of virtual offices. The metaverse and the real world are brought together through the creation of a link in order to achieve this goal. As a consequence of this, it is vitally required to place a greater emphasis on the exploration and development of technologies connected to augmented reality (AR) and virtual reality (VR).

It is vital for the growth of countries to attain some level of grasp of the relevance of the metaverse in connection to digital transformation. This understanding may be gained through study. If businesses want to keep their advantage in the market and be able to adapt to the quick speed of change, it is imperative for them to increase the amount of work and initiative they put into the areas. Users of virtual environments might be assigned onerous numerical targets that, should they want to do so, may be difficult to achieve. Within the confines of a confined physical space, one of the potential activities that may be carried out is known as the consolidation of virtual avatars. This is due to the fact that it would be extremely difficult to host a large number of these animals at the same time due to the limited space available. As a direct consequence of this, it is very essential to put money into the development of digital technologies such as the metaverse, artificial intelligence (AI), blockchain, digital twins, virtual reality (VR), and augmented reality (AR).

## A HOUSING REVIEW AT THE INTERSECTION OF ARCHITECTURE AND ARCHEOLOGY: EPHEBUS YAMAÇ HOUSES-2

### MİMARLIK VE ARKEOLOJİ ARAKESİTİNDE BİR KONUT DEĞERLENDİRMESİ: EFES YAMAÇ EVLERİ-2

*Assist. Prof. Dr. Ayça ARSLAN*

*Uşak Üniversitesi, Mimarlık ve Tasarım Fakültesi, Mimarlık Bölümü, 1 Eylül Kampüsü, Uşak.*

*ORCID NO: 0000-0002-5262-1429*

#### ÖZET

Bu makale, mimarlık ile arkeoloji disiplinlerinin ara kesitinde bir çalışma olarak, antik çağda konut yerleşimleri üzerine bir araştırma sunmakta ve antik çağda eski bir yerleşim olan, Efes Antik Kenti'nde bulunan, ilk ve önemli konut yerleşimlerinden Efes Yamaç Evler projesini incelemektedir. Efes Antik Kenti içerisinde kurulmuş olan bu son derece nitelikli Yamaç Evler konut projesi, zamanının çok ötesinde bir proje olup, teras evler tipinde tasarlanmış bir konut topluluğudur. Efes Yamaç Evler projesi, özellikle antik kent içinde bulunan diğer tüm farklı fonksiyonel yapılar olan, çarşı, pazar, anfi tiyatro, kütüphane, ibadethane ve tabi ki bağlantıları oluşturan cadde ve sokaklar, ile son derece uyumlu konumlandırılmış bir konut yerleşimidir. Yamaç Evler projesi bağlamı ile son derece uyumlu bir planlama olup, topoğrafyaya ve doğal çevreye uyumlu bir şekilde yerleşmiş, 7 adet teras ev ve onların peristil (avlulu ev) tarzında planlanmış, iklime uygun olarak tasarlanan avlularından oluşmaktadır. Bu doğal çevreye uyum ve iklimle barışık şekilde tasarlanan yerleşim, dönemine göre oldukça ileri bir konut planlaması örneğini teşkil eder. Çalışmada özellikle Peristilli avlu'nun çevresinde ki mekanlar ile kurduğu ilişkiye dikkat çekilmiş, ayrıca topoğrafya göz önünde bulundurularak tasarlanan teras evler tipolojisinin yaratmış olduğu özgün mimari özellikler; 7 konutun her birinin kendi manzarasının ve avlusunun olması gibi, Yamaç Evler yerleşkesinin planlamasının ne kadar özel ve özgün bir planlama olduğunun kanıtı gibidir. Bu bakımdan çalışmada, bu nitelikli konut projesi incelenerek, her bir konutun mekan organizasyonları, mekan sentaksı aracılığı ile ve ağaç grafikleri çizilerek özellikle mekan yerleşimlerinin, peristilli avlu etrafında ki organizasyonları incelenmiştir.

**Anahtar kelimeler:** Mekânsal tasarım, Antik konutlar, Efes Yamaç Evler, Mekân sentaksı, Peristil avlu

#### ABSTRACT

This article is a study at the intersection of the disciplines of architecture and archaeology and presents a research on residential settlements in ancient times and examines the Ephesus Yamaç Evler project, which was an old settlement in ancient times. This highly qualified Yamaç Evler housing project, established in the Ancient City of Ephesus, is a project far ahead of its' time and is a residential community designed in the terrace house type. Ephesus Hillside Houses project is a residential settlement positioned in harmony with all the other functional structures in the ancient city, such as; the bazaar, market, amphitheater, library, place of worship and ofcourse, the avenues and streets that form the connections.

The Yamaç Evler project is extremely compatible with its context and consists of 7 terrace houses and their courtyards, planned in peristyle (courtyard house) style and designed to suit the climate, settled in harmony with the topography and natural environment. The settlement, which was designed to adapt to the natural environment and be in harmony with the climate, constitutes an example of housing planning that was quite advanced for its time. In the study, attention has been given to the relationship between the peristyle courtyard and the surrounding spaces.

In addition, the unique architectural features created by the typology of terrace houses, designed taking into account the topography indicates the fact that each of the seven residences has its' own view and courtyard as a proof of how special and original planning of the Yamaç Evler project is. In this respect,

in this study, this qualified housing project has been examined and the spatial organizations of each house were examined through space syntax and by drawing tree graphics, especially the organization of the space settlements around the peristyle courtyard.

**Keywords:** Spatial Design, Ancient Houses, Ephesus Slope Houses, Spatial Syntax, Peristyle Courtyard

### 1. INTRODUCTION: SPACE & SPATIALITY & SPATIAL RELATIONS

Its' mainly aimed to explore spatiality and space relations of Yamaç Ev-2 dwelling units that are commonly organized around the peristyle courtyard. Thus, in the study firstly examinations on space and space relations have been realized. Than, Ephesus Yamaç Houses 2 have been explored as the field and case study with its' famous peristyle courtyards and all architectural features that are unique to Yamaç Ev-2. All 6 dwelling has been analyzed separately. Especially, dwelling-6 is investigated with its' large apse called 'basilica' as public space and an area for gatherings. Basilica is also the most huge and distinctive space with its' small lateral spaces organized hierarchically. Thus, a comprehensive spatial analyses and investigations into space organizations have been achieved. Yamaç Ev-2 settlement compromises unique space relations due to the topography such as; the peristyle courtyard of dwelling-6 transforms a scenery to the dwellings units 3-5-7. In addition, entrances of each house exhibit variations such as; 'side-front-back' street entrances also come forward. Each dwelling is unique by its' entrance hall due to the natural use of topography.

At the end, it's aimed to reveal spatiality of peristyle houses as an inter-discipliner study between architecture and archaeology. On the other hand, there is also a dynamic diversity between houses of Ephesus Yamaç Houses 2 and contemporary spatial relations existence will be examined over an antique style housing.

#### 1.1. Exploration of Space and Spatiality

Space architecture is an important dimension that distinguishes it from all other three dimensional production and design branches. (Necdet Teymur) Space is a place of a person or a group of people very simply. Space is an empty place that is determined by structure, material and character of organization where human beings, human relations involved and its' different from the area. (Gür Ş., 1996) On the other hand, Loidl & Bernard (2003) indicated that; "Pure space is an attempt to depict the (intellectual) construct of human space creation pictorially: space as a self-sufficient, inward-looking structure, characterized by equal, continuously closed boundary walls and a uniform, level surface. Space is a unit and we are in the middle of it" (Loidl & Bernard, pg:55, 2003)

Also as expressed by Loidl & Bernard (2003); "Area-unit spatial boundary relates to each other reciprocally: the weaker the 'spatial boundary' is, the more indistinctly it will function as a space-creating criterion, and the area-unit will have to assert itself all the more 'strongly' and clearly (and vice versa). The criteria 'weaker' and 'stronger' or 'clearer' always relate to degree of unity of **area-unit boundary**, or the degree to which they differ from their surroundings" (Loidl & Bernard, pg:50, 2006). Spaces can be defined by different sort of architectural elements physically such as; nodal elements (columns), vertical planes (walls), volumetric forms and level changes. By using planes more strong and enclosed spaces can be defined, whilst, by pointless elements more open, weak and integrated spaces can be determined, thus, the form of architectural elements create spatial degrees between weak to strong (Meiss, 2013). These dynamics between implicit to explicit or infinite to strongly defined borders of spaces create spatiality degree of spaces. The degree of spatiality increases from static to dynamic organizations and revealed into commonly open plan configurations with flexible and adaptable usages, which does not require any constructional changes. Space dividers can be both physical and non-physical.

#### 1.2. Overlapping and Transparency

One method of contemporary space organization is layering which consists of layers that overlap each other in one open space. There can be a total of four, five or six secondary or sub spaces in the same main space yet it appears as only one open space due to the overlapping methods used and the associated daily functions that occur in that space. It's observed that by overlapping, so many different spaces flow

and slide on each other because there is a very weak separation between, thereby is very dynamic space relation.

**Overlapping:** The closure of one of two shapes is a covering event. The rule is that overlapping shape at the front. Design elements such as; 'colour/value/texture' are utilized to further enhance the depth expression of the covering and consists of two types as vertical and horizontal overlapping.

**Transparency:** By transparency the overlapping and covered shape are better understood so that the three-dimensionality of depth and more accurate representation of the shape are provided. Transparency in structures can be provided not only with glass parts but also with the aid of lattice compartments.

### 1.3. Juxtaposition and interpenetration

There are two basic types of spaces that link to another space: juxtaposition and interpenetration. Juxtaposition consists of well-defined closed space sequences such as room, bedroom, cell, hall and corridor, which are all separated from other spaces with high levels of privacy and static. As indicated by Meiss (2010); spatial interpenetration creates continuity from one space to another from the moment an important element of definition; wall, ceiling, floor - appears to belong two or more spaces. (Meiss, pg.139, 2010) (Figure 1)

Figure 1. Exploration of spatial interpretation between 'kitchen-dining-living-work space' within open spaces

### 1.4. Horizontal syntax/juxtaposition

Spaces include density in addition to the depth, which indicates the syntax of spaces side by side, horizontally, which is generally useful when shallow spaces are the case. However, "Density is different from depth where serial visions and the overlapping of different functions appear in one space. Spatial relations can be expressed different sort of methods such as; by using different colors over 2d plans, interior elevations to express different functional spaces, and by using syntactic graphs" (Meiss, 2010) (Figure 2-3-4)

Figure 2. Horizontal overlapping of spaces; sliding light panels are used to create sub-spaces

Figure 3. Exploration of spatial relations by 2d plans and space syntax graph (Source: moddamavisehir.com)

Figure 4. Exploration of space relations

### 1.5. Space Organizations

Public spaces are defined with spaces which strongly have integration relations that all daily activities occur in one place such as; entrance, kitchen, living room, terraces, whilst, private compartments exhibit spaces for night and individual usages generally such as; ‘bedroom, dressing room, bathroom’. (Friedman A, 2012) Public spaces commonly exhibit multi-functional features suchas, a living room usage in daytime can be sleeping space at nights by the help of semi-transparent partitions and mobile furniture. (Figure 5)

Figure 5. Exploration space organization with space syntax method: 1+1.5 type house

## 2. EPHEBUS YAMAÇ HOUSES-2 AS FIELD AREA

### 2.1. Presentation of Ephesus Antique City-Unesco

Ephesus in Turkey’s Western Aegean coast near present day Selcuk in İzmir and is located 70 km güneybatı. While the area essentially lies on the plan in-between Bülbüldağ and Panayırdağ, the Virgin Mary’s house is located on the southern slopes of Bülbüldağ. Ephesus has always occupied an important place in transportation and trade between the Aegean Sea and Central Anatolia in the entire historical period. Having one of the largest ports, it was an economic platform and cultural intersection point between Anatolia and the Mediterranean World from the very beginning. Over time, Ephesus has always served as the main center for it’s surroundings, with fertile hinterland and rich natural resources for agricultural production. (Figure 6-7)

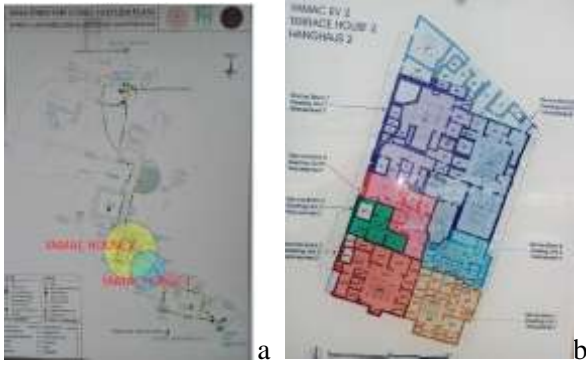

Figure 6. a. Ephesus Archeological Site Plan, b. Map of Yamaç House-2, exploration of 7 dwelling units by colors

Figure 7. a-b-c Recent years pictures of Ephesus Archeological Site, Kuretler Street (photos taken by author)

2012 was the 50.th anniversary of the discovery of slope house in Ephesus. Since its' discovery and especially the construction of the modern protective roof over it, these Roman residences in the center of the ancient city have become a complete attraction. The house group called Yamaç House-2, located in the city center of Ephesus and spread over an area of about 4000 m<sup>2</sup>, consists of seven houses on three terraces. Yamaç House-2 is one of the most scientifically important and remarkable monuments of Roman residential culture, due to its' extremely well preserved nature. In general, with Yamaç house-2, we are faced with a unique finding for the Eastern Mediterranean basin. (Ladstatter S.2013)

## 2.2. Topography and The Connection of Yamaç House 2 with Urban Architecture-Contextual Approach

By Yamaç House-2, we mean a residential complex in the center of the Roman Ephesus. The 4,000 m<sup>2</sup> insula was built on the steep Northern slope of Bülbülbağ located in the South of Ephesus. Yamaç house-2 is bordered by the road called Yamaç house street in the East-West direction to the South and Kuretler street to the North. The irregular route of the old ceremonial procession road, which is today called Kuretler street, which does not match the city's grid plan, is the reason the trapezoidal shape of the insula. On both sides of the building complex, to the East and West, it is limited by two stairways that meet a 27 mt elevation difference and give access to residential units.

In it's original form, the building complex consisted of residential units of almost the same size, with plots varying between 400 and 600 m<sup>2</sup>, closed on three terraces. Just the location of the Yamaç House-2 in the heart of the city center of the Roman Ephesus indicates that the inhabitants of the city were members of the higher layer of the city, who had the financial means to acquire property and property in this distinguished district.

Housing units in Yamaç house-2, are the city residences of famous and wealthy Ephesus citizens. Apart from this private residences, these houses also served the host to carry out their businesses, that is, to receive guests and customers and to show themselves out in general by these families.

Yamaç Houses 2, located with the borders of Ephesus ruins, are a residential area consisting of seven Roman houses of the ancient city. These very well-preserved houses that are built on terraces at the foot of Bülbül Mountain. Ephesus Yamaç Houses-2 area where the notables of Ephesus lived in antiquity, was a cemetery in the Hellenistic period before it was transformed into a living space by the Romans. The houses, whose first construction date was determined as the 1st century AD, were used until the city was abandoned with various additional changes in the following years. (URL 1) (Figure 8)

(source:<https://www.kulturportali.gov.tr/turkiye/izmir/gezilecekyer/efes-yamac-evler>)

Figure 8. Recent year view of houses in the ruins (photos taken by author)

### 2.3. Iconic Peristyle Gardens as Space Explorations

As defined by Cortes (2014); ‘*The second courtyard, where the atrium, which is a courtyard system surrounded by columns within high walls closed to the outside, is opened by an opening with columns on one side is called peristyle*’ (Cortes,2014). The peristyle seen in the 2.nd century BC Hellenistic and Roman architecture is completely open and most of the rooms of the house opened to this area. (Ilgin,2008) A garden was built in the middle of this courtyard, which is the traditional living space of the family and the Romans adapted Greek peristyle gardens to these atrium houses.

According to Özköse; ‘Peristyle was used as a garden in Romans, it was surrounded by rooms reserved for guests or servants’ (Özköse, 1995). Roman peristyle is not a passage court like in the Greek peristyle, it holds the place of the garden and is decorated with a pool. In addition to being a promenade, the galleries with columns increase the splendor and beauty of the courtyard with the decorations of various architectural and sculptural works.(Morkoç 2008)(Cortes A., 2014). According to Farar (1998), Roman peristyle represented the outer space brought to the interior by combining the stone-paved Greek Peristyle with Italian Garden. The peristyle was a central inner garden and was implemented as a domesticated version of the wild nature. The Romans preferred to create an order in their gardens, on nature, whether wild or cultivated. (Cortes A., 2014) (Figure 9)

Figure 9. A Roman peristyle house (source: Ada Cortes Vicente)

As indicated by Cortes; ‘*It’s an ongoing and complex discussion to define what a porticated courtyard, atrium, atriolum or peristyle is. For example, in Catalonia one finds examples of houses that could wrongly be identified as atrium houses. After close examination of their architecture and socio-historical context one realizes that they are porticated court houses*’ (Cortes A.,2014).

The peristyle house is essentially the house built around a peristyle, as the main transit area of the domus. As indicated by Cortes(2014), the axial layout consisting vestibule, peristyle and diningroom, is unique to imperial period peristyle houses. This transition space accommodates different porticos inside. Surprisingly, peristyle house may include courts more than one such as; house with two courtyards, but the main distribution of space is happen through peristyle.

In fact, it is important that when identifying this construction style in the bibliography, it is described as **peristyle house** and **porticated court house** without explaining the use of one nomenclature or the other. In Meyer's work (1999), examples of the two typologies appear under the same label: axial peristyle house. (Cortes A., 2014)

Hellenistic style peristyle was a central space and patio, covered with stone mosaic or marble, that ensures link to the backside rooms of the house. But Romans added porticos to this patio and imitated Hellenistic garden with more natural elements and arranged as open public space. (Cortes A., 2014)

### 2.4. Vestibule-peristyle-tirclinium spaces and their relations

Accordingly to Knight; 'Atrium-type dwellings, common in early imperial samples, were arranged on the atrium-tablium axis' (Knight, 1994). In imperial era residences, the atrium is generally positioned between the **vestibule and the peristyle**. The houses examined in Italy since the end of the 2nd century BC show different arrangements according to their axes. In most of these houses, defined as axial peristyl dwellings, the **vestibule-peristyl-tirclinium** sections are positioned in such a way that they can be transitional. (Figure 10)

Figure 10. The three axial areas which mark peristyle Roman house from the High Empire (scheme: Meyer 1999) B: view of of the centripetally Greek house (plan: Athens 10, Bonini 2006) (Cortes A., 2014)

The difference between Roman and Hellenistic style peristyle houses comes from their space distribution and use of structural elements such as portico. At Roman houses, space organization consists of a strong link between; 'vestibule (entrance hall)-peristyle courtyard-dining room' spaces axially. But, on the other hand, at Hellenistic houses, spaces organized around courtyard centrally instead of axially. (Zaccaria, 1995) (Meyer 1999)

The difference between two houses reflects a privacy concept of interior organization. However, at Roman peristyle house, privacy of interior spaces are very strong by the help of axially and deep space organization, but on the other hand, at atrium houses by centrality and shallow space organization, interior spaces are open to public. (Ghedini, 2003) (Cortes A., 2014)

This axial organization of vestibule-peristyle-dining room might have variations. And, Roman garden, in addition to its functional use, ensures physical comfort to rooms with green decorations. The peristyle was a central inner garden and was implemented as a domesticated version of the wild nature. (Cortes A., 2014)

### 3. HISTORY OF EFES YAMAÇ HOUSES

As a result of the excavations, ruins have been found showing that the hillside houses were built in the 1st century AD during the Augustus period and were used by repairs and modifications many times until the 7th century AD. Houses underwent major changes in the 2nd century AD. It's understood from the processing of these subjects on the frescoes that the hosts of this period were very interested in fine arts and theater plays. (Ephesus Mz. Directorate Archaeologists, 1995) (Figure 11)

Figure 11. Sample of Peristyle garden

### 3.1.Efes Yamaç House-1

The east of the two islands (insulae) unearthed by excavations were excavated under H.Vettres in 1960-67. The area covered by this insulae, which forms a building block in a modern sense, is approximately 3000 m<sup>2</sup>. There are six sitting units built as three terraces in the slopes of Bülbül Mountain. The seating units have been planned in accordance with the Hellenistic architecture in the form of rooms and other spaces lined up around the peristyle in the center. These houses, which have all the comforts of the era, are also located in an important part of the city. Some even small baths were found during excavations. The spaces are small and there are apses on the narrow sides.

### 3.2.Ephesus Yamaç House-2

The settlement traces on the northern slope of the Bülbül Mountain date back to the Archaic Age (7.th/6.th century BC). At that time, this area was used as a cemetery in the Hellenistic Period (ca 200BC), the slope was divided into parts by numerous terrace walls, and later it was subjected to an unplanned construction consisting of small units. Slope house 2 can be described as an insula ( a house rented to many people) with an area of approximately 4.000 square meters today. There are six different houses on the three terraces, each with separate entrance. There are two streets on both sides of the island, covering a 27.5 meters level difference as topography. The northern side of the hillside house 2 is bordered by a row of taberns (shops) on Kuretler street, and the 'Yamaç Ev street' which conforms to the grid plan of the Ephesus City, forms the southern border.

The seating units, which were built in the Early Roman Imperial Period (around AD 20) are characterized by a multi-storey central courtyard surrounded by rows of columns (peristyle) around which the working spaces for sitting and housekeeping are grouped. Water needs and expenditures were provided by walls, as well as a canal system divided into many branches. While the official reception halls or rooms of the house are decorated with rich decorations, parts of the house for study and use such as the kitchen and toilet have been left simpler. It is thought that the upper floors, which have not survived to the present, and are used for the purpose of hosting and visitin are especially luxurious floors.(Figure 12)

Figure 12. Recent years view from anfi-theater, (photos taken by author)

**\*Dwelling Unit-1:** Dwelling unit-1 indicates last pahase in the 3.rd century AD. Especially, noteworthy in project is the bath (SR3), furnished with a bath tub in the Northeastern part of the room and floor heating, as well as the high quality wall paintings of the theatre room (SR 6). In the main part of these paintings servant figures and theater scenes are displayed a mythological scene is preserved in the upper part. (Ladstatter S.,2013). (Fig 13)

Figure 13. Spatial explorations of dwelling unit-1

**\*Dwelling Unit-2:** In Dwelling Unit-2, the early Roman imperial ground plan was used until the destruction in the 3rd century AD. The entrance in the West leads to a small peristyle courtyard (SR27) whose Western hall was over built by a mill in the early 7th century AD. The main rooms were arranged around the central peristyle courtyard (SR22/23). A luxurious reception room (GEW D) with high quality wall and floor fittings opened onto the Southern hall of the peristyle. During the excavation numerous finds of the last period in the 3rd century AD were found. (Ladstatter S., 2013). (Figure 14-15-16)

Figure 14. Spatial explorations of dwelling unit-2

Figure 15. Spatial explorations of dwelling unit-2

Figure 16. Recent years views from peristyle courtyard of dwelling unit-2 (photos taken by author)

**\*Dwelling Units 3 and 5:** Originally a single house, units 3 and 5 were split into separate houses in the 2nd century AD. The small unit-3 boasts a rich figurative mosaic embellishment in three rooms and decorative wall paintings in the room of the Muses. (12). The utility rooms of unit-5 were reduced due to the installation of the Basilica (8) in the east but the unit still comprised representative rooms. A fountain was installed at the Southwestern corner of the courtyard. (Ladstatter S., 2013). (Figure 17)

Figure 17. a) Spatial explorations of dwelling unit-3 and 5. b) Reconstruction of peristyle courtyard of dwelling unit-5

**\*Dwelling Unit 4:** Like all the other dwelling units of Yamaç house-2, unit-4 was originally organized as a peristyle house. Due to the extension of unit-6 to the North (erection of the rooms 8 and 31) the area of unit-4 was reduced. The Peristyle courtyard (21) and the water basin installed there were replaced by a walled courtyard divided by pillars. The statue of the goddess Artemis which was originally set up at the basin was transferred to a niche in room. (Ladstatter S.,2013). (Figure 18-19)

Figure 18. Spatial explorations of dwelling unit-4

Figure 19. Peristyle courtyard of dwelling unit-4 (photos taken by author)

**\*Dwelling Unit 6:** In the 2.nd century AD the owners of the spacious unit-6 (surface area 950m<sup>2</sup>) can be identified with the family of C. Flavius Furius Aptus who held municipal and peristyl offices. Comprising the banquet halls on the Southern side, the splendid marble hall (31), the basilica (8) and the stucco room (8a), this dwelling unit resembles a palais. In the 3.rd century a private bath was built into the Eastern hall. This room is one of the areas of unit 6 which were used after demolishment. (Ladstatter S.,2013)(Figure 20)

Figure 20. Peristyle courtyard of dwelling unit-6

**\*Basilica (Bazilika):** The basilica was constructed with an apse and a barrel vault. Here, guests and clients were received by the owner. The main and lower parts of the walls bear traces of marble decor, the upper parts of the walls and the barrel vault are decorated with frescoes. The high quality decor of the Room 36 in front of the Basilica features a similar decoration. A water basin is situated in the center of this room which was roofed by a cross vault. (Ladstatter S., 2013).(Figure 21-22)

Figure 21. a) Basilica and the apsed hall of the dwelling unit-6, b) Marble hall of dwelling unit-6

Figure 22. Spatial explorations of dwelling unit-6

**\*Peristyle courtyard:** Originally the peristyle courtyard of dwelling unit 6 featuring 8 columns had at least two floors. The peristyle made accessible the Northern and Western rooms, but also the large hall (31) in the South. Floors and walls are decorated with marble fittings, a basin is installed along the South side of the courtyard. (Ladstatter S., 2013). (Figure 23)

## 4. SOCIAL LIFE OF YAMAÇ HOUSES-2 AND GENERAL FEATURES OF HOUSING UNITS

The first concept of Yamaç house 2 belonging to the Early Imperial Period consists of six residential units located on three terraces, with at least one upper floor approximately the same size (400-600 m<sup>2</sup>) peristyle house types. In the course of their use spanning almost 300 years, the houses have undergone changes that made them very different from their original state. As a result of these changes, the house standing on the middle terrace was divided into two as the 3.rd and 5.th residential units in the

continuation of the 2.nd century AD. And a city house like a palace emerged as the housing unit numbered 6 became imposing. (Ladsatter S.2013) The main entrances of the houses were usually on narrow streets with stairs and these entrances were emphasized as partly marble-covered main gates.

#### 4.1.Repetition of Courtyards

In the first building phase of Yamaç house 2, two types of peristyle houses are distinguished in terms of plan typology. The hallmark of the first type is a central pillared courtyard that can be accessed via narrow entrance. The courtyard was surrounded by galleries that allowed access to other parts of the house. In the second type; although the central peristyle surrounded by colonnaded galleries remained unchanged, another courtyard was placed in front of it, serving as a transition or connection space for relations with side spaces. (Ladsatter S.2013) (Figure 25)

Figure 25. a) 1.st building phase, dwelling unit-2; 1st building phase, b) Exedra of dwelling unit-1

The central peristyle courtyard functioned as the connecting space, communication point, and an ostentatious reception room for guests and clients. For this reason, the center of the house and the place where the heart beats has gained an extremely elaborate and partially magnificent equipment with cut stone architecture, marble and colored, stone wall coverings, very high quality wall paintings, multi-colored mosaic floors and ornamental fountains. (Ladsatter S.2013) Thanks to the reliefs and scultural groups and their decorative display, these columns emphasized the importance of the courtyards as the core parts of the show of houses. Open courtyards also fulfilled the functions of being the light source and ventilation of the house. There were regulations regarding the house cult in the entrances of the houses or in the courtyards. Their form could differ depending on the possibilities preferences and tradition in the family. In this context, there were also many spaces devoted to small cult rituals in which heros and funeral dinner reliefs were placed. Generally in the southern part of the houses, there were places or space groups that were especially prominent with their favorite positions and ambitious equipments. (Ladsatter S.2013)

#### 4.2.Space Organizations

There should be areas of acceptance and service in these areas. Taking advantage of the slope location, small rooms were also opened in the South by carving from the bedrock. These rooms were used for the storage and cooling of food. On the other hand, in the North there are generally large reproduction venues where guests are welcomed and symposiums and conviviums are held. These spaces generally opened to courtyards with wide door and window openings and they were very impressive with their magnificent hard-ware and decorations. (Ladsatter S.2013)

Other spaces with strong equipment were generally located directly opposite the entrances, directly adjacent to the courtyard. These spaces would immediately attract the attention of the visitors. It should be mentioned that there are many side spaces such as cubiculum and cella (bedroom) in addition to these main spaces. These were accessible either from the courtyard galleries or from other rooms. (Ladsatter S.2013)

Their simple decorations were different from the others with their secondary positions in the house layout and they served as bedrooms and refection rooms. In the ancient World, there were no spaces reserved only for children in the Roman period. The children of the hosts either slept in the same room as their parents. Servants slept in the courtyard or in the workshops. Housework, kitchens and latrines were predominantly at the entrance to homes and could be shared by several residential units. In addition, the houses had rooms and bathrooms that were heated to the high standard of living of their inhabitants. (Ladsatter S.2013)

#### **4.2.1. Multi-Layered Spaces & Spatial Depth- Vertical Syntax**

All residential units have an upper floor. It has been proven that residential units 4 and 6 also have a second floor, at least in the end-use phase (260 AD). It is plausible that the plan of the upper floor resembles the lower plan, even for static reasons alone. Access to the upstairs can be both by stairs at downstairs in the courtyards and vestibules, these could have the same entrances directly from the upper floor.

Such a situation has been proven, for example, for the residential unit 4, where a staircase parallel to the 1.st staircase street opens to the first floor of the building. The same is likely to be the case in the housing no 7, the upper floor of which can be accessed from the 3.rd stairway street. This was not a must, as it could be directly linked between the ground floor and the upper floor. Another possibility is that there are workplaces on the upper floors that open to the street side and do not have to have a spatial connection with the house itself.

Although the equipment and items of the ground floor are mostly recovered in situ or where they fell, the reconstruction of the appearance of the upper floors should be done based on the finds in the destruction layer.

#### **4.2.2. Upper floors**

It should be noted that the equipment of the upstairs residences, which partially overshadow the downstairs, is remarkable. The SANATKARE in the dwelling unit-6 with an assertive mosaic floor, stepped fountain and hot air heater are a good example of this.

In addition, on the upper floors, there were all the functional areas needed in a Roman house. These included colonnaded courtyards, show off sections, tricliniums, and partially heated cubiculum as well as workshops or latrines, kitchens or small courtyards.

One of the typical features of Yamaç house-2 is that the individual housing units are connected with the other and some areas are shared. These include especially households, places for water supply and latrines. In this case, it was generally possible to move from the upper floor of one house to another. Another reason for the attractiveness of the upper floors may be that it offers the opportunity to watch the impressive view of the city and its' surroundings with the help of the terraces and windows facing outside. (Ladsatter S.2013)

#### **4.3. Lighting and ventilation**

The natural lighting and ventilation of the houses, especially the ground floors, was provided through the central and open peristyle courtyards. High windows above the doors and the door openings themselves were contributing to the ventilation of the space. (Fig 49) Large glazed window set in wooden frames, for example, courtyards with peristyle (SR 22/23; 38B) in residential units 2 and 7, separated from the adjacent representation spaces. (Fig 26) (Ladsatter S.2013)

Figure 26. a) Window of dwelling unit-6 on the hall, b) Dwelling unit-7 peristyl courtyard relation with neighbour with window

#### **4.4. Roofs**

The galleries on the sides of the colonnaded courtyards, which are the central elements of each housing unit, were covered with inward-sloping roof surfaces, and the middle was open. The gallery roofs could be in the form of a single pitch or gable roof. They allow rainwater to flow into the courtyards with a

slope of 15-20. Flat roofs, on the other hand, are rarely identified and were generally used to cover terraces.(Figure 27) (Ladsatter S.2013)

Figure 27. Roofs of dwelling unit-6

#### 4.5. Spatial Explorations in Ephesus Yamaç House 2

##### 4.5.1. Guest Reception and Entertainment Departments: Engagement Venues

The function of the peristyle rich houses, with some variants of which we encounter in Yamaç house 2, is not limited to being the private living space of the Roman family: it also served as an official stage for the boss in the perception of his social and/or work related duties. Thus, the descriptions played a role in affirming or ensuring clarity of values and cultural ideals while fulfilling tasks such as space arrangements, creating atmosphere and being decorative. The function of the spaces can be understood from the size of the house, their relationship with other spaces, their equipment, the location of the doors and windows, the light and the weather conditions in the room, and also the marble recovered in space. This includes highly emphasized representation spaces that are used especially for reception and entertainment. (Ladsatter S.2013) (Figure 28)

Figure 28. a&b) Courtyard of dwelling unit 4 Red colored courtyard of dwelling unit 1

##### 4.5.2. Welcoming and waiting rooms and the relationship with peristyle

The reception and waiting rooms are adjacent to the courtyard and are located in the core part of the house with these locations. (Figure 29)

Figure 29 Spatiality of **exedra**

In Yamaç House 2, the **EXEDRA** style is often preferred for spaces with this function. This is a niche-like space that opens transversely to the courtyard and can be highlighted with columns and sequins. The reception and waiting rooms are neighboring the peristyl courtyard and located in the core part. With its central location and magnificent decoration, it is aimed to impress those who step here. This influence was additionally provided by consciously formed gaze axes. Its center is marked and with its magnificent language, it is aimed to affect those who step here. This influence was additionally provided by consciously formed gaze axes. Neither the expense nor the trouble was spared in order to respond to the homeowner's need to stage himself, as the latest equipment of the exedra of housing unit 2 impressively demonstrates. Architecture and hardware are here in direct communication with each other; **courtyard and exedra almost talk to each other and melt into each other to form a single space whole.** (Ladsatter S.2013)

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

The venues for receiving and hosting guests in the hillside house 2 are numerous and their forms are also very diverse. These are distinguished by their width, priority position and equipment in the house. On top of that, they could have special symposium, related extensions or furniture. (Fig 30-31) There had to be enough room in these spaces to accommodate the clinics on which the guests lay. (Ladsatter S.2013)

Figure 30. a) Dwelling no-2 no view form triclinium to eksedra, b) Wall niche in the space SR18, c) Eksedra with its rich mosaic decoration

Figure 31. a) The big peristyle courtyard of the dwelling unit-6, b) Reconstruction of the marble hall

Peristyle courtyard as **repetitive spaces**, studies conducted here have shown that there are two different housing groups according to the peristyle and the surrounding areas. In the center of the houses in the first group, there are individual rooms around the peristyle. In the second group; although the peristyle is located in the center of the houses, it has been observed that in front of the courtyard there are spaces for entrance and located a second front courtyard with a welcoming function opening to the neighbors. (Ladsatter S.2013)(Figure 32-33)

Figure 32. a) Peristyle courtyard, b) Fountain at the entrance (SR1) of the house

Figure 33. a&b) Volumetric repetition of peristyle courtyards

The spaces named SR27 and SR22/23 in housing unit 2 in, are an area with two courtyards that provide access to each other. Here, SR 27 area was firstly defined as the entrance area and atrium, and then it was understood that it was peristyle.(Figure 34)

Figure 34.a-b) basilica-atrium-courtyard relation

In addition, at the entrance of the peristyl courtyard of the housing unit 2, there is a relief depicting a hero, presented as a respect for the family cult, just like in the atrium houses. Since the courtyards of the residences located in the South, have a luxurious and spacious decoration, it is thought that they are the areas where the house owners meet their customers and guests. It is thought that the rooms decorated with similar prestige in the northern part are an area where guests are welcomed and banquets are given. (Ladsatter S.2013)

### 5.Conclusions

As consequences, it's aimed to make an investigation of an antique house between the intersection of architecture and archeology. To realize, this research topic, space organizations of contemporary houses have been introduced first, to indicate the core research topic which is; '**space and spatiality**', compromising both today and antique houses, to demonstrate similarities between two different styles by compromising space organizations of contemporary and Ephesus Antique Hillside houses'.

Through analyzes, its' found that spatial features of Yamaç house 2 project indicate highly unique, original space feautres and relations.

1.Firstly, through spatial relations, all seven housing units of Yamaç house-2 project show similar space patterns with shallow space syntax, where the peristyle is the hard at all seven houses and all spaces are organized around this peristyle, which are gathering, socializing, open public spaces. Peristyle courtyards show similarities with the living space of contemporary houses which accomodates all daily activities in one open plan such as; entrance-hall 1-hall 2-hall 3 (even some more designed types)-kitchen-dining-working-living-terraces.

2. The hillside hosues project has especially shown that entrances have a very important place in these ancient houses. So much so that seven residences in the project have a secondary peristyle courtyard, especially at the larger houses. this actually points to an important spatial analysis. As the residences grew larger, comfort was provided with secondary courts inside the residence to ensure that the spaces receive air and daylight. Of course, the Romans achieved this solution, by peristyle courts which enable extensions of houses.

3. It's found that; unlike Hellens, the Romans, two important civilizations, used courtyard solutions in their architectural designs due to their location and being from the Mediterranean. The courtyard solution which is unique to Mediterranean architecture, shows itself in ancient residences. In fact, seeing this peristyle courtyard in Roman and Italian gardens, that is, in an open public space, is a unique feature of Italian garden design. This unique 'perisytle courtyard' concept in Italian gardens was used in paralel with the residences to ensure that the residences received light and air. Thus, especially the large ones of the 7 houses, its' found that, there commonly 2 peristyle courts exist.

4.Unlike the Greeks, the Romans used the peristyle courtyard with porticoes. This created a significant difference between thetwo types of housing, between Roman and Greek houses. This portico architectural element is the reason why the courtyard is read as an atrium in the Greek house and as a

peristyle courtyard in the Roman house. The use of this architectural element increases privacy in the interior spaces of Roman houses.

5. Being from the Mediterranean residential, entrances are provided always from the courtyard, which was an open space for both Romans and Greeks. However, there is an important space organization and linear axis system that distinguishes Roman houses from Hellenistic houses; it starts from the entrance area, passes through the peristyle court, and ends with the reception area; entrance (vestibule)-court(peristyle courtyard)-guest reception/welcoming area(tirclinium /exedra). This unique space organization is found all seven houses.

6. Therefore, the entrance space (vestibule), which is open to everyone, is at the end of the axis in the middle of the peristyle courtyard, only selected people can enter. This reception venue is not available in Helen residences. This linear axis system is present in the space organization of the 7 residences in this Yamaç Evler project. Thanks to this axis system, residential spaces are deepened and privacy is increased with full of daylight.

7. The space syntax graphics and plan drawings adapted to the seven residences in the Yamaç Evler project indicate that the space organizations of these residences have deep tree graphics in relation with privacy concept. It's found that; the first peristyle courtyard in front of the entrance was designed to separate the people entering the house (guests and households) and was more like a courtyard garden for guests, while the second peristyle courtyard was designed to distribute the interior spaces in the background of the house and to solve the light problem in the depths. That's why every house has at least 2 peristyle courts.

8. Upper floors which are not exist today, generally thought to be opposite with downstairs and use for working spaces and constitute the public compartments of the houses with a secondary entrance halls.

9. Generally all 7 houses have at least 1 peristyle courtyard except dwelling unit 4 which has 2 peristyle courtyards where the peristyle act as welcoming hall.

10. All houses show a shallow space organization around the 2.nd peristyle where all spaces open to this area, thus private spaces are very dense and integrated instead of depth. Especially 'vestibule-peristyle-tiricubulum or exedra' axis is very visible and show similarities with contemporary houses where spaces juxtapose openly as 'entrance-hall 1- hall 2-private spaces'

11. The spatial relation of reception rooms (GEW) and exedra with the peristyle is also found in a dynamic way, which exedra transforms a U shape niche space hosts visitors and placed at the end of axial organization, separated from courtyard by nodal elements openly.

12. Finally, when we consider it as an architectural context other than spatiality and space organization, the hillside houses project, as terrace houses, is a project that is extremely compatible with its' context. It is located on the topography between 27.5 meter lower and the upper street, with entrances from the streets on the left and right. The peristyle courtyard gardens at the entrances of the residences also provide a view to the other residences.

These spatial features of the antique dwelling determined that Ephesus Yamaç Evler project is ahead of its' time, uses natural data very well, including a planning that is extremely compatible with the context, and offers a very special planning and settlement in the organization of residential spaces with its' unique spaces such as; exedra and peristyle courtyard.

**ÖZET**

**Giriş:** Psödomeningoseller, beyin omurilik sıvısının (BOS) dural yırtıklardan sızarak ekstradural alanda birikmesiyle oluşan patolojik formasyonlardır. En yaygın oluşum sebepleri arasında cerrahi müdahaleler yer alsa da, bu çalışmada travmaya bağlı nadir bir psödomeningosel vakası sunulmaktadır.

**Olgu sunumu:** İş kazası sonucu travmaya uğrayan 25 yaşındaki erkek hasta başvurduğunda, nörolojik muayenesinde bilinci açık, oryante ve koopere bulguları mevcuttu. Ancak alt ekstremitelerde bilateral paraparezi ve anal refleks zayıflığı gibi klinik bulgulara rastlanmıştır. İlk torakal MR görüntülemesinden bir hafta sonra yapılan ikinci görüntüleme, akciğer apeksine bası oluşturan travmatik bir psödomeningosel tespit edilmiştir. Hastaya T1-T4 seviyesinde posterior enstrümantasyon ve duraplasti cerrahisi uygulanmıştır.

**Tartışma:** Psödomeningoseller, genellikle cerrahi sonrası komplikasyon olarak bilirse de, travmatik torakal psödomeningosel bu çalışmada literatürde nadiren rapor edilen bir durum olarak karşımıza çıkmaktadır. Torakal bölgenin özelliği ve solunumla ilişkilendirilen negatif basınç, psödomeningosel oluşum hızını arttırabilir. Bu sebeple, torakal bölgede travma sonrası oluşabilecek potansiyel psödomeningoseller için erken dönemde kontrol spinal görüntülemesinin önemi vurgulanmıştır.

Vakanın dikkat çeken bir diğer yönü ise dural yaralanmanın travmatik disk seviyesinin bir altında lokalize olmasıdır. Bu, travma sonrası dural yaralanmanın travma seviyesinin hemen altında veya üstünde olabileceğine dair önemli bir bulgudur. Lokal fluorescite kullanımı, dural yaralanma bölgesini belirlemede etkili bir yöntem olarak kullanılmıştır. Özellikle anterior yaralanmalarda bu yöntemin kullanımı kritik öneme sahip olup gereği durumunda intratekal kullanıma da hazırlıklı girilmelidir.

**Anahtar kelimeler:** Psödomeningosel, Travma, torakal kırık

**ABSTRACT**

**Aim:** Pseudomeningoceles are pathological formations that arise from the leakage of cerebrospinal fluid (CSF) through dural tears, accumulating in the extradural space. While surgical interventions are commonly recognized as primary causes, this study presents a rare case of pseudomeningocele due to trauma.

**Case report:** A 25-year-old male patient, who suffered a work-related accident, presented with a neurological examination that revealed he was conscious, oriented, and cooperative. However, clinical findings also indicated bilateral paraparesis in the lower extremities and a weakened anal reflex. A week following the initial thoracic MR imaging, a subsequent imaging revealed a traumatic pseudomeningocele exerting pressure on the apex of the lung. The patient underwent posterior instrumentation and duraplasty surgery at the T1-T4 level.

**Discussion:** While pseudomeningoceles are typically known as post-surgical complications, the traumatic thoracic pseudomeningocele highlighted in this study is a seldom-reported occurrence in the literature. The unique nature of the thoracic region and the negative pressure associated with respiration

may accelerate the formation of pseudomeningoceles. Hence, the importance of early control spinal imaging after thoracic trauma to detect potential pseudomeningoceles is emphasized.

Another intriguing aspect of this case is the localization of the dural injury one level below the traumatic disk. This suggests that post-traumatic dural injuries may be situated just below or above the level of trauma. The use of local fluorescite has been employed as an effective method to pinpoint the location of dural injuries. Especially for anterior injuries, the application of this method is of critical importance. When necessary, one should also be prepared for the use of intrathecal fluorescite.

**Keywords:** pseudomeningocele, trauma, thoracic fracture

### Giriş

Psödomeningoseller, BOS'u araknoid kaplı bir zara veya fibröz kapsüle sızdırmaya devam eden, iyileşmeyen bir dural yırtıktan kaynaklanan ekstradural beyin omurilik sıvısı (BOS) koleksiyonlarıdır. Büyük ölçüde iatrojenik hasarın bir sonucu olan psödomeningoseller aynı zamanda nadiren travmatik de olabilir.(Couture & Branch, 2003; MILLER & ELDER JR, 1968) Küçük psödomeningoseller genellikle asemptomatiktir, bu nedenle gerçek insidans bilinmemektedir ancak %0.07 ila %2 olduğu bildirilmiştir. Psödomeningoseller semptomatik olduğunda postural baş ağrısı, boyun/sırt ağrısı, kusma, nörolojik defisit, palpabl kitleler ve/veya progresif miyelopati ile kendini gösterir.(Ailon et al., 2017; Maiuri, Corriero, Giamundo, Donati, & Gambardella, 1988; Mizuno, Nakagawa, & Iwata, 1986; Schumacher, Wassmann, & Podlinski, 1988)

Bir psödomeningoselin optimal tedavisi tartışmalıdır; uzamış hastanede yatış ve yeniden ameliyat ile ilişkilidirler. Hafif veya hiç semptom göstermeyen vakalar konservatif tedavi alır: yatak istirahati, fokal kompresyon, kesi dikme veya tekrarlayan lomber ponksiyonlar.(Hawk & Kim, 2000) Konservatif tedavide başarısız olan ve tolere edilemeyen klinik semptomlarla başvuran hastalar için revizyon cerrahisi kesin tedavidir. (Ailon et al., 2017) Bir psödomeningoselin onarımı sırasında, cerrahi onarımı zorlaştıran, sıklıkla zayıflamış fasya ve kas, iltihaplı dura ve diğer dokular ve gevşek cilt marjları ile karşılaşılır. Oldukça nadir görülen travmaya sekonder psödomeningosel tanılı bir hasta sunmak istiyoruz.

**Case report:** Bu çalışmada, iş kazası sonucu travmatik torakal psödomeningosel gelişen 25 yaşındaki bir erkek hastayı sunmaktayız. Başvuru nörolojik muayenesi: bilinci açık, oryante, koopere idi. Alt ekstremiteler bilateral paraparetik. Her iki alt ekstremitte motor muayenesi 3-4/5. Anal refleks zayıf.

İlk başvuru torakal mr görüntülemesi Şekil 1.

Hasta yoğun bakım takibi sonrası 1. haftada tekrar değerlendirildi. Yapılan torakal mr görüntülemesinde akciğere apekten bası oluşturan travmatik psödomeningosel geliştiği görüldü. (Şekil 2) Hasta T1-T4 posterior enstrümantasyon ve duraplasti cerrahisi gerçekleştirildi.

Şekil 2

**Tartışma:** Psödomeningosel genellikle cerrahi sonrası gelişen, çok nadir olarak travma sonrasında görülebilen bir durumdur.(Couture & Branch, 2003) Olgu bildirimiz travmatik torakal psödomeningosel olarak bildirilen oldukça nadir bir vakadır.(EPSTEIN & EPSTEIN, 1974; Kachooie, Bloch, & Banna, 1985) Özellikle torakal bölgede solunum ile beraber olan negatif basınç sebebi ile psödomeningosel oluşum hızını arttırdığını düşünmekteyiz. Bu negatif basınç sebebi ile torasik bölgedeki spinal travmalarda erken kontrol spinal görüntülemesi yapılması gerekmektedir.

Vakamızda dural yaralanma sol anterolateral bölgede idi. Dural yaralanmanın, travmatik disk seviyesinin bir alt seviyesinde olması dikkat çekicidir. Bu sebeple şüpheli dural yaralanmanın travma seviyesi altında ya da üstünde olabileceği akılda tutulması gerekiyor. Bu vaka sırasında lokal fluorescite kullanarak yaralanma bölgesini belirledik. Özellikle anterior yaralanmalarda dural yaralanma bölgesini belirlemek oldukça zorlu olabilmekte. Bu durumlarda intratekal fluorescite kullanılabilir. Buna da hazırlıklı girmekte yarar görmekteyiz.

**Sonuç:** Spinal yaralanmalarda post-operatif dönemde psödomeningosel açısından dikkatli olunmalıdır. Özellikle torasik yaralanmalarda negatif basınca bağlı olarak psödomeningosel gelişimi açısından dikkatli olunmalıdır.

**ÖZET**

Bu çalışmada, yüksek mukavemet ve dayanımın gerekli olduğu yerlerde özellikle de havacılık endüstrisinde yoğun olarak kullanılmakta olan AA7075-T6 alaşımının farklı takım kaplama türleri ve takım uç açıları ile delinmesi sürecinin sonlu elemanlar yöntemi ile ele alınarak değerlendirilmesi ve elde edilen verilerin deneysel sonuçlar ile tutarlılığı üzerinde durulmuştur. Çalışmada kaplamasız karbür matkaplar ve TiAlN kaplamalı karbür matkaplar olmak üzere iki farklı kaplama türünde matkap kullanılmıştır. Matkaplar 120-130-140 derece uç açılarına sahip olacak şekilde seçilmiştir. Kesici takımlar ve AA7075-T6 malzemeye ait veriler Advantedge 7.1 programı vasıtasıyla işlenmiştir. Bu çalışma kapsamında sonlu elemanlar yöntemi ile yapılan uygulamalar neticesinde elde edilen veriler, literatürden elde edilen deneysel veriler ile tutarlı bir sonuç göstermiştir. Buna ek olarak, regresyon ve yapay sinir ağları (YSA) analizleri yapılarak 120-125-130-135-140 uç açıları (Pa) ve 118-122-127-131-138 uç kenar açılarına (Ca) sahip matkapların kesme kuvveti (Fz) performansları karşılaştırılmıştır. Sonuç olarak, en düşük kesme kuvvetleri, kaplamasız ve TiAlN kaplamalı matkaplar için 120/118, 120/122 ve 125/118 (Pa/Ca) tasarımlı matkaplardan elde edilmiştir. Deneysel çalışmalardan elde edilen verilerin sonlu elemanlar ve yapay sinir ağları yöntemleri ile değerlendirilmesi ile, tutarlı sonuçların elde edilerek tahmini ve optimum değerlerin de elde edilmesinin mümkün olduğu görülmüştür. Bu durum ayrıca, deneysel çalışmalarda karşılaşılan hem takım hem işçilik hem de malzeme maliyetlerinin de bilgisayar programları vasıtasıyla güvenilir şekilde bertaraf edilebilerek doğrudan uygulanabilir verilerin elde edilebileceğini de göstermiştir.

**Anahtar kelimeler:** Talaşlı imalat, Delme, AA7075-T6, Sonlu Elemanlar Yöntemi, Regresyon.

**ABSTRACT**

In this study, the drilling process of the AA7075-T6 alloy, which is extensively used in the aviation industry, especially in applications requiring high strength and durability, was examined with different tool coating types and tool rake angles using the finite element method, and the consistency of the obtained data with experimental results was emphasized. Two different types of drills were used in the study: uncoated carbide drills and TiAlN-coated carbide drills. The drills were selected to have point angles of 120-130-140 degrees. Cutting tools and data for AA7075-T6 material were processed using the Advantedge 7.1 program. The data obtained from the applications carried out with the finite element method in this study showed consistent results with experimental data obtained from the literature. In addition, regression and artificial neural network (ANN) analyses were conducted to compare the cutting force (Fz) performance of drills with point angles of 120-125-130-135-140 (Pa) and chisel edge angles of 118-122-127-131-138 (Ca). As a result, the lowest cutting forces were obtained from drills designed with 120/118, 120/122, and 125/118 (Pa/Ca) for both uncoated and TiAlN-coated drills. The evaluation

of experimental data through finite element and artificial neural network methods demonstrated that consistent results were obtained, and it was possible to obtain estimated and optimum values. Furthermore, this approach indicated that both tool and labor costs as well as material costs encountered in experimental studies could be reliably eliminated through computer programs, allowing for the direct acquisition of applicable data.

**Keywords:** Machining, Drilling, AA7075-T6, Finite Element Method, Regression.

### GİRİŞ

Günümüz imalat alanlarının çoğunda üretilen makine ve donanımların hem hafiflik hem de dayanım açısından en üst seviyelerde olması istenmektedir. Özellikle askeri ve sivil havacılık alanında gerçekleştirilen uygulamalarda bu özelliklerin sağlanabilmesi amacıyla çelik türevi ürünler yerine Alüminyum alaşımları ve kompozit malzemeler tercih edilmektedir. Alüminyum alaşımları içerisinde ise birçok farklı alüminyum serisi olmakla birlikte en yaygın olarak üstün yorulma dayanımı, sertliği ve mukavemeti gibi özellikleri sebebiyle 7000 serisi tercih edilmektedir [1], [2]. 7000 serisi içerisinde ise en çok kullanılan ve en önemli olan 7075-T6 alaşımı durumundadır. 7075-T6 yüksek dayanım ve sertlik ile gerilime maruz kalması esnasında gösterdiği yüksek mukavemet özelliği sebebiyle havacılık endüstrisinde çok büyük bir yer kaplamaktadır [3].

7075-T6 malzemenin talaşlı imalatta frezeleme, tornalama ve delme işlemleri üzerine gerçekleştirilmiş çok sayıda çalışma bulunmaktadır [2]–[11]. Özellikle alüminyum malzemelerin genel sorunlarından olan sıvanma eğilimi, her türlü talaşlı imalar aşamasında önemli bir sorun olarak karşımıza çıkabilmektedir. Delme işlemi esnasında da takım kesici kesarlarına ve hatta helis kanallarına yapışan, sıvanan Al malzeme delme performansını olumsuz yönde etkilemekte, esas kesme kuvvetini (Fz) arttırmaktadır [4], [6], [12]. Kuvvet artışı takımın zorlanmasına, delik yüzey kalitelerinde bozulmalara ve ilerleyen süreçte takım kırılmasına kadar sebebiyet verebilmektedir [13]. Bu sebeple kesme parametrelerinin (kesme hızı, ilerleme, kesme derinliği vb.) ve kesici takıma ait verilerin (takım malzemesi, kaplama türü, kesici takım geometrisi vb.) doğru tayin edilmesi büyük öneme sahiptir. Bu verilerin belirlenmesi için genel olarak deneysel çalışmaların gerçekleştirilerek en optimum seviyelerin belirlenmesi gerekmektedir. Ancak, günümüz bilgisayar yazılımları sayesinde yüksek maliyetli deneysel çalışmalar yerine bilgisayar yazılımları ile bu süreç yüksek doğruluk oranları ile gerçekleştirilebilmektedir. Günümüzde birçok malzemenin işlenebilirliği üzerine FEM metodu kullanılarak çalışmalar yapılmaktadır [6], [14], [15].

Bu çalışmada, AA7075-T6 havacılık alaşımının delinmesinde kesici takım geometrisi ve kesici takım kaplamasının delinebilirliği etkisinin sonlu eleman yöntemiyle araştırılması amaçlanmıştır.

### ARAŞTIRMA VE BULGULAR

#### Deneyel Kurulum, Sonlu Elemanlar Yöntemi, Regresyon ve Yapay Sinir Ağları

Delme deneyleri [16] ve sonlu eleman analizlerinde iş malzemesi olarak AA7075-T6 alüminyum alaşım kullanılmıştır. İş malzemesinin kimyasal bileşimi Tablo 1’de gösterilmiştir.

**Tablo 1.** AA7075-T6 alaşımının kimyasal bileşimi (% ağırlık)

Ana	Fe	Si	Cu	Mn	Mg	Zn	Cr	Zi+Ti	Diğer
Al	0,5	0,5	1,2	0,3	2,1	5,1	0,18	0,25	0,15
			2,0		2,9	6,1	0,28		

İş malzemesinin mekanik ve fiziksel özellikleri ise Tablo 2’de verilmiştir.

**Tablo 2.** AA7075-T6 alaşımın mekanik ve fiziksel özellikleri

Özellik	Değer
Termal iletkenlik (W/mK)	180
Özgül ısı (J/kgK)	910
Termal genleşme katsayısı (1/°C)	2,36E-5
Yoğunluk (kg/m <sup>3</sup> )	2700
Elastisite modülü (GPa)	68,9
Poisson oranı	0,3
Çekme Dayanımı (MPa)	530-570
Sertlik (Brinell)	140-160

Kesici takım olarak kaplamasız karbür ve 0,002 mm kalınlığında TiAlN kaplamalı karbür matkaplar kullanılmıştır [16]. Delme parametrelerinde takım geometrisi açısından farklı matkap uç açısı (Şekil 1) ve uç kenar açısı belirlenmiştir (Tablo 3). Diğer takım geometrisi parametreleri tüm matkaplar için sabit tutulmuştur. Matkap çapı 5 mm, helis açısı 30°, boşluk açısı 14°, ağız yarıçapı 2,9 mm ve öz kalınlığı 1,75 mm olarak sabit tutulmuştur. Delik delme deneyleri, kaplamasız, kaplamalı, 120°, 130°, 140° uç açılı ve 118° uç kenar açılı matkaplar ile sürdürülmüştür. Sonlu eleman analizlerinde tüm matkap geometrileri kullanılmıştır (Tablo 3). Kesme parametreleri olarak 50m/dak kesme hızı ve 0,05mm/dev ilerleme seçilmiştir. Çalışmada kesme sıvısı kullanılmamıştır.

**Şekil 1.** Matkap uç geometrisi

**Tablo 3.** AA7075-T6 alaşımın delme parametreleri

Seviye	Faktör		
	Kaplama k	Uç açısı (point angle) Pa	Uç kenar açısı (chisel edge angle) Ca
1	WC	120	120
2	TiAlN	130	127
3		140	136
Çıktı	Kesme kuvveti, Fz (N)		

FEM analizleri, bilimsel ve ticari amaçlar için geliştirilmiş Third Wave AdvantEdge® yazılımı ile yapılmıştır. Bu yazılım, talaşlı imalat tekniklerinde göre optimize edilmiş bir sonlu eleman yazılımıdır. Nümerik çözümleme sırasında, updated-Lagrangian sonlu eleman metodu ve adaptif yeniden ağ örme teknikleri kullanılır. İş malzemesi ve kesici takımın ağ dokusu, 4 nokta ve 12 serbestlik dereceli elemanlar ile oluşturulmuştur. Talaşlı imalat simülasyonlarında, iş malzemeleri üzerinde sıcaklık değişimine bağlı deformasyon ve yüksek gerilim ve gerinim oranları oluşmaktadır. İş malzemelerinin gerilim-gerinim davranışının yüksek doğrulukta tanımlanması için pekleşme, gerinim oranı ve sıcaklık değişimine bağlı malzeme modelleri kullanılmalıdır [14]. Bu nedenle AA7075-T6 alaşımın mekanik davranışını tanımlamak için, Johnson-Cook malzeme modeli kullanılmıştır. Johnson-Cook malzeme modeli Eş. 1'de ifade edilmiştir. Kesici takım, iş malzemesinin ağ yapısı Şekil 2'de gösterilmiştir.

$$\sigma = \left[ \begin{array}{c} A + B \epsilon^n \\ \text{Elastoplastik} \end{array} \right] \left[ 1 + C \ln \left( \frac{\dot{\epsilon}}{\dot{\epsilon}_0} \right) \right] \left[ 1 - \left( \frac{T - T_{oda}}{T_{erime} - T_{oda}} \right)^m \right] \quad (1)$$

Viskozite Termal Yumuşama

Burada;  $\sigma$ ,  $\epsilon$ ,  $\dot{\epsilon}$  ve  $\dot{\epsilon}_0$  sırasıyla akış gerilimi, plastik gerinim, gerinim oranı ve referans gerinim oranıdır.  $T$ ,  $T_{erime}$  ve  $T_{oda}$  sırasıyla anlık sıcaklık, erime sıcaklığı ve oda sıcaklığıdır. Malzeme ampirik sabitleri: A başlangıç akma dayanımı, B mukavemet katsayısı (pekleşme modülü), C gerinim oranı bağımlılık katsayısı, n pekleşme üsteli, m termal yumuşama katsayısıdır. AA7075-T6 alaşım için Johnson Cook malzeme model parametreleri Tablo 4'te verilmiştir. Sürtünme modeli olarak Coulomb sürtünme modelini kullanılmıştır (Eş. 3). Eşitlikte;  $F_n$ ,  $F_f$  ve  $\mu$  sırasıyla yüzeyler arasındaki normal kuvvet, sürtünme kuvveti ve sürtünme katsayısıdır. FEM analizlerinde sürtünme katsayıları, AA7075-T6 alaşım ile karbür için 0,45, TiAlN için 0,35 olarak belirlenmiştir.

$$F_f = \mu F_n \quad (2)$$

**Tablo 4.** AA7075-T6 alaşımın Johnson-Cook malzeme modeli parametreleri

Parametre	A (MPa)	B (MPa)	n	$T_{erime}$ (°C)	$T_{oda}$ (°C)	m	C	$\dot{\epsilon}_0$ (1/s)
Değer	496	310	0,41	635	20	1,2	0	1

**Şekil 2.** Delme işlemi 3 boyutlu sonlu eleman ağ yapısı

Regresyon analizleri, Minitab® R19 istatistiksel analiz yazılımı ile yapılmıştır. Deneysel sonuçlar ile doğrulanmış FEM sonuçları kullanılarak regresyon modeli kurulmuştur. Regresyon analizleri, kesme kuvvetlerinin ( $F_z$ ), delme parametrelerine diğer bir deyişle bağımsız kontrol faktörlerine bağlı olarak değiştiği kabul edilerek ve 95% güven seviyesi tanımlanarak sürdürülmüştür. Analiz sonucunda elde edilen regresyon eşitliği (Eşitlik 3) kullanılarak, test verilerindeki (Tablo 3) delme parametreleri ile bileşke kesme kuvveti değerleri tahmin edilmiştir. Model özetinde, S 11,5615,  $R^2$  %94,70,  $R^2(\text{adj})$  %93,56 ve  $R^2(\text{pred})$  %91,17 değerleri elde edilmiştir. Kesme kuvvetleri üzerinde delme parametrelerinin etkisi, %63,58 oranla uç kenar açısı (Ca), %29,58 oranla uç açısı (Pa) ve %1,54 oranla kaplama olduğu görülmüştür. Model hata oranı ise %5,30 olarak elde edilmiştir.

$$F_{z_{FEM}} = -542,6 + (11xk) + (2,95xPa) + (4,806xCa) \quad (3)$$

Yapay sinir ağırları (YSA) analizleri, MATLAB® yazılımı ile kodlanarak ve neural networks toolbox kullanılarak yapılmıştır. Analizlerde kullanılan YSA parametreleri Tablo 5’te verilmiştir.

**Tablo 5.** YSA model kurulumu

Parametre	Değer
Gizli katman	1
Nöron sayısı	7
İterasyon sayısı (maks)	1000
Öğrenme oranı (lr)	0.0005
Eğitim veri oranı (rastgele)	80%
Test veri oranı (rastgele)	20%
Öğrenme algoritması	trainbr (bayesian regularization)
Transfer fonksiyonu	tansig (tangent sigmoid)
Öğrenme kuralları	Geri yayılım

Analizlerde eğitim algoritması olarak *Bayesian regularization* kullanılmıştır. YSA modelinde 1 gizli katman ve 7 nöron kullanılmış ve 3-7-1 ağ yapısı kurulmuştur. Girdi ve çıktı verileri, *dividerand* fonksiyonu ile eğitim için %80 oranında ve test için %20 oranında rastgele olarak ayrıştırılmıştır. Transfer fonksiyonu olarak hiperbolik tanjant sigmoid transfer fonksiyonu (*tansig*) kullanılmıştır. Kurulan YSA modelinde R değerleri, eğitim verileri için 0.99266 ve test verileri için 0.98484 olarak elde edilmiştir (Şekil 3).

**Şekil 3.** YSA modeli için R grafikleri

Çalışmada daha önceden deneysel olarak gerçekleştiren araştırmalar referans alındığında [6], [13], [16] Şekil 4’te belirtildiği üzere kaplamasız karbür matkaplarda 120° -130° -140° derece uç açılarında elde edilen kesme kuvveti değerleri 400N seviyelerinde tutarlı bir şekilde elde edilmiştir. TiAlN kaplamalı karbür takımlarda ise özellikle 120° ve 118° uç açılına sahip matkaplarda deneysel verilerin 650N civarında olmasına karşın sonlu elemanlar yöntemi ile elde edilen değerlerin 380N seviyesinde olduğu görülebilmektedir. Benzer şekilde TiAlN kaplamalı 130° ve 140° uç açılı matkaplarda deneysel ve sonlu elemanlar yöntemi ile elde edilen kesme kuvveti farkları daha az olacak şekilde elde edilmiştir. Burada TiAlN kaplamalı matkaplarda deneysel kuvvet verilerinin daha yüksek çıkmasının sebebi delme şartlarında yaşanan talaş sıvanması ve talaş tahliyesinde yaşanan sorunlar olarak görülmektedir. Hata oranı incelendiğinde ise en düşük hata oranının WC 130° uç açılı matkapla gerçekleştirilen hem deneysel hem de FEM yöntemi ile elde edilen verilerde olduğu görülmektedir.

Şekil 4. Deneysel ve FEM sonuçlarının doğrulanması

Şekil 5'te uç açısı (Pa) değişiminin kesme kuvvetleri üzerine etkisi görülmektedir. Sonlu elemanlar yöntemi ile gerçekleştirilen bu grafik neticesinde uç açısındaki artışla kesme kuvvetinde de artış meydana geldiği görülmüştür. TiAlN kaplamalı matkaplarda kesme kuvvetinin kaplamasız karbür matkaplara göre daha yüksek olduğu, özellikle 140° uç açılı matkaplarda kesme kuvveti değerinin 540N seviyelerine ulaştığı görülmektedir.

Şekil 5. Uç açısı (Pa) değişiminin kesme kuvvetlerine etkisi

Şekil 6'da ise uç kenar açısı değişimine göre kaplama türü ve matkap uç açısına göre meydana gelen kesme kuvveti değişimleri verilmiştir.

Şekil 6. Uç kenar açısı (Ca) değişiminin kesme kuvvetlerine etkisi

Şekil 7 ve Şekil 8'de sırasıyla WC ve TiAlN kaplamalı matkaplar için FEM, regresyon ve YSA kesme kuvvetleri değerleri verilmiştir.

Şekil 7. WC (kaplamasız) matkaplar için FEM, regresyon ve YSA kesme kuvvetleri

Şekil 8. TiAlN kaplamalı matkaplar için FEM, regresyon ve YSA kesme kuvvetleri

Kaplama, uç açısı ve uç kenar açısı değişimin kesme kuvvetine olan etkisi göstermek için etki grafiği oluşturulmuştur (Şekil 9). Şekil 9 incelendiğinde TiAlN kaplamalı matkapta kaplamasız matkaba göre kesme kuvvetinin yükseldiği görülmektedir. Uç açısı ve uç kenar açısını artışı ile kesme kuvvetlerinin belirgin şekilde arttığı anlaşılmaktadır.

Şekil 9. Matkap geometrisinin kesme kuvveti üzerindeki etki grafiği

## SONUÇ

Bu çalışmada, AA7075-T6 havacılık alaşımının delinmesinde kaplamasız karbür ve TiAlN kaplamalı karbür olmak üzere, farklı uç açıları (point angle) ve farklı uç kenar açıları (chisel edge angle) ile tasarlanan matkapların kesme kuvvetleri ve takım geometrisi açısından işleme performansları deneysel, sonlu elemanlar, regresyon ve yapay sinir ağları yöntemleri kullanılarak araştırılmıştır. Elde edilen sonuçlar aşağıdaki gibi özetlenebilir:

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

- Deneysel çalışmaların gerçekleştirilmesinde yüksek malzeme, ekipman, işçilik ve zaman maliyeti olması sebebiyle optimizasyon metotlarının kullanılmasının ve böylece deney sayılarının minimum seviyede tutularak çalışmaların gerçekleştirilmesinin büyük bir öneme sahip olduğu,
- Sonlu elemanlar yöntemi ile kesme parametreleri, kesici takım verileri ve işlenecek malzeme özelliklerinin çok net bir şekilde tayin edilerek, böylece elde edilecek sonuçların doğruluğunun ve oluşacak hata paylarının en aza indirilebileceği,
- Johnson Cook malzeme modeli ile AdvantEdge programı vasıtasıyla yüksek tutarlılıkta talaşlı imalat işlemlerinin ön çalışma seviyesinde gerçekleştirilerek ardından deneysel uygulamalara çok daha tutarlı bir şekilde geçilebileceği ve böylece hatalı üretim yapma sonucunda oluşacak maliyetlerin en aza indirilebileceği,
- Kesme kuvvetleri açısından; kaplamasız matkaplar için en düşük kesme kuvvetleri 120° uç açısı ve 118° uç kenar açısına (120°-118°) sahip matkaptan elde edilmiştir. Buna ek olarak 120°-122° ve 125°-118° tasarımlarındaki matkapların da kesme kuvvetleri oldukça düşük olup performansları kabul edilebilir seviyede olduğu anlaşılmıştır. TiAlN kaplamalı matkaplar için en düşük kesme kuvveti 120°-118° tasarımındaki matkaptan elde edilmiştir.
- Takım geometrisi açısından; hem kaplamasız hemde TiAlN kaplamalı matkaplar için uç açısı artışı ile kesme kuvvetlerinin arttığı sonlu elemanlar yöntemi ile gerçekleştirilen çalışma neticesinde de gözlemlenmiştir.
- AA7075-T6 malzemenin çalışmada belirtilen kesici takım ve matkap uç açısı değerlerine göre hem deneysel hem de sonlu elemanlar yönteminde 140° uç açılı matkaplarda kesme kuvvetinin daha yüksek meydana geldiği,
- En yüksek hata oranının özellikle talaş sıvanması ve BUE oluşması sebebiyle TiAlN kaplamalı matkaplarda gerçekleştiği,
- Kesme kuvvetleri üzerinde delme parametrelerinin etkisi, %63,58 oranla uç kenar açısı (Ca), %29,58 oranla uç açısı (Pa) ve %1,54 oranla kaplama olduğu görülmüştür. İlerleyen çalışmalarda farklı takım ve kesme parametreleri belirlenerek kuru kesme şartları haricinde kesme sıvısı tanımlamaları da yapılarak doğrudan imalat alanındaki uygulamalara yönelik çalışmalar gerçekleştirilebilecektir.

**ÖZET**

Serebral Palsi prenatal, perinatal ve postnatal nedenlerle beyinde ilerleyici olmayan bir lezyon sonucu oluşan, ancak yaşla değişebilen, aktivite kısıtlanmasına yol açan, kalıcı motor fonksiyon, postür ve hareket gelişim bozukluğudur. SP’de ortaya çıkan motor bozukluklar sonucunda, üst ekstremitede sınırlı eklem hareket açıklığı, normal patern içinde gerçekleştirilemeyen izole parmak ve baş parmak hareketleri ile kavrama problemleri görülmektedir. SP’li çocuklarda günlük yaşam aktivitelerini etkileyen önemli unsurlardan bir tanesi etkilenmiş üst ekstremitte fonksiyonlarıdır. SP’li çocuklarda el, günlük yaşam aktivitelerinde çok önemlidir. Etkilenmiş üst ekstremitte fonksiyonları, bu çocuklarda günlük yaşam aktivitelerini etkileyen en önemli unsurdur. Bu nedenle çalışmamızın amacı, hemiparetik serebral palsili çocuklarda ayna tedavisini klasik fizyoterapi yöntemleriyle karşılaştırmak ve üst ekstremitetedavisindeki etkisini belirlemektir. Çalışmaya 30 hemiparetik Serebral Palsi tanılı 6-15 yaş arasındaki çocuklar dahil edilmiştir. Demografik ve tanımlayıcı verilerin yanı sıra çocukların tedavi öncesi ve sonrası üst ekstremitte kas gücü, kavrama kuvveti, iki nokta diskriminasyonu, parmak tanıma, omuz, dirsek el bileğinde pasif hareket hissi değerlendirilmiştir. Çocukların günlük yaşam aktivitelerini değerlendirmek için WeeFIM, üst ekstremitte fonksiyonelliği için Jebsen-Taylor El Fonksiyon testi uygulanmıştır. Çocuklar randomize olarak iki gruba ayrılmıştır. Gruplardan birine ayna tedavisi uygulanırken diğer gruba geleneksel fizyoterapi ve rehabilitasyon programı uygulanmıştır. Tüm çocuklar 6 hafta boyunca 12 seanslık tedaviyi tamamlamıştır. İki grup karşılaştırıldığında tedavi öncesi benzerlik gösteren pronasyon ve supinasyon eklem hareket açıklığında, Jebsen-Taylor El Fonksiyon testinin dolu kutuları hareket ettirme alt testinde anlamlı fark bulunmuştur. ( $p < 0,05$ ) Ayna tedavisinin rehabilitasyon amaçlı kullanılması hemiparetik Serebral Palsili çocukların el fonksiyon becerilerini geliştirmiştir. Ayna tedavisi geleneksel fizyoterapiye alternatif olarak kullanılabilir farklı bir tedavi yönetimi olarak benimsenebilir.

**Anahtar kelimeler:** Ayna Tedavisi, El Fonksiyonları, Hemiparezi, Rehabilitasyon, Serebral Palsi.

**ABSTRACT**

Cerebral Palsy is a permanent disorder of motor function, posture and movement development that occurs as a result of a non-progressive lesion in the brain due to prenatal, perinatal and postnatal reasons, but can change with age, leading to activity limitation. As a result of the motor disorders that occur in CP, limited joint range of motion in the upper extremity, isolated finger and thumb movements that can not be performed in a normal pattern, and grasping problems are observed. Therefore, the aim of our study is to compare mirror therapy with classical Physiotherapy methods in children with hemiparetic cerebral palsy and to determine its effect on upper extremity treatment. 30 children aged 6-15 years diagnosed with hemiparetic Cerebral Palsy were included in the study. In addition to demographic and descriptive data, the children's upper extremity muscle strength, grip strength, two-point discrimination,

finger recognition, passive movement sensation in the shoulder, elbow and wrist were evaluated before and after treatment. WeeFIM was used to evaluate the children's Daily living activities, and the Jebsen-Taylor Hand Function test was used to assess upper extremity functionality. Children were randomly divided into two groups. While mirror therapy was applied to one group, traditional Physiotherapy and rehabilitation program was applied to the other group. All children completed 12 sessions of treatment over 6 weeks. When the two groups were compared, a significant difference was found in the pronation and supination joint range of motion, which were similar before treatment, and in the moving filled box subtest of the Jebsen Taylor Hand Function Test. ( $p < 0,05$ ) Using mirror therapy for rehabilitation purposes improved the hand function skills of children with hemiparetic Cerebral Palsy. Mirror therapy can be adopted as a different treatment method that can be used as an alternative to traditional physiotherapy.

**Keywords:** Mirror Therapy, Hand Functions, Hemiparesia, Rehabilitation, Cerebral Palsy.

## GİRİŞ

Serebral Palsi prenatal, perinatal ve postnatal nedenlerle beyinde ilerleyici olmayan bir lezyon sonucu oluşan, ancak yaşla değişebilen, aktivite kısıtlanmasına yol açan, kalıcı motor fonksiyon, postür ve hareket gelişim bozukluğudur. SP'nin klinik semptomları anormal kas tonusu, derin tendon refleksleri, primitif refleksler ve postüral reaksiyonlarda değişiklikler içerir (1). Anormal nöromotor kontrol, mobilite ve bağımsız hareketlerde azalmaya neden olur (2). Kas kuvvetsizliği SP'nin yaygın bir semptomudur (3). SP'de temel sorun istemli motor kontrolün bozukluğudur. Gövde ve denge reaksiyonlarındaki bozukluk, spastisite, distoni gibi kas tonusundaki değişikliklerden ötürü çocuk hareketlerini kontrol edemez ve dengesini tam olarak sağlayamaz. Çocukta ayrıca motor hareketi planlama zorluğu da izlenir. Yüzeysel duyu çoğu zaman normaldir, buna karşılık kortikal algılama, eklem pozisyon hissi ve hareket hissi bozuktur (4).

SP'de ortaya çıkan motor bozukluklar sonucunda, üst ekstremitede sınırlı eklem hareket açıklığı, normal patern içinde gerçekleştirilemeyen izole parmak ve başparmak hareketleri ile kavrama problemleri görülmektedir. SP'li çocuklarda günlük yaşam aktivitelerini etkileyen önemli unsurlardan bir tanesi etkilenmiş üst ekstremitte fonksiyonlarıdır. SP'li çocukların yaklaşık olarak %60'ında üst ekstremitte problemleri görülür (5). Üst ekstremitenin günlük yaşamdaki kullanımı bağımsız yaşam için önemlidir (6). Spastisitenin sebep olduğu anormal postür ve deformite üst ekstremitte fonksiyonlarını kısıtlar, günlük yaşam aktivitelerinin zorlaştırır ve çocuğa bakım veren kişilerin yükünü artırır (7,8). Ayrıca çocuğun aile, okul ve sosyal aktivitelere katılımını olumsuz etkiler (9).

Hemipareziye bağlı olarak ortaya çıkan fonksiyonellik kaybının giderilmesinde birçok fizyoterapi yöntemi uygulanmaktadır. Bu yöntemlerden biri olan ayna tedavisinin görsel geri bildirim yoluyla beyin fonksiyonlarını düzenlediği savunulmaktadır. Ayna tedavisinde kişi paretik ekstremitesini aynanın arkasında tutar. Sağlam ekstremitesiyle normal eklem hareketleri yapar ve bu sırada aynadan ekstremitesini izler. Hasta aynadaki tarafın paretik taraf olduğunu düşünür böylece görsel proprioseptif girdiler artar. Ayna tedavisi paretik ekstremitenin hareket yeteneğinin artırılmasında bu görsel illüzyonundan yararlanmaktadır.

Ayna tedavisiyle ilgili yapılan çalışmalar daha çok inme sonrası yetişkin hemiparetik hastalar üzerindedir ve fonksiyonelliğin kazanılmasında etkili olduğu bilinmektedir. Hemiparetik çocuklarda ayna tedavisi uygulamasıyla ilgili az sayıda çalışma bulunmaktadır. Bu çalışmalar ayna tedavisinin çocuklarda da uygulanabileceğini ve paretik kolun dinamik işlevini geliştirdiğini göstermektedir.

Planlamış olduğumuz çalışmamızda hemiparetik çocuklarda ayna tedavisini klasik fizyoterapi yöntemleriyle karşılaştırmak ve tedaviye etkisini belirlemek amaçlanmıştır.

Çalışmanın başında ortaya koyduğumuz hipotezler;

H1: Ayna tedavisi, hemiparetik çocuklarda el fonksiyonlarını iyileştirici bir etkiye sahiptir.

H2: Ayna tedavisi, el fonksiyonlarını iyileştirmede klasik fizyoterapiden daha üstündür.

## YÖNTEM

Bu çalışma, hemiparetik SP'li çocuklarda ayna tedavisinin el fonksiyonlarına etkisini belirlemek amacıyla tarihleri arasında İstanbul ve Mersin'de hizmet veren çeşitli özel eğitim merkezlerinde gerçekleştirildi. Çalışmaya 30 Hemiparetik SP tanılı 6-15 yaş arasındaki çocuk katıldı. Çocuklar çalışmaya dahil edilmeden önce kendileri ve aileleri çalışma hakkında bilgilendirildi, katılımcıların ailesine aydınlatılmış onam formu imzalatıldı.

### Çocukların Çalışmaya Dahil Edilme Kriterleri

- ✓ Hemiparezi tanısı almış olması,
- ✓ Yeterli iletişim becerisine sahip olması,
- ✓ Bir objeyi kavrama ve bırakma aktivitesini engelleyecek ölçüde ağır spastisitesi olmaması,
- ✓ 6-15 yaş aralığında olması,
- ✓ Ailenin, çocuğunun çalışmaya katılmasını kabul etmesi olarak belirlenmiştir.

### Çocukların Çalışmadan Dışlanma Kriterleri

- ✓ Çocukta mental retardasyon olması,
- ✓ Çalışmada kullanılacak testleri uygularken çocuğun davranış ve uyum bozukluğu göstermesi,
- ✓ Ağır ve iletişimi engelleyen konvülsyonu olması,
- ✓ Çalışmaya katılmayı engelleyen medikal durumun olması,
- ✓ Görme ve işitme bozukluğunun olması,
- ✓ Son 3 ayda Botoks yapılmış olması şeklinde belirlenmiştir.

## Değerlendirmeler

**Hikaye Alımı:** Bireylerin cinsiyet, yaş, boy, okul durumu gibi kişisel bilgileri kaydedildi. Etkilenmiş tarafları kaydedildi. Bunun yanı sıra doğum hikayeleri, aile hikayeleri, tıbbi hikayeleri, daha önce cerrahi ya da Botoks uygulaması yapıp yapılmadığı, ortez kullanıp kullanmadıkları, şu ana kadar fizyoterapi ve rehabilitasyon hizmeti alıp almadığı, almış ise başlangıç zamanı ve toplam süresi not edildi.

**Üst Ekstremitte Kas Gücü Değerlendirmesi :** Biceps, bilek fleksör ve bilek ekstansör kas kuvveti manuel kas testiyle değerlendirildi.

**Kavrama Kuvveti:** Kavrama kuvveti tansiyon aletinin manşonu ile yapıldı. Ölçüm sırasında Amerikan El Terapistleri Derneği'nin (American Society of Hand Therapist, Fess 1992) standart test pozisyonu kullanıldı. Çocuklar kol dayama imkanı olmayan sandalyeye oturtuldu. Omuz eklemi adduksiyon ve nötral rotasyonda, dirsek 90° fleksiyonda ve ön kol nötral pozisyonda tutuldu. Ölçümlere başlamadan önce tansiyon aletinin manşonu 40 mm Hg'ye ayarlandı. Çocuklar ölçümler sırasında en iyi performansı gerçekleştirmek için motive edildi. Bunun için standart talimatlar sabit ses seviyesinde verildi. Her ölçüm yaklaşık 5 saniye sürdü. Sabit ve tepe kavrama kuvveti test sonucu olarak kaydedildi.

**İki Nokta Diskriminasyonu:** Çalışmamızda bu ölçüm diskriminatör ile yapılmıştır. Bu araç her biri değişen aralıklarla gömülmüş olan çubuklar içeren iki plastik diskten oluşur. Çubuklar arası mesafe 1mm'den 25 mm'ye kadar değişir. Çocuğun iki farklı nokta olarak hissettiği değer kaydedilmiştir.

**Parmak Tanıma:** Çocuğun parmakları numaralandırılarak, çocuğun görme alanı kapalı iken parmağına dokunularak hangi parmağına dokunulduğunu sözel olarak veya göstererek tanıması istenmiştir.

**Omuz-Dirsek ve El Bileğinde Pasif Hareket Hissi:** Çocuğun gözler kapatılır, el parmaklarından biri iki yandan tutularak yukarı ya da aşağı doğru hareket ettirilir. Bu sırada çocuktan hareketin yönünü söylemesi istenir.

**Üst Ekstremitte Fonksiyonelliğin Değerlendirilmesi:** Çalışmada, günlük yaşamda el fonksiyonlarını temsil eden bir seri alt testten oluşan 'Jebsen-Taylor El Fonksiyon Testi' kullanılmıştır.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Sağlam ve paretik ekstremiteler için ayrı ayrı test yapılmış ve her bir el için alt testi gerçekleştirme süresi saniye cinsinden kaydedilmiştir. Bu çalışmada testin yazı yazma dışındaki bölümleri uygulanmıştır.

**Üst Ekstremitte Eklem Hareket Açıklığının Değerlendirilmesi:** El bileği fleksiyon, ekstansiyonu ve ön kol pronasyon, supinasyonu gonyometrik ölçüm yapılarak değerlendirilmiştir.

**Günlük Yaşam Aktivitelerinin Değerlendirilmesi:** GYA değerlendirmesi Pediatrik Fonksiyonel Bağımsızlık Ölçeği (Functional Independence Measure for Children- WeeFIM) ile yapıldı. WeeFIM, SP'li çocukların gelişimsel, eğitimsel ve toplumsal açıdan fonksiyonel limitasyonlarını tespit eden kapsamlı bir ölçüm yöntemidir. WeeFIM motor ve kognitif olmak üzere 2 ana başlıkta toplanmaktadır. Kendine bakım (6 alt başlık), sfinkter kontrolü (2 alt başlık), transferler (3alt başlık) ve lokomasyon (2 alt başlık) ile ilgili maddeler motor fonksiyonel düzeyi, iletişim (2 alt başlık) ve sosyal algı (3alt başlık) ile ilgili maddeler ise bilişsel fonksiyonel düzeyi göstermektedir. Ölçek toplam 18 madde içerir. Her bir maddedeki fonksiyonu gerçekleştirirken hastanın yardım alıp almadığı, zamanında yapıp yapmadığı veya yardımcı cihaza gereksinim duyup duymadığına göre 1 ile 7 arasında puanlanmaktadır. Verilen görevi tamamen yardımla yaptığında 1, tamamen bağımsız olarak, uygun zamanda ve güvenli bir şekilde yaptığında ise 7 olarak skorlanır.

## Tedavi Protokolü

Çalışmaya dahil edilen 30 hasta randomize olarak iki gruba ayrılmıştır. Her iki gruba da tedavi haftada 2 gün her seans 30 dakika olmak üzere 6 hafta boyunca uygulanmıştır. Birinci grup ayna tedavisine ikinci grup ise klasik fizyoterapi programına alınmıştır. Ayna grubunda 30 dakikalık seans 10'ar dakikada bir dinlenme periyodu verilerek tamamlanmıştır. Aynada el bileği fleksiyon- ekstansiyon, parmaklara fleksiyon-ekstansiyon, ön kol pronasyon supinasyon ve kavrama-bırakma hareketleri çalıştırılmıştır. Kontrol grubuna ise üst ekstremitte kuvvetlendirme egzersizleri, bilateral üst ekstremitte hareketleri, eklem hareket açıklığı egzersizleri çalıştırılmıştır.

## İstatistiksel Analiz

Hastaların fiziksel özellikleri ortalama, standart sapma, frekans ve yüzde değerleri ile tanımlanmıştır. Gruplar arası kıyaslama yapılırken Ki-kare testi ve Fisher'in kesin Ki-kare testi kullanılmış verilerin normal dağılıma uyup uymadığı Kolmogorov Smirnov testi ile belirlenmiştir. Normal dağılıma sahip değişkenler için bağımlı örneklerde tedavi öncesi ve tedavi sonrası ortalamaları karşılaştırmak için Paired Sample t-test kullanılmıştır. Tedavi etkinliği gruplar arası karşılaştırmada Mann Whitney U testi, grup içi karşılaştırmada ise Wilcoxon Testi ile değerlendirilmiştir. Sonuçlar, anlamlılık  $p < 0.05$  düzeyi kabul edilmiştir.

## BULGULAR

Hemiparetik SP tanısı konmuş, yaşları 6-15 arasında değişen 18'i kız 12'si erkek 30 çocuk çalışmaya dahil edilmiştir. Grupların yaş, cinsiyet, boy, kilo ve etkilenmiş taraflarını gösteren özellikleri Tablo 1'de sunulmuştur.

Tablo 1. Demografik Özellikler

Değişkenler (birim)	Ayna Grubu ort±sd (n=15)	Kontrol Grubu ort±sd (n=15)	Gruplar arası Fark Analizi

## TARTIŞMA VE SONUÇ

Serebral Palsi, immatür beyin motor merkezlerinde meydana gelen lezyon sonucu oluşan hareket ve postür bozuklukları ile karakterize ilerleyici olmayan gelişimsel bir bozukluktur. Oluşan motor bozukluklar, kas kuvvet dengesizlikleri, kas-iskelet sistemi problemleri, kontraktürler, eklem çevresindeki sertliklerin artması ve hareket açıklıklarının azalması, spastisite, duyu-algı-motor bütünleme sorunları gibi durumlar postüral kontrol ve denge bozukluklarına neden olmaktadır (10,11,12).

Hemiparetik çocuklarda kuvvet kaybı, spastisite gibi motor bozukluklar aktivitelere katılımı kısıtlayan en önemli faktördür. Hastalık şiddetinden bağımsız olarak, çocuklarda ciddi bir etkilenme olmasa da paretik ellerini kullanmaktan kaçınma eğilimi olduğu, ellerini sadece destek amaçlı kullandıkları bildirilmektedir (13,14).

Hemiparetik bir çocuğun değerlendirilmesinde sadece etkilenmiş taraf değil aynı zamanda sağlam olan kontralateral tarafın da değerlendirilmesi ve karşılaştırılması gerekmektedir. Wendy ve ark. (15) Hemiparetik SP'li 37 (26 erkek, 11 kız) 4-15 yaş arasında çocuk değerlendirilmiş, kavrama kuvveti Jamar el dinamometresi ile ölçülmüş, beceri testi "Box and Block" ile yapılmıştır. Çalışmanın sonucunda, etkilenmiş elin kontralateral ele göre kavrama ve sıkma kuvvetinin önemli derecede daha az olduğu bildirilmiştir. Bizim çalışmamızda kuvvet için dinamometre ve el beceri hızı için Jebsen Taylor El Fonksiyon testi kullanılmıştır. Farklı bir test kullanılmış olsa da sonuçlar benzer niteliktedir ve paretik elin kavrama kuvveti ve beceri hızı daha düşük bulunmuştur. ( $p=0,01$ ,  $p<0,05$ )

Çalışmamızda JTHF testinin ince parmak becerisi gerektiren, altı küçük objeyi (iki para, iki ataç, iki gazoz kapağı) masadan alıp bardağa koyma testi paretik elde diğer testlere göre daha uzun sürmüştür. Bu alt test için ince motor becerinin yeterliliği son derece önemlidir. Sürenin uzamış olması ince motor beceride bir eksikliğe işaret etmektedir. Arnould ve ark.'nın (16) yaptıkları bir çalışmada el becerisi için "Purdue Pegboard Testini kullanmış olup, çalışmalarına dahil ettikleri HP'li çocukların paretik olmayan ellerinde, özellikle ince parmak becerisinde motor bozukluklar sergiledikleri belirtilmiştir. Ayrıca Arnould ve ark.'nın (17) yaptığı başka bir çalışmada 136 SP'li çocuk değerlendirilmiş (35

kuadriplejik, 24 diplejik, 77 hemiplejik). 6-16 yaş aralığındaki bu çocukların her iki eli için altı adet el becerisi ölçülmüştür. Kavrama kuvvetini “Jamar Hand Test”, Gross manuel beceriyi “Box and Block test”, ince parmak becerisini de “Purdue Pegboard Test”i ile değerlendirdikleri çalışmada hemiplejik çocukta non-paretik elin özellikle ince motor becerileri başarmada etkilenmiş olabildiği sonucuna ulaşmışlardır.

Megan ve ark (18) yaptıkları çalışmada hemiparetik serebral palsili çocukların büyük bir kısmında zayıf dokunsal algı olduğu ve bunun fonksiyonel bozukluğa sebep olabileceği sonucuna ulaşmışlardır.

Hoon JR ve ark (19) yaptıkları çalışmada 28 SP’li çocuk ve 35 sağlıklı çocuk üzerinde dokunma duyusu, propriosepsiyon, kas gücü ve spastisiteyi değerlendirmişlerdir. Sensorimotor fonksiyonlar ve thalamo-kortikal anormallikler arasındaki ilişkiyi incelemek amacıyla yapılan bu çalışmada dokunma duyusu ve propriosepsiyon duyusunda kayıplar gözlemlenmiştir.

Çalışmamıza dahil edilen hemiparetik SP grubundaki çocukların etkilenmiş taraflarında dokunma duyusunun eksiklikleri olduğu görülmüştür. Çocuklarda pasif hareket hissinde, iki nokta diskriminasyonunda eksiklikler olduğu saptanmıştır. Gordon ve ark (20) yaptıkları çalışmada 15 hemiparetik ve 15 kontrol grubundan oluşan çocukların üst ekstremitelerine iki nokta ayırımı, spastisite, el becerileri kavrama kuvveti açısından ve Semmes-Weistein duyu filamentlerini kullanarak değerlendirmişlerdir. Semmes-Weistein duyu filamentleriyle yaptıkları değerlendirmede gruplar arasında anlamlı farklılıklar bulmuşlar, fakat taktil duyu ve kavrama kuvveti arasında bir ilişki bulamamışlardır.

Serebral Palsili çocuklara uygulanan tedavi yöntemlerinin temel amacı, ulaşabilecek en üst düzeyde fonksiyonel bağımsızlıklarını kazandırmak ve yaşam kalitelerini arttırmaktır. Bu amaca yönelik olarak birçok tedavi yaklaşımı uygulanmaktadır.

Boinier ve ark (21), hemiparetik SP’li çocuklar üzerinde yaptıkları araştırmada, bu çocukların el fonksiyonlarının çok sınırlı olduğunu ve günlük aktivitelerdeki karmaşık işleri yapmada zorlandıklarını bildirmişlerdir. Levitt ve ark (22) SP’li çocuklarda el fonksiyonlarının önemli olduğunu ve etkilenmiş üst ekstremitel fonksiyonlarının günlük yaşam aktivitelerini etkileyen en önemli faktör olduğunu vurgulamışlardır. Anna ve ark (23), hemiparetik SP’li çocuklarda etkilenmiş taraf üst ekstremitel performansını değerlendirmiş ve hemiparetik SP’li çocukların aktiviteleri yapma hızını düşük bulduklarını ifade etmişlerdir. Biz de çalışmamızda üst ekstremitel fonksiyonelliğini değerlendirmek için Jebsen Taylor el fonksiyon testi uyguladık ve benzer sonuçlara ulaştık. Paretik elde aktivite hızı oldukça düşük bulundu. ( $p=0,021$ ,  $p < 0,05$ )

Gordon ve ark (24), 20 hemiparetik SP’li çocukta yaptığı randomize kontrollü çalışmada bir gruba taktil eğitimi diğer gruba da bimanuel eğitim vermiştir. 8 haftalık eğitimden sonra her iki grupta da paretik elde stereognosis düzelme göstermiştir ancak iki nokta diskriminasyonunda bir değişiklik olmamıştır. Bizim çalışmamızda da ayna tedavisi grubunda iki nokta diskriminasyonunda anlamlı iyileşme gözlenmedi. Çünkü çalışmamızda tamamen motor fonksiyonlar, normal eklem hareketleri çalışıldı, taktil eğitim verilen bir çalışmada dahi gelişim gözlenmemesi gözönüne alınırsa, bizim protokolümüzde iki nokta ayırımında bir farklılık olmaması şaşırtıcı değildir.

Çalışmamıza sadece 6-15 yaş aralığında hemiparetik SP’li çocukları dahil ettiğimizden bu çocuklara ulaşmada zorluklar yaşadık. Diğer taraftan yapılan çalışmalar incelendiğinde ayna tedavisinin hemiparetik çocuklarda uygulandığı bir pilot çalışma bulunmaktadır. Bu çalışma 5 kız 5 erkek 10 çocukla planlanmış ve ayna tedavisi hemiparetik çocuklarda uygulanabileceği söylenmiştir. Bizim çalışmamız da daha fazla katılımcıyla yapılmış ve ayna tedavisinin el fonksiyonlarını iyileştirmede kullanılabileceğini göstermiştir.

#### ÖZET

İklim değişikliği gerçeği altında, iklimsel sorunların tanımlanarak doğru analizlerin yapılması ekoturizm yönetiminin stratejik biçimde ilerlemesini sağlamaktadır. Yerelden hareket ederek doğru kapasitenin ortaya konması amacıyla müşteri portföyüne dayalı bir sistematik belirlenmesi bu çalışmanın ana odak noktasıdır. Müşteri portföyünün doğru tanımlanarak, kimler için tüm ekonomik faaliyetlerin tasarlanacağı ekoturizm işletmesi için yaşamsal önemdedir.

**Anahtar kelimeler:** müşteri portföyü, iklim değişikliğine uyum, stratejik ekoturizm yönetimi

Jel kodu: Q54, Q1

#### ABSTRACT

Hamdi Ayyıldız, Kahramanmaraş Sütçü İmam University, Faculty of Health Sciences, Medical Services and Techniques, Medical Documentation and Secretariat Program, ORCID ID: 0000-0001-6280-7182, [hayyildiz@ksu.edu.tr](mailto:hayyildiz@ksu.edu.tr)

Under the fact of climate change, making proper analyses by identifying climate problems ensures strategic progress in ecotourism management. A systematic determination based on the customer portfolio to identify the right capacity from the ground up is the focus of this work. By correctly defining the customer portfolio, whom all economic activities are designed for is vital to the ecotourism business.

**Keywords:** customer portfolio, climate change adaptation, strategic ecotourism management

#### İklim Değişikliği Gerçeği

İklim değişikliği gerçeği, her geçen gün daha sık karşılaştığımız kentsel ve kırsal alanlarda yaşadığımız iklim kaynaklı olaylardan ortaya çıkan bir olgudur. İklimin değişimi denildiğinde uzun süreli süreçte yaşanan ekstrem olayların sıklığının artması konu edilmektedir. Bu süreçte, ekstrem iklim kaynaklı olaylar; yağış rejimlerinin değişimi (azalması veya şiddetli artması), sel olayları, güneşli gün sayısının artması, yağış miktarının azalması, fırtına ve hava akımlarından kaynaklanan zarar verici iklim bazı aktivitelerin artmasını konu edinmektedir.

İklim değişikliği, kentsel topluma ait bir kavram olup, daha önce yaşanan biyolojik temelli döngüden farklılık arz etmektedir. Bugün yakınılan ekstrem olayların olası sonuçları düşünüldüğünde, kentsel toplumun yaşam biçiminden kaynaklanan nedenlerin buna yol açacağı görülmektedir. Makineleşme süreci ile birlikte, çoklu atölye tipi üretimin geliştirilmesi, bu durumun sanayi devrimine yol açarak kitlesel üretimi ortaya çıkarması ve bu süreçte üretim için daha çok kaynak tüketimi ile doğa zararı oluşturan bir sistemin kurulması, günümüz iklim değişikliği gerçeğinin temelini oluşturmaktadır.

Her ülkenin farklı gelişim süreçleri, iklimi değiştiren olguların farklı hızlarda ortaya çıkmasına neden olmuştur. Örneğin; gelişmiş ülkelerde farklı sanayi seviyelerinde üretimlerin gerçekleştirilmesi (Endüstri 4.0 veya Endüstri 2.0) aslında kaynak kullanımı ve doğa zararının farklı seviyelerde ortaya çıkmasına neden olmaktadır. Endüstriyel üretimin doğa merkezli değil, ekonomik fayda merkezli düşünülerek gerçekleştirilmesi de bu sürecin en önemli düşünsel kaynağıdır.

Artan ekonomik gelişmişlik ile birlikte kaynakların kaynağının sorgulanması ve doğa zararının minimize edilmesi gerekliliği, sürdürülebilir üretimin düşünülmesini ve temel alınmasını getirmiştir. Sürdürülebilir üretim, üretimde zihniyet değişimini temsil etmekte olup, üretimin kaynak temelli ve doğa faydası düşünülerek gerçekleştirilmesini ifade etmektedir. Gelineen noktada, iklim değişikliği gerçeğine Türkiye özelinde bakıldığında;

-Meteoroloji Genel Müdürlüğü'nce gerçekleştirilen 2099 yılına kadarki 3 projeksiyonda ortalama sıcaklık artışının 1,5 – 3,7 °C aralığında artması, yağışın ise, +%3 ile % -12 aralığında olması beklenmektedir. Dolayısıyla, istatistiklere bakıldığında, rakamların ciddiyeti durumu göstermektedir.

İki yüzyıl önce keşfedilen sera gazları çevrimine ilişkin doğal süreç, bir gezegen olarak Dünya'nın sıcaklığını Güneşten gelen enerji ve uzaya bırakılan enerji olmak üzere dengede tutmaktadır(Maslin, 2009). İki önemli sera gazı olan su buharının ve karbon dioksitin varlığı olmasa Dünya'da ortalama sıcaklık -20°C dolaylarında olacaktır(Dow ve Downing, 2006). Öte yandan bu sera etkisi doğuran gazların olması gerekenden fazla olmaları ise, olumsuz sonuçlar doğurmaktadır. İklim değişikliğinin gerçek bir sorun olduğu ise, birçok bilim insanı tarafından kanıtlanmış ve yüksek CO2 konsantrasyonunun daha düşük fayda getirdiği kanıtlanmıştır(Watts, 2007). Yüksek CO2 konsantrasyonu, böcek sayısını artırmakta olup, bitkilerin düşen besin değeri ile birleştiğinde, tarımsal üretimin büyük yara almasına neden olmaktadır(Watts,2007). Dahası sıcaklığın artması durumunda, ekstrem kuralıkların %40 dolayına çıkması beklenmektedir(Fagan, 2008). Kuraklık, dağların sessiz katili olarak isimlendirilebilecektir. Mikrobiyolojik ve böcek kaynaklı hastalıklara bakıldığında ise, sıtma gibi hastalıklar, parazitler ve hastalıkların yayılması hızlanmaktadır.

İnsan kaynaklı(antropojenik) nedenler iklim değişikliğine neden olan başat faktörler olarak sıralanacaktır. İnsan kaynaklı aktiviteler, sera gazları çevrimi sürecini bozmuş olup, temel iklim sorunlarının kaynağını oluşturmaktadır(NRC, 2006). Sera gazı çevriminde bir diğer süreç, karbondioksitin çevrimi olup, karbondioksit çevriminde bozucu etkinin oluştuğunu ve bunun insan kaynaklı olduğunu bilim insanları şu şekilde açıklamaktadır: Doğada, karbon izotopları kimyasal olarak birbirinden farklı atomik ağırlıklara sahiptir. Bu karbon izotopları 3 farklı formda, hepsi de 6 protona sahip olmak üzere, farklı nötron seviyelerinden oluşmaktadır. Atmosferde bulunan yüzde 99 oranındaki karbon, karbon 12 formunda olup, geri kalanın büyük miktarını karbon 13, çok az kısmını radyoaktif olan karbon 14 formu oluşturmaktadır. Bitkiler büyümek için karbon 12 tercih ederler. Bilim insanlarına göre, karbon çevriminin bozulmasını gösteren en önemli kanıt karbon 13/karbon 12 oranıdır. Günümüzde karbon 13 aşırı derecede azalmaktadır(Mann ve Kump,2009) Bu durumun nedeni olarak da fosil yakıt kullanımı gösterilmektedir.

İklim değişikliği gerçeği altında, iklim değişikliğine uyum kavramı gittikçe önem kazanan bir hale gelmektedir. İklimin değişen yapısı, uyum kavramını öne çıkarmakta olup, adapte becerisi olmaksızın gerçekleştirilecek herhangi bir çalışma veya aktivite sonuçsuz kalacaktır. Bu nedenle, adaptasyon iklim değişikliği gerçeği altında tüm organizasyonel süreçleri ilerletmek üzere, disiplin oluşturan bir kavramdır.

### **İklim Değişikliğine Uyum(Adaptasyon) Kavramı**

Uyum kavramı; ekolojik, sosyal ve ekonomik sistemlerde gerçekleşen değişimlere yanıt verebilme becerisini kapsamaktadır. İklim değişikliğine uyum kavramı ise, iklimdeki değişimlere karşı süreçte,

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

uygulamalarda ve yapılarda değişim oluşumunu kapsamaktadır. İklim değişikliğine uyum, hem kırılganlık ve etki değerlendirmesi ile iklim değişikliğinin risk ve maliyet tahminini, hem de yanıt verebilme ve strateji geliştirme ile “etkileri azaltma” olgusunu kapsamaktadır(Kane ve Shogren, 2000).

Adaptasyon kapasitesi ise, sistemin, topluluğun veya bölgenin iklim değişikliği etkilerine karşı uyum sağlama potansiyeli veya yeteneğidir. Uyum sağlama kapasitesinin varlığı, kırılganlıkları azaltmakta ve sürdürülebilir gelişimi sağlamaktadır(Munasinghe 2000).

Smit(2000), sistemin karakteristiğinin uyumlaştırılması olarak uyum kavramını tanımlayarak, süreç ve çıktılar ile iklim değişikliğine uyumun oluştuğunu vurgulamaktadır. Ayrıca, iklim değişikliğine uyumun göstergesi olarak ise, değerlendirme kriterlerinin ve göstergelerinin baz alınması gerektiğini belirtmiştir. Uyum kavramına bakıldığında farklı biçimlerde karşımıza çıkması nedeni ile, uyum göstergelerinin de çok çeşitli olduğu görülecektir. Örneğin; planlanmış adaptasyon, farkındalık bilinci olan bir topluluğun önceden kararlaştırılmış politika kararlarına uygun biçimde ilerlemesi ile oluşmaktadır.

Şekil 1: Adaptasyon opsiyonlarının sınıflandırılması

Kaynak: Burton, 1996

Adaptasyon, iklim değişikliği etkilerini olumlama açısından iki temel alternatiften birisidir. Adaptasyonun karşıtı alternatif, azaltmadır. Adaptasyon opsiyonlarına bakıldığında, azaltma veya adaptasyon kararı verilmesinde temel karar zinciri baz alınmalıdır. Bu karar zinciri daha sonra adaptasyon opsiyonlarının de gelişimini etkileyecektir. Örneğin; yapısal korunma kararları veya Pazar bazlı kararlar verilmesinde adaptasyon kararının en başında verilmesi de etkili olacaktır. Adaptasyon kararının, etki azaltma kararı verilmesi sırasındaki karar örgüsü şu şekilde gösterilebilecektir:

Şekil 2: Adaptasyon veya Etki Azaltma Kararı Verilmesinde Temel Karar Zinciri(Karar Örgüsü)

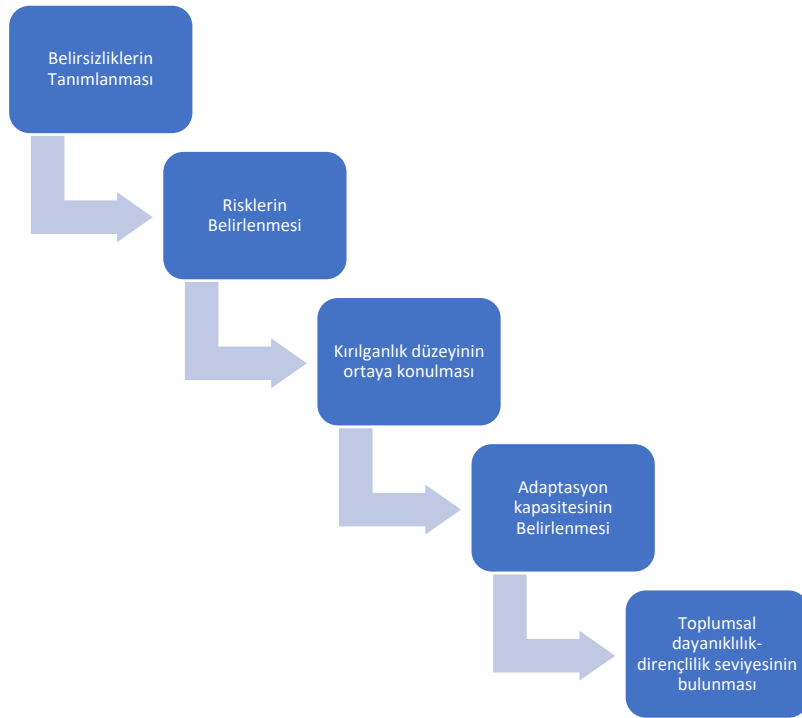

Şekil 2'ye bakıldığında, temel karar zincirinde öncelikle bilgi ve farkındalık ölçümleri gerçekleştirilmeden önce, politika kriterleri oluşturulmalı ve gelişim amaçları da kurulmalıdır. Bu doğrultuda, iklim değişikliğine uyum amaçlı bir plan ve program oluşturmak mümkün olacaktır. Bu kapsamda, iklim değişikliğine uyum amaçlı bir plan ve programda temel eylem politika kriterleri ve gelişim amaçlarının kurularak karar zincirinin bu şekilde denkleme alınmasıdır.

Politika kriterleri kamunun ihtiyaç analizleri doğrultusunda, belirsizlikleri azaltan ve risk yönetimini planlayan bir biçimde oluşturulmalıdır. Bu nedenle, doğru ekoturizm yönetiminin iklim değişikliği gerçeği kapsamında uygulanması amacı ile risklerin doğru analizi ve belirsizlik içeren konuların tanımlanması da gerekmektedir. Risklerin tanımlanması ve analiz edilmesi, belirsizlik içeren tüm durumların çözümlenmesini de gerektirmektedir. Risklerin gerçekçi tanımlanması amacı ile, belirsizliklerin minimize edilmesi önemli bir noktadır.

Belirsizlikler, olası risklerin yönetimi zorlaştırmasına neden olacağından doğru tanımlanmış belirsizliklerin belirli hale getirilebilmesi, iklim değişikliği karşısında toplumsal, yapısal veya alt kırılım olarak birçok farklı noktada kırılabilirlikleri gösterecek olduğundan adaptasyon kapasitesini de doğru tanımlamayı sağlayacaktır. İklim değişikliği karşısındaki kırılabilirlik, risk oluşumuna olan tepki becerisini ifade etmektedir. Dolayısı ile, kırılabilirlik potansiyel olarak içerisinde bulunan yanıt verebilme yeteneği veya yeteneksizliğidir. Her bir yerel değişkenin uyum kapasitesi, riskleri, belirsizlikleri ve kırılabilirlikleri farklılık arz etmektedir. Adaptasyon kapasitesinin gelişimi sonucunda artması veya olumlu ilerlemesi ise, iklim değişikliklerine dirençli bir topluluğun oluşturulması ile ilgilidir.

Şekil 3: Belirsizliklerden İklim Dirençli-Dayanıklı Topluluğa Aşamaları

Kaynak: Yazar tarafından literatürden yararlanılarak geliştirilmiştir.

### İklim Değişikliğine Uyum İçin Stratejik Ekoturizm Yönetimi Nasıl Başarılır?

Ekoturizm, korunan çevreler ve yerel halkın iyi halde olmasını destekleyen sorumlu bir turizm olarak tanımlanmaktadır. Ekoturizm, bu yönü ile doğa ve kültürün karışımını ifade eden misafir doyumluluğunu içermektedir. Öte yandan, sürdürülebilir turizmden farklı olarak turistlerin ihtiyaçlarını karşılamaktan çok ekosistem aktivitelerine odaklanmaktadır.

Stratejik yönetim ise, herhangi bir organizasyonun temel becerilerine ve öz yeterliliklerine göre temellendirilen ve organizasyonun hangi kaynakları kullanarak ne yöne gideceğinin belirlendiği bir üst yönetim metodu olarak tanımlanacaktır. Böylece, stratejik ekoturizm yönetimi ise, ekoturizm konusunda

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

çalışan bir organizasyonun stratejik yönetim ilkelerini uygulayarak kaynak planlaması ve yön analizlerinin yapılmasıdır.

Tablo 1: Stratejik Ekoturizm Yönetimi Aşamaları

Stratejik Ekoturizm Yönetimi Aşamaları
1.Yerel ekosistemin ve ekoturizmin gelişimi konusunda kapasitenin araştırılması(Yerel zenginlikler)
2.Paydaş analizi
3.Gelişim alanının tanımlanması ve uygulama alanlarının belirlenmesi
4.Alanın ana güç odaklarının tam belirlenmesi
5.Doğru deneyimlerin ve etkileşimlerin oluşturulması

Kaynak: Yazar tarafından literatürden yararlanılarak geliştirilmiştir.

2015 senesinde, Birleşmiş Milletler'in uluslararası alanda sürdürülebilir gelişimi bir amaç olarak belirlemesi ile sürdürülebilir gelişim yaygın bir sorumluluk haline gelmiştir. Avrupa Birliği ise bu konuda, Avrupa turizminin sürdürülebilir bir kapsamda ilerlemesinin doğal ve kültürel miraslarına odaklanması ile gerçekleşeceğini ileri sürmektedir.

Ekoturizmin temel aldığı prensipler ise;

- yerleşikleri desteklemek,
- turizmin çevre üzerindeki olumsuz etkilerini minimize etmek,
- çevresel ve kültürel değerler konusunda yerelde farkındalığı artırmak,
- misafirler ve yerleşikler için otantik deneyimler oluşturmak.

Kitlesel veya geleneksel turizm düşünüldüğünde, ekoturizm sıradışı bir deneyim sunmaktadır. Literatürde, ekoturizm tanımlamalarında en çok karşımıza çıkan, kavramlar “doğal çevre-değerler” ve “kültürel değerler”dir. Yerele ilişkin en çok otantik deneyim yaşatacak olan bu iki değer, ekoturizm aktivitelerinin temelini oluşturmaktadır.

Ekoturizmin farklı nitelikleri:

- Ekoturizmin bir yaşam biçimi olması,
- Ekoturizm aktivitelerine katılanların çevre bilinci ve doğa koruma farkındalığı olması
- Turizmin doğaya zarar vermeyeceğini de gösteren bir turizm alt türü olması
- Tüm paydaşlara katkısı bulunması

İklim değişikliğine uyum kapsamında ekoturizmin stratejik yönetiminin başarısı için, odaklanılması gereken ana kavram; yerel doğal ve kültürel değerlerden(sahip olunanlara) yola çıkılması, bu değerlerin yerel topluluk için ifade ettiklerinin iyi anlaşılmasıdır. Ekoturizmin stratejik yönetim başarısında, yerel toplulukların gelişimlerine odaklanıldığında yerel kalkınma ve sosyo-ekonomik temelli ekoturizm hedeflerine ulaşılmış olacaktır. Ekoturizme stratejik yaklaşıldığında, piyasa temelli çözümler değil, kaynak ve insani temelli bir çözüm temel alınmaktadır.

Ekoturizme stratejik yönetim açısından yaklaşıldığında, topluluk geliştirme konseptinin bireyselleştirilmesi baz alınmaktadır. Wheelen ve Hunger(2008), stratejik yönetimi uzun dönemli çevresel tarama, strateji formülasyonu, strateji uygulaması ve değerlendirmeyi içeren performans yönetim kararları ve aksiyonları seti olarak tanımlamıştır. Stratejik yönetimin karar setleri ve aksiyonları, ekoturizmin iklim değişikliğine uyumu açısından değerlendirildiğinde baştan sona planlama

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

yapılmasına imkan tanımaktadır. Stratejik yönetim kararlarının, biyolojik çeşitlilikten ekoturizm aktivitelerinin elementlerine kadar tanımlanmasını içermektedir.

Ekoturizmin stratejik yönetim kapsamında 4 ana amacı bulunmaktadır(Urban Ecotourism Declaration- UED, 2006):

- Doğal ve kültürel mirasın korunması ve yenilenmesi
- Yerel faydaların maksimize edilmesi ve yerel insanların ihtiyaçlarının giderilmesine katkıda bulunması
- Çevresel konularda, tarihsel miras ve değerleri, sürdürülebilirlik başlıklarında kentli insanların ve misafirlerin farkındalığını artırma
- Ekolojik ayak izinin azaltılması

Stratejik yönetim açısından konuya bakıldığında, aksiyon planlarının ve ekoturizme başlama planının yapılması yerelin ihtiyaçları ile başlamaktadır. Öncelikle, korunacak doğal ve kültürel alanların tanımlanması ile birlikte yerelde insanların ihtiyaçları ekoturizmin stratejik yönetimini gerektirmektedir. Korunacak doğal ve kültürel alan zenginliğinin iyi tanımlanması, farklı zenginliklerinin, eksik yönlerinin ve olası geliştirilmesi gereken yönlerinin ortaya konulması gerekmektedir. Ekoturizm, zenginliğe sahip ekolojik alanların sürdürülebilir yöntemlerle yerel ve bölgesel ekonomiye fayda sağlamasına kanalize edilmesi olduğundan yerel zenginliklerin boyutu bilinmelidir.

Yerelde sahip olunanlar bilindikten sonra, amaçlara özgü belirteçlerin belirlenmesi ve bunlara özgü başarı kriterlerinin oluşturulması gerekmektedir. Başarı kriterleri belirlendikten sonra, hedef Pazar segmentasyonun yapılması ise uygulama sürecinin daha doğru ilerlemesini sağlamaktadır.

Tablo 2: Ekoturizmde Farklı Segmentasyon Kurulumunda Öne Çıkan Kriterler

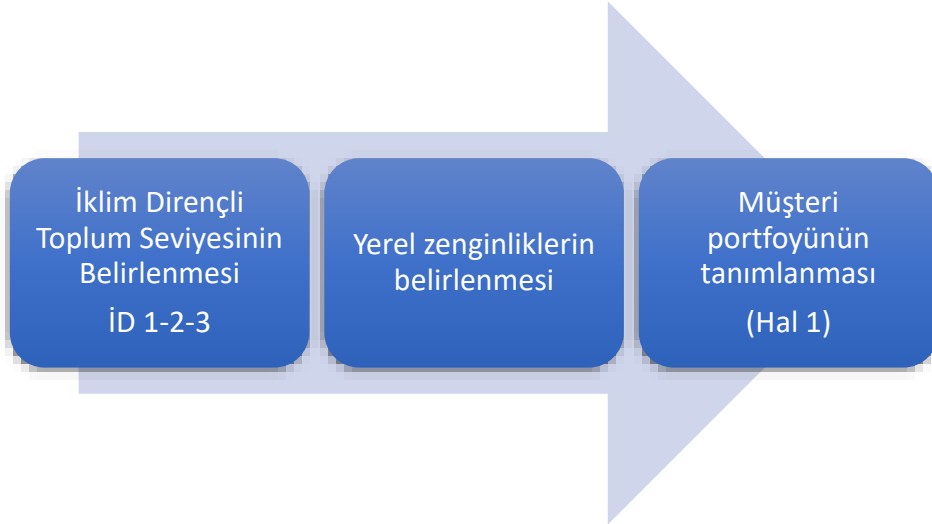

-Yerel Pazar değişkenlerinin bilinmesi
-Uluslararası Pazar değişkenlerinin bilinmesi
-Uluslararası Hedef Grupların tanımlanması
-Ekoturistler için Motivasyon Unsurlarının belirlenmesi
-Aktivitelerin yoğunluğu

Kaynak: Yazar tarafından literatürden yararlanılarak geliştirilmiştir

Uluslararası hedef grupların tanımlanması, turizm aktiviteleri için ana ögedir. Turizm aktivitelerinde, hedef grup müşteri portföyü ve nakit akışı bağlamında en önemli ögedir. Müşteri portföyünün niteliği ve potansiyel misafirlerin ana özellikleri, Ekoturizm işletmesinin tüm stratejik kararlarını yönlendirmektedir. Örneğin; potansiyel misafirlerin tek olmaları, çift olarak gelmeleri, tek çocuklu veya çok çocuklu olmaları stratejik yönetim sürecini etkileyen bir faktördür. Dolayısı ile, Ekoturizm işletmesi için stratejik yönetim uygulamalarının temeli misafir portföyünün oluşumu ile başlamaktadır. Bu portföy tamamen yerel zenginlikler ve geliştirilebilir yönler üzerine inşa edilmektedir.

Belirsizliklerden İklim Dirençli-Dayanıklı Topluluğa Aşamaları'nda tanımlanan direnç seviyesine odaklı bir planlama ile aşağıda belirtilen stratejik yönetim uygulamaları süreci işletildiğinde, iklim değişikliğine uyumlu bir ekoturizm süreci işleyecektir. Bu süreçte öne çıkan, iklim direnci seviyesi olup, bu direncin seviyesi baz alınarak yapılacak çalışmalar Ekoturizm faaliyetlerinin başarısının doğrudan belirleyicisi olacaktır.

Şekil 4: Ekoturizm İşletmesi İçin Stratejik Yönetim Uygulamalarının Temeli: 3 Faktör

Kaynak: Yazar tarafından literatürden yararlanılarak geliştirilmiştir.

Stratejik yönetim literatüründe, işletmelerin iç ve dış çevre analizleri müşteri portföyünün tanımlanması ve müşterilere ulaşmaya odaklı planlanmalıdır. İşletmenin bulunduğu sektör ve ekonominin genel analizinden sonra iç analiz kısmında en öne çıkan noktalar, işletmenin varlıkları ve yetenekleridir. Tüm varlıkları ve yetenekleri, müşteri portföyünün tanımlanması ile birlikte önem kazanmaktadır. Müşteri portföyü, pazarlama planının oluşturulmasını sağlayacağından işletmenin gelir kaynaklarının en önemli aşamasını oluşturacaktır.

Müşteri portföyü odaklı yapılacak olan örgüt yapısı planı, örgütsel kültürün inşa edilmesi, vizyon ve misyon kurulumu, teknik donanım ve kaynak planlaması Ekoturizm işletmeleri için iklim odaklılık ve iklim değişikliğine uyum için de temel arz etmektedir. 3 Faktör sonrasında, Ekoturizm işletmesi kendi amaç ve vizyonuna uygun biçimde;

-değer ürettiği

-ikame edilmediği,

-kaynağı nadir bir konuya sahip aksiyonlarını planlaması başarı için elzem koşullardır. Bu durumda, iklim değişikliğine uyumun konuşulduğu bir altyapı oluşacaktır. Öte taraftan, ekoturizm işletmelerinin iklim bazlı düşündükleri, neyi doğru yaptıkları, neyi iyi yapabilecekleri, hangi konularda yarıldıkları ve hangi konuların onlara piyasada sorun yaşatacağını bilmeleri de iklim değişikliğine uyum kapasitelerini iki yönlü etkilemektedir.

İklim bazlı stratejik yönetimde, Şekil 4'te tanımlanan 3 Faktör yaklaşımının ilk ikisi dış faktörleri temsil etmektedir. Diğer 1 faktör ise, işletmenin iç faktörü olup bu faktörün oluşturulmasında aşağıda belirtilen diğer aşamalar da birlikte düşünüldüğünde Ekoturizm işletmesi için iklim değişikliğine uyum temelli bir stratejik planlama süreci oluşturulacaktır.

Şekil 5: Bir Ekoturizm İşletmesi İçin Stratejik Yönetim Sürecinin 1. Aşaması

Kaynak: Yazar tarafından literatürden yararlanılarak geliştirilmiştir.

3 Faktör sürecinde tanımlanan müşteri portföyüne, işletmenin kendi içsel öğelerinin eklenmesi ile müşteri portföyü yeni öğeler ile zenginleşmekte ve 3 faktör sürecinde almış olduğu çerçevenin içerisini işletmenin içsel öğeleri, düşünüş biçimi ve kültürü ile donatmaktadır. Hal 2, bu süreci isimlendirmektedir. Hal 2 durumundan hareketle, stratejik yönetim süreci devam etmekte olup işletme piyasaya ilişkin iç ve dış stratejilerini bu yeni müşteri segmentasyonuna göre tanımlayacaktır.

Şekil 6: Bir Ekoturizm İşletmesi için Stratejik Yönetim Sürecinin 2. Aşaması

Kaynak: Yazar tarafından literatürden yararlanılarak geliştirilmiştir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Dolayısı ile, şekil 5’de öne sürülen biçimde, Müşteri portföyü 1 (Hal 1), özelliklerini çerçeve olarak Ekoturizm temelli içermektedir. Makro boyutta yapılan bu tanımlama, sektöre ilişkin müşteri portföyünü çizerken, müşterilerin tüm ihtiyaç ve diğer özelliklerini barındırdığından, çerçeve faktör niteliğinde 3 Faktörden birisi olarak belirtilmiştir. Şekil 5’te bu çerçeve Hal 1 pozisyonuna, iklim değişikliğine uyumlu vizyon, misyon ve etik değerler ile işletme amaçları da eklendiğinde, Hal 2 olarak isimlendirilecek müşteri portföyü 2’nin oluşturulması anlatılmaktadır. Böylece, Ekoturizm işletmesinde temel stratejilerin kurulmasının müşteri odaklı olması gerektiği vurgulanmaktadır. Şekil 6’da ise, işletmenin tüm piyasa stratejilerini yeni tanımladığı Hal 2 kapsamına uygun biçimde kurması gerektiği belirtilmektedir. Şekillere eklenmeyen tüm öğeler arasında ise, geri bildirim süreci bulunmaktadır. Eğer Şekil 6’da bir değerlendirme olacaksa, önce bu Hal 2’ye daha sonra Hal 1’e inecektir. Öte yandan, düzeltmeler ve yeniden değerlendirmeler bu noktalarda olacaktır.

Geleneksel yaklaşımda, müşteri portföyünü merkezde göremeyiz. Çok daha sonraları analize dahil edilen müşteri odaklılık, ekoturizm sürecinde merkezde bulunmaktadır. Ekoturizm işletmeciliğinde temel konu müşterinin sektörü belirlediğidir. Örneğin; müşteri kamp yapacağı bir alanda aynı zamanda hiking de yapmak istiyor ise, işletmenin fonksiyonel ve finansal stratejilerini bu kapsamda oluşturması elzemdir. Öte yandan, müşterilerin hangi kategorilerde daha çok ziyaretçi oldukları da işletmenin kurumsal stratejileri konusunda fikirler vermektedir. Öte yandan, Ekoturizm işletmesinin iklim değişikliğine uyumu düşünüldüğünde, 3 Faktör’den Hal 1 dışında 2 faktörü tamamen göz önüne alması ve bu 2 faktöre Hal 1’den Hal 2’ye giden süreci de dahil ederek, ortaya kendine özgü bir bağlam ve başarı fonksiyonu çıkartması bu bölümde önerilmektedir. Böylece, her bir Ekoturizm işletmesi, geri bildirim ve sürekli kontrol-iyileştirme süreci ile birlikte kendi iklim değişikliğine uyumlu stratejik yönetim sürecini başarabilecektir.

**ÖZET**

Din ve ahlak, insan denen canlı türünün fertlerini yetkinleştirmeyi ve bu sayede de yeryüzündeki bireysel ve toplumsal yaşamı düzene koymayı hedefleyen sistemlerdir. Her iki sistemin de hem inanç ya da varsayımlara/kabullere dayanan bir metafiziksel yönü hem de birtakım eylemlerin icrasına dayanan aksiyon yönü bulunmaktadır. Gerek hedeflerinin ve gerekse yapılarının benzerliği, her ikisi de varlığını öteden beri sürdüren ve sürdürmeye de devam edecek bu inanç ve eylem sistemlerinin birbiriyle bir irtibatı olup olmadığı sorusunu gündeme getirmektedir. O nedenle de dinin ahlak ile nasıl bir ilişki içerisinde bulunduğu meselesi genelde düşünce tarihi ve daha özelde de felsefe tarihi boyunca önemli soruşturma alanlarından biri olagelmıştır. Her ne kadar modernleşme sonrası dönemde bu meseleye olan ilgide ciddi derecede bir artış gözlemlense de klasik dönem geleneklerinde de din ile ahlak arasındaki ilişkiyi konu edinen kayda değer miktarda metne rastlamak mümkündür. Klasik geleneklere ait metinler din ve ahlak gibi hem insan hem de toplum yaşamı açısından son derece mühim iki olgunun birbiriyle münasebetini farklı yönleriyle incelemişlerdir. Bu incelemelerde ikisi arasında irtibat kuranların oranı yüksekse de böylesi bir irtibatın kurulma biçimi çeşitlilik arz etmektedir. Nitekim dini bazıları ahlakî değerlerin yegane belirleyicisi veya belirleyicilerinden biri, bazıları da ahlakî eylemlerin temel motivasyon kaynağı ya da kaynaklarından biri şeklinde değerlendirmiştir. Öte yandan bunun tam tersi şekilde ahlakî dinin kaynağı ya da dini eylemlerin temel motivasyon kaynağı olarak gören filozof ve düşünürlerin varlığından da bahsedilebilir. Elinizdeki tebliğ, din ile ahlak arasında sözü edilen irtibatın İslam ahlak filozofları tarafından nasıl inşa edildiği sorusuna erdem tasnifleri üzerinden bir cevap aramaktadır. Zira erdemler, klasik düşünce açısından ideal ahlakî yaşamın yapı taşlarıdır. Nitekim tebliğ de aradığı cevaba ulaşmak için erdemler içerisinde “kulluk (ibâdet)” şeklinde isimlendirilen erdemi merkeze alarak soruşturmasını yürütecektir. Bu bağlamda tebliğimizde farklı erdem tasnifleri bünyesinde kulluk erdeminin yeri, mahiyeti ve diğer erdemlerle ilişkisi ana hatlarıyla soruşturulacaktır. Böylelikle de İslam ahlak filozoflarının kulluk denilen erdem aracılığıyla din ile ahlak arasında nasıl bir ilişki kurdukları konusunun bir miktar aydınlatılması hedeflenmektedir.

**Anahtar Kelimeler:** İslam Felsefesi, İslam Ahlak Felsefesi, Din, Ahlak, Erdem, Kulluk.

**ABSTRACT**

Religion and morality are systems that aim to perfect the members of the species called human beings and thereby regulate individual and social life on earth. Both of these systems have both a metaphysical aspect based on beliefs or assumptions/acceptances and an action aspect based on the performance of certain activities. The similarity of both their goals and structures raises the question of whether these belief and action systems, both of which have existed and will continue to exist, have any connection with each other. Therefore, the question of how religion relates to morality has been one of the most important areas of inquiry throughout the history of thought in general and the history of philosophy in particular. Although there has been a significant increase in interest in this issue in the post-modern period, it is possible to find a considerable amount of texts on the relationship between religion and morality in classical traditions. The texts belonging to the classical traditions examined the relationship between religion and morality, two phenomena that are extremely important for both human and social life, from different aspects. Although the percentage of those who establish a connection between the two is high, how such a connection is established varies. Indeed, some have considered religion as the sole determinant or one of the determinants of moral values, while others have considered it as the main

motivation source of moral actions or one of them. On the other hand, oppositely, some philosophers and thinkers see morality as the source of religion or the main motivation for religious actions. This paper seeks an answer through the classification of virtues to the question of how the aforementioned connection between religion and morality was constructed by Islamic moral philosophers. For virtues are the building blocks of the ideal moral life in terms of classical thought. To reach the answer it seeks, this paper will conduct its investigation by focusing on the virtue called “servanthood (ibādat)” among the virtues. In this context, this paper will investigate the place of the virtue of servanthood within different classifications of virtues, its nature, and its relationship with other virtues. In this way, it is aimed to shed some light on how Islamic moral philosophers establish a relationship between religion and morality through the virtue called servanthood.

**Keywords:** Islamic Philosophy, Islamic Moral Philosophy, Religion, Morality, Virtue, Servanthood.

## GİRİŞ

Din ve ahlakın varlığı insanlık tarihi kadar eskidir. Gerek dinin ve gerekse ahlakın böylesine kadim olgular olmasının ise kayda değer nedenleri bulunmaktadır. Din için söz konusu edilebilecek en temel neden insanın inanma ihtiyacıdır. Bu ihtiyaca en kapsamlı şekilde ve en üst düzeyde cevap veren kurum da din olmuştur. Nitekim bundan dolayıdır ki insanlık var oldu olalı yeryüzünde bazıları ilahi nitelikli olan fakat bazıları da olmayan pek çok din ortaya çıkmıştır (Taşçı Yıldırım, 2020: 358). Ahlak için söz konusu edilebilecek en temel neden ise insanın yalnızca “yaşamak” ile yetinmeyip bundan bir adım daha öteye gidip “iyi yaşamak” istemesidir. İyi yaşamak ise duygu, düşünce ve davranışlara rehberlik edecek birtakım eylem ilkelerinin varlığını gerektirmektedir. İşte ahlak da tam olarak bu türden ilkeler sunduğu için tıpkı din gibi insanlık var olduğundan bu yana yeryüzünde bulunagelmiştir.

Din ve ahlak ilk ortaya çıktıkları andan itibaren insanı yetkin hale getirmeyi ve yetkinleşmiş insan aracılığıyla da önce insan fertlerinin birlikte inşa ettikleri toplumu ve ardından da yeryüzünü daha iyi hale getirmeyi hedeflemiştir. Her iki olgu arasında hedef dışında başka ortak noktalardan da bahsedilebilir. Şöyle ki; dinin de ahlakın da hem inanç ya da varsayımlara/kabullere dayanan bir metafiziksel yönü hem de birtakım eylemlerin icrasına dayanan aksiyon yönü bulunmaktadır. Diğer bir deyişle, din yalnızca inanma ihtiyacını karşılamak değil aynı zamanda -tıpkı ahlak gibi- eylem rehberliği de yapmaktadır. Öte yandan ahlak da yalnızca eylem rehberliği yapmak değil aynı zamanda -tıpkı din gibi- iyinin ve doğrunun ne olduğunu da ortaya koymaktadır. Din ile ahlak arasında sözü edilen böylesi ortaklıklar, filozofları bunların birbiriyle nasıl bir ilişki içinde olduğu sorusuna yöneltmiştir. Bu büyük sorunun cevaplanmayı bekleyen pek çok alt sorusu bulunmaktadır. Onlar arasında ilk hatıra gelenleri şöyle sıralayabiliriz: Din ve ahlak birbirinden bütünüyle ayrı iki olgu mudur? Din, ahlakın kaynağı mıdır? Din, ahlakın şartı mıdır? Ahlak, dinin olmazsa olmaz bir parçası mıdır? Ahlak, dinin yardımcı mıdır?

Filozofların bazıları din ile ahlak arasındaki ilişkiyi pozitif yönde inşa etmiş ve ahlakın kaynağını din olarak görmüştür. Buna göre, din ve dini buyrukların kaynağı sayılan kutsal kitap ahlakın ilkelerini sunar ve bu ilkelere normatiflik verir. Öte yandan ahlak da söz konusu ilkelerin zaman ve mekan düzleminde somutlaşmasını sağlar (Tatar, 2015: 31). Kaydedilen bu yaklaşımın aksine kimileri de din ve ahlak ikilisinin birbiriyle herhangi bir irtibatının bulunmadığını, hatta bundan da öte dinin ahlakın önünde bir engel olarak yer aldığını yahut ahlakın dine ihtiyacı ortadan kaldırdığını öne sürmüştür (Çakmak, 2019: 11-12). Bununla birlikte, din ile ahlak arasında zorunlu değilse de kuvvetli bir ilişki bulunduğunu ve bunların birbirlerini desteklediğini varsayan üçüncü bir yaklaşım daha bulunmaktadır (Yaran, 2012: 44). Modern döneme gelinceye kadar din-ahlak ilişkisinde daha belirleyici olan yaklaşımın da esasında bu sonuncusu olduğunu söyleyebilmek mümkündür.

Felsefe tarihinde din ile ahlak arasında inşa edilen kuvvetli irtibatları takip etmemize imkan tanıyacak çokça mesele bulunmaz. Bunları incelemek ve filozofların o meseleler etrafındaki görüşlerini tahlil etmek pek çok soruna çözüm bulabilmek yanında din ve ahlak arasında kurulan ilişkilerin aydınlatılmasına da hizmet etmektedir. Böylesi meselelerden biri de erdem meselesidir.

Klasik dönem filozofları bireylerin dinle irtibatlı olmasını, bir dine sahip bulunmasını, o dinin ritüellerini, ibadetleri yerine getirmesini önemsemiş ve bunun ahlaki açıdan önemli olduğunu iddia

etmişlerdir. Bu nedenle de klasik dönemin en önemli ahlak felsefesi geleneklerinden olan antik Yunan felsefesinden itibaren “dindarlık” bir erdem olarak görülmüştür. İslam dünyasına geldiğimizde ise İslam ahlak filozoflarının da benzer bir fikri tavrı sürdürdüklerini görmekteyiz. Zira klasik dönemin bir başka büyük ahlak geleneği olan İslam ahlak felsefesinde de dinin ahlakı ve ahlakın da dini beslediği, beslemesi gerektiği öne sürülmüştür. Yine benzer şekilde bu geleneğin mensubu isimler de antik Yunan filozoflarında görüldüğü gibi dindarlık ve erdemliliği birbirini tamamlayan şeyler olarak değerlendirmiştir. Nitekim bu değerlendirmeye paralel biçimde de antik Yunandaki dindarlık erdemine karşılık buradaki erdem tasniflerinde karşımıza “kulluk” erdemi çıkmaktadır. Şu halde, dindarlık yahut Tanrı’ya kulluk, O’nun emirlerine ve yasaklarına uyup dini emirleri ve yasakları gözetme klasik dünyanın bu her iki büyük geleneğinde de bir erdem olarak görülmüştür. Söz konusu erdem antik Yunan felsefesinde doğrudan dindarlık şeklinde isimlendirilirken, İslam ahlak felsefesinde ise kulluk adıyla yer almıştır. Elinizdeki çalışma, “kulluk” adlı bu erdemi merkeze alacak ve onun erdem tasnifleri içerisindeki yerini, mahiyetini ve diğer erdemlerle ilişkisini inceleyecektir. Böylelikle de İslam ahlak filozoflarının kulluk denilen erdem aracılığıyla din ile ahlak arasında kurdukları irtibatı netleştirmeye gayret edecektir.<sup>1</sup> Ancak İslam ahlak felsefesinde yönelmeden önce bu geleneği besleyen önceki felsefe geleneklerine de başvurmak ve orada karşımıza çıkan dindarlık erdemine ana hatlarıyla göz atmak hem yapacağımız incelemeye iyi bir arka plan sağlayacak hem de kavram takibini kolaylaştıracaktır.

### ANTİK YUNAN VE HELENİSTİK DÖNEM AHLAK FELSEFELERİNDE DINDARLIK ERDEMİ

Antik Yunan felsefesinin önde gelen isimleri inşa ettikleri felsefi sistemler içerisinde dine de önemli bir yer vermiştir. Dahası, bazıları “felsefenin işinin bizi yarı dini bir gerçeklik görüşüne, hatta yarı dini bir yaşam tarzına götürmek olduğunu” dahi ileri sürmüştür (Charlesworth, 2023: 25). Böylesi bir iddianın izini sürebileceğimiz metinlerin başında Platon’un kiler gelmektedir. Platon (ö. MÖ. 348), diyaloglarında konuştuğu Sokrates (ö. MÖ. 399) üzerinden pek çok mesele yanında din olgusunu da farklı açılardan ele almıştır. Bu çerçevede işaret edeceğimiz ilk metin *Protagoras* diyalogudur. Burada Sokrates muhatabı Protagoras ile gerçekte tek bir erdem mi yoksa birden fazla erdem mi bulunup bulunmadığını sorununu, eş deyişle erdemlerin birliği meselesini (Aksu, 2019/2: 176-180) tartışırken dindarlığı da hikmet, adalet, cesaret ve iffet temel erdemleri yanında ayrı bir erdem olarak zikretmektedir (Plato, 1997: 762-763, 329d-330b). Ancak burada, örnek olarak zikretme dışında dindarlık erdemi üzerinde ayrıca durulmamaktadır.

Dindarlık söz konusu olduğunda gündeme gelecek ikinci ve en önemli metin *Euthyphron* isimli diyalogdur. *Euthyphron* doğrudan bu meseleye, bir dine inanmanın ve o dini yaşamının yani dindarlığın ne olduğu meselesine hasredilmiştir. Şöyle ki, eser dindarlık erdeminin hem mahiyetini hem de erdem tasnifi içerisindeki yerini özel olarak tartışmaya açmaktadır. Sokrates’in diğer pek çok diyalogda olduğu gibi burada da kesin bir sonuca ulaştığı görülmez. Bununla birlikte, dindarlığın mahiyetini açığa çıkarma bağlamında özellikle “bir şeyin dine uygun olduğu için mi tanrılar tarafından sevildiği yoksa tanrılarca sevildiği için mi dine uygun olduğu” sorusu üzerinde durulur (Platon, 2011: 53-63, 9D-11E). İlgili soruya ilişkin tartışma, eserin sonlarına gelindiğinde dindarlığın erdem tasnifi içerisinde nerede durduğunu sorgulamaya doğru yönelir. Buna göre; dindarlık adaletin tanrılara hizmetle yani ibadette/kullukla<sup>2</sup> ilgili yönüne verilen addır. Adaletin bir diğer yönü ise insanlara hizmetle ilgilidir (Platon, 2011: 65-67, 12D-E).

Kaydedilen açıklamalardan hareketle şunları söylemek mümkündür: Platon dindarlığa, özü itibarıyla, “tanrılara kullukta adaleti gözetme” anlamı vermektedir. Kendisine verilen böylesi bir anlamının sonucu

<sup>1</sup> Tam bu noktada İslam filozoflarının dindarlık-ibadet-ahlak ilişkisine dair fikirlerini ve yaklaşımlarını inceleyen, fakat bizim burada kullandığımız veri setinden nispeten farklı kaynaklara dayalı olarak gerçekleştirilen yakın tarihli bir çalışmaya işaret etmek gerekmektedir. Bk. Taşçı Yıldırım, 2020: 362 vd.

<sup>2</sup> Çevirinin ana metninde “therapeia” sözcüğü “özen” ile karşılanmışsa da kelimenin diğer anlamları arasında “hizmet, ibadet, refakat” gibi başkalarının da bulunduğu belirtilmiştir. Bk. Platon, 2011, 92, dp. 41. Biz, metnin bağlamı ve çalışmamızın içeriği dikkate alındığında *therapeiayı* (tanrılara) *hizmet* yani ibadet/kulluk şeklinde karşılamanın daha doğru olacağını düşünmekteyiz.

olarak o, her ne kadar *Protagorasta* diğer dört temel erdem yanında ayrı bir erdem şeklinde anılsa da *Euthhyphronda* adaletin bir yönü, başka bir deyişle, adalet temel erdeminin bir alt erdemi olarak değerlendirilmiştir. Platon'un aynı değerlendirmeyi *Devlet* diyalogu başta olmak üzere daha sonraki çalışmalarında da sürdürdüğü ve dindarlık erdemini nihai olarak temel erdemler şemasının dışında bırakıp adaletin altına yerleştirdiği görülmektedir (Annas, 1981: 110-111).<sup>3</sup>

Dindarlığın erdem şemasındaki yerine ilişkin zikredilen bu Platoncu tavır, antik Yunan düşüncesi sonrasında doğup gelişen Helenistik dönem felsefe okullarınca da devam ettirilmiştir. Burada örnek olması bakımından Stoacılığa işaret etmek yerinde sayılacaktır. Nitekim günümüze ulaşan Stoacı metinlerde dindarlığın adaletin alt erdemi şeklinde ele alındığı açıkça görülmektedir:

“(…) Bazı erdemler birincildir, fakat diğerleri onların altında yer almaktadır. Birincil erdemler dörttür: Amelî hikmet (prudence), iffet, cesaret, adalet... Amelî hikmetin alt erdemleri akliselim, iyi hesaplama, çabuk kavrayış, sağduyu ve becerikliliktir. İffetin alt erdemleri iyi disiplin, yakışıklılık, alçak gönüllülük ve kendini kontroldür. Cesaretinkiler tahammül, [öz] güven, âlîcenâplık, neşelilik ve çalışkanlıktır. Adaletinkiler ise *dindarlık* (piety), onurluluk, hakkaniyetlik, dürüstlüktür (L.S., 61H.6-10) (Long ve Sedley, 1987: 380; Aksu, 2018: 79).

Toparlayacak olursak, dindarlık İslam düşüncesi öncesi dönemde tanrılara kulluk ile özdeşleştirilmiş ve kullukta adaleti, hakkı gözetmek, eş deyişle tanrılara karşı adil davranmak şeklinde anlaşılmıştır. Sözü edilen anlayışın doğal sonucu ise dindarlığı temel bir erdem değil adaletin alt erdemlerinden biri kabul etmek olmuştur. Aynı kabul, birazdan daha detaylı inceleyeceğimiz şekilde, İslam ahlak felsefesi tarafından da tevarüs edilmiş ve geliştirilmiş gözükmektedir.

### İSLAM AHLAK FELSEFESİNDE KULLUK ERDEMİ

İslam felsefesi geleneğinde din ve dine dair meseleler daima önemli inceleme konuları arasında yer almıştır. Özellikle Fârâbî'den (ö. 950) itibaren dinin felsefe ile ve daha özelde de ahlakla irtibatı derinlemesine ve farklı boyutlarıyla tahlil edilmiştir. Öyle ki, insanın tabiatı itibarıyla dine, dindarlığa yatkın bir varlık olduğu öne sürülmüş (Taşçı Yıldırım, 2020: 366) ve insanın yer yüzünde bulunma nedenleri arasında Tanrı'ya kulluk da yerleştirilmiştir (İsfahânî, 2010: 84). Bunun yanında dindarlık felsefe başta olmak üzere teorik ilimlerde başarı elde edebilmenin yani nazari yetkinliğin ön şartları arasında zikredildiği gibi (Fârâbî, 1992: 191-192), dahası hakiki anlamda erdemli olabilmenin yani pratik yetkinliğe erişebilmenin de yine ibadetlerde devamlılıktan geçtiği belirtilmiştir (Taşçı Yıldırım, 2020: 366). Fakat din-ahlak ilişkisi açısından bu tabloya bakarak bir noktaya dikkat çekmek gerekmektedir. Burada din (dindarlık/ibadet) ile ahlak iki ayrı alan şeklinde sunulmaktadır ve hem nazari hem de amelî yetkinlik için bu ayrı alana da müracaatın gerekliliği vurgulanmaktadır. Ne var ki, dinin ahlakla irtibatı söz konusu olduğunda İslam ahlak filozoflarının erdem tasnifleri çerçevesinde nispeten farklı bir tabloyla daha karşılaşmak mümkün gözükmektedir. Bu farklı tabloyu ise kulluk denilen erdem aracılığıyla görebilmek ve yorumlayabilmek mümkündür.

Klasik dönem ahlak filozoflarına ait erdem tasnifleri içerisinde kulluk (ibâdet) erdemine ilk rastladığımız tasnif İbn Miskeveyh'e (ö. 1030) ait olandır. İbn Miskeveyh kulluğu -tıpkı Platon gibi- adaletin bir alt erdemi şeklinde sunmaktadır (Miskeveyh, 1966: 23). Filozofun kulluğa çizdiği anlam çerçevesi ise üç ayrı eylem grubunun icrasını içermektedir. Birinci eylem grubu, Allah Teâlâ'nın yüceltilmesini ve O'na itaat edilmesini; ikincisi meleklere, peygamberlere ve büyük mezhep imamlarına hürmet gösterilmesini; üçüncüsü de şeriatın gerektirdikleriyle amel edilmesini içermektedir. Ayrıca İbn Miskeveyh, takvâyı gözetmenin sayılan tüm bu eylem gruplarının icrasını yetkinleştireceğini ve onlardan elde edilmesi umulan neticeyi en üst düzeye çıkaracağını da açıklamalarına eklemektedir (Miskeveyh, 1966: 24).

Kulluk erdemi bağlamında müracaat edeceğimiz ikinci filozof Nasîruddîn et-Tûsî'dir (ö. 1274). Tûsî de İbn Miskeveyh'i takiben kulluğu adaletin alt erdemlerinden saymıştır. Yine kulluğa dair sunduğu tanım da selefi ile hemen hemen aynıdır denilebilir:

<sup>3</sup> Dindarlık ile adalet arasındaki ilişkiye ve dindarlığın temel erdemler şemasının dışında bırakılmasının olası sebeplerine dair ayrıca bk. Weiss, 2012: 133-135.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

“*İbâdet* [kulluk], kişinin Yüce ve Üstün Yaraticıyı ve O’nun Huzuruna yakın kılınan melekleri, nebiler, imamlar ve evliyalı (aleyhisselam) ta’zim edip yüceltmesi, onlara tabi olup şeriat sahibinin emir ve yasaklarına itaat etmesi ve bu anlamda yetkin ve tam olan takvayı kendisine şiar ve örtü edinmesidir.” (Tûsî, 2007: 97).

Ancak Tûsî’nin erdem tasnifi bir noktada İbn Miskeveyh’in tasnifinden ayrılmaktadır. O da şudur: Tûsî’nin adaletin alt erdemleri olarak sundukları arasında kulluk dışında din ve dindarlıkla ilişkili sayılabilecek başka erdemler de yer almaktadır. Bunlar teslimiyet ve tevekküldür. Filozof bunları sırasıyla şu şekilde tanımlamaktadır:

“*Teslimiyet*, kişinin, İsmi Yüce Bâri Teâlâ’ya taalluk eden veya itiraz edilmesi caiz olmayan birisine taalluk eden fiile, doğasına uygun olmasa bile rıza gösterip onu hoşlukla ve güler yüzle karşılamasıdır. *Tevekkül*, beşerin güç ve yeterliliğine havale edilemeyecek ve insanların görüş ve düşüncesinin kendisinde tasarrufta bulunamayacağı işlerde, artırma ve eksiltme, hızlandırma veya ertelemenin istenilmemesi ve (bu şekilde) olan şeylere muhalefet etmeye eğilim gösterilmemesidir.” (Tûsî, 2007: 97).

Kaydedilen her iki erdem de özü itibarıyla kulluk erdemi ile irtibatlandırılabilir, bir anlamda onu tamamlayıcı özellikteki karakter nitelikleridir. Böylesi karakter niteliklerinin sayısının Tûsî sonrasında artırıldığını görmekteyiz. Bu hususu biraz daha açmak adına Taşköprüzâde Ahmed Efendi’nin (ö. 1561) erdem tasnifine yönelebiliriz.

Taşköprüzâdede de diğerleri gibi kulluk adaletin alt erdemleri arasındadır ve tanımı da büyük oranda diğerleriyle benzerdir. Ancak burada müellif, kendisinden öncekilerde rastlamadığımız bir detay sunmakta ve kulluk erdeminin hangi durumda ortadan kalkabileceğine işaret etmektedir:

“On dördüncüsü kulluk, Allah Teâlâ’yı ve peygamberler, evliya ve imamlar gibi ehlullahtan olanları yüceltmek ve O’nun şer’î emirlerine uymak ve şer’î yasaklardan da uzak durmaktır. Bil ki ilimleriyle amel olan alimler de Allah’ın ehliindedir. (...) Ayrıca bilinmelidir ki ibadetin afeti riyadır ve ondan kaçmak lazımdır. (...) Riyakarın dört alameti vardır. Yalnız iken tembel, insanlarla beraber iken gayretlidir, övüldüğü zaman daha fazla çalışır, yerildiği zaman çalışmasını azaltır.” (Taşköprüzâde, 2014: 102-104).

Taşköprüzâde adaletin altında önceki tasniflerde yer alanlardan daha fazla alt erdem zikretmektedir. Bunlar arasında kullukla irtibatlandırılacaklardan ilk ikisi Tûsî’nin de yer verdiği tevekkül ve teslimiyet erdemleri iken, orada bulunmadığını gördüğümüz üçüncüsü ise rıza erdemidir. Bu erdem, her biri Allah Teala’nın takdiri olarak başa gelen musibetlere ve elde kaçan fırsatlara, iyi şeylere üzülmeyi ve bunları olduğu gibi kabullenmeyi ifade etmektedir (Taşköprüzâde, 2014: 102). Böylesi bir anlam dolayısıyla yine rızanın da tevekkül ve teslimiyet gibi kulluk erdemini tamamlayıcı özellikte bir erdem olduğu kabul edilebilir.

Kulluk erdemine dair görüşlerini paylaşacağımız son isim Kınalızâde Ali Çelebi’dir (ö. 1572). Kınalızâde adalet erdeminin alt erdemlerini tasnif ederken kendisinden önceki meşhur ahlakçıları ve bunlar arasında da özellikle Tûsî’yi dikkate aldığını açıkça belirtmektedir. Dolayısıyla onun kulluk erdemine yaklaşımı da yukarıda aktarılanlara paraleldir. Bununla birlikte, kendisinin kulluğa dair açıklaması tüm diğer tanımları ve izahları toparlayıcı ve özetleyici mahiyette olduğundan ötürü onu da ayrıca kaydetmekte fayda vardır:

“İbadet: Kerem ve cömertlik hazinelerinden varlığı bahsettikten sonra açık ve gizli nimet türleri, iç ve dış ihsan çeşitleri ile varlık mülkünü mamur eden Cenabı Hakk’a hizmet ve itaat için çalışman ve gevşeklik göstermemendir. Peygamberler, melekler ve temiz kullardan oluşan Hak dergahının yakınlarına salavat ve teslimat ile yaklaşım şeriatı uyman, emir ve yasaklarını kabul edip uygulamandır. Bu erdem tamamlayıcısı, mükellefin en iyi vasfı ve en güzel huyu olan ve kulun Allah’ın yasakladığı her şeyden sakınıp kaçınması anlamına gelen takvadır.” (Kınalızâde, 2016: 97).

## DEĞERLENDİRME VE SONUÇ

İslam ahlak filozoflarının kulluğu erdem tasnifi içerisinde nerede konumlandıklarına, nasıl tanımladıklarına ve yine bu çerçevede kullukla ilişkilendirilebilecek başka hangi erdemlere tasnifte yer

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

verdiklerine dair yukarıda çizilen tablo, cevaplanması gereken birkaç soruyu gündeme getirmektedir. Bunların en başında gelen iki tanesi kulluğun niçin başka bir temel erdem değil de adaletin alt erdemi olduğu sorusudur. Bir diğeri ise, kulluk şeklinde bir alt erdem varlığını kabul etmenin din-ahlak ilişkisi açısından hangi neticeleri doğurduğudur.

Kulluk erdemi, kaydedilen tüm erdem tasniflerinde adaletin bir alt erdemi olarak sunulmuştur. Ne var ki, hangi sebeple başka bir temel erdemle değil de adaletle irtibatlandırıldığına, adaletin altında, onun bir parçası yahut onun görünümünden biri şeklinde değerlendirildiğine ilişkin açık bir kayıt da - görebildiğimiz kadarıyla- zikredilmemiştir. Şu halde, bu konuda ancak dolaylı yollardan birtakım gerekçeler tespit edebilmemiz mümkün gözükmektedir.

Başlangıç noktası olarak antik Yunandaki dindarlık erdemini hatırlamak iyi olacaktır. O erdeme atıfta bulunmamızın nedeni ise kulluk erdemine İslam ahlak filozoflarının çizmiş olduğu anlam çerçevesi ile antik Yunan'ın dindarlık erdemi arasında neredeyse hiçbir farkın bulunmaması, orada dindarlık şeklinde ifade edilen olgunun İslam ahlak felsefesinde kulluk (ibâdet) terimi ile dile getirilmiş bulunmasıdır. Antik Yunan felsefesinde Sokrates'in ağzından Platon dindarlığı insanın tanrılara karşı bir borcu şeklinde değerlendirmiş ve o değerlendirmenin bir sonucu olarak da onu kısaca "hakkın hak sahibine verilmesi" diye tanımlayabileceğimiz adaletle ilişkilendirmişti. Benzeri bir durumun izini İslam ahlak felsefesi söz konusu olduğunda Kınalızâde Ali Çelebi'nin açıklamaları üzerinden sürebilmek mümkün görünmektedir.

Kınalızâde, Aristoteles'e dayandırdığı fakat kendisinin de benimsediği görüşe göre adaletin üç türünün olduğunu belirtmektedir. Bu türlerden ilki de Cenâb-ı Hakk'a karşı adalettir. O bizlere önceden alınmış yahut verilmiş herhangi bir şeyin karşılığı olmaksızın, hiç hak etmediğimiz halde varlık ve türlü iyilikler ihsan etmiştir. Bu da O'na karşı hizmet ve şükürü yani kulluğu O'nun bizim üzerimizdeki bir "hak" kı haline getirmektedir (Kınalızâde, 2016: 118).<sup>4</sup> Bu düşüncüyü Kınalızâde şu cümlelerle açık biçimde dile getirmektedir:

"Adalet, kulun kendisiyle merhametli Rabb'i arasında olan her hakkı en üstün yol ve en etkin yöntem ile eda etmesini, varlık kırpıntılarını ihlas ve riyazet testisi ve mücahede ve kulluk potasında eritip şekil vermesini gerektirir. Bu, her mükellefin üstüne düşen ve zimmetinde bulunması gereken bir haktır." (Kınalızâde, 2016: 118).

Kulluk erdeminin adaletin bir alt erdemi olması tıpkı antik Yunan düşüncesinde olduğu gibi burada da insanların Tanrı'ya karşı bir "kulluk" borcunun bulunmasına dayandırılmaktadır. Böylesi bir borcun ortaya çıkış gerekçesi ise şudur: İnsanın nasıl ki bu dünyadaki bireysel, toplumsal ve tabii huzur ve düzen için herkese ve her şeye karşı adaletli olması gerekiyorsa, başta bizatihi "var olmak" özelliği gelmek üzere kendisine ihsan ettiği sayısız nimetler dolayısıyla Tanrı'ya karşı da adaletli olması gerekmektedir. Bu adaletin görünürlük kazanma, somutlaşma şekli de O'na kulluk etmektir. Ancak şunu da belirtmek yerinde olacaktır. Antik Yunan düşüncesinde insanın kulluk borcu olduğu pek çok tanrı söz konusu iken İslam ahlak felsefesinde bu borç yalnızca tek bir Tanrı'ya karşıdır.

Kulluğun adalet erdemi ile ilişkisini inceledikten sonra şimdi de kulluğu bir erdem kabul etmenin din-ahlak ilişkisi açısından bizi hangi sonuçlara ulaştırabileceğine bakabiliriz. Din ile ahlakın irtibatı meselesi gündeme geldiğinde cevabı aranan temel birkaç sorudan biri de şudur: Tanrı'ya inanmak ve O'na tabi olmak mı ahlakı doğurmakta yoksa ahlak mı Tanrı'ya, O'na inanıp tabi olmaya sevk etmektedir? Diğer bir ifadeyle, bizler Tanrı'ya inandığımız için mi ahlaklı olmaya gayret ederiz yahut ahlak sahibi olmamız mı doğal olarak bizleri herhangi bir Tanrı inancına yöneltir? (Çakmak, 2019: 11). Kulluk erdemine dair İslam ahlak filozoflarının açıklamaları bu soruya şöyle bir yanıt verebilmemize imkan tanımaktadır: Ahlak, insanı Tanrı'ya inanmaya ve bu inancı yaşamaya sevk etmektedir. Eş deyişle, Tanrı'ya iman ve imanın bir sonucu olarak da O'nun buyruklarına itaat *bir yönüyle* ahlakın sonucudur. Çünkü ahlaklı olabilmek için temel erdemlerin elde edilmesi gerektiği gibi, aynı şekilde temel erdemlerin ve içlerinde de özel olarak adaletin gerçek anlamda, tüm görünümüleriyle/somutlaşma biçimleriyle kişide vücut bulabilmesi için de kulluk gerekmektedir. Yalnız burada Tanrı inancının yalnızca *bir yönüyle* ahlakın sonucu oluşunun altı özellikle çizilmelidir. Bunun nedeni, İslam ahlak

<sup>4</sup> Kulluğun niçin Allah Teâlâ'nın bizim üzerimizdeki bir hakkı olduğuna dair daha detaylı bir gerekçelendirme için bk. Kınalızâde, 2016: 119-123.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

filozoflarının *başka bir yönüyle* de Tanrı'yı, Tanrı inancını ahlakın kaynağı kabul etmeleri gerçeğidir. Bu noktayı biraz daha açacak olursak diyebiliriz ki, İslam ahlak filozofları her ne kadar ahlakın akıl kaynaklı olduğunu düşünseler ve ifade etseler de onlara göre aklın yani insanı diğer tüm diğer canlılardan ayıran yetinin kaynağı da nihai noktada Tanrı'dır. Öyleyse ahlakı, ahlakî olanı belirleyen de en yukarıda Tanrı olmaktadır (Arıcı, 2015: 271). Bu durumda din ile ahlak arasında kurulacak ilişkide kulluk erdeminin nerede durduğuna dair şöyle bir sonuca varabiliriz: İslam ahlak filozoflarına göre Tanrı, Tanrı inancı, din ahlakın kaynağı olduğu kadar aynı zamanda bir neticesidir. Kaynağıdır, çünkü insan akli ahlakî olanın bilgisini yine Tanrı'dan almaktadır; neticesidir, çünkü ahlaklı olmak için Tanrı'ya inanmayı ve O'na itaati bir erdem seviyesine getirmek yani kulluk erdemini elde etmek gerektirmektedir.

Sonuç olarak, İslam ahlak filozofları din ile ahlak arasında çok sıkı bir ilişki kurmaktadır. Yalnız bu bir yönüyle dinden ahlaka, diğer yönüyle de ahlaktan dine doğru işleyen bir ilişkidir. Din-ahlak ilişkisinin dinden ahlaka işleyen ve dinin yani Tanrı'nın, O'nun buyruklarının yahut yine O'nun var ettiği aklın ahlaka kaynaklık etmesi şeklinde beliren ilk yönü çokça inceleme konusu olmuş ve olmaya da devam eden bir husustur. Ancak din-ahlak ilişkisinin ahlaktan dine doğru işleyen yönü üzerinde yeterince durulmamaktadır. Bu tebliğ, böylesi bir gaye ile kulluk olarak isimlendirilen erdemi ana hatlarıyla soruşturmuş, ahlakın Tanrı'ya itaati ve dolayısıyla da bir dine inanmayı gerekli kıldığını göstermiş ve bunun neticesinde de şöyle bir hükme varmıştır: Kulluk erdemi açısından bakıldığında, İslam ahlak filozoflarına göre din ile ahlak birbirinden ayrılabilir iki olgu değildir; aksine bunlar biri diğerinden ayrılmayacak şekilde iç içe geçen ve birbirlerini tamamlayan olgulardır.

**ABSTRACT**

In this study, noise measurements were made by determining five different points in Konya/Ereğli. From February 2023 to June 2023 noise measurements were made on certain days and at certain times of the week. It has been noted that the regions selected in the measurements are usually at the edge of the intersection and in areas where there is a high density of people. While noise measurement was made at the data collection points, it was also evaluated in the traffic situation and passing vehicles were counted and recorded in three different categories: motorcycle, car and truck-bus-minibus. It was also evaluated whether any noise-reducing measures were taken at the points where the measurements were taken. Subsequently, the collected data were recorded and transferred to a computer environment and interpreted according to the rules set out in the Environmental Noise Assessment and Management Regulation. During the evaluation, the data exceeding the limit values were determined and it was determined how much of the total data exceeded the limit value.

**Keywords:** Noise Map, Noise Measurement, Ereğli Noise Map

**Introduction**

Today, technology continues to develop unabated. These technological developments make our lives easier and the development of machines that started with the industrial revolution is still increasing. All these developments which make our life easier bring with them some problems. One of the most important of these problems is noise. Different ways have been developed to cope with the noise. It can greatly be reduced the quality of people's lives and can cause a lot of psychological and physical damage to health. The cheapest and most effective of the measures to be taken is to take measures in areas where the sound level is high by creating noise maps. It is necessary to create noise maps up to every neighborhood of our country.

After the industrial revolution, the development of machinery in terms of mechanization and technology has gained speed. The first foundation of the engines of today's vehicles was laid with the inventor of the internal combustion two-stroke and water-cooled electric ignition engine Étienne Lenoir (*içten yanmalı motor*, 2023)With these developments, human life has started to become much easier. However, in addition to the advantages of all these technological developments, they have also brought negative consequences to the environment and human health. Noise has been one of the problems that has entered our lives in this regard and is difficult to cope with. Noise has always been a problem throughout history, but after the industrial revolution, this noise problem has become a problem that affects our lives. Noise is inevitably a problem that requires precautions.

Throughout history, managers have tried to take some precautions for noise. Julius Caesar (M.D. 100-44) forbade horse-drawn carriages from going out on the streets in the evening after people had retired to their homes, because the noise of the iron wheels of the horse-drawn carriages disturbed people. In America, while conducting meetings and studies for the constitution in the 18th century, they sprinkled

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

straws on the stones in front of the building so that those who came for the meeting would not be disturbed by the noise(Murphy & King, 2022). As it can be seen, precautions have been tried to be taken to combat constant noise throughout history. 11 th century with 20 th century while noise-related studies have been conducted in 900 years until the middle of 20 th century from the middle of the 21 th century. (Kalıpcı & Bilgen, 2017).

Noise causes not only a feeling of discomfort, but also serious health risks. In addition to psychological discomfort, it can also lead to physical problems. Problems such as heart attacks (myocardial infarction), hypertension, ischemic heart disease may occur due to constant noise exposure and may increase the risk of developing these diseases (Babisch & Van Kamp, 2009). There are tiny hairs inside our ear that help us hear, and incoming sounds make these hairs vibrate. In case of continuous noise exposure, these hairs may be damaged and cause temporary or permanent hearing loss(YAZICI, 2007). Noise also affects people psychologically. Noise can trigger some emotions of people and they can feel several of these emotions at the same time or separately. It has been observed that they can be angry, scared, nervous, sad or stressed(Stansfeld & Clark, 2011). Noise generated in and near educational institutions can cause teaching or learning difficulties (Amine et al., 2017)

Turkey has a rapidly growing population and this increase is causing distorted urbanization. Cities grow in a fringe style and grow more sparsely in all directions to the central dense environment, and this is not a healthy urban growth(Güler & Çobanoğlu, 1994). While cities are growing, it is necessary to plan urban plans in a forward-looking manner because irregular urbanization causes traffic and noise(Yassi et al., 2001). Nowadays, the fact that most people have a motor vehicle has increased the noise problem(Polat et al., 1994). Noise may vary depending on the speed of motor vehicles, the type of vehicle, the road surface and the slope of the road(Affenzeller & Rust, 2005).

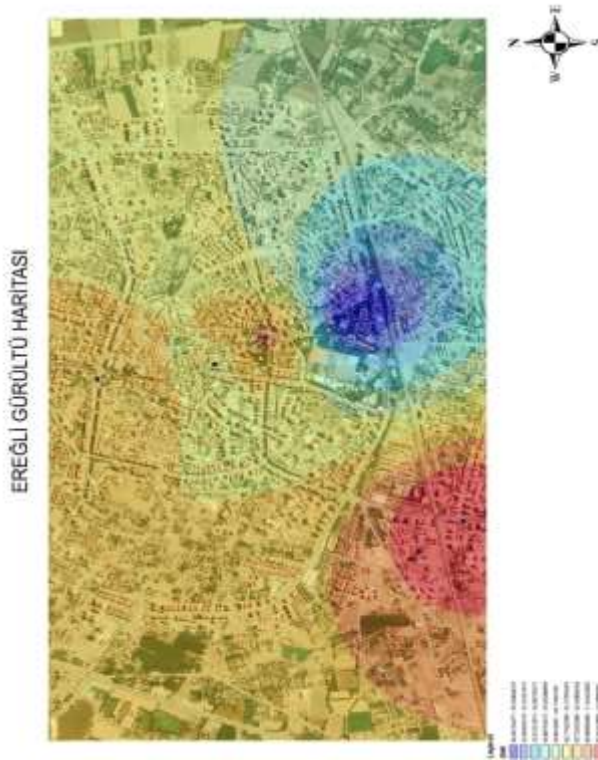

Figure 1 The general noise map of Konya/Ereğli

Figure 1 shows the general noise map of Konya/Ereğli. The red areas show the areas where the noise level is high, while the dark blue areas show the areas where the noise level is low

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

Some steps have been taken to combat noise in Turkey. One of the first works carried out for noise control was the 14th amendment of the law No. 2872, which was enacted in 1983. In accordance with the article, the Noise Control Regulation was prepared in 1986 and entered into force. In this study, noise measurements were made by determining five different points in Konya/Ereğli. From February 2023 to June 2023 noise measurements were made on certain days and at certain times of the week. Obtained results are presented in this study.

## Materials and Method

Ereğli district of Konya province was selected as the area in the research. At the first stage, the places where have been determined and data were collected it has been determined where they may be more suitable. Noise measurements were carried out by determining 5 different points in the district. Sensitive buildings (school-nursery V. Where the selected points have a high density of people.b), attention has been paid to the selection of areas close to the city center and places close to roads and intersections including February-March- April-May-June months. The data were collected at the front of Akbank, Yunus Emre Square, front of Municipality, Oguz Ata Social Facility, Rashid Tolun Hodja underpass. 1.5 Meters above the ground and on designated days 08:00-09:00, 12:00-13:00, 16:00-17:00, 19:00-20:00 hours and measurements were made between the hours of 23:00 and 24:00. The measurements were made with Extech R232/Data Logger 407764 brand sound measuring device. Later, the received data was transferred to digital media and converted into an excell table. The data in these tables were prepared using the IDW method in ArcGIS software and noise maps were created. The measurements were performed for 1 hour and recorded every 10 minutes.. The highest (Lmax) and lowest (Lmin) values were recorded and the equivalent noise measurement level (Leq) was determined. It was measured and recorded in given decibels (dBA). The measured values were compared in decibels based on the Environmental Noise Assessment and Management Regulation (CGDYY). Finally, the measures to be taken are presented. The number of passing vehicles was also observed during the noise measurement. Vehicles passing by in 1 minute were registered in 3 different categories (Truck-bus-minibus).

The measurement values at the selected points were dependent variables and the environmental characteristics, the status of the traffic light, the characteristics of the measurement location and the measurement time are independent variables. Extech R232/Data Logger 407764 brand sound measuring device was used during the measurements. This device is able to measure sounds between 30-130 Decibels. A tripod is mounted to the device and placed at the measuring point at a height of 1.5 meters from the ground. The device memory is able to record 128000 data and these data can then be transferred to the digital environment via a data cable.

The measurements were made between 1 february 2023 and 19 june 2023. Monday, Fridays, Wednesdays measurements were made in front of Akbank. Measurements were made on Thursdays in February and March at Yunus Emre Square and Rashid Tolun Hodja Underpass. Measurements were made on tuesdays in February and March in front of the municipality and Oğuzata social facility. Measurements were made on tuesday in april-may and june at Yunus Emre Square and Rashid Tolun Hodja Underpass. Measurements were made on Thursdays in april-may and june in front of the municipality and Oğuzata social facility Measurement hours in front of Akbank 08:00-09:00, 12:00-13:00, 16:00-17:00, 19:00-20:00, 23:00-24:00. Measurement hours at Yunus Emre Square are 13:00 and 14:00, front of the municipality 13:00-14:00, Rashid Tolun Hodja Underpass 14:00-15:00, Oğuzata social facility 14:0-15:00.

The measurements were made by a single researcher. Sudden very loud and low sounds that occur in the environment during measurements were not included. Attention has been paid to the reflection of the natural acoustic environment of the measuring shit. By taking the average of the Lmax and Lmin values, the ambient sound was accepted as a single numerical value. Since the measurement can affect the measurement in meterological events at the time of measurement, the measurements were postponed when the wind was too high and there was precipitation, and they were made again when the weather improved.

Akbank front has been preferred due to the fact that it is an area where bazaars and shops are dense in the city center, it is a place where there are road arteries and intersections. Yunus Emre Square was

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

preferred because it is a transit route, it is a region where there are arteries and intersections, and it is a region where residential buildings and shops are mixed. The municipality front was preferred because the district is located in an area used for the transition to the intercity road, is close to arteries and intersections, and is a residential-dense area with business places. Raşit Tolun Hoxha underpass has been preferred due to the fact that it is on the way to the state hospital, which is the only hospital in the district, and it is a residential-intensive area. Since the Oguz Ata social facility is an area surrounded by trees and where there is no vehicle traffic, this area was preferred due to determining the change in noise level when there is no vehicle noise and there are objects that can create a barrier for noise, such as trees.

## Analysis of the Data

While interpreting the collected data, it was interpreted according to the assessment of environmental noise and management regulation published in the official gazette No. 27601 on June 4, 2010. Evaluation of environmental noise and according to the management regulation, measurement results that are above the limit values have been determined.

While preparing the noise map, the satellite image of the Ereğli region was taken on a digital screen, and the measurement zones were separated by making a clipraster. The data were entered into the places where measurements were made on the satellite image as point data and a noise map was created using IDW (inverse distance weighted) analysis from spatial analysis options.

The measurement values of the front of the Akbank are given in table 1.1.

**Table 1.1 The measurement values of the front of the Akbank**

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

When we look at the overflow interval in Table 1.2, it is observed that the maximum overflow time is between 19:00 and 20:00 and the maximum overflow interval is between 4-8 dBA. When compared to the average noise value of other months in February, it was observed that it was 1 dBA lower, and it was interpreted that the reason for this may be related to the arrival of people in the region and other affected areas to these regions due to the impact of the Kahramanmaraş-centered earthquake disaster.

The measurement values of Yunus Emre Square are given in table 1.3.

**Table 1.3 The measurement values of Yunus Emre Square**

28.02.2023	Tuesday	48,6	49,8	47,4
7.03.2023	Tuesday	49,5	53,3	45,7
14.03.2023	Tuesday	49,4	53,4	45,4
21.03.2023	Tuesday	46,1	51,2	41,0
28.03.2023	Tuesday	45,5	50,4	40,6
4.04.2023	Tuesday	48,8	53,6	44,0
13.04.2023	Thursday	50,2	54,8	45,6
20.04.2023	Thursday	49,9	55,0	44,8
27.04.2023	Thursday	48,2	53,3	43,1
4.05.2023	Thursday	46,9	52,0	41,8
11.05.2023	Thursday	48,7	52,2	45,2
18.05.2023	Thursday	46,0	51,1	40,9
25.05.2023	Thursday	48,7	53,7	43,7
1.06.2023	Thursday	49,3	53,8	44,8
8.06.2023	Thursday	49,4	54,0	44,8
15.06.2023	Thursday	49,0	53,1	44,9

It was observed that all the data taken in Table 1.7 were within the limit values, and it was interpreted that the fact that this region is closed to vehicle traffic and surrounded by trees contributes to the measurements being within the limit values.

**Table 1.8 The statue of exceeding the limit level according to the environmental noise assessment and management regulation at all measurement points**

exceeding the limit level according to the environmental no overshoot	In front of Akbank	In front of the municipality	Raşit Tolun Hodja underpass	Oğuz Ata social facility	Yunus Emre square	Total
1-2 dBA	63	0	0	19	1	83
2-4 dBA	38	3	0	0	1	42
4-8 dBA	65	7	0	0	1	73
>8 dBA	114	9	3	0	13	139
Total	20	0	18	0	5	43
	300	19	21	19	21	380

In Table 1.8, it is observed that 21.9% of the 380 data taken in total were within the limit values, while 78.1% exceeded the limit values. It is observed that 36.5% of these exceedances are concentrated between 4-8 dBA.

The total average number of cars passing in front of Akbank throughout the entire measurement is 45, the number of motorcycles is 9, and the number of trucks-buses-minibuses is 8.

The total average number of cars passing in front of the municipality along the entire measurement is 49, the number of motorcycles is 8, and the number of trucks-buses-minibuses is 8.

The total average number of cars passing through Yunus Emre Square throughout the entire measurement is 48, the number of motorcycles is 8, and the number of trucks-buses-minibuses is 7. The total average number of cars passing through the Raşit Tolun Hodja underpass throughout the entire measurement is 50, the number of motorcycles is 8, and the number of trucks-buses-minibuses is 7.

**Figure 2 The number of vehicles passing and the Leq value**

Figure 2 shows the number of vehicles passing and the Leq value. As the number of passing vehicles increased, the average Leq value also increased. The interpretation that there is a direct relationship between the number of passing vehicles and the Leq value has been Deciphered. In general, the most used vehicle is a car.

## CONCLUSION

With this study, the noise level of the central part of the Ereğli district of Konya in general has been determined and the rates of exceeding the legal limit have been determined. A city map has been created for noises, most of which are caused by the road. It was determined that 78.1% of the data collected in this study were above the limit values according to the environmental noise assessment and management regulation, which is set as the legal limit. In general, the average daytime noise level was 68 dBA, while the evening noise level was 66.5 dBA and the night noise level was 55.6 dBA. These values scientifically show that there is noise pollution in the district. It has been observed that the noise level is high in areas close to the city center, and in these regions it is located in noise-sensitive areas such as education, culture, health.

While the daytime and evening noise levels were close to each other, a decrease in the night noise level was observed. The reason for this has been interpreted as the lack of open workplaces and cafes at night in places close to the measurement zones.

The noise level was observed within the legal limits at the Oğuz Ata social facility from the measurement zones. The reason for this is that this area is closed to vehicle traffic and it is surrounded by trees. The surrounding trees also noticeably reduce the noise passing through the surrounding roads.

It has been observed that the average Leq value also increases as the number of vehicles in the measurement zones increases. It has been observed that there is a direct relationship between the Leq value and the number of vehicles. It has been observed that vehicle speeds are on average 20-30 km/h in the city, and the average speed at the Rashid Tolun Hodja underpass is 60 km/h, and the noise level increases as the speed increases or the vehicles do not go and stop running where they are.

## EXAMINATION OF PI3K/AKT/mTOR PATHWAY IN TERMS OF TARGETED THERAPY IN BREAST CANCER TREATMENT

### MEME KANSERİ TEDAVİSİNDE PI3K/AKT/ mTOR YOLAĞININ HEDEFE YÖNELİK TEDAVİ AÇISINDAN İNCELENMESİ

*Dr. Öğr. Üyesi Büşra DEMİR ÇETİNKAYA*

*Erzincan Binali Yıldırım Üniversitesi, Eczacılık Fakültesi, Farmasötik Toksikoloji Anabilim Dalı,

*ORCID NO: 0000-0002-9926-107X*

#### ÖZET

Dünya çapında en sık teşhis edilen ikinci kanser türü olan meme kanseri kadınlarda tüm kanser türleri arasında en yüksek insidansa sahiptir. Meme kanseri moleküler düzeyde belirli hormon ve büyüme faktörlerinin durumuna göre alt gruplara ayrılır ve bu sınıflandırma tanı ve tedavinin temelini oluşturur. Hormon reseptör pozitif tümörler (HR+) östrojen reseptörünü (ER) veya progesteron reseptörünü (PR) eksprese eden tümörlerdir. Bu iki reseptörü de eksprese etmeyip insan epidermal büyüme faktörü reseptörü 2'yi (HER2) aşırı eksprese eden tümörler HER2+ tümörler olarak adlandırılırken; ER, PR HER2'nin üçünden de yoksun tümörler üçlü negatif tümörler olarak adlandırılır. Mevcut kanser tedavisinin yan etkileri, tedaviye direnç gelişmesi ve hastalığın tekrarlamasının yaşam kalitesini bozması ve yaşam süresini kısaltması araştırmacıları kanser tedavisinde yeni tedavi yöntemlerinin geliştirmesine yönelik çalışması yöneltmiş olup, bu çalışmaların çoğu doğrudan moleküler anormalliklere odaklanan hedefe yönelik tedavilere odaklanmıştır. Monoklonal antikorlar, Antikor-ilaç konjugatları, Tirozin Kinaz İnhibitörleri, Anti-anjiyogenikler, Poly (ADP-ribose) polimerase (PARP) inhibitörleri, Cyclin-dependent kinase (CDK) 4/6 inhibitörleri ve PI3K/Akt/ mTOR yolağı inhibitörleri meme kanseri tedavisinde kullanımı ilgili otoriteler tarafından onaylanan hedefe yönelik tedaviler arasında yer almaktadır. Bu çalışmada PI3K/Akt/ mTOR yolağının ve bu yolağı hedefleyen ve meme kanserinde kullanımı yakın zamanda onay almış ajanların (Alpelisib, Everolimus) moleküler açıdan incelenmesi amaçlanmıştır. PI3K/Akt/ mTOR yolağı hücre metabolizması, hücre proliferasyonu, hareketlilik, apoptoz ve anjiogenez gibi temel hücresel süreçlerde önemli bir role sahiptir. Bu sinyal yolağının meme kanseride dahil olmak üzere çok sayıda kanserde anormal biçimde aktive olduğu ve kötü huylu hücrelerin biyolojik özelliklerinin korunmasında önemli bir rol oynadığının bilinmesi çeşitli kanser türlerinin tedavisi için üzerinde çalışılmasına neden olmuş, bu yolağı hedefleyen çeşitli inhibitörler geliştirilmiştir. Alpelisib ilk oral PI3K inhibitörüdür ve 2019 yılında HR+/HER2-, PIK3CA mutasyonlu, ilerlemiş ya da metastatik meme kanseri olan postmenapozal kadınlarda ve erkeklerde endokrin bazlı tedavi sırasında ya da sonrasında ilerleme kaydedilmesini takiben fulvestrant ile kombinasyon halinde kullanılmak üzere FDA tarafından onaylanmıştır. Everolimus, 2012 yılında non-steroidal aromataz inhibitörü tedavisi sonrasında nüksetmiş veya ilerlemiş ileri HR + /HER2- meme kanseri olan postmenopozal kadınlarda eksemestan ile kombinasyon halinde kullanılmak üzere FDA tarafından onaylanmıştır.

**Anahtar Kelimeler:** meme kanseri, hedefe yönelik tedavi, PI3K/Akt/ mTOR, Alpelisib, Everolimus

#### ABSTRACT

Breast cancer, the second most commonly diagnosed cancer type worldwide, has the highest incidence of all cancer types in women. Breast cancer is divided into subgroups at the molecular level according to the status of certain hormones and growth factors, and this classification forms the basis of diagnosis and treatment. Hormone receptor positive tumors (HR+) are tumors that express the estrogen receptor (ER) or progesterone receptor (PR). Tumors that do not express either of these receptors but overexpress human epidermal growth factor receptor 2 (HER2) are called HER2+ tumors; Tumors lacking all three ER, PR HER2 are called triple negative tumors. The side effects of current cancer treatment, the

development of resistance to treatment, and the recurrence of the disease impairing the quality of life and shortening the lifespan have led researchers to work on the development of new treatment methods in cancer treatment, and most of these studies have focused on targeted therapies that directly focus on molecular abnormalities. Monoclonal antibodies, Antibody-drug conjugates, Tyrosine Kinase Inhibitors, Anti-angiogenics, Poly (ADP-ribose) polymerase (PARP) inhibitors, Cyclin-dependent kinase (CDK) 4/6 inhibitors and PI3K/Akt/mTOR pathway inhibitors are among the targeted treatments approved by the relevant authorities for use in the treatment of breast cancer. This study aimed to molecularly examine the PI3K/Akt/mTOR pathway and the agents that target this pathway and have recently been approved for use in breast cancer (Alpelisib, Everolimus). The PI3K/Akt/mTOR pathway has an important role in basic cellular processes such as cell metabolism, cell proliferation, motility, apoptosis and angiogenesis. The knowledge that this signaling pathway is abnormally activated in many cancers, including breast cancer, and that it plays an important role in preserving the biological properties of malignant cells has led to studies on it for the treatment of various types of cancer, and various inhibitors targeting this pathway have been developed. Alpelisib is the first oral PI3K inhibitor and was approved by the FDA in 2019 for use in combination with fulvestrant in postmenopausal women and men with HR+/HER2-, PIK3CA-mutated, advanced, or metastatic breast cancer following progression during or after endocrine-based therapy. Everolimus was approved by the FDA in 2012 for use in combination with exemestane in postmenopausal women with advanced HR+/HER2- breast cancer that has relapsed or progressed after non-steroidal aromatase inhibitor therapy.

**Keywords:** breast cancer, targeted therapy, PI3K/Akt/mTOR, Alpelisib, Everolimus

## GİRİŞ

Meme kanseri hem tüm dünyada en sık teşhis edilen ikinci kanser türü olması hem de kadınlarda görülen ana karsinom türü olması (Dong et al., 2020; Pashayan et al., 2020) nedeniyle en önemli kanser türleri arasında yer almaktadır. Meme kanseri belirli hormon ve büyüme faktörlerinin ekspresyonuna bağlı olarak alt sınıflara ayrılır. Metastatik meme kanseri, hormon reseptörü [HR, östrojen reseptörü (ER) ve/veya progesteron reseptörü (PR)] ve insan epidermal büyüme faktörü reseptörü 2 (HER2) 'nin ekspresyonuna dayalı olarak farklı histopatolojik alt tiplere kategorize edilir. Hormon reseptör pozitif tümörler (HR+) ER veya PR'yi eksprese eden tümörlerdir. Bu iki reseptörü de eksprese etmeyip 'yi HER2'yi aşırı eksprese eden tümörler HER2+ tümörler olarak adlandırılırken; ER, PR HER2'nin üçünden de yoksun tümörler üçlü negatif tümörler olarak adlandırılır (Makena & Rao, 2020; Waks & Winer, 2019). Geleneksel tedavinin bazı olumsuz sonuçları nedeniyle, son yıllarda kanser alanında yapılan çalışmaların çoğu hedefe yönelik tedaviye yoğunlaşmıştır. PI3K/Akt/ mTOR yolağı hücre metabolizması, hücre proliferasyonu, hareketlilik, apoptoz ve anjiogenez gibi temel hücresel süreçlerde önemli bir role sahiptir. Bu sinyal yolağının meme kanserinde dahil olmak üzere çok sayıda kanserde anormal biçimde aktive olduğu ve kötü huylu hücrelerin biyolojik özelliklerinin korunmasında önemli bir rol oynadığı bilinmektedir (Lim, Mayer, & Pawson, 2015; Martini, Santis, Braccini, Gulluni, & Hirsch, 2014). Bu yolağın hedeflenmesi meme kanseri tedavisi için değerli bir seçenek olmuştur. Alpelisib ve everolimus bu yolağı hedefleyen ve HR+/HER2- ileri evre meme kanserinde endokrin tedavi ile birlikte kullanımı ilgili otoriteler tarafından onaylanmış hedefe yönelik ilaçlardır.

## ARAŞTIRMA ve BULGULAR

### 1. PI3K/Akt/mTOR Sinyal Yolağının Yapısı

#### 1.1. PI3K (Phosphatidylinositol 3-Kinase, Phosphoinositide 3-Kinase)

Lipid kinaz ailesinin bir üyesi olan PI3K (Vara et al., 2004) alt grup homolojilerine ve substratlara karşı göstermiş oldukları spesifiteye göre üç sınıfa ayrılmaktadır (Riehle, Cornea, & Degtarev, 2013). Sınıf I PI3K da kendi içinde PI3K sınıf IA, PI3K sınıf IB and PI3K sınıf IC olmak üzere alt sınıfa ayrılmaktadır (Yudushkin, 2019). Sınıf IA PI3K'ler katalitik alt birimlerden ve bunları aktive eden düzenleyici alt birimlerden oluşan heterodimerik bir yapıya sahiptir (Markman, Dienstmann, & Tabernero, 2010). Katalitik alt birimleri sırasıyla PIK3CA, PIK3CB, PIK3CG ve PIK3CD genleri tarafından kodlanan p110 $\alpha$ , p110 $\beta$ , p110 $\gamma$  ve p110 $\delta$ 'dan oluşurken, düzenleyici alt birimler p85 $\alpha$  (p85 $\alpha$ , p55 $\alpha$ , p50 $\alpha$ ), p85 $\beta$  ve p55 $\gamma$ 'dan oluşmaktadır ve bu alt birimler ise sırasıyla sırasıyla PIK3R1, PIK3R2 ve PIK3R3 genleri

tarafından kodlanmaktadır (Cidado & Park, 2012). Sınıf IA PI3K'lar büyüme faktörlerinin tirozin kinaz reseptörlerine bağlanması ile aktive edilir (Engelman et al., 2006) ve tümör oluşumu ile en sık ilişkilendirilen alt birimdir (Riehle et al., 2013). Sınıf IB PI3K'lar da Sınıf IA PI3K'larda katalitik ve düzenleyici alt birimlerden oluşan heterodimerik bir yapıya sahiptir ancak bu yapı Sınıf IA PI3K'lar ile farklılık gösterir. Şöyle ki: Sınıf IB PI3K'lerin p110 katalitik alt birimlerini aktive eden düzenleyici kısmı p101 ve p84 ve p87PIKAP alt birimlerinden (87 kDa'lık PI3Kg adaptör proteini) oluşmaktadır (Balla, 2013; Stephens et al., 1997; Yu, Long, & Shen, 2015). Sınıf IB PI3K'ların G-protein bağlı reseptörler (GPCRs) ile aktive edildiği bilinmektedir (Engelman, Luo, & Cantley, 2006)

Monomerik bir yapıya sahip olan Sınıf 2 PI3K'ların (Markman et al., 2010) üç katalitik izoformu vardır: PI3KC2  $\alpha$ , PI3KC2  $\beta$  ve PI3KC2  $\gamma$ . PI3KC2  $\alpha$  ve PI3KC2  $\beta$  birçok doku ve organda eksprese edilirken; PI3KC2 $\gamma$  sadece hepatositlerde eksprese edilmektedir (Braccini et al., 2015; Odorizzi, Babst, & Emr, 2000).

Sınıf 2 PI3K'ların aksine Sınıf 3 PI3K'lar Vps34 katalitik alt biriminden ve p150 düzenleyici alt biriminden oluşan heterodimerik bir yapıya sahiptir (Odorizzi et al., 2000).

### **1.2. Akt**

Aynı zamanda protein kinaz B (PKB) olarak adlandırılan (Manning & Toker, 2017) Akt AGC kinaz ailesine ait bir serin/treonin kinazdır ve PI3K sinyal yolunun önemli bir aşağı akış parçasıdır (Dummler & Hemmings, 2007; Leroux, Schulze, & Biondi, 2018; Manning & Toker, 2017; Pearce, Komander, & Alessi, 2010). Akt'nin genel olarak insan dokularında sıklıkla eksprese edilen Akt1, Akt2 ve Akt3 olmak üzere üç farklı alt birimi bulunmaktadır (Palumbo, Paterson, Yang, Hood, & Law, 2021; Xia, X. et al., 2019). Detaylı olarak incelemek gerekirse dokuların birçoğunda eksprese edilen Akt1'in yanı sıra, Akt2 karaciğer gibi insüline fazla duyarlı dokularda eksprese edilirken, Akt3 beyin ve testislerde eksprese edilir (Revathidevi, S., & Munirajan, 2019; Szymonowicz, Oeck, Malewicz, & Jendrossek, 2018).

### **1.3. mTOR**

mTOR (rapamisin'in mekanistik hedefi) , PI3K ile ilişkili kinaz (PIKK) ailesinde yer alan bir serin/treonin protein kinazdır (Laplante & Sabatini, 2012; Saxton & Sabatini, 2017). mTOR iki farklı protein kompleksinin katalitik alt birimlerini oluşturur; mTOR Kompleks 1 (mTORC1) ve mTOR Kompleks 2 (mTORC2) (Laplante & Sabatini, 2012; Saxton & Sabatini, 2017). mTORC1 6 protein komponentinden oluşurken, mTORC2 7 protein komponentinden oluşmaktadır. mTOR, dektor, mLST8, tti1/tel2 kompleksi iki mTOR kompleksinde ortak olarak bulunurken; raptor ve pras40 mTORC1 kompleksine spesifik, rictor, mSin1, protor ½ ise mTORC2 kompleksine spesifik proteinlerdir (Laplante & Sabatini, 2012).

## **2. PI3K/Akt/mTOR Sinyal Yolağının Aktivasyonu**

PI3K'nin aktivasyonu için tirozin kinaz reseptörleri ya da G protein-bağlı reseptörlere spesifik ligandların bağlanması gerekir. Spesifik ligandlar tarafından aktive edilen spesifik reseptörler PI3K'yi aktive eder (Lim et al., 2015). Aktive PI3K, fosfatidilinositol 4,5-bisfosfatı (PIP2) 3'pozisyonunda fosforile ederek fosfatidilinositol 3,4,5-trifosfata (PIP3) fosforile eder (Bahrami, A., Khazaei, M., Shahidsales, S., Hassanian, S. M., Hasanzadeh, M., Maftouh, M., ... & Avan, 2018; Slomovitz, B. M., & Coleman, 2012; Tessier & Woodgett, 2006). Bu sürecin negatif düzenleyicisi PTEN (The tumor suppressor phosphatase and tensin homolog deleted on chromosome 10)'dir. PIP3'ü PIP2'ye defosforile ederek PI3K sinyalizasyonunu engellemiş olur (Courtney, Corcoran, & Engelman, 2010; Slomovitz, B. M., & Coleman, 2012). PIP3, PDK1'i, PDK1 ise Akt'yi aktive eder (Dieterle et al., 2014; Hresko, R. C., Murata, H., & Mueckler, 2003). mTORC1 ve mTORC2 Akt tarafından aktive olur. Aktive edilmiş Akt mTORC1'i inhibe eden TSC1/TSC2 (tumor supressor proteins tuberous sclerosis complex 1/ tuberous sclerosis complex 2)'i fosforile ederek inhibe eder. TSC1/TSC2'in inhibisyonu mTORC1 ve mTORC2'nin aktivasyonu ile sonuçlanır (Hresko, R. C., Murata, H., & Mueckler, 2003; Kenna MM, McGarrigle S, 2018). mTORC1'in Akt ile aktivasyonu hücre büyümesi ve protein sentezi gibi kritik süreçlerde rol oynarken, mTORC2 Akt'nin aktivasyonunda rol alır (Karar, J., & Maity, 2011; Slomovitz, B. M., & Coleman, 2012). Aktive edilmiş Akt mTOR'u fosforile ederek hücre büyümesi ve protein sentezi gibi kritik süreçleri kontrol eder (Karar, J., & Maity, 2011).

### **3. PI3K/Akt/mTOR Sinyal Yolağının İnhibitörleri**

#### **3.1. Alpelisib**

Alpelisib (Piqray™) ilk oral PI3K inhibitörüdür. HR+, HER-, PI3KCA mutasyonlu postmenapozal kadınlarda ve erkeklerde, endokrin temelli tedavi sırasında ya da sonrasında ilerlemeyi takiben, estrogen reseptör antagonisti fulvestrant ile birlikte kullanılmak üzere ilgili otoriteler tarafından onaylanmıştır (Verret, Cortes, Bachelot, Andre, & Arnedos, 2019). Son yapılan çalışmalarda Alpelisib'in farmakolojik tedaviyi ve hastaneye yatmayı gerektirebilecek diyare, döküntü ve hiperglisemiye neden olduğu kaydedilmiştir (Miller, Armgardt, & Svoboda, 2022).

#### **3.2. Everolimus**

Aynı zamanda rapamycin olarak bilinen ve bir sirolimus türevi olan Everolimus (RAD001, Afinitor®) mTOR serin/treonin kinaz sinyal iletim yolağını inhibe eden oral bir protein kinaz inhibitörüdür (Laplane & Sabatini, 2012). Everolimus düzenleyici otoriteler tarafından; steroid olmayan bir aromataz inhibitörünün ardından hastalığı ilerleme veya nüks etme göstermiş HR+/HER2- meme kanseri olan postmenapozal kadınlarda aromataz inhibitörü eksemestan ile birlikte kullanılmak üzere onay almıştır (Paplomata, E., Zelnak, A., & O'Regan, 2013). Everolimus ayrıca pankreatik nöroendokrin tümörlerin (PNET), ileri renal hücreli karsinom (RCC) ve tüberoz skleroz (TSC) ile ilişkili subependimal dev hücreli astrositom (SEGA) gibi farklı kanser türlerinde kullanılmak üzere de tedavi onayına sahiptir (Hasskarl, 2018). İlacın kullanımının hiperglisemi, hiperinsülinemi, somatit, bulaşıcı olmayan pnömoni gibi yan etkilerin ortaya çıktığı kaydedilmiştir (Paplomata, E., Zelnak, A., & O'Regan, 2013).

#### **SONUÇ**

Kadınlarda görülen meme kanseri dünya çapında yaygın olarak teşhis edilen kanser türleri içerisinde ilk sırada yer almaktadır (Chhikara & Parang, 2023). Mevcut tedaviye karşı direnç gelişimi, hastalığın nüks etmesi ve yaşam kalitesini bozan yan etkiler nedeniyle araştırmacılar hedefe yönelik tedaviler üzerinde yoğunlaşmıştır.

Hedefe yönelik tedavi kanser gelişimine neden olan moleküler anormallikler doğrudan hedeflenir. Bu şekilde tedavi etkinliğinin artması, daha düşük dozda ilaç kullanılması ve bu sayede yan etkilerin azalması sağlanmaktadır (Chhikara & Parang, 2023). PI3K/Akt/ mTOR yolağı meme kanseri tedavisinde hedeflenen yapılardan birisidir. PI3K/Akt/ mTOR yolağı hücre metabolizması, hücre proliferasyonu, hareketlilik, apoptoz ve anjiogenez gibi temel hücresel süreçlerde önemli bir role sahiptir. Bu sinyal yolağının meme kanserinde dahil olmak üzere çok sayıda kanserde anormal biçimde aktive olduğu ve kötü huylu hücrelerin biyolojik özelliklerinin korunmasında önemli bir rol oynadığı bilinmektedir (Lim et al., 2015; Martini et al., 2014). Alpelisib ve everolimus bu yolağı hedefleyen ve HR+/HER2- ileri evre meme kanserinde endokrin tedavi ile birlikte kullanımı ilgili otoriteler tarafından onaylanmış hedefe yönelik ilaçlardır. Everolimus hiperglisemi, hiperinsülinemi, somatit, bulaşıcı olmayan pnömoni gibi yan etkilere sebep olurken (Paplomata, E., Zelnak, A., & O'Regan, 2013). Son yapılan çalışmalarda Alpelisib'in farmakolojik tedaviyi ve hastaneye yatmayı gerektirebilecek diyare, döküntü ve hiperglisemiye neden olduğu kaydedilmiş bu sonuç ilacın tolere edilebilirliği konusunda endişe uyandırmıştır (Miller et al., 2022).

HR+/HER2- hastalarda CDK 4/6 inhibitörleri, BRCA gen mutasyonu mevcutsa PARP inhibitörleri gibi tedavi seçenekleri de mevcuttur. Yüksek nüks riski taşıyan erken evre meme kanserinde bu tip spesifik tedavi seçeneklerine ihtiyaç duyulmaktadır.

**ÖZET**

Ebeveynlerin çocuklar için fiziksel aktiviteye katılım konusunda temel etkenlerden biri olduğu göz önünde bulundurulduğunda, erken çocukluk dönemindeki öğrencilerin fiziksel aktivite düzeyini arttırmak için aile katılımlı etkinliklerin düzenlenmesi son derece önemlidir. Bu çalışmanın amacı, aile katılımlı fiziksel aktivitelerin erken çocukluk dönemindeki 4-6 yaş arası öğrencilerin fiziksel aktivite düzeyi üzerindeki etkilerini incelemektir. Ön test- son test kontrol gruplu deneysel yöntemin kullanıldığı çalışmaya 16 ebeveyn ve onların 4-6 yaş aralığındaki çocukları katılmıştır. Katılımcılar rastgele bir uygulama (n: 8) ve bir kontrol grubuna ayrılmıştır (n: 8) Uygulama grubunda yer alan ebeveynler ve çocuklara, 8 hafta boyunca haftada üç gün, 30'ar dakika süreyle fiziksel aktivite programı uygulanmıştır. Program süresince uygulama grubundaki ebeveynler çocuklarıyla birlikte haftada bir gün fiziksel aktivitelere birlikte katılırken, haftanın iki günü ise çocuklarının performansını gözlemlemiştir. 8 haftalık aile katılımlı fiziksel aktivitelerin öncesi ve sonrasında Serbest Zaman Egzersiz Anketi aracılığıyla 4-6 yaş aralığındaki çocukların fiziksel aktivite düzeyine ilişkin veriler toplanmıştır. Elde edilen verilerin analizinde SPSS 20.0 istatistik paket programından yararlanılmıştır. Veri setinin sayıca az olmasından dolayı, 4-6 yaş aralığındaki çocukların grup içi ve gruplar arası fiziksel aktivite düzeyinin karşılaştırılmasında Mann-Whitney U testi ve Wilcoxon İşaretili Sıralar testi kullanılmıştır. Bulgular, uygulama ve kontrol grubunda yer alan 4-6 yaş aralığındaki çocukların 8 haftalık program öncesi benzerlik gösteren fiziksel aktivite düzeyinin (U: 22,50, p: 0,309) program sonrası uygulama grubu lehine değişim gösterdiğini ortaya koymuştur (U: 0,00, p: 0,001). Uygulama grubundaki çocukların fiziksel aktivite düzeyinde 8 haftalık aile katılımlı fiziksel aktivite programı öncesi ve sonrası arasında anlamlı farklılıklar olduğu belirlenirken (Z: -2,536, p: 0,011) kontrol grubunun fiziksel aktivite düzeyinde herhangi bir anlamlı farklılık olmadığı saptanmıştır (Z: -0,736, p: 0,461). Bu bulgular sonucunda, aile katılımlı fiziksel aktivitelerin 4-6 yaş aralığındaki çocukların fiziksel aktivite düzeyi üzerinde olumlu yönde bir etki oluşturduğu izlenimi edinilmiştir.

**Anahtar kelimeler:** Aile katılımı, fiziksel aktivite, erken çocukluk.

**ABSTRACT**

Considering that parents are one of the main factors in participation in physical activity for children, it is extremely important to organize activities with family participation to increase the physical activity level of students in early childhood. The aim of this study is to examine the effects of physical activities with family participation on the physical activity level of students aged 4-6 in early childhood. 16 parents and their children aged 4-6 participated in the study, in which the experimental method with pretest-posttest control group was used. Participants were randomly divided into an application (n: 8) and a control group (n: 8). A physical activity program was applied to the parents and children in the

application group for 30 minutes, three days a week for 8 weeks. During the program, parents in the application group participated in physical activities with their children one day a week, and observed their children's performance two days a week. Data on the physical activity level of children aged 4-6 were collected through the Leisure Time Exercise Questionnaire before and after 8 weeks of family-participated physical activities. SPSS 20.0 statistical package program was used in the analysis of the data obtained. Due to the small number of data sets, Mann-Whitney U test and Wilcoxon Signed Rank test were used to compare the physical activity levels of children aged 4-6 years within and between groups. The findings revealed that the physical activity level of children aged 4-6 in the application and control groups, which was similar before the 8-week program (U: 22.50, p: 0.309), changed in favor of the application group after the program (U: 0.00, p: 0.001). While it was determined that there were significant differences in the physical activity level of the children in the application group before and after the 8-week physical activity program with family participation (Z: -2.536, p: 0.011), it was determined that there was no significant difference in the physical activity level of the control group (Z: -0.736, p: 0.461). As a result of these findings, it was obtained the impression that physical activities with family participation have a positive effect on the physical activity level of children between the ages of 4-6.

**Keywords:** Family participation, physical activity, early childhood.

### GİRİŞ

Fiziksel aktivitelere katılım, çocukların tüm gelişim alanları üzerinde olumlu etkiler ortaya çıkarmaktadır. Fiziksel aktivitelere katılan çocukların fiziksel ve motor yeterlilikleri, öz güven düzeyleri, sosyal etkileşim ve iletişim becerileri, ruhsal uyumları, psikolojik dayanıklılıkları ve kişilik gelişimleri olumlu yönde gelişim göstermektedir (Açak, 2006). Fiziksel aktivitelerin çocukların gelişim alanları üzerindeki bu anlamlı etkilere karşın, çocukların sürdürülebilir bir fiziksel aktivite deneyiminden ne düzeyde yararlandığı önemli bir soru işaretidir. Başka bir anlatımla çocuklar düzenli bir şekilde fiziksel aktivitelere ne derece katılım sağlamaktadır? Bu anlamda çocukların sadece okul yaşamındaki sınırlı sayıdaki derslerde fiziksel aktivitelere katılımlarının yanı sıra okul dışı öğrenme ortamlarında da fiziksel aktivitelere katılımı desteklenmelidir. Okul dışı öğretmen ortamlarında çocuklara düzenli bir şekilde fiziksel aktivitelere katılma fırsatının sunulması onların fiziksel aktivitelerin yukarıda bahsedilen faydalarından sürdürülebilir bir şekilde ve tam anlamıyla yararlanmalarını açısından son derece önemlidir.

Çocuklara fiziksel aktivite konusunda okul dışı öğrenme ortamları oluşturma konusunda ailelere büyük sorumluluklar düşmektedir. Araştırmalar ailenin etkinliklerdeki aktif katılımı olmazsa hem çocuk hem de aile açısından etkinliklerin belirlenen amaçlara ulaşamayacağını öne sürmektedir (Diken, 2009). Ailenin etkinlik sürecinde bizzat yer almasının yanı sıra öğretici olarak etkinlikte bulunması sonucunda çocukların sürdürülebilir bir şekilde çeşitli becerileri kazanmalarına katkı sunulmaktadır (Acar, Tekin-İftar & Yıkılmış, 2017).

Ülkemizde çocukların fiziksel aktivitelere katılımını ele alan çalışmalar genelde, fiziksel aktivitelerin çocukların gelişim alanları üzerindeki etkilerini ortaya koymaya yöneliktir (Karakaya vd., 2006). Aile katılımlı fiziksel aktivitelere yönelik yapılan sınırlı sayıda çalışma ise yalnızca özel gereksinimli bireyler üzerinedir (İlhan, Yarımkaaya & Esentürk, 2017; Solomon vd., 2014). Sürdürülebilir bir fiziksel aktivite öğretimi için ebeveynlerin fiziksel aktivitelere çocuklarıyla birlikte katılmaları, fiziksel aktivite örneklerini bizzat görmeleri ve uygama becerisi kazanmasının önemli olduğu düşünülmektedir. Bu bağlamda mevcut çalışmada, aile katılımlı fiziksel aktivitelerin 4-6 yaş aralığındaki çocukların fiziksel aktivite düzeyi üzerindeki etkilerinin incelenmesi amaçlanmıştır.

### YÖNTEM

#### Araştırma Deseni

Mevcut çalışma, Bayburt Üniversitesi Etik Kurulu tarafından 29.03.2023 tarih ve 99 nolu karar ile etik ilkelere uygun görülmüştür. Çalışmada deneysel desen olarak ön test – son test deneysel model kullanılmıştır. Bu modelde bir gruba bağımsız değişken/değişkenler uygulanmaktadır. Hem uygulama öncesi (ön test) hem de uygulama sonrası (son test) ölçümler alınarak elde edilen ölçümler arasında fark

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

meydana gelirse, bunun bağımsız değişken/değişkenler kaynaklı olduğu kabul edilmektedir (Neuman, 2006). Mevcut çalışmanın deneysel desenine ilişkin bilgiler aşağıda Tablo 1’de özetlenmiştir.

**Tablo 1.** Araştırmanın deseni

Grup	Ön test	Uygulama	Son test
Uygulama	Boş Zaman Fiziksel Aktivite Ölçeği	Aile katılımlı fiziksel aktiviteler (8 hafta)	Boş Zaman Fiziksel Aktivite Ölçeği
Kontrol	Boş Zaman Fiziksel Aktivite Ölçeği	-	Boş Zaman Fiziksel Aktivite Ölçeği

Tablo 1’de görüldüğü üzere, mevcut çalışmada ön test son test kontrol gruplu deneysel desene uygun olarak, 8 haftalık aile katılımlı fiziksel aktiviteler öncesi uygulama ve kontrol grubunda yer alan çocukların fiziksel aktivite düzeyi ön test olarak değerlendirilmiştir. Ardından 8 hafta süresince haftada 3 gün ve 30’ar dakika süreyle aile katılımlı fiziksel aktiviteler yürütülmüştür. Bu süreçte kontrol grubu herhangi bir fiziksel aktivite programına katılmamıştır. 8 haftalık aile katılımlı fiziksel aktiviteler sonrası uygulama ve kontrol grubunda yer alan çocukların fiziksel aktivite düzeyine ilişkin son test verileri elde edilmiştir.

## Katılımcılar

Araştırmaya Bayburt ilinde ikamet eden 16 ebeveyn ile onların 4-6 yaş aralığındaki çocukları katılmıştır. Katılımcıların belirlenmes sürecinde, kolay ulaşılabilir örnekleme yöntemi kullanılmıştır. Katılımcılara ulaşmak için İl Milli Eğitim Müdürlüğü’nden destek alınmıştır. Çalışmanın ebeveynlere duyurulması amacıyla İl Milli Eğitim Müdürlüğü koordinesinde rehber öğretmenler nezaretinde bizzat proje içeriği ailelere anlatılarak gönüllülük esası doğrultusunda katılımcılar belirlenmiştir. Katılımcıların demografik bilgileri aşağıda Tablo 2’de sunulmuştur.

**Tablo 2.** Katılımcılara ilişkin demografik bilgiler

		Grup	
		Uygulama (n: 8) n(%)	Kontrol (n: 8) n(%)
Çocuklar	<b>Cinsiyet</b>		
	Kız	3(37.5%)	4(50.0%)
	Erkek	5(62.5%)	4(50.0%)
	<b>Yaş (X+SD)</b>	4.87+0.64	4.90+0.59
Ebeveynler	<b>Cinsiyet</b>		
	Kadın	6(76.1%)	7(66.7%)
	Erkek	2(23.9%)	1(33.3%)
	<b>Yaş (X+SD)</b>	37.49+5.73	38.56+6.81
	<b>Eğitim düzeyi</b>		
	Ortaokul	2(25.0%)	3(37.5%)
	Lise	3(37.5%)	3(37.5%)
	Üniversite	3(37.5%)	2(25.0%)
	<b>Algılanan gelir düzeyi</b>		
	Düşük	1(12.5%)	1(12.5%)
Orta	5(67.5%)	6(75.0%)	
Yüksek	2(25.0%)	1(12.5%)	

Tablo 2 incelendiğinde, çalışmaya katılan uygulama grubundaki çocukların 3’ü kız, 5’i erkek iken ebeveynlerinin 6’sı kadın, 2’si erkektir. Kontrol grubundaki çocukların 4’ü kız, 4’ü erkek iken ebeveynlerinin 7’si kadın, 1’i erkektir. Yaş açısından, uygulama grubundaki çocukların yaş ortalaması 4.87 iken ebeveynlerinin 37.49’dur. Kontrol grubundaki çocukların yaş ortalaması 4.90 iken

ebeveynlerinin yaş ortalaması 38.56'dır. Eğitim düzeyi açısından, uygulama grubundaki ebeveynlerin 2'si ortaokul, 3'ü lise ve 3'ü üniversite mezunu iken kontrol grubundaki ebeveynlerin 3'ü ortaokul, 3'ü lise ve 2'si üniversite mezunudur. Bunun yanı sıra, algılanan gelir düzeyi açısından uygulama grubundaki ebeveynlerin 1'i düşük gelir düzeyinde, 5'i orta gelir düzeyinde ve 2'si yüksek gelir düzeyinde yer almaktayken kontrol grubundaki ebeveynlerin 1'i düşük gelir düzeyinde, 6'sı orta gelir düzeyinde ve 1'i yüksek gelir düzeyinde yer almaktadır.

### Aile Katılımlı Fiziksel Aktiviteler

Çalışma kapsamında, 8 hafta boyunca 1haftada 3 gün 30 dakika süreyle aile katılımlı fiziksel aktiviteler uygulanmıştır. Her bir fiziksel aktivite oturumu şunlardan oluşmuştur: a) yaklaşık 10 dakikalık bir ısınma periyodu, b) yaklaşık 10 dakikalık bir fiziksel aktivite periyodu and c) yaklaşık 10 dakikalık bir soğuma periyodu. Isınma periyodu, hafif yürüyüş ve ekstremitelerdeki (diz ve ayak bileği, kalça, boyun ve omuz) eklemlerin rotasyonunu içermektedir. Fiziksel aktivite periyodunda eğlenceli oyunlar ve parkurlar yer almıştır. Soğuma periyodu ise, nefes alma ve esnetme egzersizleri gerçekleştirilmiştir.

### Veri Toplama Araçları

Çalışma verileri, Kişisel Bilgi Formu ve Serbest Zaman Egzersiz Anketi aracılığıyla elde edilmiştir.

*Kişisel Bilgi Formu:* Çalışmaya katılan ebeveynlerin ve çocukların cinsiyet, yaş, eğitim düzeyi, ve algılanan gelir düzeyleri ile ilgili bilgiler elde etmek amacıyla Kişisel Bilgi Formu kullanılmıştır.

*Serbest zaman Egzersiz Anketi:* Boş Zaman Fiziksel Aktivite Değerlendirme Ölçeği aracılığıyla çocukların müdahale öncesi ve sonrası fiziksel aktivite düzeyi hakkında bilgi elde edilecektir. Boş Zaman Fiziksel Aktivite Değerlendirme Ölçeği son bir haftada en az 15 dakika süreyle; a) Yüksek şiddette fiziksel aktivitelerin, b) Orta şiddette fiziksel aktivitelerin ve c) Hafif şiddette fiziksel aktivitelerin kaç kez yapıldığını belirlemeyi hedeflemektedir (Godin ve Shephard, 1985). Anketin toplam skoru şu şekilde hesaplanmaktadır; haftalık serbest zaman aktivitesi skoru = (9 x yüksek şiddette fiziksel aktiviteler) + (5 x orta şiddette fiziksel aktiviteler) + (3 x hafif şiddette fiziksel aktiviteler) (Godin, 2011). LTEQ'nun Türk kültürüne uyarlama çalışmasında (Yerlisu-Lapa, Certel & Yağar, 2016), Açıklayıcı Faktör Analizi sonucunda (AFA) toplam varyansın %55'ini açıklayan tek faktörlü bir yapı elde edilmiştir. Anketin güvenilirliği kapsamında test-tekrar test analizi gerçekleştirilmiştir. LTEQ'nun Türkçe versiyonu için test-tekrar test güvenilirliği katsayısı anketin geneline ilişkin .84, anketin maddelerine ilişkin ise sırası ile .80, .76 ve .72 olarak hesaplanmıştır. Ayrıca ölçüt geçerliği doğrultusunda "Uluslararası Fiziksel Aktivite Anketi-Kısa Form" ile yapılan korelasyon analizi sonucunda Spearman korelasyon katsayısı .92 olarak bulunmuştur.

### Verilerin Analizi

Çalışma verilerinin analizinde SPSS 20.0 paket programından yararlanılmıştır. Veri setinin sayıca az olmasından dolayı, 4-6 yaş aralığındaki çocukların grup içi ve gruplar arası fiziksel aktivite düzeyinin karşılaştırılmasında Mann-Whitney U testi ve Wilcoxon İşaretli Sıralar testi kullanılmıştır.

### BULGULAR

**Tablo 1.** Uygulama ve kontrol grubundaki çocukların ön test fiziksel aktivite puanlarının karşılaştırılması

Grup	n	Sıra ortalaması	Sıra toplamı	U	p
Uygulama	8	7,31	58,50	22,500	0,309
Kontrol	8	9,69	77,50		

Tablo 1 incelendiğinde, uygulama ve kontrol grubunda yer alan çocukların ön test fiziksel aktivite puanları arasında anlamlı bir farklılık olmadığı belirlenmiştir (U: 22,500, p: 0,309, p>0,05). Bu sonuç, 8 haftalık aile katılımlı fiziksel aktivite programı öncesi uygulama ve kontrol grubundaki çocukların fiziksel aktivite düzeylerinin benzer olduğunu göstermiştir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

**Tablo 2.** Uygulama ve kontrol grubundaki çocukların son test fiziksel aktivite puanlarının karşılaştırılması

Grup	n	Sıra ortalaması	Sıra toplamı	U	p
Uygulama	8	12,50	100,00	0,000	0,001*
Kontrol	8	4,50	36,00		

\*p<0,05

Tablo 2’de görüldüğü üzere, uygulama ve kontrol grubunda yer alan çocukların son test fiziksel aktivite puanları arasında anlamlı bir farklılık olduğu tespit edilmiştir (U: 0,000, p: 0,001, p<0,05). Bu sonuç, 8 haftalık aile katımlı fiziksel aktivite programı sonrası uygulama ve kontrol grubundaki çocukların fiziksel aktivite düzeyleri arasında uygulama grubu lehine bir artış olduğunu açığa çıkarmıştır.

**Tablo 3.** Uygulama ve kontrol grubundaki çocukların ön test – son test fiziksel aktivite puanlarının karşılaştırılması

Grup	Son test-Ön test	n	Sıra ortalaması	Sıra toplamı	Z	p
Uygulama	Negatif sıra	0	0,00	0,00	-2,536	0,011*
	Pozitif sıra	8	4,50	36,00		
	Eşit	0				
Kontrol	Negatif sıra	1	3,00	3,00	-0,736	0,461
	Pozitif sıra	3	2,33	7,00		
	Eşit	4				

\*p<0,05

Tablo 3 incelendiğinde, uygulama grubunda yer alan çocukların ön test – son test fiziksel aktivite puanları arasında anlamlı bir farklılık olduğu saptanmıştır (Z: -2,536, p: 0,011, p<0,05). Buna karşın kontrol grubunda yer alan çocukların ön test – son test fiziksel aktivite puanları arasında anlamlı bir farklılık ol olmadığı belirlenmiştir (Z: -0,736, p: 0,461, p>0,05). Bu sonuç, 8 haftalık aile katımlı fiziksel aktivite programının uygulama grubundaki çocukların fiziksel aktivite düzeyleri üzerinde olumlu bir etki oluşturduğunu göstermiştir.

## TARTIŞMA VE SONUÇ

Aile katımlı fiziksel aktivitelerin 4-6 yaş aralığındaki çocukların fiziksel aktivite düzeyi üzerindeki etkilerinin incelenmesi amacıyla yapılan bu araştırmadan elde edilen bulgulara göre, aile katımlı fiziksel aktivitelerin 4-6 yaş aralığındaki çocukların fiziksel aktivite düzeyi üzerinde olumlu yönde bir etki oluşturduğu izlenimi edinilmiştir. Fiziksel aktivitelerin düzenli ve sürdürülebilir bir şekilde uygulanarak çocukların gelişim alanları üzerinde olumlu etkiler oluşturması bakımından ailenin fiziksel aktivitelere katılımı son derece önemlidir (Lantz, Nelson & Loftin, 2004). Aile katılımının sağlandığı fiziksel aktiviteler esnasında ortaya çıkan aile-çocuk etkileşimi ile çocuklarda istenilen davranış değişiklikleri için potansiyel bir öğrenme ortamı oluşturmaktadır (Keay-Bright & Boardman, 2006). Literatürde aile katımlı olarak uygulanan fiziksel aktiviteler neticesinde çocukların fiziksel aktivite düzeyindeki artışı ele alan sınırlı sayıda çalışmaya rastlanmıştır (Esentürk & Yarımkaya, 2021). Söz konusu çalışma sosyal etkileşim ve iletişim becerilerinde sorunlar yaşayan özel gereksinimli bireylere yöneliktir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Ailelerin günlük yaşamlarında fiziksel aktivitelerin sistemli bir şekilde uygulayabilecek seviyeye gelmeleri hem kendileri hem de çocuklarının gelişimlerine önemli katkılar sağlayacaktır. Bu nihai amaç doğrultusunda tasarlanan mevcut çalışmanın, 4-6 yaş aralığındaki çocukların fiziksel aktivite düzeyinin aile katılımı fiziksel aktiviteler aracılığıyla nasıl artırılacağı konusunda paydaşlara rehberlik edebileceği düşünülmektedir.

Çalışma kapsamında ulaşılabilecek sonuçların Milli Eğitim Bakanlığı, Bayburt Üniversitesi ve Bayburt İl Milli Eğitim Müdürlüğü ile paylaşılması hedeflenmektedir. Bu bağlamda, deprezede ailelerin yanı sıra kapsayıcı fiziksel aktivite faaliyetlerini düzenleyen Milli Eğitim Bakanlığı'nın ilgili alt birimleri tarafından kullanılabilmesi değerlendirilmektedir. Bu genel etkinin yanı sıra çalışmanın gerçekleştiği ilin milli eğitim müdürlüğü tarafından da yerel bazda öğretmenlerin kapsayıcı fiziksel aktiviteler konularında faaliyetler düzenlenebileceği öngörülmektedir. Ayrıca çalışma sonuçlarının Bayburt Üniversitesi'nde öğrenim gören beden eğitimi ve spor öğretmenliği, sınıf öğretmenliği ve çocuk gelişimi bölümü öğrencilerinin eğitimlerine de katkı sunabileceği değerlendirilmektedir.

### ÖZET

Finans sektörü hızla dönüşüm geçirmekte olup, Bitcoin fiyatlarını tahmin etmek merkezi bir zorluk haline gelmiştir. Kaggle'dan alınan verileri kullanarak Yapay Sinir Ağı (ANN), Evrişimli Sinir Ağı (CNN) ve Uzun Kısa Vadeli Bellek (LSTM) olmak üzere üç öne çıkan derin öğrenme modelini analiz ettik. CNN, 0.0632 RMSE, 0.0373 MAE ve 0.9469 korelasyon katsayısı ile üstün bir performans sergileyerek, özellikle mekansal desenlerin bulunduğu zaman serisi tahminlerinde yeteneğini öne çıkardı. Buna karşılık, LSTM beklenildiği gibi performans göstermedi, bu da genellikle sıralı veri işleme konusundaki başarısını öven mevcut literatürden sapmaktadır. LSTM'in etkinliğini etkileyen faktörler arasında veri ön işleme, model parametreleri veya Bitcoin fiyatlandırma verisinin benzersiz doğası yer alabilir. Araştırmamız, Bitcoin fiyat tahminleri için CNN'lerin tercih edilebilir olduğunu önermektedir, ancak en uygun model veri nüanslarına, ön işlemeye ve hiperparametrelere bağlı olarak değişebilir. Bu alanları keşfetmek ve potansiyel olarak diğer modelleri veya hibrid teknikleri entegre etmek için daha fazla araştırma yapılması teşvik edilmektedir.

**Anahtar kelimeler:** Derin Öğrenme, Kripto, ANN, CNN, LSTM, Fiyat, Tahmin.

### ABSTRACT

The finance sector is undergoing swift transformations, with predicting Bitcoin prices being a central challenge. We analyzed three prominent deep learning models such as Artificial Neural Network (ANN), Convolutional Neural Network (CNN), and Long Short-Term Memory (LSTM) using data from Kaggle. The CNN showed superior performance with an RMSE of 0.0632, an MAE of 0.0373, and a correlation coefficient of 0.9469, highlighting its aptitude for time-series forecasting, especially when spatial patterns are present. In contrast, the LSTM did not perform as expected, diverging from existing literature that usually praises its sequential data handling. Factors affecting LSTM's efficacy might include data preprocessing, model parameters, or the unique nature of Bitcoin pricing data. Our research suggests CNNs are preferable for Bitcoin price predictions, yet the optimal model can vary based on data nuances, preprocessing, and hyperparameters. Further research is encouraged to explore these areas and potentially integrate other models or hybrid techniques.

**Keywords:** Deep Learning, Crypto, ANN, CNN, LSTM, Price, Prediction.

### INTRODUCTION

This study delves into the intricate aspects of Bitcoin's technical operations. Among the primary focuses are the challenges in key management (Sureshbhai et al., 2020), the emergence and constraints of custodial wallets (Mell et al., 2017), and the usability hurdles that Bitcoin beginners often encounter (Casado-Vara et al., 2019; Clyde, 2020). Our objective is not just to shed light on these challenges but

also to propose potential solutions (Financial Time, 2008; G. Wood., 2016). The foundation of digital currencies can be traced back to Chaum's anonymous payment systems in the 1980s (B.Insider, 2008). However, these initial systems had a dependence on central entities. This centralized approach was subsequently countered by innovations like B-Money by Dai (1998) and Bit Gold by Szabo (2005) (A. Mikhaylov., 2019). Another landmark in the progression of digital currencies was Hal Finney's "Reusable Proofs of Work" in 2004 (Kuo Chuen et al., 2017).

Addressing the unpredictability of the cryptocurrency market, the accurate prediction of Bitcoin Price (BP) remains a daunting task. Conventional models that process extensive datasets in bulk can sometimes risk precision. Also, expansive neural networks are plagued by challenges such as the vanishing gradient dilemma and computational intensiveness. Our study unveils a fresh BP prediction approach that examines data for each individual cryptocurrency prior to its amalgamation (Corbet et al., 2022). This method leverages a fusion of ANN, CNN, and LSTM models (Corbet et al., 2022) with the intent to bolster prediction precision and counteract computational drawbacks. In essence, our research offers a noteworthy advancement in cryptocurrency price prediction endeavors.

### RELATED WORK

In the realm of Bitcoin price predictions through Deep Learning (DL) models, there exists an abundance of literature. (Aggarwal et al., 2019) explored the capabilities of LSTM, reporting an RMSE of 47.91, though the study refrained from linking Bitcoin prices with gold. The innovative WT-CATCN model was introduced by (Jiang, 2020), boasting an RMSE of 19.020. On the other hand, (Saadah & Ahmad Whafa, 2020) accentuated LSTM's proficiency, demonstrating an impressive accuracy of 80% for cryptocurrency predictions. A novel approach by (Jay et al., 2020) presented a stochastic model, which outperformed deterministic models by achieving an RMSE of 4.84833%. The domain of Ether price predictions saw advancements from (Glenski et al., 2021), who registered an accuracy rate of up to 84.2%. Diving deeper into the LSTM's capabilities, (Shin et al., 2021) exhibited an ensemble approach, particularly efficient during volatile phases, resulting in an RMSE of 37.24. Achieving an RMSE of 21.2% through LSTM, the work of (Carbó & Gorjon, 2022) further solidified the model's position. (Kang et al., 2022) ventured into hybrid DL methodologies, revealing promising RMSE figures. Concluding the overview, (WARDAK & RASHEED, 2022) showcased an LSTM RNN's prowess, achieving a staggering 95.7% accuracy when fine-tuned with optimal hyperparameters.

### METHODOLOGY

In our research, we have meticulously constructed a prediction model rooted in data sourced from Kaggle, a renowned platform for datasets. Prior to delving into the intricacies of model implementation, this data undergoes a critical preprocessing phase, where we employ the min-max scaler technique to standardize and normalize the data, ensuring that the range stays consistent and facilitating easier computational processing. Having refined the dataset, we then partition it, allocating 80% for training purposes and the remaining 20% reserved for testing, a distribution that provides a harmonious balance, guaranteeing robust model training while also leaving ample space for rigorous evaluation. Following these initial steps, we introduce and implement three prominent Deep Learning architectures: ANN, CNN, and LSTM. The selection of these models stems from their proven efficiency and prowess in handling diverse data types and structures. To gauge their efficacy and reliability, we have adopted regression-specific assessment techniques, ensuring that the results derived are both accurate and indicative of the models' predictive potential within the realm of cryptocurrency price movement analysis.

**Figure 1.** Proposed Flowchart

In our model development process, we harness the capabilities of three distinct Deep Learning (DL) strategies:

- ANN (Chen et al., 2020): This is a sequential construct comprising four hidden layers. The model relies on the ReLU activation function for these layers. The training process spans 100 epochs to ensure robust model learning.
- CNN (Rathan et al., 2019): Specifically tailored for one-dimensional data sets, this architecture integrates a Conv1D layer, succeeded by Flatten and Dense layers. Similar to the ANN, the training regimen is designed to be executed over 100 epochs.
- LSTM (Borges & Neves, 2020): Recognized for its adeptness in managing sequential data, this model integrates an LSTM layer. This is subsequently followed by a series of three Dense layers, each utilizing ReLU activations. The optimization phase for this model is diligently performed over 100 epochs.

By synergizing the meticulous data preprocessing stages with the incorporation of these diverse DL models, our methodology seeks to provide comprehensive, resilient, and pragmatically applicable perspectives on the nuanced dynamics of cryptocurrency pricing.

## EVALUATION AND RESULTS

In this research, we conducted an exhaustive performance analysis of three deep learning architectures are ANN, CNN, and LSTM, for the purpose of forecasting Bitcoin prices. The evaluation utilized a set of key metrics, namely MSE, RMSE, MAE, and the R2 score. Our models were built using Python version 3.6.1 and executed on a Windows 10 environment, bolstered by an Intel Core i7 CPU with a clock speed of 2.60 GHz, coupled with 16 GB RAM and operating on a 64-bit system. It's worth noting that MSE gauges the average squared differences, whereas RMSE quantifies the average variances between the actual and forecasted values. In addition, the MAE and R2 score provide deeper insights into the reliability and precision of the models. Among the analyzed models, the RF stood out distinctly, registering an MAE of 0.024609, an RMSE of 0.056137, and an impressive R2 value of 0.958287. Other modeling techniques, including DT and XGBoost, showcased commendable outcomes. However, the Lasso regression technique demonstrated a relatively subdued performance. Such results underscore the

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

**October 13-14, 2023**

significance of meticulous model selection and optimization, especially when navigating the unpredictable terrains of cryptocurrency pricing.

**Table 1.** Loss Values of Different Models for Predicting Cryptocurrency Prices

Regressor	MAE	RMSE	R2
Linear Regression	0.065311	0.107985	0.845651
Decision Tree Regressor	0.026540	0.069409	0.936232
RF	0.024609	0.056137	0.958287
SVR	0.062093	0.083781	0.907090
Gradient Boosting Regressor	0.035017	0.066422	0.941602
AdaBoost Regressor	0.055780	0.080166	0.914934
XGB	0.026591	0.058331	0.954962
LGBM	0.029611	0.060188	0.952049
KNN	0.028625	0.059169	0.953658
Ridge	0.065359	0.107970	0.845694

In our evaluation of Bitcoin price predictions, we assessed the capabilities of both ANN and CNN models. The ANN architecture manifested a commendable performance, posting an RMSE value of 0.09349, MAE standing at 0.0612, and a correlation coefficient pegged at 0.8842. Contrarily, the CNN framework eclipsed the ANN, showcasing superior metrics: RMSE of 0.05437, MAE measuring 0.03247, and a striking correlation value of 0.960. Such metrics imply that the CNN not only forecasts with greater accuracy but also aligns more closely with the actual trends.

**Table 1.** Comparative Results ML/ DL

Model (Type)	MAE	RMSE	R
Random Forest (ML)	0.024609	0.056137	0.958287
ANN (DL)	0.061200	0.093494	0.884297
CNN (DL)	0.032474	0.054376	0.960863

In Figure 2, we juxtapose the genuine Bitcoin prices, illustrated by the blue trajectory, against the forecasts produced by our DL architectures, ANN and CNN, represented by the red trajectory. Observationally, the projected values, on an aggregate level, tend to hover above the actual prices. Nevertheless, these predictions emulate the overarching trend with a significant degree of accuracy.

Figure 2. DL True vs Prediction

## DISSCUSSION

In our exploration, both ML and DL architectures were assessed in terms of their proficiency in predicting Bitcoin prices. Within the ML models, Random Forest emerged as the leader, whereas among the DL architectures, CNN took the spotlight. While the outcomes are noteworthy, it's crucial to address the study's constraints. The research leaned heavily on past data, overlooking some external factors that influence Bitcoin prices. Additionally, we were bounded by computational limitations, leading to an incomplete exploration of potential DL hyperparameters. To further refine prediction accuracy, upcoming studies might delve into enhancing model optimization, experimenting with varied neural network configurations, and incorporating expansive datasets.

## CONCLUSION

Our research underscored the significant role of both ML and DL methodologies in forecasting Bitcoin prices. Among the ML techniques, the Random Forest Regressor shone brightly, while within the DL paradigm, CNN outperformed ANN. These outcomes highlight the burgeoning potential of data analytics in deciphering the intricacies of cryptocurrency markets. However, it's imperative to approach the results with a discerning lens given the study's limitations. Subsequent research endeavors should aim to bridge these gaps and further hone the models to capture the nuances of cryptocurrency price movements. Ensuring precise Bitcoin price predictions continues to be of paramount importance for numerous stakeholders in the field.

## COVID-19 PANDEMİ DÖNEMİ SONRASINDA ÜNİVERSİTE ÖĞRENCİLERİNDE ONLINE PLATFORM YORGUNLUĞU: NİTEL BİR ARAŞTIRMA

### ONLINE PLATFORM FATIGUE IN UNIVERSITY STUDENTS AFTER THE COVID-19 PANDEMIC PERIOD: A QUALITATIVE STUDY

#### ÖZET

Covid-19 salgın süreci 2019 yılının Aralık ayında ortaya çıkmış olup 2020 Mart ayında tüm dünyada pandemi olarak Dünya Sağlık Örgütü tarafından ilan edilmiştir. Bu sürecin başlamasıyla birlikte eğitimden sağlığa, hizmetten üretim sektörüne birçok sektör olumsuz yönde etkilenmiştir. Özellikle eğitim sürecine bakıldığında bütün kademelerde online eğitim süreci kamu otoritesi tarafından kararlaştırılmış ve uzun bir süre bu şekilde devam etmiştir. Salgın sürecinin seyrinin azalmasıyla birlikte online eğitim sürecinden yüz yüze eğitime geçilmiş ve bu süreçte riskin devam etmesi şüphesiyle dolaşımı azaltmak açısından karma eğitim anlayışı bazı yükseköğretim kurumları tarafından benimsenmiştir. Bu süreçte öğrenciler öğrenim gördükleri üniversitelerde bazı derslerini yüz yüze alırken bazı derslerini çevrim içi ortamlarda almışlardır. Covid-19 salgın süreci sonrası üniversite öğrencilerinde yaşanan bu durumdan yola çıkılarak lisans düzeyindeki öğrencilerin online platform yorgunluklarını araştırmak çalışmanın temel amacını oluşturmaktadır. Araştırmanın örneklemini Yozgat Bozok Üniversitesinde 2021-2022 eğitim-öğretim yılında öğrenim gören lisans öğrencileri oluşturmaktadır. Nitel araştırma deseninde oluşturulan çalışmada 20 lisans öğrencisi ile yarı yapılandırılmış görüşmeler gerçekleştirilmiştir. Görüşme yöntemiyle toplanan veriler nitel araştırma yöntemlerinden içerik analizine tabi tutulmuştur. Katılımcılardan elde edilen veriler kategorilere ayrılarak incelenmiştir. Araştırmadan elde edilen bulgulara göre Covid-19 pandemi süreci sonrasında üniversitelerde uygulanan karma eğitim sürecinden öğrencilerin memnun olmadığı, bu durumun eğitim sürecinde aksamalar yaşattığı ve ikisi öğrenim sürecinden birisinin tamamen uygulamaya geçmesi gibi düşüncelerinin olduğu görülmüştür. Üniversite öğrencilerinin yaşadıkları bu sürece ilişkin bireysel, kurumsal ve toplumsal öneriler sunulmaya çalışılmıştır.

**Anahtar Kelimeler:** Üniversite Öğrencileri, Online Platform, Nitel Araştırma

#### ABSTRACT

The Covid-19 pandemic process emerged in December 2019 and was declared by the World Health Organisation as a pandemic all over the world in March 2020. With the start of this process, many sectors from education to health, from service to production sector have been negatively affected. Especially when looking at the education process, the online education process at all levels was decided by the public authority and continued in this way for a long time. With the decrease in the course of the epidemic process, the online education process was switched from the online education process to the face-to-face education process, and with the suspicion of the continuation of the risk in this process, the concept of mixed education was adopted by some higher education institutions in order to reduce circulation. In this process, students took some of their courses face-to-face at the universities where they studied, while some of their courses were taken in online environments. Based on this situation experienced by university students after the Covid-19 pandemic process, the main purpose of the study is to investigate the online platform fatigue of undergraduate students. The sample of the study consists of undergraduate students studying at Yozgat Bozok University in the 2021-2022 academic year. In the qualitative research design, semi-structured interviews were conducted with 20 undergraduate students. The data collected by interview method were subjected to content analysis from qualitative research

methods. The data obtained from the participants were categorized and analyzed. According to the findings obtained from the research, it was observed that students were not satisfied with the mixed education process implemented in universities after the Covid-19 pandemic process, that this situation caused disruptions in the education process, and that they had thoughts such as the complete implementation of one of the two learning processes. Individual, institutional, and social suggestions regarding this process experienced by university students were tried to be presented.

**Keywords:** University Students, Online Platform, Qualitative Research

## GİRİŞ

Günümüzde bireyler, iletişim araçlarının sağlamış olduğu kolaylıkların farkında ve neredeyse internet ve iletişim araçlarına sahip olan herkes bu araçları kullanmaktadır. Bireylerarası iletişim geçmişte yüz yüze iken günümüzde bu sınırlar ortadan kalkmış ve yerini çevrimiçi platformlar aracılığıyla iletişime bırakmıştır. Çevrimiçi platformlar, bireylerin yaşamında, iletişiminde ve onların işbirliği içerisinde olmasında büyük katkılar sunan araçlardır. Özellikle mesafelerin bir öneminin olmadığı çevrimiçi platformlar, oluşturulduğu andan itibaren geliştirilerek insanlık için büyük bir fayda sağlamış ve sağlamaya da devam etmektedir.

Çevrimiçi platformlar genel olarak Zoom, Google Meet ve benzeri uygulamalar ile karşımıza çıkmış olup bireylerin sanal ortamlarda bir araya gelmesine ve görüşmelerini yapmalarına olanak sağlamaktadır. Çevrimiçi platform araçları video konferans yetenekleri ile ön plana çıkmakta, ses ve video özellikleri sayesinde bireylerin görüntülerini ve seslerini karşı tarafa aktarmak suretiyle iletişimi gerçekleştirmektedir. Bunun yanı sıra iletişim kuran bireyler arasında bilgi iletişim teknolojilerinin karşı tarafa iletilmesi, materyallerin sunulması, canlı görüşmenin kayıt altına alınarak sonradan izleme gibi birçok olanağı bünyesinde barındırmaktadır.

Zoom, Google Meet ve benzer şirketlerin oluşturmuş olduğu uygulamalar çevrimiçi görüşmeler sayesinde zamanı etkin kullanma, mekân sınırlamasını ortadan kaldırma, iletişimi daha hızlı erişilebilir hale getirme gibi imkânları sunarken özellikle iş dünyasında büyük bir dönüşüm meydana getirmiştir. İşletmeler, çalışanlarını sürekli bir araya toplamak yerine bu çevrimiçi uygulamalar sayesinde toplantılar düzenleyebilmekte ve stratejik açıdan birçok kazanç elde etmektedirler. İş dünyasının yanı sıra çevrimiçi platformlar eğitim, sağlık, sosyal etkileşimler gibi birçok alanı da kapsama alanına almıştır. Özellikle Covid-19 pandemi sürecinin dünyada etkili olmasıyla birlikte çevrimiçi uygulamalara olan rağbet artmış ve pandemi süreci bitse de bu uygulamalar devam etmiştir.

Bu araştırmanın konusunu oluşturan eğitim sürecinde çevrimiçi platformların etkisi Covid-19 pandemi süreciyle birlikte başlamış olup sürecin bitmesiyle birlikte devam etmiştir. Online platformlar uzaktan eğitimi destekler nitelikte meydana getirilmiş ve sanal sınıflarda eğiticiler ve öğrenciler bir araya gelerek zorunluluk halinde eğitim süreçleri devam etmiştir. Fakat pandemi sürecinden sonra evrilen eğitim sürecinde birçok eğitim kuruluşu çevrimiçi platformların bazı süreçlerde devam etmesi gerektiği kanaatine varmış ve bu uygulamalara devam etmiştir. Her ne kadar zorunluluk halinde kuruluşların ve hizmet alanların kullandığı bu çevrimiçi platformlar, sürecin sonlanması ile birlikte oransal olarak devam etse de bireylerin bu uygulamalara karşı bir önyargılarının olduğu düşünülmektedir. İnsanların alışlagelmiş iletişim tarzlarını bir anda bırakabilmesinin zor olduğu bilinmekte ve özellikle eğitim-öğretim süreçlerinde yüz yüze eğitim-öğretim sürecinin yerini çevrimiçi platformların tutmayacağı anlaşılmaktadır. Bu çalışmada üniversite öğrencilerinin Covid-19 pandemi süreci sonrasında çevrimiçi (online) platformlara karşı düşünceleri elde edilerek literatürdeki bilgi birikimine katkı sunulmaya çalışılmıştır.

## EĞİTİMDE ONLINE PLATFORM YORGUNLUĞU

1 Mart 2020 tarihinde Dünya Sağlık Örgütü tarafından ilan edilen Covid-19 salgını hayatı akışında birçok şeyi etkilemiştir. Covid-19 salgını eğitim ve öğretim alanında da birçok modelin değişimine neden olmuştur. Özellikle yüksek öğretim kurumlarında gelişen çevrimiçi öğrenme olanaklarını derslerin yüz yüze eğitimden online (çevrimiçi) eğitime geçilmesine sebep olmuştur. 2020 bahar dönemi itibari ile öğrencilerin online etkinlik sayıları hızla artmıştır. Bu noktada teknoloji daha önce akla gelmeyecek şekilde kullanılmaya başlanmıştır (Massner, 2021: 19). Üniversiteler bu online

dönemde kendi çevrimiçi eğitim altyapılarıyla, yada Zoom, MicroSoft Teams, Perculus, BigBlueButton, Adobe Connect ve Google Meet gibi görüntülü web görüşme uygulamalarıyla derslerine devam etmeye başlamıştır (Zan & Zan, 2020). Pandemi dönemi alınan karar sonrası her üniversite uzaktan eğitime başlamak zorunda kalmıştır. Yüksek Öğretim Kurumu'nun belirlediği verilere göre 189 üniversiteden 121'i 23 Mart 2020; 41'i 30 Mart 2020 ve 25'i 6 Nisan 2020 tarihlerinde uzaktan eğitim ve öğretime başlamıştır. Açılan derslerin %22'sinde canlı sınıf uygulaması kullanılmış olup, uzaktan eğitimin en fazla etkin olduğu alan Sosyal Bilimler (%91) iken en az kullanıldığı alan ise Sağlık Bilimleri (%54) olmaktadır (Yüksek Öğretim Kurumu, 2020). Sürdürülen uzaktan eğitim programlarında öğrencilerin bir önceki dönemden yüz yüze işlenemeyen dersler nedeni ile bir üst sınıftaki eksiklerini tamamlanmasına öncelik verilmesini içeren genelge yükseköğretim kurulu tarafından yayımlanmıştır. Daha sonra Hibrit eğitim modeline yakın bir uygulamaya geçilmeye karar verilerek, yükseköğretim kurumları kademeli bir şekilde eğitim ve öğretim faaliyetlerine başlamıştır. Hibrit eğitim modeli uzaktan eğitim ve yüz yüze eğitimin bir arada uygulandığı bir model olarak tanımlanmaktadır (Yaman, 2021: 3300).

Çevrimiçi öğretimde, geleneksel öğretimden farklı yöntemlerin kullanılması öğrencilerin genellikle çevrimiçi olarak görüntülü bir şekilde ders almaları online platform yorgunluğuna yol açmıştır (Toney vd., 2021). Bu durum literatürde çevrimiçi eğitimde bilgisayarda geçirilen vaktin, ismini güncel olan video görüşme platformundan Zoom yorgunluğu ya da Zoom tükenmişliği sorunu olarak ele alınmıştır. Toplantılara ve derslere katılımlardan dolayı katılımcılarda yakınlaştırma yorgunluğuna neden olan ve tükenmişlik sendromuna yol açan Zoom yorgunluğu, genel bir zihinsel yorgunluk duygusu olarak ifade edilmektedir (Ateş ve Kanık, 2022:787). Zoom platformunun her yerde kolaylıkla bulunması ile giderek kullanıcı sayısı artarken "Zoom" kelimesi jenerikleşmeye başlamış ve video görüşmeleri yerine "Zoom" kelimesi kullanılmaya başlanmıştır. Bu noktada marka adı olan Zoom video görüşme kategorisi ile eş anlamlı olarak kullanılmaya başlanmıştır (Iqbal, 2020).

Zoom yorgunluğu, sık sık online etkileşimde bulunan kişilerin anksiyete, yorgunluk, gerginlik ve bitkinlik yaşadığı olumsuz bir durum olarak ifade edilmektedir. Video konferans görüşmeleri nedeni ile tükenmişlik hissetme kişilerin hayatında olumsuz etkiler gösterebilmektedir. Bu noktada kişiler olaylar karşısında kötümser ve alaycı bir tutum sergileyebilmektedir. Bu durum kişilerde olumsuz düşünceler ve gelecek kaygısı oluşmasına neden olmaktadır (Bothra, 2020). Uyar ve arkadaşları (2016) araştırmasında, üniversite öğrencileri üzerinde tükenmişlik durumunun, ağır işlerde çalışmak durumunda olan işçiler ile aynı olduğunu vurgulamaktadır. Online platformlar, dijital ortam bağımlılığının gençler üzerinde depresyon, anksiyete ve zihinsel çöküş gibi olumsuz etkileri olduğunu ortaya koymaktadır (Akduman, 2021: 17).

### YÖNTEM

Bu çalışmada üniversite öğrencilerinin Covid-19 pandemi dönemi sonrasında online platformlarla ilgili düşüncelerini belirlemek amacıyla olgu ve davranışların nasıl gerçekleştiğine odaklanan nitel araştırma yöntemlerinden birisi olan fenomenolojik (olgu) deseni tercih edilmiştir. Araştırmada veri toplama amacıyla veri toplanacak kişilerin belirlenmesinde kolay ulaşılabilir durum örnekleme yolu tercih edilmiştir. Yıldırım ve Şimşek (2018)'in ifade ettiğine göre özellikle nitel araştırmalarda var olan durum ile ilgili bilgi vermeyi hedefleyen örnekleme yöntemleri kullanılması gerekmektedir.

Araştırmada Yozgat Bozok Üniversitesinde 2021-2022 eğitim-öğretim yılında öğrenim görmekte olan lisans öğrencileriyle yarı yapılandırılmış mülakatlar gerçekleştirilmiştir. Görüşmeler öncesinde iş kaygısı kavramına ait alan yazın incelemesinin ardından çalışma grubuna yöneltililecek sorular oluşturulmuş ve araştırmacı tarafından 2 lisans ile yaklaşık 1 saat süren pilot görüşmeler gerçekleştirilmiştir. Bu görüşmelerde katılımcılara online platformları bilme durumları, Covid-19 süreçleri, öğrenim gördükleri bölümlerle ilgili sorular ve sürece dair genel sorular yöneltilerek konuya ilişkin verebilecekleri tepkiler üzerinde durulmuştur. İlgili pilot görüşmelerin sonucunda elde edilen ifade kalıplarının içerik açısından değerlendirilmesi için alanında uzman 2 öğretim üyesine danışılmış ve yarı yapılandırılmış görüşme formu üzerinde son düzenlemeler gerçekleştirilmiştir. Son olarak yapılacak örneklem grubu üzerinde uygulamaya geçilmiştir.

Veri toplama aracı olarak çalışma grubunda bulunan öğrencilerle yüz yüze derinlemesine mülakatlar gerçekleştirilmiş olup, mülakatlar esnasında görüşme formunda yer alan soruların mümkün olduğunca

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

açık ve anlaşılır bir şekilde ifade edilmesine özen gösterilmiştir. Ayrıca katılımcılar kesinlikle yönlendirilmemiştir. Her bir görüşme ortalama 45 dakika sürmüş olup elde edilen verilerin araştırma kapsamı dışında kullanılmayacağına dair bilgilendirilmiş gönüllü formu katılımcılarla paylaşılmıştır.

Çalışmaya katılan öğrencilerin yaş ortalaması 21,3 olup, lisans düzeyinde eğitim gören öğrencilerden oluşmaktadır. Çalışma grubunda yer alan öğrencilerin sosyo-demografik özellikler aşağıda ayrıntılı bir şekilde yer almaktadır.

**Tablo 1.** Katılımcıların Sosyo-Demografik Özellikleri

No	Cinsiyet	Yaş	Öğrenim Düzeyi	Sınıf Düzeyi	Bölüm	Kod
1	Kadın	21	Lisans	2. Sınıf	Türkçe Öğretmenliği	KA1

KA=Katılımcı

Tablo 1’de görüldüğü üzere araştırmaya 20 adet lisans öğrencisinin katılım sağladığı görülmektedir. Veri toplama sürecinde öğrencilerin ders yoğunlukları, ders dışındaki sosyal yaşantıları göz önünde bulundurulmuş ve görüşmeye en uygun zamanları tercih edilmiştir. Araştırmacı tarafından verilerin tekrar etmeye başladığının saptanması ve 20 katılımcı ile doygunluğa ulaşıldığının görülmesiyle birlikte 20. katılımcıdan sonra veri toplama süreci sonlandırılmıştır. Her bir üniversite öğrencisinin eğitim alma amacının ilk olarak sorulduğu araştırmada “yorgunluk” cevabını vermesi sebebiyle konuya hâkim oldukları düşünülmüş ve ekstradan bir bilgi sunulmamıştır.

Görüşmelerin tamamlanmasıyla birlikte öğrencilerden elde edilen kayıtların analize uygun hale getirilmesi işlemine başlanmıştır. Veri analiz sürecinde katılımcılardan elde edilen veriler içerik analizi yöntemiyle ifade kalıplarına dönüştürülmüş olup, dönüştürülen ifadelerin belirli temalar altında toplanmasını sağlayacak alt temalar belirlenmiştir. Yıldırım ve Şimşek’in (2018) ifade ettiğine göre içerik analizi verilerin kodlanması, kodlanan verilere ait temaların bulunması, kodları ve temaların düzenlenmesi, bulguların tanımlanması, yorumlanması gibi süreçler veri analizi sürecinin zeminin oluşturmaktadır.

## Verilerin Analizi

Öğrencilerle yapılan online platform yorgunluğu konusundaki derinlemesine görüşmeler içerik analizi ile değerlendirilmiştir. Bu amaçla öncelikle öğrencilerle yapılan görüşme kayıtları deşifre edilmiş ve metne dönüştürülmüş, ardından elde edilen verilerdeki benzer ifade kalıpları bir araya getirilerek gruplandırılmış ve temalara dönüştürülmüştür. Aşağıda katılımcılara yöneltilen sorular yer almaktadır.

- 1) Covid-19 pandemi sürecini atlattığımız bu dönemlerde neler yaşadığımızdan biraz bahseder misiniz?
- 2) Öğrenim gördüğünüz üniversitedeki derslerden ve müfredatlardan biraz bahseder misiniz?
- 3) Bildiğiniz üzere birçok üniversite hibrit denilen karma eğitim sistemine devam etmektedir. Bu süreçte bazı dersler yüz yüze yapılırken bazı dersler ise çevrim içi bir şekilde yapılmaktadır. Bu konu hakkında olumlu ve olumsuz düşüncelerinizi öğrenebilir miyiz?
- 4) Covid-19 pandemi süreci neredeyse bitmiş durumda ve artık eski alışkanlıklarımıza dönmeye başlıyoruz. Fakat bu eğitim-öğretim süreçlerinde yapılan çevrim içi dersler ile ilgili görüşlerinizi öğrenebilir miyiz?
- 5) Uzaktan öğretim ile verilen dersler sosyal hayatınızı nasıl etkilemektedir? Bize bunlardan biraz bahseder misiniz?
- 6) Tamamen çevrim içi öğrenim görürken nasıldı, şimdi nasıl? Bize bunlardan biraz bahseder misiniz?
- 7) Çevrim içi eğitim-öğretim süreçlerinin sizlere sağladığı faydalar veya size verdiği zararlar hakkında bizlere nelere söylemek istersiniz?

### **BULGULAR**

Araştırmanın bu kısmında öğrencilerin online platform yorgunluğu ile ilgili tükenmişlik, boşvermişlik hissi, eğitim-öğretim sürecinin sağlıklı olmaması, başarı oranlarının gerçeği yansıtmaması gibi birçok bulgu elde edilmiş ve bu bölümde sunulmuştur.

#### **Katılımcıların Covid-19 Pandemi Süreci İle İlgili Görüşlerine İlişkin Bulgular**

Katılımcılara “Covid-19 pandemi sürecini atlattığımız bu dönemlerde neler yaşadığımızdan biraz bahseder misiniz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır. Verilen cevaplar Covid-19 sürecinin katılımcılar tarafından olumsuz algılandığını göstermektedir.

*Hepimiz için zor bir süreci eve ama atlatmayı başardık tabi tam atlatamasak da. Ekonomik ve manevi anlamda ailemizle birlikte çok sıkıntılı bir dönemden geçtik diyebiliriz. Aslında bizim için sağlığın ne kadar önemli olduğunun farkına varmış olduk. Çok sayıda kayıplar verdik bunun için çok üzgünüm tabi aşının daha erken bir zamanda gelmesini dilerdim (KA1).*

*Benim için çok yorucu bir süreçti. Üniversite sınavına hazırlanmak yeterince stresliyken bir de sağlık kaygısı eklenmişti. Hem kendi sağlığımı hem de ailemin sağlığını riske atmamak için sıkı tedbirler aldım. İkisini bir arada yürütmek benim için zorlu bir süreç oldu (KA5).*

*Pandemi sürecine gelirse eğer, açıkçası pandemi benim açımdan pek olumlu geçtiğini söyleyemem. Çünkü pandemi sürecinde pek çok zorlu şartlar altında geçirdik genel olarak, mesela gelen zamlar, dışarı çıkma yasağı, sağlık sorunları ve psikolojik olarak birçok insanı etkiledi. Yani sürekli dört duvar arasında kaldık ve bu kilo, hastalık (covid-19 hariç), psikolojik sorunları doğurmaya başladı. Bundan ötürü pek olumlu geçmediğini söyleyebilirim (KA11).*

#### **Katılımcıların Öğrenim Gördükleri Üniversitedeki Derslerine ve Müfredatlarına İlişkin Bulgular**

Katılımcılara “Öğrenim gördüğünüz üniversitedeki derslerden ve müfredatlardan biraz bahseder misiniz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır. Verilen cevaplar katılımcıların genellikle yoğun ders müfredatları ile uğraştıklarını göstermektedir.

*Bölümümüze tamamen Arapça hazırlık ile başladık yalnızca Arapça olması zorlarsa da sonrasında müfredat dersleri ve seçmeli dersler bize dünyaya daha geniş çerçeveden bakmamıza katkı sağladı. Bu dersler bizi ne kadar zorlarsa da hayat açısından bize çok fazla fayda sağlayacak (KA2).*

*4 yıllık eğitim sürecinde her dönemde (güz-bahar) tek tek 0-18 yaş arası dönemler işlenmektedir. Ek olarak sağlık alanına ilişkin olan dersler görülmektedir ( mikrobiyoloji farmakoloji) gibi. 2. Sınıftan itibaren olan uygulamalarına çıkılmaktadır. 2. Sınıftan itibaren sahalara çıkmamız ve er dönem farklı bir alanda satj yapma imkânlarımızın olması bizim için önemli ve kendimizi geliştirmek için bir fırsattır (KA4).*

Gördüğümüz alan derslerimiz tamamen gelecek odaklı. Bence bize yardım dokunan ve birbirleri ile bağlantılı dersler. Yetersiz bilgiye sahip olduğun bir ders varsa onunla bağlantılı başka bir derste de başarısız olmamız oldukça yüksek bir ihtimal. Bunun dışında seçtiğimiz bölümle tamamen alakasız ve gereksiz olduğunu düşündüğüm birkaç ders var bize katkısının olmayacağını düşündüğüm dersler. Bu dersler için ekstra zaman ve efor sarf etmek oldukça yorucu (KA7).

### **Katılımcıların Öğrenim Gördükleri Üniversitelerdeki Karma Eğitim Sürecine Yönelik Düşüncelerine İlişkin Bulgular**

Katılımcılara “Bildiğiniz üzere birçok üniversite hibrit denilen karma eğitime devam etmektedir. Bu süreçte bazı dersler yüz yüze yapılırken bazı dersler ise çevrim içi bir şekilde yapılmaktadır. Bu konu hakkında olumlu ve olumsuz düşüncelerinizi öğrenebilir miyiz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır.

Ben bu olay kadar gereksiz ve saçma bir şey görmedim. Resmen oyuncak ettiler bizi hatta ayrımcılık da yaptılar. Allah aşkına bu virüs bulaşacaksa eğer her türlü bulaşacak. Yok efendim hibrit sistemle sınıfların yoğunluğunu azaltacaklarmış. Misal ben Isparta’da yaşıyorum, sekiz dersimden sadece ikisi yüz yüze geriye kalan altısı online ben bu iki ders için ya hiç yoktan yere Yozgat’ta kalıp yurda iki gün için para vereceğim ya da sırf bu iki ders için her hafta Isparta ve Yozgat arası gel git yapacağım. Aşağı tükürsem sakal, yukarıya tükürsem bıyık. Ne anladım ben bu işten. Yani hibrit sistem sayesinde bu virüs bana bulaşmayacak mı? İki gün derse geliyorum bulaşan orda da bulaşır. Ya da sırf iki ders için yurtda o kadar insanla yaşıyorum. Ağzı ağıza e o zaman da bulaşacak (KA8).

Çevrimiçi derslerin olumsuz tarafı, güzel ama vize sınavlarının uygulanması zorluyor. Yani 3 quiz, 1 ödev tek bir vizeyi oluşturuyor. Bu da bizi psikolojik olarak etkiliyor. Yani 1 quizden iyi alıp diğerlerinden kötü alıyorsak bu bizi psikolojik olarak kötü etkiliyor. Bir diğer olumsuz tarafı ise 1 vize sınavının 1-2 ay sürmesi, her hafta, her gün aynı sınav psikolojisiyle ders çalışmak benim için çok zor oluyor. Bu da beni haliyle kötü etkiliyor. Çevrimiçi derslerin olumlu yanları ise hava şartları kötü olduğunda okula gidip gelmek zorunda kalmıyoruz. Hem de vakitten kazancımız oluyor. Çevrimiçi derslerin ders kaydı olduğu için tekrar tekrar dinleyebiliriz (KA13).

Benim okulumda bu sistemi uyguluyor fakat ben memnun değilim tüm derslerimin yüz yüze olmasını isterdim çünkü kendimi çevrim içi derste hiç sınıf ortamında hissetmiyorum ve derse katılımın az olduğunu düşünüyorum. Olumlu yanıyla bazen müsait olamıyoruz okula gidemeyecek şartlarda oluyoruz o zaman istediğimiz her yerde açıp dersi dinleyebiliyoruz (KA16).

Bence gayet mantıklı, çünkü alan derslerimi yüz yüze alırken seçmeli derslerimi online olarak alıyorum. Online derslerde sınıflar çok kalabalık oluyor zaten. Bu şekilde hem okulun yükünü hem otobüslerdeki sıklığı hemde yemekhanelerdeki kalabalığın önüne geçilmiş oldu (KA18).

Ashında bütün derslerin yüz yüze görülmesi taraftarıyım. Sınıf ortamında yapılan dersler, daha kalıcı ve daha sağlıklıdır. Sınıf arkadaşlarımla dersin hocası olan akademisyen ile iletişime geçerek göz teması kumral bir öğrenci için her zaman daha iyi olacaktır. Online dersler hakkında olumlu bir düşüncem yok. Online dersleri sevmiyorum. çünkü göz teması yok, bilgi alışverişi yeterli seviyede değil, yoklama alınır, ders dinlenilmez ve sınavlarda online olunca kopyada kaçınılmaz olmaktadır (KA9).

### **Katılımcıların Eğitim-Öğretim Süreçlerinde Covid-19 Sonrasındaki Uygulamalara Yönelik Düşüncelerine İlişkin Bulgular**

Katılımcılara “Covid-19 pandemi süreci neredeyse bitmiş durumda ve artık eski alışkanlıklarımıza dönmeye başlıyoruz. Fakat bu eğitim-öğretim süreçlerinde yapılan çevrim içi dersler ile ilgili görüşlerinizi öğrenebilir miyiz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır.

Vaka sayılarında ciddi bir düşüş söz konusu ve bu kadar aşılama da yapılmışken online olması uygun değil. Online olan derslerde hak etmeyenlerin hak etmediği puanlar aldığını düşünüyorum online olması dersin ciddiliğini okuduğumuzun ciddiliğini kaybettiriyor yüz yüze hem görerek hem dinleyerek sınıf ortamında alınan verim daha kaliteli olduğunu düşünüyorum. Online olduğu zaman ister istemezden dersten kopmak daha kolay oluyor telefondan girdiğimiz zaman bildirim gelince hemen ona bakıyoruz ve dersten kopuyoruz yerimizden kalkmadan dinlese de verimli olmadığını düşünüyorum (KA3).

Çevrimiçi derslerde sürekli ekrana bakmaktan gözlerimde ağrılar oluyor ve uyku bozukluğu yaşıyorum. Çevrimiçi olduğundan yatarak derslere girdiğimden dolayı vücudum hantal kalıyor ve uyumamak için direniyorum. Hocanın online dersi istediği zaman yapma imkanı olduğu için bazen çok geç bazen çok erken saatlerde yapıyorlar ve uyku düzenimizi tam anlamıyla bozuyor. Kafalarına göre ders koyduklarından bazen dersi unutabiliyorum. Hafta sonu kafamız derse yok diye odaklanmışken bazen hafta sonu ders koymaları mental olarak beni sarstıyor. Cuma günlerinden online derslerin namaza denk gelmesi sebebiyle ya koştur koştur derse girmek zorunda kalıyorum ya da dışarda giriyorum (KA6).

Malum çevrim içi derslere katılırken teknoloji ile iç içeyiz bu durum göz sağlığımızı çok etkiledi. Gözlerim çok etkileniyor, başım ağrıyor artık. Ve masada 2 saat belki 3 saat ders dinlemek omurga ağrılarımı arttırdı. Hocalarım içinde bu durum söz konusu (KA16).

Şuan 8 tane dersimden 5 tanesi çevrimiçi olarak yapılıyor. Derslere katılım gerçekleştiriyorum ve bana verilen ödev Forum gibi etkinlikleri yapıyorum fakat yüz yüze olarak aldığım 3 tane derslerim kadar verimli olmuyor. Çevrimiçi derste merak ettiğim veya takıldığım konularda yazılı olarak kendimi tam ifade edemiyorum. Yüz yüze yaptığımız derslerde ise kendimi ve dersle ilgili fikirlerimi sözlü olarak tam ve net olarak ifade edebiliyorum. Yüz yüze olan derslerin sınavlarına daha çok çalışıyorum, bu durum sadece bende değil neredeyse herkeste aynı durumda. Dersim yüz yüze olduğu zaman okula daha zinde bir şekilde gidiyorum ve sınıf ortamında daha verimli bir ders işliyoruz. Dersim çevrimiçi olduğu zaman ise alarm kurup derse kalkıyorum, uykulu bir şekilde derse giriş yapmak zorunda kalıyorum. Tam olarak kendimde olmadığım için dinlediğim dersten de net olarak Bir şey anlayamıyorum. Gün içinde yüzyüze dersim olursa kendimi ona göre ayarlıyorum fakat çevrimiçi dersim olursa her zaman bu şekilde değil ama bazen dersi kendime uydurmaya çalışıyorum ve bu durum beni ve aldığım eğitimi olumsuz yönde etkiliyor. Online derslerin yoklamasını bile unutuyorum bu bir tek bende mi oluyor yoksa tüm öğrencilerde mi bilmiyorum ama neredeyse tüm alışkanlıklarımızı unuttur olduk (KA14).

### **Katılımcıların Derslerini Uzaktan Öğretim Yöntemiyle Görmesinin Sosyal Hayatı Üzerindeki Etkisine İlişkin Bulgular**

Katılımcılara “Uzaktan öğretim ile verilen dersler sosyal hayatınızı nasıl etkilemektedir? Bize bunlardan biraz bahseder misiniz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır.

Böyle durumlar kesinlikle benim hayatımda oldu. Dediğim gibi zorlu bir süreçten geçtik ve sosyal ortamlardan uzak kalmak zorunda kaldık bu yüzden online dersler artık gözümü ağır gelmeye başladı. Sosyal yorgunluğum okulların yüz yüze eğitime geçmesiyle biraz azaldı ama bu pandemi süreci hayatımda büyük bir leke oldu artık eskisi gibi hissetmiyorum her an okullar online eğitime geçecek diye şüphelerim hala var (KA20).

Evet sosyal bir yorgunluk oldu. Uzaktan öğretim insanı yalnızlaştırıyor. Daha çok içe kapanık olmaya sebep oluyor. Her dersten en az yedi, beş ve üç etkinlik yaptı hocalar bu etkinler kısa sınavlar, ödevler ve forumlar hep zamanımın çoğu bunları yapmakla geçti. İnsan ailesiyle, arkadaşlarıyla, sevdikleriyle zaman geçirmek istiyor (KA19).

Bir önceki cevap da söylediğim gibi bende daha çok sosyal ortam korkusu oluştu. Çünkü okul içerisinde ve dışarısında çoğu kişinin umursamaz ve sorumsuz davranışlarını görmek hala hasta insanların olabileceği düşüncesi geliyor aklıma bu yüzden yalnız kalmak bu süreçte bana daha mantıklı bir davranış gibi geliyor bana. Uzaktan eğitimin sosyal hayatımıza zararı da faydası da olmadı (KA12).

Pandemi sürecinde hep evde kaldığımız için serbest zamanlarda dışarı çıkmak çok zorluyordu beni. Çoğu zaman serbest sıralarda bile evdeydim. Herhangi bir yerde kalabalık görsem içim sıkışıyordu. Pandemi öncesi çok fazla sosyal aktivitelerim vardı. Örneğin; halk oyunlarına, korolara katılıyordum ve arkadaşlarımla geziyordum. Pandemi sosyal hayatımı olumsuz etkiledi, beni asosyal olmaya itti (KA5).

### **Katılımcıların Covid-19 Pandemi Dönemindeki Eğitim Süreçleri İle Karma Eğitim Süreçleri Arasındaki Farklara Yönelik Düşüncelerine İlişkin Bulgular**

Katılımcılara “Tamamen çevrim içi öğrenim görürken nasıldı, şimdi nasıl? Bize bunlardan biraz bahseder misiniz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır.

*Tabii ki motivasyon olarak ve duygusal olarak tamamen zorlu bir süreçti. Dışarıya çıktığımızda insanlarla sohbet etmek iletişime geçmek en azından bizi daha mutlu ediyordu şimdi tek başına veya sadece telefonla, bilgisayarla vakit geçirmek insanı monotonlaştırıyor ve duygusuz hale getiriyor. Eğitim ortamı aslında çok önemlidir ailemizin yanındaydık ve birer ev ortamındaydık bu ders çalışmamıza yahut kendimizi bir şeylere vermemize pek de olanak sağlamadı hatta hiç sağlamadı. Herkesin evde bazı sorumlulukları vardı ve online derslerde fazlaca sınav yapıldı ve ödevler verildi bu da tüm öğrencileri yeterince yordu ve derslere karşı belli bir soğukluk oluştu. Yüz yüze derslerimiz de daha verimli geçerken online derslerimiz verimsiz bir şekilde ilerledi. Online eğitim öğrenmeye dair içimizde heves bırakmadılar (KA2).*

*Tamamen çevrimiçi olduğunda eğitimden yeterli miktarda verim alabiliyor muyum? endişesi yaşamaktayım. Bu da elbette ki motivasyonu düşürmektedir. Şimdi ki eğitim sistemi ise bizler için daha iyi hem derslerden verim alabiliyoruz hem alan uygulamalarımızı gereken şekilde yerine getirebilmekteyiz. Böylece motivasyonumuzda artmakta duygusal olarak da rahatlamaktayız (KA4).*

*Motivasyonel açıdan yorgunluklarım oluyor. Çevrimiçi ders görürken sabah erken saatte de olsa uyuma imkânım oluyor ve uyandığımda ders kaydını daha dikkatli ve anlayışlı bir şekilde dinleyebiliyorum. Fakat şimdi ise sabah erken saatlerde olan derslerime zorla uyanıyorum ve uykulu bir şekilde katılım sağlıyorum. Kendime derse adapte edemediğim için hiçbir şekilde motive olamıyorum ve yararlı bir ders geçiremiyorum. Duygusal açıdan herhangi bir sıkıntı yaşadığımı düşünmüyorum. Ama motivasyonel olarak hiç mutlu değilim. Sınavlara çalışırken bile çevrimiçiye daha verimli çalışma imkanı oluyorken şimdi öyle imkan bulduğumu söyleyemem. Galiba duygusal olarak etkilenmedim dedim ama şuan düşündüğüm de etkilendiğim farkına vardım. Sınavlarımın şu anki eğitim zamanında kötü geçmesi beni üzüyor ve bu üzülmemin sonucunda o üzüntü duygum diğer sınavlarıma da yansıyor (KA6).*

*Genel olarak çevrim içi dersler döneminde ve yüz yüze dersler dönemindeki duygusal yorgunluğun pek bir farkı yok. Pandemi sürecinde de sınavlarım oluyordu yüz yüze dönemde de sınavlarım oluyor. Pandemi sürecinde de arka arkaya birkaç saat ders işlediğim oluyordu yüz yüze dönemde de oluyor. Fakat ikisini karşılaştırdığım zaman online (çevrim içi) dönemde daha fazla yorgunluğum oluyordu. Çünkü sürekli ödevler, sınavlar, etkinlikler veriliyordu. Hocalarımız sanki bizim sürekli boş olduğumuzu düşünüyordu. Halbuki fazlasıyla dersimiz var ve her bir hocanın sisteme yükledikleri etkinlikleri düşününce yetiştirme telaşı, sınavların çakışması gibi sorunlar bizi mental olarak düşürüyordu. Bu ödevlerin yanı sıra aile evinde kaldığımız için farklı problemler de yaşıyorduk. Bu nedenle duygusal olarak ekstra kötü zamanlarımda oldu. Normal hayatımdaki duygusal yorgunluğum algıda seçicilik oluştuğu için beni zorladı. Bazı cümleleri anlamakta ve analiz etmekte güçlük çektim. Bu yetersiz hissetmemde büyük rol oynadı. Eminim benim gibi çoğu kişi aynı sorunları yaşamıştır. Şimdiyi düşündüğümde online eğitim zamanına göre daha az etkinlik oluyor. Hocalarımızla iletişim konusunda kendimizi yüz yüze daha iyi ifade edebiliyoruz, anlatabiliyoruz ve onlarda kısmen anlayış gösteriyor. Arkadaşlarımızla bir araya gelip sorunlara çözüm üretebiliyorum ve bu da beni olumlu yönde etkiliyor (KA10).*

### **Katılımcıların Genel Olarak Çevrimi İçi Eğitim-Öğretim Süreçlerine Yönelik Düşüncelerine İlişkin Bulgular**

*Katılımcılara “Çevrim içi eğitim-öğretim süreçlerinin sizlere sağladığı faydalar veya size verdiği zararlar hakkında bizlere nelere söylemek istersiniz?” sorusu yöneltilmiş olup, bazı katılımcıların verdikleri cevaplar aşağıya çıkarılmıştır.*

*Faydalarını şu şekilde sıralayabilirim; dersi istediğim zaman daha sonra tekrar dinleyebiliyordum, yoklama sıkıntısı olmuyordu ve fiziksel olarak hiç yorulmuyordum pandeminin başlarında fiziksel olarak hiç yorulmadığım için online eğitimi sevsem de biraz zaman geçtikten sonra anladım ki hiç iyi değilmiş. Zararları ise asla verimli geçmiyordu geç saatlerde dersler oluyordu rahat soru soramıyordum ve bazı derslerimiz mesela anatomi gibi maket üzerinde yüz yüze gerçekleşerek pekiştirmemiz gerekirken, maketlerimiz okulda olduğu için anlamakta zorlanıyordum ve o derslerden geçmiş olsam da o dersler benim için pek verimli olmadı (KA15).*

*Biz ilk başta pandemi sürecinde aldığımız çevrimiçi sınavlardan dolayı asosyal olduk. Dışarı çıkmaktan, insanlarla bir araya gelip konuşmaktan çekinir olduk. Covid-19 virüsü bize bulaşır mı diye korkar olduk. Hatta konuşma şeklim bile değişti. Dersler konusunda bize sağladığı zararlar ise; sürekli ödev*

ve sınav yaptığımız için ders çalışmaktan sıkıldık. Bazen bölümümden soğuduğum da oldu. Çevrimiçi eğitim-öğretimin bizlere sağladığı faydalar ise; okula gidip yorgunluğumuz olmuyordu ve derslerin tekrar tekrar dinleniyor olmasıydı. Bir diğeri ise bir sürü online eğitici kursların olması ve sertifika alınan kursların açılması gitmeden sertifika alabiliyor olmam güzel yanlarındandı (KA13).

Çevrimiçi eğitim öğretimin yararı yapılan ödevlerde kullandığımız bilgisayar programlarına daha iyi hakim oldum. Derslerde sunum yapma tecrübesi elde ettim. Zararları ise çok fazla ekran başında durmak göz yorgunluğu baş ağrısı sürekli oturmaktan bel ağrıları yaşamıştım. Sonuç olarak tamamen çevrimiçi eğitimin her ne kadar yararları ve zararları olsa da bizler için bir tecrübe olmuştur (KA4).

Faydaları pek olduğunu sanmıyorum. Zararları ise zaman zaman üşengeçlik halsizlik gibi kolayca kaçma durumları oldu. Bu da derslerimde veya işlerimde pek çok olumsuz etki bıraktı (KA11).

Faydası şu şekildeydi; bir aile ortamındayken rahatlıkla derslere katılabiliyordum ve gerçekten sınavlardan kolaylıkla geçebiliyordum. Aslında bu yanlış oldu çünkü şuan bile online derslerim iyi yüz yüze derslerim kötü olsa pandemi sürecinde kopyayla geçtim derdim ama yoklamadan dolayı böyle söyledim. Şimdi ise derse katılım sağlama zorunluluğu var. Zararı ise rahata alışıp yüz yüze ders görmeye fazla isteğimin olmaması (KA1).

### TARTIŞMA VE SONUÇ

Bu araştırma Covid-19 pandemi dönemi sonrasında üniversitelerde alınan kararlarla eğitim süreçlerinin karma bir şekilde yürütülmesinin öğrenciler üzerindeki etkisini/etkilerini belirlemek amacıyla yapılmıştır. Bilindiği üzere Covid-19 pandemi sürecinde eğitim-öğretim tamamıyla çevrimiçi uygulamalarla gerçekleştirilmiştir. Sadece tıp fakültesi ve bazı sağlık programlarında önemli uygulamalar olduğuna ilişkin getirilen kanaat onların yüz yüze eğitime devam etmesi gerektiği yönünde olmuştur. Genel olarak bakıldığında ise Covid-19 pandemi dönemi sonrasında ise eğitim-öğretim süreçleri, öğrencilere karma bir şekilde sunulmuştur. Bir devlet üniversitesinde öğrenim gören öğrencilerin katılımıyla gerçekleşen bu çalışmada, öğrencilerin eğitimden aldıkları verim, memnuniyet, öğrenim görülen okula karşı güven ve birçok algı derinlemesine ölçülmeye çalışılmıştır.

Literatür incelendiğinde doğrudan bu süreçlere ilişkin bir çalışmaya rastlanılmamış olup sadece pandemi döneminde çevrimiçi uygulamaların gerçekleştiği paket programlar üzerinden bireylerin eğitim-öğretim süreçleri, toplantılar ve benzeri uygulamalarla ilgili çalışmaların yapıldığı görülmektedir (Akduman vd, 2021; Massner, 2021; Toney vd., 2021; Ateş ve Kanık, 2022). Ayrıca Serbest ve arkadaşları (2023) tarafından üniversite ortamında dijital eğitim ortamını değerlendirmek açısından bir ölçek uyarlama çalışması yapılmış olup, bu araştırma ile benzer şekilde olduğunu söylemek mümkündür. Bu durum araştırmanın özgün değerini ortaya koymakta olup literatürdeki bilgi birikimine katkı sağlayacağı öngörülmektedir. Üniversite öğrencilerinde online platform yorgunluğunun, kamu otoritesi tarafından alınan eğitim-öğretim süreçleri kararlarının daha hassas bir şekilde gözden geçirilmesi gerektiği anlaşılmaktadır. Kararlar alınırken toplumun büyük bir kesiminin memnun edecek kararların alınması önemli olup zorunlu haller dışında eğitim-öğretim süreçlerinin online olmaması performansın, başarının ve sürdürülebilirliğin artması noktasında önemli görülmektedir.

Yapılan bu çalışmanın sadece Yozgat Bozok Üniversitesi öğrencileriyle sınırlı olması, araştırmanın en büyük kısıtını oluşturmaktadır. Her ne kadar birçok üniversitede çeşitli bölümlerde öğrenim gören öğrenciler bu çalışmaya dâhil edilmemiş olmasa da Yozgat Bozok Üniversitesi özelinde yapılmış olması literatüre katkı noktasında önemli görülmektedir. Ayrıca daha önce hiç yaşanmamış bir olay olan Covid-19 pandemi süreci sonrasında yapılması da salgının etkilerinin eğitim sürecine etkileri açısından değerlidir. Araştırmada ele alınan online platform yorgunluğu kavramının net olarak etkilerinin ortaya konulabilmesi için farklı üniversitelerden öğrencilerin örneklem olarak ele alınması gelecekte yapılacak çalışmalar için araştırmacılara önerilmektedir. Gelecekte yapılacak benzer çalışmalarda ise nicel araştırmaların benimsenmesi, karma araştırmaların yapılması ve online platform yorgunluğunun sonrasında ortaya çıkan öğrencinin başarı durumu, motivasyonu, kararlarındaki değişiklikler ve benzeri durumların incelenmesinin literatürdeki bilgi birikimine katkı sağlayacağı düşünülmektedir.

### ABSTRACT

In the dynamic world of e-commerce, as the market continues to grow, the volume of customer comments grows significantly. Customer comments are of immense importance to potential customers, as they can either increase or decrease the perceived value of a product or service. Consequently, it is crucial for companies that want to increase customer satisfaction while optimizing their offerings to accurately understand and categorize the emotions expressed in these comments. This study aims to analyze the emotions expressed in customer comments on the Vivense e-commerce platform by using natural language processing (NLP) models, specifically Bidirectional Encoder Representations from Transformers (BERT), Convolutional Bidirectional Encoder Representations from Transformers (Conv-BERT) and Electra. To achieve this goal, a dataset was carefully curated consisting of 12.000 customer comments from the e-commerce platform of Vivense, categorized as either positive (for acceptance) or negative (for rejection) emotions. The performance of the developed models has been evaluated using key metrics such as Accuracy, Precision, Recall and F1 score. The results show that BERT model outperforms the Electra and Conv-BERT models in terms of performance.

**Keywords:** Sentiment Analysis, Customer Reviews, Machine Learning, Natural Language Processing

### INTRODUCTION

With the advent of the digital age, the field of e-commerce has undergone a fundamental transformation. The simplicity of online shopping, coupled with a wealth of options, has made the customer experience a critical factor in the success of e-commerce businesses. In this digital marketplace, where products and services are just a click away, the feedback and feelings expressed by customers in their reviews and comments have taken on great importance.

Sentiment analysis, an invaluable component of natural language processing (NLP), is a captivating field that deals with these user-generated comments. Sentiment analysis, also known as opinion analysis, is the art of extracting and understanding the emotions, opinions, and attitudes conveyed by customers through their words. At its core, sentiment analysis is about answering essential questions: what do customers really think about a product, service or shopping experience? Are they satisfied or

dissatisfied? What aspects do they value and where do they encounter problems? By getting to the bottom of these questions, e-commerce companies can gain deep insights into customer satisfaction and, more importantly, uncover actionable information to improve their offerings. In this era where data is abundant, sentiment analysis in e-commerce goes beyond mere feedback analysis. It enables companies to refine their strategies, improve customer relationships, and tailor their products and services to the ever-changing needs and desires of their clientele.

This study aims to analyze emotions on the Vivense e-commerce platform using NLP methods. For this purpose, models were developed using BERT, Conv- BERT and Electra. The performance of the developed models was evaluated using the error metrics Accuracy, Precision, Recall and F1 score.

This paper is organized as follows: Section 2 presents related literature. The materials, methodology and details of the forecast models are presented in Section 3. Results and discussion are presented in Section 4. Section 5 concludes the paper.

### **LITERATURE REVIEW**

In recent years, many methods have been used for sentiment analysis. (Yu Wen et al., 2023) proposed a combination of BERT and the Enhanced Representation through Knowledge Integration (ERNIE) model for sentiment analysis of hotel reviews. BERT layer served as a word vector layer, transforming input text sequences into vectors. The output vectors were then classified using a Softmax Activation Function through a corresponding neural network. Interestingly, ERNIE outperformed BERT in this study. (Saman Iftikhar et al., 2023) focused on classifying Amazon product reviews using a variety of techniques, including machine learning, deep learning, and BERT. They extracted features from text using methods like Term Frequency-Inverse Document Frequency, Bag of Words, Global Vectors, and Word2Vec. Their experimental results highlighted BERT as the top-performing model, achieving an impressive 90% accuracy in one scenario. (Huang Huang et al., 2023) conducted a systematic review of sentiment analysis methods on e-commerce platforms, identifying a growing trend in both machine learning and deep learning techniques being employed for this purpose. (Mala J. B. et al., 2023) explored sentiment analysis in IMDB movie reviews using transformer models like BERT, Transformer XL, and Electra. Electra emerged as the most accurate model with a score of 93.32%. (Hong Fang et al., 2022) introduced a Chinese BERT model with fused neural networks, tailored for e-commerce product reviews. The experimental results demonstrated its high performance. (Laleh Dvoodi and Jozsef Mezei, 2022) conducted a comparative analysis of transformer-based methods using customer reviews from the Trustpilot platform, revealing the superior performance of transformer models with over 98% accuracy. (Hendri Murfi, Syamsyuriani et al., 2022) presented a hybrid deep learning method using BERT for Indonesian sentiment analysis. The results showed that BERT increased Accuracy of hybrid architectures. (Mahmud Hasan Munna et al., 2020) proposed deep learning models for Product Review Classification (PRC) and sentiment analysis, achieving notable accuracies of 0.84 and 0.69, respectively. (Yi Liu et al., 2020) introduced Bert-BiGRU-Softmax, a model combining BERT and other mechanisms for multidimensional product feature extraction from e-commerce reviews, achieving accuracy levels exceeding 95.5%. (Song Xie et al., 2020) devised a Chinese e-commerce sentiment analysis method based on BERT, employing a BIO logic labeling scheme for dataset annotation. Their method significantly improved accuracy and F1-score metrics.

### **METHODOLOGY**

The methodology for this study involved a systematic approach to preparing and expanding the dataset obtained from the Vivense e-commerce platform to ensure its suitability for sentiment analysis. Below is a step-by-step breakdown of the methodology:

1. Data Collection: The original dataset was obtained from the Vivense e-commerce platform and consisted of a large number of customer reviews.
2. Preprocessing of data: A stratified sampling method was used to eliminate data imbalances and ensure a balanced dataset. The result was a curated dataset of 12.000 reviews.
3. Text cleaning: During the pre-processing phase of the data, various text cleaning techniques were applied to improve data quality. These included:
  - Removal of unnecessary characters and special characters from the text.
  - Elimination of URLs and web addresses that do not contribute to sentiment analysis.
  - Removal of numeric values, as they are generally not relevant to sentiment assessment.
4. Tokenization: The cleaned text data was processed using the WordPiece tokenization method. This approach is particularly suitable for words that are not included in a standard dictionary and ensures a more accurate text representation.
5. Data Augmentation: Data augmentation techniques were used to improve the robustness of the dataset and the generalization of the model. Two key techniques were used:
  - Synonym replacement: Certain words in the reviews were replaced with synonyms to diversify the dataset while maintaining the original sentiment. This allows the model to learn from different word choices.
  - Retranslation: The text was translated into another language and then back translated into the original language. This process introduced linguistic variations and helped generate new but contextually relevant text examples.

With this comprehensive methodology, the dataset was carefully prepared to ensure a balanced, clean, and expanded dataset for sentiment analysis. These steps aimed to optimize the dataset for training and testing machine learning or deep learning models to ultimately improve the accuracy and reliability of sentiment predictions for Vivense e-commerce platform reviews.

### 1. BERT

Among contemporary language modeling architectures, BERT stands out as one of the most renowned and widely adopted. Its exceptional generalization capability enables it to flexibly adapt to various downstream tasks, ranging from Named Entity Recognition (NER) and relation extraction to question answering and sentiment analysis. The essence of BERT's architecture lies in its pre-training on vast text corpora, leading to the freezing of parameters in the innermost layers. Conversely, the outermost layers are the ones subjected to task-specific adaptation, a process commonly referred to as fine-tuning (Marco Pota et al., 2020).

### 2. Conv-BERT

Expanding upon the BERT framework, Conv-BERT incorporates convolutional layers designed to adeptly capture local text features. In a manner akin to BERT, this model employs an initialization and fine-tuning strategy. Notably, Conv-BERT goes a step further by optimizing additional hyperparameters specific to the convolutional layers through an exhaustive grid search process.

### 3. ELECTRA

While BERT and its variants have demonstrated exceptional performance on downstream NLP tasks, their effectiveness comes at the cost of substantial computational resources. This resource-intensive nature is primarily due to their reliance on masked language models (MLM), which randomly mask a limited number of words during training and predict only a small fraction of the tokens. Furthermore, because of the arbitrary selection of masked tokens, these models may struggle to capture a wide range of meaningful tokens, including emotional and opinion words crucial for sentiment analysis tasks. As an alternative approach, Electra presents a more efficient pre-training task designed to address these limitations. In light of its efficiency and the potential to compensate for these shortcomings, we

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

introduce Electra as a sentiment classification model for attraction reviews, aiming to achieve enhanced classification performance in sentiment analysis tasks (Hui Fang et al., 2022).

## RESULTS AND DISCUSSION

The performance of the developed models has been evaluated using Accuracy, F1-score, Precision, Recall. The results obtained with the developed models are shown in Table 1.

*Table 1. The results obtained with the developed models.*

Method	Accuracy	F1-score	Precision	Recall
BERT	0.9432	0.9415	0.9235	0.9602
ELECTRA	0.9162	0.9136	0.8962	0.9318
Conv-BERT	0.9203	0.9173	0.9058	0.9290

- The results demonstrate that BERT achieved the highest accuracy of 94.32%, surpassing both ELECTRA (91.62%) and Conv-BERT (92.03%). This indicates that BERT exhibits superior overall performance in sentiment analysis.

- Consistency in F1-score follows a similar pattern, with BERT (0.9415) leading, followed by ELECTRA (0.9136) and Conv-BERT (0.9173). The higher F1 scores suggest that BERT maintains a balance between precision and recall in sentiment classification.

- In terms of precision, BERT (0.9235) still maintains the highest value, indicating its capability to accurately identify positive and negative sentiments in reviews. ELECTRA (0.8962) and Conv-BERT (0.9058) exhibit slightly lower precision values.

- BERT's recall score (0.9602) signifies its effectiveness in capturing a higher proportion of actual positive and negative sentiments within the reviews. ELECTRA (0.9318) and Conv-BERT (0.9290) also perform well but fall slightly behind BERT in this aspect.

## CONCLUSION

In today's business world, e-commerce has become a predominant and highly demanded form of commerce, characterized by immense demand and high turnover. Careful analysis of customer reviews in the field of e-commerce platforms is of great importance and benefits both consumers and sellers. This research project was conducted with the primary objective of studying reviews on the Vivense e-commerce platform. To achieve this, advanced machine learning models were developed, specifically leveraging the capabilities of BERT, Electra, and Conv-BERT in conjunction with a robust dataset of 12,000 reviews. The performance of developed models was evaluated using Accuracy, Precision, Recall, and F1-score. The empirical results of this comprehensive analysis clearly highlight the superior performance of the BERT model on all major assessment metrics, including Accuracy, Precision, Recall, and the F1 score. These results underscore the effectiveness of BERT in extracting valuable insights from e-commerce reviews on the Vivense platform, improving our understanding of sentiment and user experiences in this dynamic digital marketplace.

### ABSTRACT

The purpose of this paper is to look at several examples of traditional breakfasts in various cultures, and to look in history for explanations regarding why certain cultures eat more or less for breakfast. For some cultures, breakfast can be considered the most important meal of the day, since it is meant to be a main meal. The English breakfast is a very hearty meal, which includes cooked food, comparable to the way lunch is considered, traditionally, in Romanian culture, the main meal of the day. A long time ago, hundreds of years away in the past, the British had a simple breakfast, and they only had two meals every day. Social classes and their practices have also influenced the way breakfast looked like. Thus, afterwards, we can find the hearty English breakfast as a means of rich classes to display their social status on important events in someone's life, in the 1700s. Later on, working class members needed to eat well for breakfast since they had to work hard for the day, in the 1800s. A complete, rich English breakfast is now served in restaurants and at hotels in Great Britain. Romanian breakfast also included cooked food and it also is quite a hearty meal traditionally: it included eggs, cooked under many forms, together with bread, cheese, ham, as well as tomatoes since vegetables were around in rural areas' gardens. In rural areas, going to work in the field required a good meal before for endurance. The French breakfast is not considered, even traditionally, the most important meal of the day. In time, for Romanian culture, dinner has become the most important meal of the day. French breakfast only consists, contrary to stereotypical expectations, of croissants during weekends, while otherwise it consists of tartines (toast with something spread on), pastry products, making French breakfast different due to the carbs content, a hot drink and fruit juice. Naturally, nowadays, function of lifestyle, we have all moved away from traditional breakfasts, and only have coffee early in the morning, while conditions allow us to get some pastry products while on our way to work or during breaks. Street food has changed many of our habits, making us differ from the traditional lifestyle. What is more, the presence in supermarkets of cooked food, delivery services, cafes and restaurants serving food often offer us the opportunity to eat out. Traditional breakfasts can be mostly had while on holidays, as hotels pride themselves with the local and specific breakfasts and foods.

**Keywords:** traditions, contemporary times, eating out, delivery services.

### INTRODUCTION

While the world is changing, so do our living conditions, our workplace, and, last but not least, our food. It is not just that our source of food is different than in the past, due to the appearance of supermarkets, delivery services, street food, which did not exist in the past, when everyone would rely on their own harvest and food production. Our habits of eating, the timing and the content of our meals has changed. While, in the past, families would often gather around cooked meals at home, and also spend time together, nowadays we may prefer to eat out, or to eat each other separately while on our way to work and to school.

Our access to traditional breakfasts can be ensured while we are tourists, and are given such meals at the hotel, or at various restaurants where we may stop for it, or even in cafes.

In some cultures, we are told by nutritionists that breakfast is the most important meal of the day (Spence, 2017), since, as we start our daily activity, we may need all the energy we can use. Lunch may

be pushes further on during the day, and not even be a consistent meal, with the current lifestyle we have. At work, we may rely on supermarket food or food from delivery services. The same could be said in the case of schools, especially if they do not provide lunch and have an eating hall, as it is often the case in Romania, where the author of the present paper lives. The same can be said about Romanian universities, where it depends if the students are from other cities, as then their meals may be provided by the canteen services.

We can start by looking at examples of breakfasts from some cultures in order to see how they have changed in time, as well as to see what specific foods they have, function of their availability in their area and local traditions. Additionally, a history of breakfast starting from ancient times could be the starting point to see how various living conditions and circumstances have led to breakfast consisting of certain foods and not others.

### **MATERIALS AND METHODS**

In the past, in some cultures such as the British culture, and for the working classes, breakfast was a hearty meal, very much like traditional Romanian breakfast, which included cooked food, consisting of eggs, ham, vegetables, toast, as, in the latter case, people in rural areas would go to do physical work in the fields and needed strength and energy. According to British Council (2023), the traditional British breakfast consisting of sausages, fried mushrooms, baked beans, fried tomatoes, bacon, hash browns, toast, and it can be considered by foreigners as a heavy meal. It is a hearty meal, according to British Council (2023), since in the 1800s, members of the working classes needed energy for the day at work. Before, breakfast was a simple meal, hundreds of years ago, including bread with cold fat from meat, or with cheese. Afterwards, in the 1700s, members of the upper class took the opportunity to show off their status at various occasions in society by giving a rich breakfast.

Usually, any practice, such as eating breakfast and other meals during the day, is adapted to the needs of the members of the respective culture at the respective historical time, thus taking into consideration their lifestyle and the living conditions, as well as the availability of food in a certain form.

In some cases, as when it comes to Turkish traditional breakfast, various regions, as they have their specific foods that are available easily to them, will have different foods for breakfast (Özden, 2020). According to Özden (2020), Eastern Anatolia is, for example, well-known for its dairy products, which makes their breakfast to contain cheese, yoghurt, as well as grain-based dishes. Mid-Anatolia is famous for its flour-based foods, which include bread and a specific pancake. Corn flour is characteristic of the Black Sea area. A common Turkish breakfast relies, however, traditionally on cheese, meat products, raw vegetables, tea, bread, and others.

Similarly, Romanian culture has variations according to regions with respect to the traditional breakfast, yet among the common elements we find eggs, cheese, bread, zacusca, ham, vegetables (TheWorldinMyPocket.co.uk, 2023). What is more, cultures can influence one another with respect to breakfast, e.g. Romanian breakfast is under influences such as “Slavic, Greek, Hungarian, and Turkish” (Tedesco, 2020).

By looking at traditional breakfasts based on continents, we may find that there is no one common breakfast, but that breakfast varies according to country and area. Wikipedia (2023) provides a very good overview for those curious to visit different countries on different continents for specific breakfasts to different continents and to their different countries. We can have a very good synthesis through reading this article about the traditional breakfasts and the actual contemporary food habits of people from all over the world.

Thus, on the African continent, breakfast varies from one country to another. In Algeria, we notice the influence of France from the time it was their colony. Thus, coffee with milk and pastry product are common breakfast food. To these, they can add a bread filled with date or jam, which is a traditional local food. In Egypt, they have a light breakfast, including a local dish of cooked fava beans, with salt and cuminte as seasonings, and accompanied by vegetables. In Egypt we notice the common presence of pita bread and pastirma which is eaten with fried eggs, which are foods they have in common with Turkish culture. This is due to the fact that these are Middle Eastern influenced cultures. In Malawi, breakfast includes porridge, a common breakfast food in Western cultures as well nowadays. They also

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

have cornbread and boiled vegetables. In Morocco, breakfast includes bread, harcha (a local type of cake), and local pancakes. In Nigeria, due to the presence of more than 250 ethnic groups, we expect variety of foods. Cakes made from ground beans and wheat flour represent a typical breakfast. They can be eaten together with porridge. A porridge made of corn is the usual breakfast of the Southwestern Yoruba population. As we can notice, the crops and vegetables that grow in the area are used for breakfast, together with other available resources from animals around the house, such as eggs. In Senegal, they drink a local spiced coffee with sugar or dried milk, called Touba, or a local tea, kinkeliba. Fruits that are available locally are also eaten for breakfast, such as mangoes and bananas. They can also eat baguette spread with Nutella. In Somalia, they have tea and pancake-like breads with honey or beef jerky, which can be eaten with soups as well. In Tunisia, they have breakfast stew. In Uganda, they have porridge and a dish made from green bananas cooked with a sauce. To this they can add tea or juice.

If we look at Asian countries, once again we can see variety in breakfast traditions. At the same time, we can see the influence of Western culture, as the Japanese have a Western version of breakfast, based on the American type of breakfast, such as corn flakes, milk, hot chocolate, fruit juice, toast with a spread of butter or jam, vegetables, or eggs. Coffee and orange juice is also included in Japanese Western-style breakfast. As for traditional Japanese breakfast, it is often had on weekends, and on days that the Japanese do not work, likely since it is complex and takes a longer time to eat and prepare. Steamed white rice, miso soup, pickles, raw egg and nori (the latter of which are dried seaweed under the form of sheets) around which rice is wrapped, grilled fish and green tea are among the specific Japanese breakfast food items. Rice, soup, steamed eggs, porridge, kimchi, and tofu are among the traditional Korean breakfast foods. In China, we also encounter variation by province. Yet, a general preference is shown towards pancakes, which can be sweet or salty, soup, bread sticks that are deep fried, doughnuts, buns, porridge, noodles that are fried or soup-based, with tea, or soybean milk that has been sweetened as drinks. Tea types and spices that can be had with them vary from province to province. Malaysia and Singapore host a wide variety of populations and races, which, as expected, leads to great variety. Traditional breakfast for Malaysia and Singapore includes foods such as dishes with coconut rice, cucumbers, eggs, fried chicken, roasted peanuts and fried anchovies. What is more, they can have for breakfast a type of Indian flatbread, milk with black tea, bread with coconut milk jam, half-boiled eggs. Toast can be dipped into eggs mixed with a sauce of soya and pepper. Coconut rice with pickled vegetables, or herbs, rice noodles with spicy broth, fishball noodles, fried rice vermicelli and a variety of local small, savoury in taste, pancakes. For Bangladesh, a popular tourist attraction, traditional breakfast staples are flour-based flatbreads, that are eaten together with curry that is made of vegetables, fried potatoes, or scrambled eggs. For Bangladesh, income is the keyword to the way breakfast looks. Additionally, function of area, breakfast differs. Thus, in villages, labourers have, usually, rice and cury. City-dwellers have a slice of bread with spread jam or jelly, due to convenience reasons, since it a breakfast that is fast and easy to prepare and eat. Bangladesh culture members prefer tea instead of coffee with their breakfast. Toasted biscuits and puffed rice served with tea are common. The Philippines have, as breakfast staples, fried eggs, dried fish, fried rice, and they use garlic as seasoning, or a type of local bread spread with cheese, jam, or peanut butter if an uncooked breakfast is considered as saving time and as more convenient. Taiwan breakfast staples include a high use of carbohydrates and protein, e.g. soy milk, rice milk, scallion pancake, eel noodles, milkfish congee, tube ride pudding, turnip cake, beef soup. As for drinks, bubble tea is preferred. Another country with several ethnicities and races is Indonesia, where we can find rice as one of the staples foods for breakfast. They also have congee with shredded chicken with condiments, steamed rice in coconut milk. In Maluku and Papua, they serve sago congee. They also serve porridge, fried rice vermicelli, beans porridge, rice pancake in coconut milk-based soup, a salad with rice cake and peanut sauce, rice and curry, etc. They also like to serve bread, under the form of sandwiches. Hong Kong, situated at the intersection of Western and Asian world, is a former British colony and it is also located close to the Canton region of China. Therefore, breakfast included foods from both cultures, which are actually mixed as hybrids. These foods include milk tea, eggs fried in the pan, noodles from the Cantonese area, macaroni in soup noodles, baby shrimp dumplings, sweet water chestnut cakes, fried and rice-based noodles and cakes. In Myanmar, we once again see the presence of region-related foods, such as in Burma, the fried rice with boiled pears, and green tea, which are staples for the poor social classes. Popular foods also include rice-based dishes, steamed and wrapped in banana leaves, salted toasted sesame, sticky rice with turmeric and onions.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

They also take over Indian foods such as flatbreads, tea, and coffee. They also can have rice vermicelli, fish broth, boiled egg, fried fish cake, as well as lots of spices. When it comes to India, we can count as much as 25 different breakfasts, and for each of them we can be given a choice that ranges starting from 100 foods. India is made up of various states that has different kinds of breakfast, and there is no common type of breakfast that can be called specific to Indian culture. We can divide breakfasts, however, by North and South Indian areas if we want. North India breakfast foods can include vegetable curry, curd, pickles, cottage cheese, and various local food dishes. For South Indian breakfast, we can find various local foods such as idly, vada, dosa, chutney and sambar. Roti and curry are the common breakfast foods for the Bengalis, and they can also have Indian French toast, flaked rice that has been fried in oil, and with added salt, together with boiled eggs. In the case of Iran, breakfast foods that are typical include types of flatbread that are spread with cheese, butter, jam, marmelade, honey, cream, as well as nuts and fruits that are fresh or dried, and as for drinks, they would have black tea or coffee. Sometimes, they can have something simple such as bread with spread butter or jam, and tea. If they want to have cooked breakfast, they can have wheat and chicken or lamb or turkey porridge with cinnamon, sheep's feet, or stomach, green lentil soup, eggs, or omelet with eggs cooked in tomato sauce. As for Israel, their breakfast is influenced by Eastern Europe, Yishuv culture, which is agrarian, North Africa, and Levantine culture. Common foods include cheese (varieties which include local ones), vegetables (cucumbers, tomatoes, red bell peppers, carrots, radishes, onions), scrambled, or fried eggs, bread, with butter, jam or honey that are spread on it. Pickled olives and herring can be served as side dishes. Salad, hummus, Shakshouka, salads of Middle Eastern type can also be included. Meat or dairy based, but not both, dishes can be part of a traditional breakfast in Israel.

The general feature of European breakfast of being light can be related to the Medieval Age, when clerics and doctors were not in favour of a rich breakfast. Habits, however, changed starting with the 16th century, when working classes needed energy to be able to do physical work.

In some cases, we may have a wrong image of another culture's breakfast, due to the popularisation of specific foods. In French culture, we know the stereotypical breakfast, from films and books, consisting of croissants. However, the French may eat croissants for breakfast only during the weekend, and rarely during weekdays, unless they are really in a hurry, while during the week they will usually have tartines (meaning slices of bread with jam or something else spread on it), pastries called viennoiseries, orange juice, and a hot or warm drink. Unlike other cultures that serve savoury foods for breakfast such as cheese, egg, bacon, cold meats, the French serve foods rich in carbohydrates such as pastry products (Alyanak, 2021). For the French, breakfast is not considered the most important meal of the day. For them, lunch is. Around the world, nowadays, we frequently just have a coffee in the morning, then rush to school or work, and get something from the street, e.g. pastry products.

Habits related to breakfast are changing, thus, according to our times, to the point where it can become a light meal and no longer be the main meal of the day (Ozden, 2020).

Even as tourists, we may not always get a traditional breakfast from cafes, or from the hotel, but instead a standard one, or a Swedish buffet. We may be offered continental breakfast, which is a light meal, consisting of "toast, muffins, pastries, yogurt, and coffee," and which is called in this way as it refers to the way such foods could remind of those that "mainland western Europe" people would eat with pleasure (Goldfarb & Fernandez, 2023).

Due to all the changes and variations of breakfasts in various regions of the same country, it may even be difficult to give an exact answer regarding what traditional breakfasts consist of. We may, however, just find some common elements with respect to continents. As an example, we could see the American breakfast as consisting of cereal, while European breakfast can consist of "crepes, waffles, pancakes and pastries with sweet toppings" (The Old European Restaurant, 2023). What is more, for European cultures, we can notice how coffee and tea can be frequently encountered for breakfast. Additionally, other foods have come to the fore and are associated with American culture: dishes containing eggs, waffles, pancakes, toast, egg and cheese sandwich, tacos, and others. In the ancient world, breakfasts were consisting of simple foods such as bread and grains, and, function of social class, some people would not even eat it everyday (The Old European Restaurant, 2023).

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

As part of the history of breakfast, according to Ozden (2020), it was introduced as a main, thus most important meal, by the end of the 19th century. Ozden (2020) claims that before the industrialization that occurred in Europe, everyone used to eat two meals every day, lunch, and dinner, while afterwards, people worked for more hours and needed breakfast. According to Kahvaltı Saati (2017), before lunch, in Europe and in the Ottoman Empire, people used to drink coffee and have snacks.

Nowadays, since we live in a culture that recommends healthy eating, we can take over, in any part of the world we live, breakfast foods from other culture that fit in with the description. If we are preoccupied by keeping fit, and practice fitness, we may be led on towards being recommended a breakfast rich in protein, in order to build our muscle. While, in the past, we believed we should have a balanced ratio, according to mainstream science, of protein, carbohydrates and sugars, according to anatomy science, nowadays we resort to low carb and high protein diets instead, claiming that health can be found in a different way. Protein rich diets with absent or reduced to minimum, carbohydrates, are believed to help burn body fat, give more energy to the body, and help improve the feeling of being full for a longer time. Even the way we conceive of nutrition has changed, with a clear taking distance from mainstream science. With low carb diets, we no longer believe that the brain needs sugars to function, but, instead, it can benefit more from protein. Nowadays we can all choose what diet to follow, as well as what to eat for breakfast. There are no more standard rules, but choices.

## RESULTS

We could claim that breakfast follows not only conditions related to the availability of resources, climate, lifestyle, social class status, social occasions conditions, travelling and wish to explore specific gastronomy, but also certain mindsets, such as those related to subcultures, e.g. vegan, vegetarian, raw vegan, fitness, bio, natural, and healthy lifestyle. As a result, breakfast can be chosen function of the situation, but also function of values. Thus, if we are vegan or vegetarian for ethical reasons, or for health reasons, we are going to always be influenced by these principles and values when choosing our food for breakfast. If we admire or wish to explore a certain culture with its traditions, we are going to wish to experiment and try their specific breakfast foods. Additionally, various cultures are proud of their various products, such as coffee, fruits, vegetables, various local and national dishes, which they wish to show to visitors.

We gradually move on from traditions to contemporary lifestyle, since we are no longer, generally, nowadays, short-term cultures, but, instead, we move on towards long-term cultures, based on technology and other developments, which leave traditions behind (Hofstede, 2011).

However, common breakfast foods, with variations based on local traditions and products, can include dairy products, bread, pancakes, jam, honey or butter spreads, yoghurt, cereals, porridge, curry, sandwiches, eggs, cooked in a variety of ways, fruits, vegetables, cold meats, coffee, tea, milk, fruit juice, etc.

Normally, starting the day should include giving the body a boost of energy. We can use energy for both physical and intellectual work. Energy can be provided by caffeine rich drinks, and we can even get some food a bit later, not as soon as we have awakened early in the morning.

## DISCUSSION

Lavish breakfasts are pictures in photographs shared on social media for various cultures, which include almost any possible traditional food. In this way, tourists are presented with an overview of several possible foods, from which they can choose what they want to try. These are likely traditional foods, and the purpose of such arrangements is to present to tourists the food culture of the respective areas. This is very much like a display of food culture and heritage of the respective countries and regions. Breakfast, in such cases, can be considered a cultural product, very much like monuments, episodes in history, objects of art, works of fiction, and others.

We may have some associations between a certain culture and a certain food item due to the way it has been popularized as symbolic of the respective culture, to the extent where we could speak of the soft power of that culture.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Traditional breakfasts are, thus, very common nowadays when we are given access to knowing a different country and culture better. Then, the hosts do everything they can to show us all of their cultural heritage. Otherwise, in practical, everyday life during contemporary times, very frequently the traditions are no longer followed. Practical reasons such as comfort lead people everywhere around the world to benefit from the facilities provided by consumerism, by supermarkets, and delivery services, as well as by the frequent presence of street food. What is more, foods taken over from other cultures can also be widely spread, such as those from American culture, e.g. cereals, which are growing in popularity and which are present in supermarkets everywhere now.

## CONCLUSION

Nowadays, we notice a tendency towards the simplification of breakfast. Generally, very early in the morning, function of the particularity of our job, or school or university schedule, we drink a cup of tea or coffee, have a slice of bread with jam or honey or other spread on it, a bowl of cereal, a yoghurt with berries, pancakes, and we hurry towards our destination. If we have only a cup of coffee, we get along the way some pastry products or we take with us a small yoghurt to eat at work or during school breaks, or we buy a sandwich or take one from home. However, when we are tourists, on holidays, or at scientific events such as a conference, we can be served either a traditional or a continental type of breakfast, if we are there at the respective time of day. We can recall, from films, breakfast in bed, which includes as staple foods, regardless of culture, boiled egg, orange juice, dairy products such as cheese slices, jams, toast, ham, some fruits, vegetables, and others. In some cases, if the characters are French, they are having croissants and coffee. However, such images are just stereotypes, or, at least, commonly recognized breakfast foods so that everyone watching the films can relate and understand what time of day it is.

### ABSTRACT

The purpose of this paper is to look at what haiku therapy is, and consider several related issues that can bring about various dilemmas to those finding out about it, especially to those writing high-quality haiku and being very knowledgeable about this type of poem. To them, the attempts done by the patients that are given as examples in popular psychology articles are clearly having nothing in common with the real haiku poem. These are only micropoems to them, and they consider it outrageous to allow patients to write haiku without teaching them how to genuinely do this. The paper will start from the example of a Romanian haiku authors' online community's reaction to an article from a women's magazine about therapy through writing haiku. The post was recent, shared and discussed during September 2023. The author of the present paper has noticed, through the participatory observation method of netnographic research, as she is a haiku author and member of the group herself, two main reactions to the article. The first one was that of outrage, as the therapists promoting this type of poem in therapy have not taken their time to become documented in what this poem actually is. The second one was that of claiming that in therapy the focus is placed simply on the self-expression of the patients, and not on the artistic value of what they write. Art therapy is, after all, a general concept which allows participants to feel relaxed and write various poetry genres or paint, without feeling bad about not being gifted artistically and without being pressured to creating a valuable piece. The user exposing this opinion also claimed that this type of therapy is simply meant for the well-being of the patient. Additionally, the same user claimed that giving examples of genuine haiku poems in the article and writing genuine haiku poems would not have helped the patients express their anxieties and dilemmas, as well as various thoughts and feelings, in a genuine, honest way, so that the therapists would not have been able to help them anymore. Their real problem would not have been addressed. The opinion of the author of the present paper has to do with explaining these types of therapies through the lens of individualism, where patients are encouraged to be themselves, and break any rules when writing, in order to be creative. This helps them break free from constraints and understand what they want, which is beneficial for their psychological balance and well-being.

**Keywords:** well-being, individualism, creativity, self-expression.

### INTRODUCTION

The haiku poem is, originally, a Japanese poem, with a fixed form, 5-7-5 syllables, and three lines. Occasionally, however, it can be two or even one lines. Additionally, in our contemporary world, and since it has been taken over as a practice by Western culture members, even the number of syllables can vary. In the English languages, in particular, it can be shorter than the 5-7-5 syllables (Imaoka, 1996). It can be considered to be made of two parts, in juxtaposition and in direct connection one with the other, or in a strong relationship of contrast. While the haiku poem is not supposed to contain the usual figures of speech and abstract ideas expressed directly as we are used to from Western poetry, it does, indirectly, through the allusions of the two parts, suggest, through visual or auditory images, a deeper meaning than that at the surface. We could say that the haiku poem contains a concrete, real meaning, yet the visual scenes are never randomly selected. They are selected with a precise goal, in order to be about a certain aspect. We should also mention that haiku poems are about the present, or about the here and now, and not about the past, or the future. At least, concerns with these are not expressed directly through words. We can suggest, however, the past by mentioning an old childhood photograph. We anchor traditional

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

haiku poems in the here and now, through references which can be direct or which can be identified as belonging to a certain seasons or to a certain time of day. This element that indicates a season directly or through suggestion, or a time of day, in a similar way, is called *kigo* (Gilbert, 2006) and it is a familiar concept to those versed in writing haiku poems. As an example, a tulip can only be found during spring, therefore we can assume that the respective haiku poem was written during springtime. We can mention multi-coloured leaves, which are clearly associated with autumn. The sun and the moon are associated with daytime, and nighttime, respectively, unless we can spot the moon during daytime as well as it can sometimes happen. Certain fruits, vegetables or flowers that are present during a certain season, snow, rain, ice, a heatwave, can all be included as *kigo* in a haiku poem. However, once a haiku poem is more about the human world than about nature, and if it does not contain a seasonal element, it can be considered a *senryu*. The *senryu* can be humorous or sad. What is more, some poems can be considered a combination of haiku and *senryu*, as they may contain a *kigo* in one of the parts, while in the other part it was have to do with a humorous or sad remark about human life.

When a haiku poem is about nature, we need not distort any detail. We do not create a fantasy world, we do not personify nature, and we need to keep any scene realistic. While in the past haiku poems were written on the spot, with the disciples gathered around the master to discuss the poems after writing them following an outing in nature, nowadays this is no longer possible. We have other activities to do, we need to go to work, our schedule can be too busy, and sometimes weather conditions can be unappealing. This is why we resort to imagining scenes or base our poem on our memories of walks in the past. We need to refrain from attributing to nature human emotions, however, which, as Westerners, we are used to from the many years of poetry written in this style. Westerners need to open their minds and start thinking in a different way, specific to Japan, at least to some extent.

Haiku poems are, traditionally, in Japanese culture, belonging to the Buddhist mindset (Blyth, 1951), which claims that we only have the present moment that is real, and that in this life, which is subjected to change, and that we need to accept the fact that we are going to lose everything and everyone dear to us. We are all ephemeral, and the world around us is ephemeral.

Of course, haiku poems can be adapted to contemporary reality, to the point where it reflects the lifestyle of various cultures other than Japanese, and it can even mention elements related to technology. It is one of the most versatile and adaptive poetic genres. It can be unsurprising how it can fit to both artistic purposes and to therapeutic purposes.

## MATERIALS AND METHODS

The author of the present paper is a haiku author and member of the haiku group Romanian Kukai, led by sensei (the word for teacher) Corneliu-Traian Atanasiu, where we are taught to write good haiku. Atanasiu believes that, in order to write good haiku poems, we need a considerable amount of time, and we are recommended by him to read good haiku, and to start feeling it and reflecting on it. At the same time, we can take examples from our haiku colleagues, who are so-called veterans and write good haiku. Through various contests, we learn and we become “contaminated” by the quality haiku written by the older members. From this point of view, we could claim a netnographic approach to this community, which also includes a Facebook group, not only a blog called Romanian Kukai where information and contests are posted, called Autori de haiku din Romania (Haiku authors from Romania). The author of the present paper could claim that she is doing participatory observation, as she read, on September 23, in a post by Florin Golban (2023), a reference to an article published in *Psychologies* online popular psychology magazine about haiku therapy, how the haiku poems posted as examples are not valuable and, for that matter, even valid attempts at writing haiku. The article claims that haiku poetry can be therapeutic, since it can lead to healing and to emotional balance. The article in the popular psychology magazine does not claim to teach anyone to write genuine and good haiku poems. Instead, it present their therapeutic purpose. Through haiku poems, patients can express themselves in a very concise manner. They do not need to write many unnecessary words, and the advantage could be that of going directly to the core of their issues, whether these are related to wishes, anxieties, uncertainties, worries, anger, etc. Self-expression is considered, nowadays, a usual consequence of the way today’s world is structured. There is, currently, the tendency towards the individualist dimension, and the focus on the individual as being part of a collectivity is gradually fading away. The individual no longer has to submit

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

to the interest of the entire group or community, but he/she can take action to suit their own interests and purpose. The individual is, in the manner of American culture ideals, granted the right for self-expression and self-development. The haiku-type of poem can be used to synthesizing what an individual feels and what an individual is preoccupied with. In the past, Sigmund Freud, the father of psychoanalysis, would recommend patients to write in their diary and to use free associations (Jones, 1990), to the point where they felt free to talk. Eventually, the patients would need to look at ideas repeating themselves, in order to identify issues that preoccupied them and that were a frequent presence. All the work appears to be already done by having patients write haiku poems as therapy.

In the post from September 23, 2023, comments did not take long to appear as a response to Golban's post. Golban condemned the practice of haiku as therapy, since the examples in the *Psychologies* article were not, after all, valid and genuine haiku poems. The therapists proved that they did not know what haiku poems were. Haiku group member Irina Tipordei replies that therapeutic haiku poems have a completely different purpose than writing valid and valuable haiku. The therapeutic version needs to highlight the self-expression of the patient.

We, therefore, in this case, deal with a clash of values. While Irina Tipordei accepts that therapy is something else, Florin Golban and Ion Cuzuioc are very much offended about the examples being posted of haiku poems, since they are not genuine ones. Elena Malec replies that this therapy is an example of consumerist culture, together with the article of popular psychology, and that we need not worry too much as haiku authors. Ion Cuzuioc expresses his wish to write to the *Psychologies* magazine and to explain what true haiku poetry is and that the way it is presented in that article is completely unprofessional.

The truth may be that creative therapy can be more related to the domain of achieving a state of well-being and relaxation, more than being helpful and even genuine therapy. In order to reach the depths of the issues patients are confronted with, psychoanalysis appears the most suitable approach, since it deals with analysis of unconscious material. Meanwhile, simply talking about personal issues, while being related to free associations techniques in psychoanalysis, may not lead to efficient results, if not applied correctly. A good analyst will stop the patient when he/she feels that the patient could develop more of an issue that should not be taken lightly. The psychoanalyst could help the patient continue the train of associations in a certain direction, which is a meaningful or problematic one. Meanwhile, in creative therapy, patients are encouraged to express themselves without caring about the artistic value of their works. They can draw, colour, write poetry, in a relaxed manner, and offer the material for analysis to their therapist. However, each patient is unique and the therapist needs to see what is most suitable for each and every patient as a means of self-expression.

We can see the strength of the beliefs and values of haiku authors such as Florin Golban and Ion Cuzuioc, who believe that we do not need to be superficial, under any circumstances, when it comes to haiku poems. They believe that even therapists need to master the rules of such poems, and not allow their patients to write pseudohaiku poems. Irina Tipordei focuses on the practical use of the creative therapy, and on the way that patients need to be encouraged to express themselves in a very free manner.

Even in the haiku authors' community, various rules, or lack of rules and experimentalism give way to arguing for and against. Some believe that the haiku poem is a fixed form poem, with three lines and 5-7-5 syllable pattern, while others are more open towards experimentalism, as long as the spirit of the haiku poem is preserved.

## RESULTS

It may be difficult to give a final answer regarding the way creative writing therapy should be practiced with respect to the haiku poem. For the time being, we could simply claim that, due to its concise form, it can help patients contract their emotions and their meaningful experiences within a limit. Otherwise, it can become time-consuming for both therapist and patient, especially nowadays, when we believe we live in the century of speed, to highlight the meaningful details within a chain of free associations.

The experience of writing genuine haiku poems is an entirely different one. We can see how old authors, or veterans, can hold onto their values and principles, to the point where they can see even a therapeutic technique as incompatible with haiku poems, if written not as they should be.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

It is difficult to say who is right and who is wrong from the clash of values and principles related, on the one hand, to respect for genuine haiku, and to therapy, on the other hand.

Individualism (Hofstede, 2011) gives rise to self-expression and to self-development, focusing on the needs of the individual, and not of the individual as part of a group or of a community.

## DISCUSSION

Haiku poems are not the only ones that are subject to creative therapy. Haiku poems can be practiced, according to this therapy technique, in order to simply encourage patients to express themselves in a relaxed manner, without caring about rules. In this way, patients are encouraged, after all, to experiment. They are suggested that rules are meant to be broken, in all circumstances. However, the most conservative haiku authors can feel completely offended by such ideas.

The novelty of creative techniques for therapy can be received either with enthusiasm, or with complete opposition, function of mindset and principles, as well as values. Once someone is a haiku author having some years behind in their work, they can feel that this is all a lack of respect towards their work, and a total disregard of quality of haiku poems, which can be achieved only through training that takes a very long time.

The question remains, if haiku is a matter of creativity or a matter of self-expression. We could conclude that, for the group of haiku writers, it is a matter not only of creativity but of knowledge and skill, while for the therapists it is a matter of encouraging their patients' self-expression. We often hear that neurosis and its symptoms can be eased through art, and through patients' expressing themselves. Yet, it all depends on the severity of the issue. For one thing, writing haiku can relax and direct the energy to a higher purpose, that of sublimation, meaning that of transforming instincts into a great artistic expression. However, not everyone can be capable of this. Yet, those that are capable of doing these can witness how their tensions are eased and how they can feel better after expressing themselves in this way.

## CONCLUSION

We could claim that haiku therapy is a simplified form of sublimation. It is more of a form of well-being, actually, than of actual healing process. Besides, in order to be able to get better, an experienced psychoanalyst is required.

Nowadays, therapies have become simplified, or, at least, in some versions of therapies. A wide variety of therapeutic approaches is available today, and patients have a wide array to choose from. What is more, popular psychology articles have popularised information about treatment and the unconscious issues, reminding of Freud's intent to have his psychoanalysis laid up all available to laymen. His work about the *Psychopathology of Everyday Life*, including slips of the tongue and their significance, together with his works on the interpretation of dreams, can both be practiced by the general public, after all, once they become informed about the techniques.

We could claim that the haiku therapy can be accessible to the general public, with no knowledge in literature, Japanese culture and haiku poetry techniques, as well as with no knowledge in interpreting self-expression through art. We can include haiku therapy within a wider category, that of art therapy, which is rendered popular and accessible to anyone, in an attempt to encourage people to express their issues through art. Poetry and art can become similar to the language of dreams, where people can express desires, wishes and fears.

**ABSTRACT**

Experimental methods are based on conducting special tests of a complex of technical means as a whole or its component parts using a real system, its prototype, simulation or physical model. In general, we can distinguish the following methods for determining evidence of safety and reliability within this group:

- testing on simulation models;
- tests on physical models;
- testing under operating conditions.

Tests under operating conditions are the final stage of proving the safety of a set of technical means, but cannot serve as the only experimental method due to the impossibility of recreating a significant part of technological and emergency situations at a real facility, therefore the main burden of experimental research on the reliability and safety of a set of technical means rests with laboratory tests. testing - using simulation and physical models.

**INTRODUCTION**

Bench tests assume maximum proximity to real operating conditions, and therefore their results are considered to be the most reliable of those achieved in laboratory conditions [1 – 3]. Traditional methods of their implementation (TSI) in relation to systems of microprocessor centralization of arrows and signals (MPC) involve complete reproduction of devices of the upper and lower levels, but only partial reproduction of the lower level - by connecting a limited selection of microprocessor object controllers (MPCs) to the stand.

Taking into account the mutual dependencies between management and control objects (CMC) directly controlled by the MPC, in this case limited test coverage of technological situations is provided. To increase it, an increase in the sample is also required, which leads to an increase in the resource intensity of tests [5].

To ensure the necessary test coverage with minimal resources, the development of combined test methods (CTM) as a subtype of bench tests was carried out by synthesizing simulation and physical modeling of the operation of the MTC and CTC [6].

MCIs are carried out under the condition that the operation of part of the MPC is reproduced by real devices, and the OUK connected to them - by physical models (layouts), the other part of the MPC and OUK - by software modules of a specialized simulation model (SIM).

At the same time, as part of the test bench, a set of drivers are used to interact with the lower level: real (for the first part) and virtual (for the second). Taking into account the isomorphism of all three levels

of the MPC on the set (where A, Z and U are subsets, respectively, of the GCP, their connections and properties), established in [8], to achieve the goal of the set of GCP A, their program modules at the level of the logical processing subsystem dependencies (DPL) ML and IPC LL are divided into isomorphic tolerance classes for managing a single group of GCCs and using a common driver type:

$$\left\{ \begin{array}{l} A = \bigcup_{i=1}^n A_i, \bigcap_{i=1}^n A_i = \emptyset, \\ LL = \bigcup_{i=1}^n LL_i, \bigcap_{i=1}^n LL_i = \emptyset, \\ ML = \bigcup_{i=1}^n ML_i, \bigcap_{i=1}^n ML_i = \emptyset, \end{array} \right. \quad \tau \subset \Lambda \times \Lambda : \left\{ \begin{array}{l} \forall A_i \xleftarrow{\gamma_i(\alpha)} \exists! LL_i \subset LL, \\ \forall LL_i \xleftarrow{\gamma_i(\alpha)} \exists! ML_i \subset ML, \\ \forall ML_i \xleftarrow{\gamma_i(\alpha)} \exists! A_i \subset A, \end{array} \right.$$

$$\Lambda = \{\alpha_j\} = \{a_j \in A, ll_j \in LL, ml_j \in ML\}_j$$

– sets of one-to-one elements;

– function implemented by the driver of the i-th group of OUK;

$\tau$  – designation of the tolerance relationship.

The vector nature of the functions is due to the multi-channel nature of the lower-level MPCs, each channel of which is controlled by its own driver component. In general, MCIs are formalized by the following expression:

$$\left\{ \begin{array}{l} \exists(A_i \subset \Lambda) \rightarrow \left[ \begin{array}{l} \exists \left( [a_g \in A_i] \leftrightarrow [ll_{g\eta} \in \vec{ll}_g \in LL_i] \xrightarrow{\gamma_{i\eta}} [ml_g \in ML_i] \right) : \\ (a_g \rightarrow model^1(a_g)) \wedge (ll_{g\eta} \rightarrow model^0(ll_{g\eta})) \wedge (\gamma_{i\eta} \rightarrow model^0(\gamma_{i\eta})) \end{array} \right] \\ \exists(A_v \subset \Lambda) \rightarrow \left[ \begin{array}{l} \exists \left( [a_i \in A_v] \leftrightarrow [ll_i \in \vec{ll}_i \in LL_v] \xrightarrow{\gamma_{in}} [ml_i \in ML_v] \right) : \\ (a_i \rightarrow model^1(a_i)) \wedge (ll_i \rightarrow model^0(ll_i)) \wedge (\gamma_i \rightarrow model^0(\gamma_i)) \end{array} \right] \end{array} \right.$$

$\vec{ll}_i$  и  $\vec{ll}_i$  – MПK, a  $ll_{g\eta}$  и  $ll_{ic}$  – their constituent channels of management and control;

and – OUK connected to the MPC;

and – software modules of the corresponding GCC as part of the POLS software;

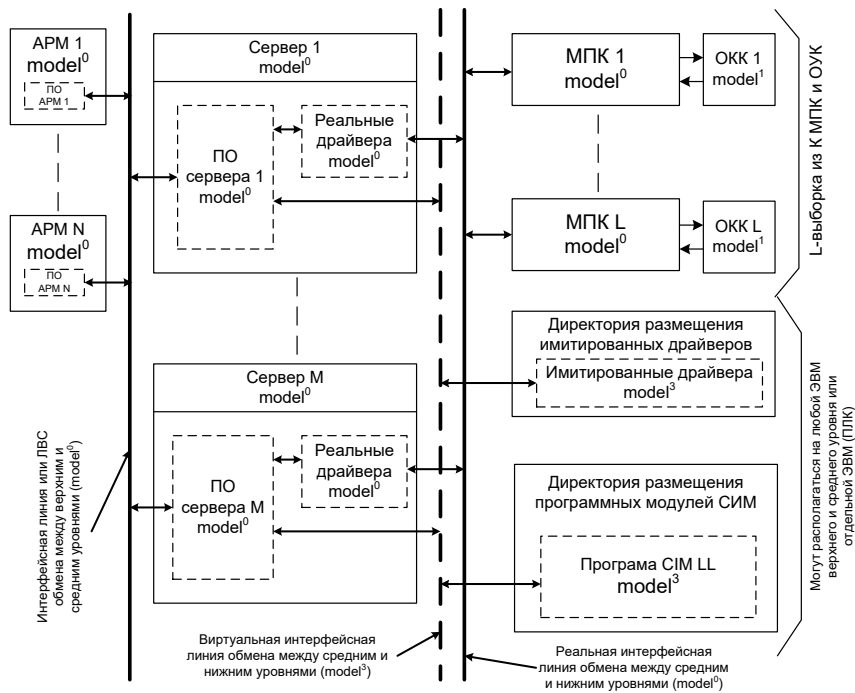

i and v – numbers of groups (tolerance classes) defined by formula (1);

and – numbers of IPC and OUK, respectively, as part of groups i and v;

$\eta$  and are the numbers of channels in the MPC, respectively, and ;

n and m are the number of IPC groups (OUK) and their channels, respectively.

The technical implementation of the MKI is carried out on the basis of a combined testing complex (CTC MTC) [10]. Its general structure, according to formula (2), is shown in Fig. 1.

Rice. 1. Generalized block diagram of the CIC MPC

The application software of each POLS server (channel) interacts with real MPCs and OUK models connected to them via a real interface line and with SIM software modules via a virtual one. In this way, software-spatial differentiation of access to lower-level elements reproduced by models of different orders is performed.

For this, a certain adjustment requires the POLS software, which must be returned to its original state after the end of the tests. Therefore, it is preferable for MCIs to be used in relation to themselves by MPCs with a single software core of POLS servers, the adaptation of which to a specific station and various interface lines is carried out by editing configuration files [11]. This architecture (from the standpoint of software replication) is recommended by the requirements of leaflet R-843 [12].

### CONCLUSION

The proposed methods make it possible to increase the efficiency of the experimental methodology for proving the safety of MPC systems by increasing test coverage and reducing material resources. At the stage of bench testing, this is achieved by minimizing the sample of MPC, OUC and using the capabilities of SIM.

ÖZET

Renal kitle tanısı alan hasta sayısı günümüzde giderek artmakla beraber renal kitle saptandığında patolojik belirsizlik devam etmektedir. Bu belirsizliği öngörebilmek amacıyla preoperatif değerlendirmeler ve buna göre tedavi planları yapılmaktadır. Bu amaçla bugüne kadar çeşitli klinik bulgular, patolojik öngörü modelleri ve perkütan biyopsiler de dahil olmak üzere preoperatif çeşitli tanıya yardımcı araçlar kullanılmıştır. Renal kitle anatomisini tanımlayabilmek için objektif anatomik skorlama sistemleri: R.E.N.A.L. nefrometri skoru (RNS), Padua skoru (PS) ve C-indeks geliştirilmiştir. Çalışmamızda RNS, PS ve C- indeksin T1 böbrek tümörlerinde patolojik agresiviteyle ilişkisini ortaya koymak böylece anatomik bilginin dışında patolojik bilgi vererek renal kitlelerin tedavi yönetiminde yardımcı olup olmayacağını göstermeyi amaçladık. Preoperatif klinik evrelendirmeye göre evre 1 (T1N0M0) 83 berrak hücreli renal hücreli karsinom (cRCC) hastası değerlendirildi. Patolojik sonuçlarına göre hastalar iki gruba ayrıldı: Fuhrman derecesi 1 veya 2 (FG1-2) olan hastalar (Non-agresif grup (NAG)) ve FG3-4 ve/veya TNM Evre 3 olan hastalar (Agresif grup (AG)). Her hastanın RNS, PS ve C-indeks puanları hesaplandı ve nefrometri skorları ile patolojik agresivite arasındaki ilişki karşılaştırıldı. Ortalama RNS, 7.3±2.4 olarak hesaplandı. Toplam RNS, AG'de (9.2±1.2) NAG'den (6±2.2) anlamlı derecede yüksekti (p=0.000). RNS, patolojik agresif hastalığın bağımsız bir öngörücüsüydü [0.863 (0.785-0.940)] (p < 0.001). En yüksek eğri altı alan için RNS' nin eşik değeri 8 olarak bulundu [0.807 (0.710-0.905)] (p < 0.001). Ortalama PS, 8.1±1.6 olarak hesaplandı. PS ayrıca patolojik agresif hastalığın bağımsız bir öngörücüsüydü [0.846(0.762-0.929)] (p < 0.001). En yüksek eğri altı alan için PS'nin eşik değeri 8 olarak bulundu [0.761(0.653-0.868)] (p < 0.001). AG'nin ortalama C-indeks puanı (1.4 ± 0.4), NAG' den (2.7±2.0) anlamlı derecede düşüktü (p=0.000). C-indeks, patolojik agresiviteyi tahmin etmede anlamlıdır [0.787(0.690-0.883)] (p < 0.001). Çalışmamızda daha yüksek RNS ve PS puanları ile düşük C-indeks puanlarının böbrek tümörlerinin tümör agresivitesi ile ilişkili olduğunu gösterdik. RNS, PS ve C-indeks renal kitlelerin agresifliğini preoperatif olarak tahmin ederek tedavi kararını vermeye yardımcı olacaktır.

ABSTRACT

The rising number of renal mass diagnoses brings about uncertainty. Preoperative assessments and treatments aim to address this. Diagnostic tools like clinical findings, prediction models, and biopsies are used. Anatomical scoring systems (R.E.N.A.L. nephrometry score - RNS, Padua score - PS, and C-index) describe renal mass anatomy. Our study explores their connection to T1 kidney tumor aggressiveness, revealing if anatomical data aids renal mass management alongside pathology. We evaluated 83 patients with stage 1 (T1N0M0) clear cell renal cell carcinoma (cRCC) according to

preoperative radiological and pathological staging. Patients were divided according to pathological results of cRCC into two groups: Patients with Fuhrman grade 1 or 2 (FG1-2) (Non-aggressive group (NAG)) and patients with FG3-4 and/or TNM Stage 3 (Aggressive group (AG)). RNS, PS and C-index scores were calculated for each patient. Finally, the relationship between nephrometry scores and pathological aggressivity were compared. The mean RNS was calculated as  $7.3 \pm 2.4$ . Total RNS was significantly higher in AG ( $9.2 \pm 1.2$ ) than in NAG ( $6 \pm 2.2$ ) ( $p = 0.000$ ). RNS was an independent predictor of pathological aggressive disease [0.863 (0.785-0.940)] ( $p < 0.001$ ). The cut off value of RNS at the highest area under curve was 8 [0.807 (0.710-0.905)] ( $p < 0.001$ ). The mean PS was calculated as  $8.1 \pm 1.6$ . PS was also an independent predictor of pathological aggressive disease [0.846(0.762-0.929)] ( $p < 0.001$ ). The cut off value of PS at the highest area under curve was 8 [0.761(0.653-0.868)] ( $p < 0.001$ ). The mean C-index score of AG ( $1.4 \pm 0.4$ ) was significantly lower ( $p = 0.000$ ) than NAG ( $2.7 \pm 2.0$ ). C-index is significant in predicting pathological aggressiveness [0.787(0.690-0.883)] ( $p < 0.001$ ). Our results suggested that higher RNS and PS scores, lower C-index scores were associated with tumour aggressivity of renal tumours. RNS, PS, and C-index aid preoperative treatment decisions by predicting renal mass aggressiveness.

### INTRODUCTION

The number of patients diagnosed with renal masses is increasing with the widespread use of cross-sectional imaging methods(1). Pathological uncertainty exists when an incidental renal mass is identified. Preoperative counselling and treatment planning are often made in the context of this uncertainty, even though 20-30% of these lesions ultimately prove benign and only 10-30% are found to be potentially aggressive (2–5). Preoperative variables, percutaneous biopsy and pathologic predictive models have been made to guess this uncertainty (6–8).

Evidence of the relationship between the pathology and anatomy of the renal mass began to be shown in various publications in the literature (9–11). Objective anatomical scoring systems: R.E.N.A.L. nephrometry score (RNS), Padua score (PS) and C-index have been developed to identify renal mass anatomy(12–14). Radiographic anatomical attributes are used in these systems.

Preoperative determination of preoperative tumour aggressivity is the mainstay of the management of treatment. In our study, we aimed to reveal the relationship between RNS, PS and C-index with tumour aggressivity in T1 renal tumours and thus to show pathologic information besides anatomic information and that would help us in the management of the treatment.

### MATERIAL AND METHODS

The records of patients who underwent renal surgery due to T1 renal mass from February 2008 to February 2016 were collected from the electronic medical database.

Radical nephrectomy (RN) (62.6%) or partial nephrectomy (PN) (37.4%) have been performed in 102 patients. 83 (81.4%) patients had clear cell pathology. Fuhrman Grade (FG) is of prognostic value only in clear cell pathology; therefore, 19 (18.6%) patients with other pathological diagnoses were excluded, including 4 with papillary RCC (3.9%), 5 (4.9%) with chromophobe RCC, 5 (4.9%) with angiomyolipoma, 5 (4.9%) with oncocytoma.

Clinical characteristics, pathological slides, and computed tomography (CT) images were retrieved for all patients. All specimens were reviewed by a pathologist. Only patients with a clear cell carcinoma (cRCC) (83 patients) were included and those with other renal cell carcinoma subtype (19 patients) were excluded. Preoperative CT images were reviewed by a urologic surgeon (AÖ); RNS, PS and C-index were calculated as previously described (12–14).

Patients were divided according to postoperative pathological results of cRCC into two groups: Patients with FG 1-2 were considered as non-aggressive group (NAG) and those with FG 3-4 and/or TNM Stage 3 were considered as aggressive group (AG).

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

RNS, PS, C-index scores and components were compared between patients with aggressive vs. non-aggressive group. Descriptive statistics for the data encompassed mean, standard deviation, median, minimum, maximum, frequency, and ratio values. To assess the distribution of variables, the Kolmogorov-Smirnov test was employed. Quantitative data were analysed using the Mann-Whitney U test and independent sample t-test. Qualitative data were subjected to analysis using the Chi-square test, with the Fischer exact test being applied when the conditions for the Chi-square test were not met. The determination of effect level and cut-off values was carried out through the utilization of the ROC curve. Statistical analyses were conducted using SPSS 22.0 software.

## RESULTS

Among the included 83 patients, the median patient age was 58.7 years (range 22-79) with a male predominance (54.2%). The ages were divided into aggressive group (AG, n = 48, 58%) and nonaggressive group (NAG, n = 35, 42%) according to the pathology results as described. Age and gender distribution of patients were similar ( $p > 0.05$ ). The RCCs were removed by radical nephrectomy in 52 (62.7%), and partial nephrectomy in 31 (37.3%). Table 1 presents a comprehensive overview of the detailed pathological examinations. Collecting system and / or renal sinus invasion were observed in 2 (2.4%) cases; In 3 (3.7%) cases lymph node positivity was observed; 11 cases (13.3%) were pathological stage 3; 9 patients were pathologically diagnosed as T3A (10.8%) (Table 1). 2 of stage 3 tumours were pathologic stage 3 due to lymph node positivity and the other 9 cases were stage 3 due to extracapsular spread and / or collecting system and / or renal sinus invasion (Table 1).

Table 1: Demographic and pathological features of the cases.

The mean RNS for all patients was  $7.3 \pm 2.4$  (median = 8). According to the components of the RNS: Tumours with increased diameter (R) ( $p=0.000$ ), endophytic nature (EII-III) ( $p<0.05$ ), distance to the collecting system or sinus  $< 4$  mm (N III), posterior location of tumour (P) ( $p<0.05$ ) and with a central location within the polar lines of the kidney (LII-III) ( $p<0.05$ ) were significantly higher in AG than in NAG. Total RNS was significantly higher in AG ( $9.2 \pm 1.2$ ) than in NAG ( $6 \pm 2.2$ ) ( $p < 0.05$ ) (Table 2). RNS was an independent predictor: of pathological aggressive disease [0.863 (0.785-0.940)] ( $p < 0.001$ ). The cut off value of RNS at the highest area under curve was 8 [0.807 (0.710-0.905)] ( $p < 0.001$ ). Sensitivity was 88.6%, positive predictive value was 70.5%, specificity was 72.9%, negative predictive value was 89.7% (Figure).

Table 2: Nephrometries and features

The mean PS for all patients was  $8.1 \pm 1.6$  (median = 8). According to the components of the PS: tumour with medial localization (M), polar localization and tumour size between 4-7 cm were significantly higher in AG than in NAG ( $p < 0.05$ ); Collector system and renal sinus involvement were although higher in AG than in NAG but not statistically significant ( $p > 0.05$ ); The rate of exophyticity (Exophyticity II-III) was significantly higher than that of NAG ( $p < 0.05$ ). PS AG ( $9.2 \pm 1.1$ ) was significantly higher than NAG ( $7.3 \pm 1.4$ ) ( $p < 0.05$ ). PS is significant in predicting pathological aggressiveness [0.846 (0.762-0.929)] ( $p < 0.001$ ) (Table 2). The cut off value of PS at the highest area under curve was 8 [0.761 (0.653-0.868)] ( $p < 0.001$ ). Sensitivity was 77.1%, positive predictive value was 69.2%, specificity was 75.0%, negative predictive value was 81.8% (Figure ).

Figure: ROC curve, area under curve and Cut off value of RNS, PS, and C-index

The C-index value was calculated for each patient. All patients had a mean age of  $39.8 \pm 10.7$  mm (20 mm-65.7 mm), a mean r (mm) of  $22.9 \pm 9.1$ mm (5 mm - 35 mm) and a mean C-index of  $2.2 \pm 1.7$  (0.7-12.0, median = 1.6). When parameters are considered separately, c (mm) in AG was not significantly different from NAG ( $p > 0.05$ ), r (mm) in AG was significantly higher than NAG ( $p < 0.05$ ). The C-index in AG ( $1.4 \pm 0.4$ ) was significantly lower ( $p < 0.05$ ) than in NAG ( $2.7 \pm 2.0$ ) (Table 2). C-index is significant in predicting pathological aggressiveness [0.787 (0.690-0.883)] ( $p < 0.001$ ) The highest cut off value for the sub-curve area was 1.55. Sensitivity was 77.1% positive predictive value was 77.1%, specificity was 68.6% and negative predictive value was 68.6% (Figure).

### DISCUSSION

The diverse nature of enhancing renal masses presents a multifaceted clinical challenge, with varying biological characteristics. Achieving the alignment of renal mass biology with an optimal treatment

approach continues to be a challenging objective in contemporary urologic oncology (15). For patients in good health with T1 tumours suitable for nephron-sparing surgery, partial nephrectomy is presently considered the established standard of care. Nevertheless, the American Urological Association includes thermal ablation and active surveillance as potential choices for patients with tumours measuring 7 cm or smaller (16). The prevalence of small tumours, particularly in elderly or comorbid patients, is on the rise. The utilization of observation/surveillance approaches and ablative treatments that could be deemed safer for less aggressive cancers has gained prominence, primarily due to the limited availability of short- to medium-term oncological outcomes (17). The widespread hesitance surrounding the adoption of percutaneous biopsy, driven by concerns over potential complications or its inherent limitations in accurately determining grading, further underscores the potential applicability of a system capable of precisely predicting malignancy or aggressiveness (18). Because of these purposes various systems were designed by using nomograms (7,8). RNS, PS and C-index have been used to predict warm ischemia time, urine leak, blood loss, urine leakage hospital length stay and patient recovery time for PN previously. Recently there have been some studies to correlate nephrometry scores especially RNS with tumour biology and pathology.

Kutikov et al (19) based on some results which correlated the anatomical features of the tumour with pathological findings, have created a nomogram which integrates age, sex with some elements of RS with high predictive ability. However, the patients taken into this study had a high proportion of advanced and/or large tumours (>25 cm) and the malignancy or aggressiveness of such tumours were not required to be predicted, because of the high grade in nearly all the cases and that was the flaw of the study. Whereas in our case all patients had T1 and clear cell pathology tumours. Wang et al. (20) affirmed a robust predictive capability for high-grade tumours when analyzing an exclusively malignant tumour cohort that exhibited similarities to the Kutikov cohort. Conversely, Bagrodia et al. (21) reported a weak predictive performance for malignancy but an exceptionally high predictive accuracy for tumour grading in a small patient cohort with tumours up to 8 cm who underwent partial nephrectomy. In contrast, Koo et al. (22) examined an extensive cohort of clinically T1 renal tumours and found an acceptable predictive performance for malignancy but a notably poor performance in predicting high-grade tumours. On the other hand, Antonelli et al. (23) and Mullin et al. (24) failed to identify any correlations between malignancy or high-grade pathology in large cohorts of cT1a patients (506 patients and 754 patients), possibly due to the lower nephrometry scores of the tumours. A limitation of these studies lies in the heterogeneity of the patient groups included in their analyses.

Pathological aggressivity is not only due to nuclear grading there are also some prognostic parameters according to pathological results. We should use not only nuclear grading but also add upstaging (from stage 1 to stage 3) to make pathological aggressivity from this point of view our study is different from the others (25–27).

Kutikov et al. (19) and Chen et al. (28) compared individual components of the RNS with nuclear grade and their results showed that R score, E score and L score were strongly associated with high-grade pathology. It has also been reported that a high percentage of endophytic tumours were associated with clear cell histology and higher grade tumours (29,30). That is consistent with our study. We demonstrated that in RNS, tumours with increased diameter (R) ( $p < 0.05$ ), endophytic nature (EII-III) ( $p < 0.05$ ), distance to the collecting system or sinus  $< 4\text{mm}$  (N III), posterior location of tumour (P) ( $p < 0.05$ ) and with a central location within the polar lines of the kidney (LII-III) are associated with aggressive pathology. The components of the PS demonstrated that larger tumours (4-7 cm) ( $p < 0.05$ ), location relative to the polar lines and endophytic tumours (Exophyticity II-III) ( $p < 0.05$ ) were more likely to be classified as aggressive pathology diagnosed with cRCC. In previous studies there is not any cut off point about RNS, PS and C-index for predicting aggressivity of RCC we demonstrated that when RNS and PS upper than 8 and c-index lower than 1.55 aggressivity risk is rising.

## **CONCLUSION**

Overall, this study uncovered that there is a relationship between nephrometry scores (RNS, PS and C-index) and final aggressive tumoral pathology. The prediction of malignant and metastatic potential of the tumour alters the management of T1 renal tumours. This is of great practical importance for preoperatively predicting renal masses aggressivity. Using these data, which will help urologists choose

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

appropriate therapies for patients. RNS, PS and C-index represents a novel tool that can help for preoperatively prediction of aggressivity of renal masses and making therapeutic decisions. However, well designed randomized controlled trials are needed to make comparable results.

### ÖZET

17. yy Aydınlanma Dönemi'nde, aklın başat konumu ve bilimsel bilginin akıl yoluyla inşa edilmesi, bilimsel yöntem ve rasyonel düşünme ilkelerinin bilimlere ortaya çıkarması ve teknolojik gelişmeleri etkilemesi ile Sanayi Devrimi yaşanmıştır. Olgular dünyası ile sınırlandırılan bilim artık toplumdaki tüm sorunlara çözüm üretecek en geçerli alan statüsüne yükseltilir. Sanayi Devrimi ile gelen sanayideki makineleşme süreci insanın manevi yönünün göz ardı edilmesiyle insan yaşamına da yansımaktadır. Bu makineleşme sürecinin ve akla dayalı bilimsel üstünlüğün felsefe ve bilim tarihindeki belki de birer isyana dönen eleştirisi ve çözüm önerisi 20. yüzyılda Paul Feyerabend ile zirvesini yaşamıştır. Feyerabend bilim üstünlüğünün toplumdaki birçok alanı etkilediği gibi, demokrasi için bir tehdit oluşturacak denli siyasal alanı da etkilediği kanısındadır. Ona göre, bilimsel yasalar ve onları ortaya çıkaran toplumsal düzen arasında bağlantı vardır. Devlet, bilimin sunduğu imkanlar vasıtasıyla geliştirdiği, sosyal denetim mekanizmalarıyla birlikte düşünce özgürlüğünü tehdit eder bir boyut kazanmıştır. Feyerabend'e göre din ve devletin birbirinden ayrılarak laik bir yapıya bürünme süreci, bilim ile devlet arasında da gerçekleştirilmelidir. Çünkü ona göre, bilim dinsel bir kurum haline gelmiş ve toplumda çeşitli problemler ortaya çıkmıştır. Bu problemlerin ortadan kalkması için bilim ve devletin birbirinden ayrılması gerekmektedir. Çünkü bilimin devlet tarafından desteklenmesi toplumsal alandaki gücünü daha da artırmıştır. Devlet eliyle güçlenen ve eleştiri kabul etmeyen bilim; insan, toplum ve evren ile alakalı bilgiler ortaya koyan bağımsız bir disiplin olma özelliğinden uzaklaşmaktadır. Bilimin de toplumdaki diğer gelenekler gibi bir gelenek olduğunu dile getiren Feyerabend'e göre devlet özgür bir toplum oluşturmak için tüm geleneklere eşit şans tanınmalıdır. Ancak bu şekilde bilimden siyasi alana yansıyan demokrasi tehdidi önlenecektir. Feyerabend, bilimsel yöneme ve kurama eleştiri getirdiği için bazı kişilerce bilim anarşisti olarak tanımlanmıştır. Onun amacı bilimsel alanda bir anarşi yaratmak değildir; bilimin otoriter, baskıcı, hükmedici tavrını ifşa ederek, devletten ayrılması gerekliliğini ortaya koymaktır. Feyerabend'e göre ancak devletten ayrılan bilim özgürce gerçekleşecek ve toplum için bir özgürlük aracı haline gelecektir.

### ABSTRACT

In the 17th century Enlightenment Period, the Industrial Revolution took place with the dominant position of the mind and the construction of scientific knowledge through reason, the scientific method and the principles of rational thinking revealed the sciences and influenced technological developments. Science, which is limited to the world of facts, is now elevated to the status of the most valid field that will produce solutions to all problems in society. The process of mechanization in industry that came with the Industrial Revolution is also reflected in human life by ignoring the spiritual aspect of man. The criticism and solution proposal of this mechanization process and reason-based scientific superiority, which perhaps turned into a rebellion in the history of philosophy and science, reached its peak in the 20th century with Paul Feyerabend. Feyerabend is of the opinion that the superiority of science affects many areas in society, as well as the political area, to the extent that it poses a threat to democracy. According to him, there is a connection between scientific laws and the social order that reveals them. The state has gained a dimension that threatens freedom of thought with the social control

mechanisms it has developed through the opportunities offered by science. According to Feyerabend, the process of separating religion and state from each other and adopting a secular structure should also be carried out between science and the state. Because, according to him, science has become a religious institution and various problems have arisen in society. In order to eliminate these problems, science and the state must be separated from each other. Because the support of science by the state has further increased its power in the social field. Science that is strengthened by the state and does not accept criticism; It moves away from being an independent discipline that reveals information about humans, society and the universe. According to Feyerabend, who stated that science is a tradition like other traditions in society, the state should give equal chances to all traditions in order to create a free society. Only in this way will the threat to democracy reflected from science to the political sphere be prevented. Feyerabend has been defined by some people as a scientific anarchist because he criticized the scientific method and theory. His aim is not to create anarchy in the scientific field; It is to reveal the necessity of separating science from the state by revealing its authoritarian, oppressive and dominating attitude. According to Feyerabend, only science separated from the state will occur freely and become a tool of freedom for society.

## GİRİŞ

Günümüz felsefesinde her felsefi problem kendi özgün kavramları ve bağlamı içerisinde ele alınmakta ve kendi çözüm önerisi ile değerlendirilmektedir. Felsefi bilginin sürekliliğinden dolayı, her felsefi ekol kendi argümanlarını oluştururken gerek yanında yer alması ile gerek eleştirisi ile başka felsefi ekollerden etkilenmektedir. 20. yüzyılın önemli filozoflarından olan Paul Feyerabend, eleştirel felsefe yöntemi ile birçok filozofun felsefi ekollerini önce benimseyip açıklamış olsa da çok ciddi şekilde eleştirerek kendi felsefi önerisini sunmuştur. Eleştiri sürecine tez danışmanı Victor Kraft, hocası sayesinde üyesi ve öğrenci lideri olduğu Viyana Çevresi eleştirisi ile başlamıştır. Daha sonra bir dönem asistanlığını yaptığı ve pozitivistten post-pozitivizme geçişte bir köprü görevi gören Karl Popper'i, fikirlerinden fazlasıyla etkilendiği Thomas Kuhn ve kendisini dogmatik uykusundan uyandırdığını iddia ettiği Ludwig Wittgenstein'i eleştirerek kendi kuramını önermiştir.

Dünyayı kendi resmettiği kadar, sadece olgular ile kabul eden Pozitivizm eleştirisi ile başlayan eleştiri süreçlerinde Feyerabend, dünyanın bu şekilde resmedilişinin eksik ya da hatalı olduğunu dile getirmektedir. Feyerabend, Pozitivizm eleştirisi ile sadece akıl ile yapılan bilimin toplum gözünde yüceltilmesini eleştirerek felsefi ya da bilimsel alanda tüm dikkatleri üzerlerine çekip birçok kişinin ya da ekolün eleştirisine maruz kalarak *bilim düşmanı* ya da *anarşist* olarak itham edilmiş, yaklaşımıyla bilim felsefesine ilişkin tartışmalarda farklı bir bakış açısı ortaya koymuştur. Viyana Çevresi pozitivistiminin ya da Karl Popper'in "eleştirel akılcılığının" önce açıklayıcısı sonrasında çok sert eleştiricisi olarak adını duyurmuş ve yirminci yüzyılın en ünlü bilim felsefecilerinden biri haline gelmiştir. Ona göre bilimde kullanılan tümevarım, yanlışlamacılık ve her türlü rasyonalist görüş toplumsal yapı için tehlike oluşturmaktadır. Çünkü bu ilkeler bilimi insaüstü bir otorite haline getirerek, bilimin toplum üzerinde bir baskı oluşturmamasını sağlayarak demokrasiyi tehdit etmektedir.

Feyerabend, bilim adına hüküm veren ve değişmez kabul edilen görüşleri eleştirerek bunu "*bilim kilisesi*" olarak tanımlamıştır. Ona göre, nasıl ki kilise kendi doktrinine uygun gelmeyen her görüşü aforoz ediyor ve din dışı bırakıyorsa bilimde kendi yapısına uygun olmayan düşünceyi kabul etmeyip yok saymaktadır. Feyerabend'in "Bir zamanlar insana, kendisini zorba bir dinin yarattığı korkulardan ve önyargılardan kurtaracak fikirleri ve gücü vermiş olan aynı girişkenlik, şimdi o insanı kendi çıkarlarının kölesi haline getiriyor" (Feyerabend, 1999). söyleminden anlaşılacağı üzere bilim Orta Çağ'daki skolastik düşünce ile yaşadığı mağduriyetin acısını çıkarmaya çalışmaktadır. Skolastik düşüncede din adamlarının söyledikleri esas alınırken, bilim ve düşünceye izin verilmemekte, özgür bir bilimden söz edilememektedir. Kilisenin tek egemen güç olduğu Orta Çağ'ın karanlık halini bilimin ve aklın tek egemen güç olduğu pozitivist süreç almıştır. Orta Çağ'da kilisenin emirlerine karşı gelmenin ağır cezaları olduğu gibi, Pozitivist süreçte de bilimin çalışmaları dışında çalışma yapmak bilim sayılmamak ile eş değer kabul edilmekte bilim adamı cezalandırılmaktadır. Bilimin kendisi dışındaki tüm açıklama modellerini aforoz etmekte olduğu Sunay'ın şu cümlelerinden de anlaşılabilir: "Nasıl

dün insanlar papazların ve kardinallerin kozmolojisini tartışmasız kabul etmek zorunda ise bugün de sıradan insan, bilim adamlarının kozmolojisini tartışmadan, düşünmeden kabul etmek zorundadır” (Sunay, 2020). Bu çalışma “*bilim kilisesi*” kavramının tarihsel kökenine inilerek nasıl olgunlaştığının ele alınması, kavramın anlaşılmasına ve niçin eleştiri sahnesinde başrol oynadığına açıklık getirmeye çalışacaktır. Daha sonra kavramın siyaset ile ilişkisi, bu ilişkinin toplum üzerindeki etkisi incelenmeye çalışılacaktır.

### “BİLİM KİLİSESİ”NİN KAYNAĞI

19. yüzyılda, bilim göz kamaştırıcı bir çıkış ile incelenmesi gerekenin yalnızca emprizmin etkisiyle ortaya çıkan olgular olduğuna değinmektedir. Burada söz konusu olan şüphesiz ki önce Saint Simon tarafından geliştirilen daha sonra August Comte tarafından sistemleştirilen Pozitivizm’dir. Klasik ve Sistematik olarak ikiye ayrılan Pozitivizm; klasik dönemde Comte’un öncülüğünde toplum incelemesi ile, Sistematik dönemde ise Kraft öncülüğünde bilim incelemesi ile çalışmalarını yürütmüştür. 19. yüzyıl felsefesinde, bilimin metafiziksel unsurlardan tamamen temizlendiği Pozitivizm ile karşımıza çıkan temel unsurlar; tümevarım, emprizm, doğrulamacılık, metafiziğin reddiyle başrol olan akıl’dır. Comte göre Pozitivizm ile bilim aracılığıyla 19. Yüzyılda yaşanan kültürel ve toplumsal tüm sorunlara çözüm bulunacak, bilim toplumun evrilişine önyak olacaktır. Pozitivizm’e göre insanın doğaya karşı gücünü gösteren temel unsur sadece deneydir ve tüm yüce gizemler insan zihnine yasaklanmıştır. 19. yüzyıl boyunca bilimsel çalışmalara sonsuz güven duyulmuş, bilimsel çalışmalar Pozitivizmin temel yasalarına göre devam etmiş ve bilim doğaya bütünüyle egemen olmuş, akıl ve bilim ayrıcalıklı bir konuma yerleşmiştir.

Feyerabend, akademik hayatının başında içinde bulunduğu Viyana Çevresi’nin etkisiyle sıkı bir pozitivism savunuculuğu yapmış olsa da zamanla bu görüşlerin en sert eleştisini yapmıştır. Metafiziğin tamamen bilim dışına atılarak, gereksiz olduğu görüşü ile Pozitivizme ait şüphe duymaya başladığını şu ifadelerinde bulabilmekteyiz; “Walter bilimsel araştırmaların gerçekliğe göre yürütüldüğüne işaret ederek başladı. Buna karşılık ben de bilim adamlarının ne yazık ki metafizik kabuklarını hala atamadıklarını söyledim. “Metafizik ya da değil” dedi Walter, “bilim adamları, pozitivistler de dahil, herkesin kabul ettiği sonuçlara ulaşıyorlar, oysa antiseptik bir dil ve katı bir mantık benimsemiş olsalardı asla bir yere varamazlardı.” Bu, bir süre sesimi kesti; ama bir kuşku tortusu kaldı” (Feyerabend, 1994). Bilimin tamamen olgusal olup metafiziği dışlaması ile ilgili şüpheleri Popper’in tümevarım eleştirisi ile daha da derinleşmiştir. Konu ile alakalı bir dönem kafa karışıklığı yaşamış, metafizik ve bilim arasındaki ilişkiyi sorgulamaya başlamıştır. “Ad hocçuluğun modası geçti; böylece, sıkı bir ampirik uyum gerekliliğinin yerini delillerin mümkün olduğunca ötesine geçme gerekliliği almalıdır. Metafizik, bilinen olguların ötesine geçmekte ve olgularla sık sık çelişmektedir. Bunun anlamı bilimin metafizik olduğu mudur? Hayır; bilimsel hipotezler çürütülebilir, metafizik sistemlerde bu mümkün değildir” (Feyerabend, 1994). Feyerabend, bilimin metafizik olduğu gibi bir fikir ileri sürmüş değildir, bilim ve metafiziğin bahsedildiği gibi keskin çizgiler ile birbirlerinden ayrılmış olduklarına dair şüphelere sahiptir.

Feyerabend, pozitivismin temel unsurlarından olan doğrulamacılık ilkesinin de geçerliliği hakkında şüphelere yine Popper sayesinde ulaşmıştır. Pozitivizme göre bir önermenin doğrulanması, doğrudan gözlemlenebilir olgular hakkında olması ve mantıksal düşünme kurallarına aykırı olmaması gerekmektedir. Doğrulanan bilimsel gerçeğin tek ve mutlak olduğunu savunan pozitivistler, bilimsel teoriler geliştirmek için temel yöntem olarak da tümevarımı kabul etmişlerdir. Popper’a göre ampirik bilimlerdeki teorileri ispatlamak mümkün değildir, bu teoriler ancak yanlışlanabilmektedirler. Popper bu görüşüyle pozitivismin temel unsuru olan doğrulamacılık görüşü ve doğrulamacılık ile varılan tümevarım yöntemini eleştirerek reddetmiş, yerine yanlışlanabilir ilkesini getirmiştir. Feyerabend, Popper’ın bu eleştirinden ve yerine gelen yanlışlanabilirlikten başlarda çok etkilenmiştir. “Beni sonunda ikna eden argüman tümevarımın bir uydurma olduğunu söylüyordu. Popper, üst düzey kanunlar çoğunlukla alt düzey kanunlarla çelişir ve bu yüzden de onlardan türetilemezlerdi; öncüllere ne kadar varsayım eklenirse eklensin sonuç değişmeyecekti. Yanlışlamacılık artık gerçek bir seçenek gibi duruyordu, ben de avlandım” (Feyerabend, 1994). Feyerabend daha sonra bu etkiden kurtulma sebebini “Popper’in fikirleri çok baştan çıkarıcıydı ve ben de tuzağa düşmüştüm.” Daha sonra bu etkiden kurtularak “Yanlışlamacılık, diyordum herhalde, iyi olabilir; ama neden ona sanki kutsal bir şeymiş gibi davranayım?” (Feyerabend, 1994)

Feyerabend, pozitivistimin temel unsurlarının toplum tarafından tek geçerli yöntem olarak mutlaklaştırılmasının, bilim ve bilime dayalı tüm teknolojilerin diğer tüm girişimleri hükümsüz kılacağını savunmaktadır. Feyerabend eleştirdiği bilimi şu şekilde tanımlamaktadır; “ “Bilim” ile kastettiğim çoğu bilim adamının ve geniş bir bölümüyle okumuş yazmış çevrelerin anladığı anlamda teorik ve uygulamalı doğa ve toplum bilimleridir: nesnellik amacı güden, sonuçlarını gözleme (deneye) ve zorunluluk yüklü gerekçelere dayandıran, sağlam bir şekilde tanımlanmış ve mantıksal olarak kabul edilebilir kurallar rehberliğinde yürütülen bir araştırma olarak bilim” (Feyerabend, 1995). Feyerabend, genel anlamda bilime karşıt değildir; aksine yaptığı çalışmaların büyük bir çoğunluğu fizik, mekanik gibi bilimler ile ilgilidir. O bilimin toplumdaki diğer girişimleri hükümsüz kılması, toplum üzerinde baskı oluşturarak demokrasiyi tehdit etmesi özelliğine karşı çıkmaktadır. Ona göre bilimin kendisinin özgür olması ve özgürce eleştirilmesi gerekmektedir, ancak özgür bir şekilde yapılan bilim toplumu özgürleştirmektedir.

Feyerabend’in “Bir zamanlar insana, kendisini zorba bir dinin yarattığı korkulardan ve önyargılardan kurtaracak fikirleri ve gücü vermiş olan aynı girişkenlik, şimdi o insanı kendi çıkarlarının kölesi haline getiriyor” (Feyerabend, 1999). söyleminden anlaşılacağı üzere bilim Orta Çağ’daki skolastik düşünce ile yaşadığı mağduriyetin acısını çıkarmaya çalışmaktadır. Skolastik düşüncede din adamlarının söyledikleri esas alınırken, bilim ve düşünceye izin verilmemekte, özgür bir bilimden söz edilememektedir. Kilisenin tek egemen güç olduğu Orta Çağ’ın karanlık halini bilimin ve aklın tek egemen güç olduğu pozitivist süreç almıştır. Orta Çağ’da kilisenin emirlerine karşı gelmenin ağır cezaları olduğu gibi, Pozitivist süreçte de bilimin çalışmaları dışında çalışma yapmak bilim sayılmamak ile eş değer kabul edilmekte bilim adamı cezalandırılmaktadır. Bilimin kendisi dışındaki tüm açıklama modellerini afroz etmekte olduğu Sunay’ın şu cümlelerinden de anlaşılmalıdır: “Nasıl dün insanlar papazların ve kardinallerin kozmolojisini tartışmasız kabul etmek zorunda ise bugün de sıradan insan, bilim adamlarının kozmolojisini tartışmadan, düşünmeden kabul etmek zorundadır” (Sunay, 2020).

20. yüzyılın başından itibaren pozitivistime getirilen eleştiriler ve yönelimlerle ortaya çıkan post-pozitivistim ile bilgi ve bilimsel alanda yürütülen tartışmalar bilimsel, düşünsel ve kültürel alanı etkilemiştir. Bu etkilenme üzerinden fikirlerini inşa eden Feyerabend’e göre bilim toplumdaki temel güç haline gelirse toplumsal değerler zarar görecektir. Çünkü ona göre; “Gücün yolu basit ve oldukça sık tutulan bir yoldur. Tartışma yoktur; anlama çabası yoktur; gücü elinde bulunduran yaşam biçimi kendi kuralını koyar ve ona ters düşen davranışı yok eder.” (Feyerabend, 1995). Feyerabend, bilim ile kesin kurallar konması düşüncesinin farklı toplumların değerleri ile uyuma göstermediğinde ne yapılabileceği üzerine sorgulamaya girmekte, bilimi bu dayatmacı tavrından dolayı ortaçağ dönemindeki kilise yapısına benzetmektedir. Ona göre bilimsel çalışmalar içerisinde yer aldığı toplumsal değerler ile değerlendirilmekte; kabul görüldüğü edilmektedir. “Kürtaj, ötenazi, genlerle oynama, suni dölleme ve farklı kültürler arası (entellektüel, politik, ekonomik, askeri) alışverişler hakkındaki tartışmalar değerlerin düşünme, tutum ve eylemlerimizi nasıl etkilediğini göstermektedir.” (Feyerabend, 1995). Feyerabend, bilimin söylemlerinin evrensel bir kıtas haline gelmesini, tek ve mutlak bilgi kaynağı olarak görülmesi ile toplumda elde ettiği güç ile demokrasi ve özgürlük için bir bilim kisisesi haline dönüştüğünü vurgulamaktadır. Ona göre, yapılması gereken bilim kilisesinin deşifre edilerek, bilimin ve toplumun özgürleştirilmesidir.

Feyerabend içinde yer aldığı post-pozitivistimi, bilimin üstünlüğünü reddi ve tek bir yöntemin varlığını kabul etmediği kuramsal anarşist tavrıyla zirvesine taşımıştır. Feyerabend’e göre bilim Ortaçağ’daki dinsel yapının halini almış, bilim adamları ise din adamlarının eleştirilemez, mutlak, dogmatik tutumuna bürünmüştür. Bilimin bu yönüyle *epitemolojik bir hastalığa* yakalandığını, bu hastalığın ilacının hastalık geçene kadar kullanılacak olan *yönteme hayır* söylemidir. Buradan kasıt yöntemsiz bilim değil, bilimin ilerlemesi için tek bir yönteme saplanıp kalmak yerine bilimsel ilerlemeyi sağlayacak olan *ne olsa uyar* ilkesiyle gelen duruma uygun olan her ilkenin geçerliliğidir. Bilim, tahakküm edici özelliği ile toplumdaki demokrasi ve düşünce özgürlüğünü kısıtlayarak amacı dışına çıkmaktadır. Ona göre, bilim insanlığa hizmet etmeli, insanlığın mutluluğu için çalışmalıdır. Bilimin değeri, insanın özgürleşmesi ve mutluluğuna yaptığı katkı ile ölçülmelidir. Oysa çağdaş bilim, başka geleneklerin varlığına engelleyerek, baskıcı siyasal iktidarlardan beslenmekte ve kendisi de bu iktidarlara beslenmektedir. Feyerabend’e göre bu durumda hem bilim, hem bilim felsefesinin hasta olduğunu ifade ederek bilimin anarşist bir çaba olduğunu kuramsal anarşizm ile açıklamaktadır. “Bilim aslında anarşist bir çabadır:

Kuramsal Anarşizm, yasa ve düzen öngören diğer seçeneklerinin yanında daha bir insana yakın, daha çok ilerlemeyi yüreklendiricidir” (Feyerabend, 1989). Feyerabend, bilimin sözkonusu hastalığından bahsedilen anarşizm ile kurtulacak, insancıl hale gelecektir. Çünkü feyerabend bilim felsefesi ile uğraşma gerekçesini, “felsefenin bu “saldırgan” dalıyla uğraşmasının gerekçesini, “daha insancıl” bir bilim görüşü ortaya koymak diye açıklar” (Güzel, 1996).

### BİLİM KİLİSESİNİN SİYASİ YAPIYA ETKİSİ

Feyerabend’e göre “Bilim konusundaki her tartışmada ortaya çıkan iki soru vardır:

(A) *Bilim nedir?* –nasıl ilerler, sonuçları nelerdir, standartları, usulleri, sonuçları öteki alanların standartlarından, usullerinden, sonuçlarından ne bakımdan farklıdır?

(B) *Bilimi bu kadar yüce yapan nedir?* –bilimi öteki varoluş biçimlerine kıyasla daha yeğlenir yapan ve bunun sonucu olarak da farklı standartlar kullanmasını ve farklı sonuçlar elde etmesini sağlayan nedir?” (Feyerabend, 1991).

Feyerabend, bu soruların cevabını araştırarak işe başlamıştır. Birinci sorunun cevabının tek bir yanıtının olmadığı, her ekole göre farklı cevaplar bulabileceğini ifade ederek, kendi tanımını “bilim insan tarafından geliştirilmiş olan pek çok düşünme biçimlerinden yalnızca biridir, en iyisi de olmak zorunda değildir” (Feyerabend, 1995). şeklinde yaparak ikinci sorunun yanıtına geçmiştir. Amacı zaten ikinci sorunun irdelenmesi ve toplumda geçerli olan bilim anlayışının eleştirilerek deşifre edilmesidir. Çünkü ona göre ikinci soruyu sorup cevap arayan pek kimse yoktur. “Soru B’yi soran hemen kimse yoktur. Bilimin kusursuzluğu varsayılır, kanıtlanmaz. Bu konuda bilim adamları ve bilim felsefecileri, kendilerinden önce biricik Roma Kilisesi’nin savunucuları nasıl davrandırlarsa öyle davranırlar: Kilise öğretisi hakikattir, bunun dışında kalan her şey pagan saçmalıklardır” (Feyerabend, 1991). Ona göre, bir dönemler dinde yer alan kabuller ve üstü kapalı ikna yöntemleri bilimde kendini gösterip toplumu etkilemektedir. Bilimin söylemleri, yapılan bilimsel çalışmaların önüne geçerek eşeltilirip sorgulanmamaktadır. “Dahası, bilim artık tikel bir kurum değildir; Kilise bir zamanlar nasıl toplumun temel dokusunun bir parçası idiye, şimdi de bilim demokrasinin temel dokusunun bir parçası olmuştur. Kilise ile Devlet artık elbette birbirlerinden özenle ayrılmışlardır. Oysa Devlet ve Bilim iç içedirler” (Feyerabend, 1991).

Feyerabend, bilim ve devlet yapısının bir arada olduğu görüşünü ileri sürerek bilimsel alanda yaşanan baskıcı ve otoriter tutumun siyasal alan için bir tehdit oluşturacağını savunmaktadır. Feyerabend, bilimin insan için olduğunu, insanı geliştirip özgürleştirilmesi gerektiğini, bilimsel etkinliklerin bu düşünceyle yapılmasını vurgulamıştır. “Kendi bilim felsefesinde vurguladığı temel şey, bilimin insan için olduğu; bilimsel etkinliklerde insanın gözardı edilmemesi gerektiğidir.” (Güzel, 2013). Feyerabend, bilimin ve bilim adamlarının tek otorite olup toplumu yönlendirerek bilimin bilim için yapılmasını, insanlığa hizmet etmemesini eleştirilmiştir. Ona göre, bilim adamları ve usalcılar savundukları görüşleri ve söylemleri ayrıcalıklı konuma getirip topluma dayatarak özgür toplum yapısına engel olmaktadır. “*Ussalcılar ve bilim adamları kendi gözde ideolojilerinin ayrıcalıklı konumunu ussal olarak (bilimsel olarak) gerekçelendiremezler. Ama diyelim ki gerekçelendirdiler –bundan, bu ideolojilerin artık herkese dayatılması gerektiği sonucu mu çıkar?*” (Feyerabend, 1991)

Feyerabend’e göre bilim, tek başına hüküm sürmektedir ve bunun nedeni ise “Bilimin günümüzdeki egemenliği, sahip olduğu kıyaslamalı üstünlüğünden değil, yarışmanın onun kazanacağı biçimde düzenlenmiş olmasından ileri gelir” (Feyerabend, 1991). Bilimin egemenliği devlet tarafından güçlenmekte, söz konusu güç yarışı bilimin galip geleceği şekilde devlet tarafından desteklenmektedir. Feyerabend, bilimsel olmayan düşüncelere eşit rekabet şansı verilmesiyle bilim karşısında güçlü bir rakip haline gelebileceklerini, hatta belki bilimin eksikliklerini açığa çıkaracaklarını savunmaktadır. Feyerabend’e göre özgür bir toplum içinde var olan bütün geleneklere eşit haklar verilmeli ve her gelenek güç merkezi olan devlete ulaşmada eşit konumda olmalıdır. Ona göre bilimin toplumda üstün olması yönteminden ya da elde ettiği sonuçlardan gelmemektedir. Bilimin baskıcı tavrından dolayı bilim dışındaki geleneklerin ne yaptıklarını bilmediğimiz için bilimi üstün görmekteyiz. “Biz bilimin ne yaptığını biliyoruz, ama öteki geleneklerin bundan çok daha iyisini yapıp yapamayacağına ilişkin en ufak bir fikrimiz yok. Öyleyse bunu anlamamız gerekiyor” (Feyerabend, 1991). Feyerabend, bunu anlamının yolunun toplumdaki bütün geleneklerin bir arada özgürce gelişmesiyle mümkün olacağını savunmaktadır. “Toplum hiçbir zaman tikel bir gelenekle özdeşleştirilemez ve devlet ile gelenekler her zaman ayrı tutulurlar” (Feyerabend, 1991).

Feyerabend'e göre özgür bir toplumda yaşamak için toplumda yer alan bireylerin belirli bir olgunluğa sahip olması gerekmektedir. Ona göre toplumda yaşayan bir çok birey henüz bu olgunluğun farkına varmamış, bu olgunluğa erişmemiştir ve böyle bir duyarlılığa toplumda en çok ihtiyacı olanlar bilim adamları ve öteki ussalcılardır. Sözü edilen olgunluk akılsal olmayıp, duyarlılık ile farklı geleneklerin amaçlarını ve üyelerinin yaşamındaki yerini anlamaya çalışarak gerçekleşmektedir. Feyerabend'e göre bu duyarlılık eğitim yolu ile öğretilecek bir şey olmayıp özgür bir toplum yapısı içerisinde gerçekleşmektedir. "Bu, okullarda öğretilemez ve gereksindiğimiz bilgeliği "toplumsal araştırmalar"ın yaratmasını beklemek de boşunadır. Ama bu, vatandaş girişimlerine katılmakla edinilebilir" (Feyerabend, 1991). Feyerabend, bilimsel yasalar ve onları oluşturan toplumsal düzen arasında bir bağlantı olduğu düşüncesiyle hareket ederek; hangisinin diğerini yönlendirdiğini, eleştirdiğini, gerektiğinde değiştirip değiştiremediğini sorgulamaktadır. Çünkü ona göre bilim de diğer gelenekler gibi eleştirilmeli, gerektiğinde değiştirilmelidir. "Bir zamanlar, bilimsel yasalar iyice oturmuş, bir daha düzeltilemez yapılar olarak görülüyorlardı. Bilginler olguları, yasaları keşfederler, böylece de güvenilir, kuşku duyulamaz bilgiyi arttırırlardı. Oysa Feyerabend'e göre, bilimsel yasalar kısmen değil bütünüyle bile yanlış olabilirler, yerine göre düzeltilebilirler de. Her ilke eleştirilebilir" (Güzel, 2013).

Feyerabend, bilimsel alandaki ilerlemenin bilim içerisinde yapılan eleştiriler ve çatışmalar ile gelişebileceğini düşünmektedir. Bilimin ilerlemesi ve gelişmesi için farklı geleneklerin bir arada, eşit değerde ve duyarlılık ile yaşaması gerektiğini vurgulamaktadır. "Görüyorsunuz ya -bilimler çatışmalarla doludur. Tek bir sesle konuşan BİLİM adlı tek bir canavar ise propogandacılar, indirgemeciler ve eğitimciler tarafından oluşturulan bir kolajdır" (Feyerabend, 1999). Feyerabend'e göre, bilim değişmez genel geçer kurallar ile işlememekte, böyle bir bilimsel düşünce bilimsel ilerlemeye zarar vermektedir. Bu durumda bilimin sonuçlarına güvenilmemeli mi ya da bilim bırakılmalı gibi yeni sorgulamalara girerek bu duruma bir çözüm getirmeye çalışmaktadır. " "Bilim bırakılmalı mı yoksa kullanılmalı mı?" soru budur. Feyerabend'e kalırsa bu soruya bilgikuramsal anarşizm yanıt verir." (Güzel, 2013). Feyerabend'in getirmiş olduğu bilgikuramsal anarşizm, bilim alanındaki bütün geleneklere eşit değer verilmesi sürecinden hareket ederek özgür bir toplum düşüncesine evrimini sunmaktadır. Onun anarşizm kavramından kastı klasik siyasi bir anarşizmi içermemektedir. "Feyerabend'in anarşizmi, toplumu eleştiren duygu ya da düşüncelerde değil, katı kuralların tamamen reddedilmesinde ve başkaldırının, farklı oluşun ve sorgulayan bir bilincin davet edilmesinde yatıyordu. Siyasi anarşistlerin (ve şiddet karşıtı anarşistlerin!) aşırı uçlarda yer almalarının ve öfkelerinin ardında yatan nedenlerin anlaşılmasını sağlamak için, günlük yaşamdaki mücadelelerde farklı kişiliklere bürünen insanlara yeteri kadar yakın değildi" (Feyerabend, 2007).

Feyerabend'e göre, her geçen gün kendini kutsallaştırarak, toplumda ayrıcalıklı bir yere konumlandırılan bilim, bunu yaparken devlet tarafından desteklenmektedir. Bilimin toplumsal yapı üzerindeki gücünü devlet sağlamakta ve bağımsız olması gereken yapıya ters düşmektedir. Devlet, bilimin evren ve dünyaya ilişkin geçerli bilgiyi sağlayabilecek tek kaynak olduğunu topluma empoze etmektedir. "Öte yandan, günümüzde devlet ve kilise arasında bir ayırım olmasına rağmen devlet ve bilim arasında bir ayırım olmadığını düşünen Feyerabend'e göre, geçmişteki devlet ve kilise ayırımı günümüzde devlet ve bilim ayırımıyla tamamlanmalıdır" (Saygılı, 2019). Feyerabend'e göre, devlet her disipline eşit yaşama hakkı vererek gerek bilimin, gerek dinin ya da bir başka baskıcı unsurun toplum üzerinde mutlak güç olmasına engel olacaktır. Bilime uygun olan yaşamalı, uygun olmayan yok olmalı biçimindeki bilim şovenliğinin üstesinden gelmek için devletin müdahalesine ihtiyaç vardır. "Ne kadar eski ve saçma olursa olsun bilgimizi geliştiremeyecek düşünce yoktur. Tüm düşünce tarihi bilimce emilir ve tek tek her kuramın geliştirilmesinde kullanılır. Siyasal müdahale de reddedilmez. Statükoya alternatiflerin direnç gösteren bilim şovenliğinin üstesinden gelmek için bu müdahaleye ihtiyaç duyulabilir" (Feyerabend, 1999). Feyerabend'e göre, devlet herhangi bir bilgi türünün karşısında ya da yanında yer almamalı tarafsız olmalıdır. "Devlet, bireysel seçim hürriyetini her türlü boyunduruktan esirgemek amacıyla bir paradigmayı diğerine, örneğin bilimi dine, dini bilime, üstün tutmaktan kaçınmalı ve her vatandaşa kendisine uyanı tanıma, kullanma ve geliştirme imkanı vermelidir" (Delacampagne, 2010).

## SONUÇ

Feyerabend *bilim kilisesi* söylemiyle; bilimin yetkeci, köleleştirici, farklılıkları dışlayıcı özelliklerinin eleştirisini yapmakta ve bilime insani bir karakter kazandırma arzusunu taşımaktadır. Ona göre bilim toplumda asli görevini yitirerek baskıcı bir role ve dinsel bir kılığa bürünerek bilim adamlarının özgür

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

çalışmasının önüne geçmiştir. Toplumdaki diğer geleneklerden hiçbir ayrıcalığı olmaması gereken bilimin dünyanın her yerinde rakipsiz bir egemenlik kurduğunu dile getiren Feyerabend, bu durumun nedenini bilimin akılsal oluşu ya da işsel üstünlüğünde değil, devletle bütünleşerek bütün diğer kültürleri, değerleri, yöntemleri, usulleri, akıldışı veya bilimdışı ilan ederek yok etmiş olmasından kaynaklandığını savunmaktadır. Bilimin bu tutumunun bilim dışı alanları haksız bir zaferle baskı altında tuttuğu, bilimsel doğrular konusunda tekelci bir konuma getirdiğini dile getirmektedir. Bilimin bu tekelci konumunu ve yegâne bir bilgi aracı olma özelliğini kabul etmeyip bu durumun yaşamdaki, bilimdeki değişme ve gelişmeyi göz ardı etmek olduğunu söylemektedir.

Feyerabend bilimin modern insan üzerinde, Hıristiyanlığın Ortaçağ insanı üzerindeki nüfuzuna benzer bir statü kazandığını savunmuş, putlaştırılan bilimin insanın gözündeki yüksek statüsünü kurumlaşmış bir baskı sayesinde koruduğunu belirtmiştir. Bu baskıyla bilim adamlarının da toplumun yapısını belirleyen, neyin doğru olup olmadığı konusunda fetva veren din adamlarına dönüştüğünü dile getirmektedir. Ona göre kilisenin Orta Çağ'daki baskı ve egemenliğini çağımızda bilim kurmuştur. Bilimin bu bağınaz yapısı hem bilimsel gelişim için hem de toplumsal ilerleme için bir tehdit oluşturduğunu dile getirerek, özgür bir toplum için bilimsel çalışmaların halkın denetimine açılması gerektiği ve bilim ve devletin birbirinden ayrılması gerektiği hususuna değinmektedir. Feyerabend'e göre bilim; din, ideoloji, astroloji hatta falcılık gibi uygulamalardan sadece biri olarak kabul edilmelidir. Çağdaş bilimin üstün bir özelliğe sahip olduğunun kabul edildiği; dogmatik, dayatmacı ve kör bir zihniyetin bilimde egemen olduğunu dile getirip bu durumu sert bir şekilde eleştirmiştir. Ona göre bir bilginin bilimsel olması, ona insanların itaatini zorunlu kılmaz, aksine bilim insan için yapılmalı, insancıl olmalıdır.

Feyerabend de metafiziği diğer bilgi türleri gibi değerli olduğu düşüncesiyle felsefe tarihindeki yerini sağlamlaştırmıştır. Bilimde sadece aklın temel alınması, aklın egemen olması fikrine de benzer karşı çıkışlarda bulunan Feyerabend *ne olsa uyar* ilkesi ile daha plüralist bir yaklaşım sergilemiştir. Feyerabend eleştirileri ile gerek bilim camiasında gerek felsefe camiasında acımasızca eleştirilmiş *bilim düşmanı* ya da *anarşist* olarak ithamlara maruz kalmıştır. Burada amacı da bilim düşmanlığı değildir, amaç sadece akıl ile yapıldığı kabul edilen bilim için tek bir yöntem kabulünün ve bilgiyi tekelleştiren bir bilim anlayışının reddidir. Feyerabend, devlet tarafından desteklenerek kısır bir döngü içerisine düşen bilimin içine düştüğü kısır döngüden kurtulması için yeni bir bilim felsefesi arayışına girmiş ve bu arayışta kendine özgü bilim önerisi getirmiştir. Ona göre, bilim tek ve evrensel bilgi üretme biçimi olmayıp bilgi elde etmek için bilgi türlerinden sadece biridir. O, Bilimin bu özelliğini bilime verecek yapı onu yücelterek mutlaklaştıran devlettir görüşünü savunmuştur. Önerdiği bilim önerileriyle toplumda bilimin doğru anlaşılmasına, özgür bir şekilde uygulanmasına ve her türlü bilimcilik ya da bilim bağınazlığına karşı bilinçli olunmasına yardımcı olacaktır. Feyerabend'e göre, bilimin toplum karşısında mutlak otorite haline gelmesini sağlayan devlet, bilimden ayrılıp tüm geleneklere eşit mesafede durarak bilimi tekrar olması gerektiği yere getirecektir. Daha insancıl hale gelen bilimsel çalışmalar, artık toplumun özürleşmesi için çalışacak demokrasi ve ifade özgürlüğünü destekleyecektir.

ÖZET

Ülkemizin Avrasya jeo-ekonomik haritasında kazandığı şanlı zaferin yarattığı yeni fırsatlar, uluslararası ulaştırma sisteminin topyekün yeniden şekillenmesi gerçeğini yarattı. Özellikle Orta Asya ülkelerinin yeni pazarlara erişiminde Zengezur koridorunun ekonomik önemi vurgulanmalıdır. Dünya ekonomisinin ana lokomotiflerinden biri olarak kabul edilen Çin'den Orta Asya güzergahı üzerinden mal taşınması potansiyelinin yanı sıra Süveyş Kanalı üzerinden deniz taşımacılığı güzergahına alternatif bir ulaşım koridoru oluşturulması potansiyeli Azerbaycan'ın ve Zengezur koridorunun önemli bir ulaşım arterine dönüşmesi için koşullar yaratıyor. Son döneme baktığımızda Evergreen gemisinin Süveyş Kanalı'nda kazası, 5,1 milyar doları batıya, 4,5 milyar doları doğuya giden kargo olmak üzere toplam 9,6 milyar dolar kayba neden oldu. Dünya ticaretinin yaklaşık yüzde 12'sinin bu kanal üzerinden gerçekleştirildiği dikkate alındığında, Zengezur Koridoru'nun da aralarında bulunduğu alternatif ulaşım arterlerinin Avrasya'nın ulaşım altyapısında ekonomik önemini görebiliriz. Zengezur koridorunun bir parçası olacak hem demiryolu hem de otoyolun inşaatı ile ilgili çalışmalar hızla yürütülüyor. Böylece 101,9 km 2 trafik şeritli "Zafar Yolu"nun inşası, Azerbaycan'ın da dahil olduğu Karabağ bölgesinin ulaşım koridorlarına erişimi çeşitlendirerek içinden geçecek hatların önemini artıracak. Cumhurbaşkanı Recep Tayyip Erdoğan'ın Azerbaycan'a resmi ziyareti çerçevesinde 25 Eylül'de Azerbaycan Cumhuriyeti ile Türkiye Cumhuriyeti Arasında "Kars-Nahçıvan Demiryolu Projesine İlişkin Niyet Protokolü" imzalanması Zengezur koridorunun açılmasına yönelik ciddi adımlardan biri sayılmaktadır. Bölgede hayata geçirilecek diğer projeler değerlendirilirken Zengezur koridoru bölge ülkelerine göre daha ucuz bir alternatif görevi görüyor. İran ve Ermenistan üzerinden geçmesi beklenen 3,5 milyar dolar değerindeki yeni demiryolu hattını uzun yıllardır uluslararası finans kuruluşları, yabancı ülkeler ve hatta Ermenistan devleti bile finanse edemiyor. Zengezur koridorunun oluşmasıyla oluşacak yeni ekonomik konjonktürün Asya ve Avrupa'nın ulaştırma altyapısında özel bir önem taşıyacağı sonucuna varılabilir.

**Anahtar Kelimeler:** Zengezur koridoru, Karabağ, Azerbaycan, Türkiye, Avrasya jeo-ekonomik haritası

ABSTRACT

The new opportunities created by our country's glorious victory on the Eurasian geo-economic map have created the reality of a total reshaping of the international transportation system. The economic importance of the Zengezur corridor, especially in the access of Central Asian countries to new markets, should be emphasized. The potential to transport goods from China, which is considered one of the main locomotives of the world economy, via the Central Asian route, as well as the potential to create an alternative transportation corridor to the maritime transportation route via the Suez Canal, creates conditions for Azerbaijan and the Zengezur corridor to turn into an important transportation artery. When we look at the recent period, the accident of the Evergreen ship in the Suez Canal caused a total loss of 9.6 billion dollars, of which 5.1 billion dollars was cargo going west and 4.5 billion dollars was cargo going east. Considering that approximately 12 percent of world trade is carried out through this channel, we can see the economic importance of alternative transportation arteries, including the Zengezur Corridor, in the transportation infrastructure of Eurasia. Work on the construction of both the railway and the highway, which will be a part of the Zengezur corridor, is being carried out rapidly.

Thus, the construction of the "Zafar Road" with 101.9 km 2 traffic lanes will diversify access to the transportation corridors of the Karabakh region, which includes Azerbaijan, and increase the importance of the lines passing through it. "Protocol of Intent on the Kars-Nakhchivan Railway Project" was signed between the Republic of Azerbaijan and the Republic of Turkey on September 25, within the framework of President Recep Tayyip Erdoğan's official visit to Azerbaijan. The signing of the "Protocol of Intent on the Kars-Nakhchivan Railway Project" between the Republic of Azerbaijan and the Republic of Turkey on September 25, within the framework of President Recep Tayyip Erdoğan's official visit to Azerbaijan, is considered one of the serious steps towards opening the Zangezur corridor. While other projects to be implemented in the region are being evaluated, the Zangezur corridor serves as a cheaper alternative compared to the countries in the region. International financial institutions, foreign countries and even the Armenian state have not been able to finance the new railway line worth 3.5 billion dollars, which is expected to pass through Iran and Armenia, for many years. It can be concluded that the new economic conjuncture that will occur with the formation of the Zangezur corridor will be of particular importance in the transportation infrastructure of Asia and Europe.

**Keywords:** Zangezur corridor, Karabakh, Azerbaijan, Turkey, geo-economic map of Eurasia

### Giriş

Ülkemizin Avrasya jeo-ekonomik haritasında kazandığı şanlı zaferin yarattığı yeni fırsatlar, uluslararası ulaştırma sisteminin topyekün yeniden şekillenmesi gerçeğini yarattı. Pek çok Asya ülkesi bu yeni fırsatların zaten farkında. Özellikle Orta Asya ülkelerinin yeni pazarlara erişiminde Zangezur koridorunun ekonomik önemi vurgulanmalıdır. Dünya ekonomisinin ana lokomotiflerinden biri olarak kabul edilen Çin'den Orta Asya güzergahı üzerinden mal taşınması potansiyelinin yanı sıra Süveyş Kanalı üzerinden deniz taşımacılığı güzergahına alternatif bir ulaşım koridoru oluşturulması potansiyeli Azerbaycan'ın ve Zangezur koridorunun önemli bir ulaşım arterine dönüşmesi için koşullar yaratıyor. Son döneme baktığımızda Evergreen gemisinin Süveyş Kanalı'nda kazası, 5,1 milyar doları batıya, 4,5 milyar doları doğuya giden kargo olmak üzere toplam 9,6 milyar dolarlık kayba neden oldu. Dünya ticaretinin yaklaşık yüzde 12'sinin bu kanal üzerinden gerçekleştirildiği dikkate alındığında, Zangezur Koridoru'nun da aralarında bulunduğu alternatif ulaşım arterlerinin Avrasya'nın ulaşım altyapısında ekonomik önemini görebiliriz. Stratejik güvenlik açısından Zangezur koridoru bölgedeki siyasi dengeleri etkileyebilir. Nahçıvan'ı Azerbaycan'a bağlayan koridor, Azerbaycan'ın bölgesel gücünü artıracak ve Ermenistan'ı bölgesel entegrasyona dahil edecektir. Bu, barışçıl çözümlere ve bölgesel işbirliğine elverişli bir ortam yaratacak ve çatışma riskini azaltacaktır.

### Araştırma ve bulgular

Özbekistan ve Türkmenistan cumhurbaşkanları düzeyinde Güney Asya ve Güney Kafkasya'nın ulaştırma ve lojistik imkanlarının tartışılması, Orta Asya ülkelerinin, Azerbaycan'ın transit imkânları da dahil olmak üzere yeni ulaşım koridorlarının kullanılmasına büyük ilgi gösterdiğini ortaya koyuyor. Zangezur Koridoru ile ilgili önemli noktalardan biri de Aşkabat Antlaşması'nın ülkelerin Avrupa'ya yeniden entegrasyonu konusunda yeni perspektifler yaratmasıdır. Avrasya bölgesindeki ulaşım bağlantılarının geliştirilmesi ve diğer ulaşım koridorlarıyla ortak faaliyetin sağlanması amacıyla Türkmenistan, Özbekistan, Kazakistan, İran, Umman, Hindistan ve Pakistan arasında Aşkabat Anlaşması imzalandığını belirtmek isterim. Uluslararası yüklerin bu ülkeler üzerinden Zangezur koridoru üzerinden Avrasya pazarlarına ulaştırılması Karabağ bölgesinin ekonomik potansiyelinin artırılmasında özel bir rol oynayabilir. (Belyayev, 2023, s.15)

Zangezur koridorunun bir parçası olacak hem demiryolu hem de otoyolun inşaatı ile ilgili çalışmalar hızla yürütülüyor. Tarihi topraklarımızdan geçecek koridor, Karabağ bölgesindeki karayollarını birbirine bağlama çalışmasının karmaşık bir yapıyla yürütüldüğünü gösteriyor. Yani 101,9 km 2 trafik şeritli "Zafar Yolu"nun inşası, Fuzuli bölgesini Şuşa şehrine bağlayarak Karabağ bölgesindeki sosyo-ekonomik ilişkilerin canlanmasına fırsat yaratacaktır. 123,8 km ve 4-6 trafik şeritli Horadiz-Cebrayl-Zangilan-Ağband yolu, 70 km ve 4 trafik şeritli Hudafarin-Gubadlı-Laçın yolu, 73 km ve 2 trafik şeritli Kelbecer-Laçın yolu, 13 km ve 4 trafik şeritli Fuzuli trafik şeritleri - Hadrut yolu, 45 km ve 4 trafik şeritli Barda-Ağdam yolunun inşası, Azerbaycan'ın da dahil olduğu Karabağ bölgesinin ulaşım koridorlarına erişimi çeşitlendirerek içinden geçecek hatların önemini artıracaktır. (Bədirxanlı, 2023, s.4)

Güney Kafkasya ülkeleri Azerbaycan, Ermenistan ve Gürcistan ile komşu ülkeler Türkiye, Rusya ve İran, "3+3" formatında jeopolitik iş birliğiyle iletişim hatlarını yeniden kurarak uluslararası transit taşımacılığında yeni bir ekonomik ağırlık merkezi oluşturabilirler. (Kamal, 2023, s.2) Elbette bu iş birliği içerisinde Zengezur koridorunun siyasi ve ekonomik önemi yadsınmaz. Bölgede hayata geçirilecek diğer projeler değerlendirilirken Zengezur koridoru bölge ülkelerine göre daha ucuz bir alternatif görevi görüyor. İran ve Ermenistan üzerinden geçmesi beklenen 3,5 milyar dolar değerindeki yeni demiryolu hattını uzun yıllardır uluslararası finans kuruluşları, yabancı ülkeler ve hatta Ermenistan devleti bile finanse edemiyor.

Zengezur Koridoru, Güney Kafkasya'ya açılan stratejik bir kapı olarak seçilmiştir. Nahçıvan Özerk Cumhuriyeti Azerbaycan'ı anavatanına bağlayan ve Ermenistan'ı bölgesel ekonomik entegrasyona dahil eden bir ulaşım ve ticaret yoludur. (Rza, 2022, s.21) Zengezur koridorunun önemi bölgedeki siyasi, ekonomik ve güvenlik dinamikleriyle birlikte değerlendirilmelidir. Çünkü Sovyetler Birliği'nden önce Zengezur, nüfusunun çoğunluğunun Müslüman Türklerin olduğu bir bölgeydi. 1920'li yıllarda Sovyetler Birliği tarafından Ermenistan'a ilhak edilmesinin ardından bölgenin demografik yapısı değişmeye başladı. Zengezur Koridoru tarihsel olarak bölgedeki farklı kültürler, etnik gruplar ve devletler arasında bir temas noktası olmuştur. Şu anda Nahçıvan Özerk Cumhuriyeti, Azerbaycan'ın ana topraklarından Megri bölgesi ile ayrılmıştır. Dolayısıyla Zengezur koridoru Nahçıvan'ı Azerbaycan'a bağlayacak ve bu bölgenin Azerbaycan'ın siyasi, ekonomik ve sosyal yapısına entegrasyonunu sağlayacaktır. Koridor, Azerbaycan'ın toprak bütünlüğünü güçlendirmenin yanı sıra Nahçıvan'ın dış dünyaya açılması ve bölgesel işbirliğine katılım için de koşullar yaratacak. Ekonomik açıdan Zengezur koridoru bölgede ticaret ve taşımacılığın canlanmasında stratejik bir rol oynayabilir. Koridor, Azerbaycan ve Türkiye ile sınırlı coğrafi konumuna rağmen Nahçıvan'ın Karadeniz ve Avrupa'ya erişimini kolaylaştıracak. Bu, Nahçıvan'ın bölgesel ekonomik entegrasyonda aktif rol oynamasına olanak sağlayacaktır. Aynı zamanda Nahçıvan'dan geçen Zengezur koridoru, Orta Asya ve Güney Asya ülkelerinin Avrupa pazarlarına erişimini kolaylaştıracak. Bu, bölgesel ticaretin artmasına ve ekonomik büyümenin teşvik edilmesine katkıda bulunacaktır. (Türk dünyasının Zəngəzur dəhlizi, 2021, s. 5)

Ayrıca Zengezur koridoru enerji politikası açısından stratejik bir rol oynayabilir. Bölgedeki enerji kaynakları bu koridor aracılığıyla Avrupa pazarlarına taşınabilecek. Azerbaycan'ın zengin petrol ve doğal gaz kaynakları, bölgenin enerji güvenliğini sağlayan Zengezur koridoru aracılığıyla uluslararası enerji projelerine entegre edilebilecek. Bu, Batı'nın enerji kaynaklarını çeşitlendirmesine olanak tanıyacak ve bölge ülkelerinin ekonomik ve siyasi istikrarını destekleyecektir.

### Sonuç

Sonuç olarak Zengezur koridorunun Güney Kafkasya'da stratejik bir geçiş güzergahı olduğunu ve bölgenin siyasi, ekonomik ve güvenlik dinamikleri açısından önemli rol oynama potansiyeline sahip olduğunu belirtelim. Koridor, Nahçıvan'ı Azerbaycan'a bağlayarak bölgesel işbirliğini ve ekonomik entegrasyonu teşvik etmenin yanı sıra enerji politikası ve stratejik güvenlik açısından da önem taşıyor. Koridor bu anlamda bölgesel ilerlemeye giden yol olarak tanımlanabilir. Zengezur koridorunun oluşmasıyla oluşacak yeni ekonomik konjonktürün Asya ve Avrupa'nın ulaştırma altyapısında özel bir önem taşıyacağı sonucuna varılabilir.

**ÖZET**

Sürdürülebilir ve çevre dostu bir tekstil malzemesi olan Lyocell ipliği, yüksek mukavemet ve nem emme özellikleri de dahil olmak üzere mükemmel özellikleri nedeniyle son yıllarda büyük ilgi görmüştür. İplik üretiminde kritik bir parametre olan büküm katsayısı, ipliğin mekanik özelliklerinin ve dolayısıyla üretim sürecindeki enerji tüketiminin belirlenmesinde önemli rol oynar. Bu makale, büküm katsayısını değiştirmenin Lyocell ipliğinin mukavemeti üzerindeki etkisini araştırmayı amaçlamaktadır ve hem iplik mukavemetini hem de enerji verimliliğini arttırmak için en uygun büküm katsayısını belirlemektedir.

Çalışma, elyaf tipi, iplik numarası gibi diğer parametreleri sabit tutarken büküm katsayısını değiştiren kapsamlı bir deneysel yaklaşım kullanıyor. Farklı büküm katsayılarına sahip 7 farklı Lyocell ipliği üretildi. İpliklerin düzgünlüğü, kusurları ve tüylülüğü bir Uster® Tester-5 kullanılarak değerlendirildi. Hassasiyet ayarları neps için +%200, kalın yerler için +%50 ve ince yerler için %50 idi. Her deneme için on test yapıldı ve sonuçların ortalaması alındı. TS EN ISO 2062'ye göre iplik çekme mukavemeti ve uzaması ölçüldü.

Çalışmanın sonuçları, büküm katsayısı ile Lyocell iplik mukavemeti arasında belirgin bir ilişki olduğunu göstermektedir. Büküm katsayısındaki bir artış genellikle lifler arasındaki bağı güçlendirdiğinden dolayı iplik mukavemetinde bir artışa yol açar. Ancak aşırı büküm ipliğin kırılma hızına ve dolayısıyla mukavemetinin azalmasına neden olabilir. Bu nedenle enerji kullanımını en aza indirirken iplik mukavemetini artırmak ve sürdürülebilir üretim süreçlerini desteklemek için optimum büküm katsayısı belirlendi.

**Anahtar kelimeler:** Lyocell iplik, İplik büküm katsayısı, İplik mukavemeti, Sürdürülebilirlik

**ABSTRACT**

Lyocell yarn, a sustainable and environmentally friendly textile material, has gained significant attention in recent years due to its excellent properties, including high strength and moisture absorption capabilities. The twist coefficient, a critical parameter in yarn production, plays an important role in determining the yarn's mechanical properties and, consequently, the energy consumption during the manufacturing process. This paper aims to explore the effect of varying the twist coefficient on the strength of Lyocell yarn and identifies the optimal twist coefficient for enhancing both yarn strength and energy efficiency.

The study employs a comprehensive experimental approach, changing the twist coefficient while keeping other parameters constant, such as fiber type, yarn count. 7 different Lyocell yarns with different twist coefficients were produced. The unevenness, imperfections, and hairiness of the yarns were evaluated using an Uster® Tester-5. The settings for sensitivity were +200% for neps, +50% for thick spots, and 50% for thin places. The unevenness (U%) and co-efficient of variation (CVm%) were used to express mass variation. While the CVm% was calculated using the standard deviation (SD) of the yarn's mass per unit length, the U% was based on the mean deviation. Ten tests were performed for each

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

trial, and the results were averaged. According to TS EN ISO 2062, yarn tensile strength and elongation were measured.

The results of the study show distinct correlation between the twist coefficient and Lyocell yarn strength. An increase in the twist coefficient generally leads to an enhancement in yarn strength due to improved fiber interlocking and cohesion. However, excessive twisting may cause the yarn to become brittle, thereby reducing its strength. Therefore, to enhance yarn strength while minimizing energy use and support sustainable production processes, the optimum twist coefficient was determined.

**Keywords:** Lyocell yarn, Twist coefficient, Yarn strength, Sustainability

## INTRODUCTION

Many people believe that there are only two types of fabrics: natural fibers such silk, wool, hemp, cotton, and ramie and synthetic fibers made from petrochemicals like nylon and polyester (Dhir,2022). Conventional synthetic fibers are often made from polymers derived from petroleum, and their widespread use has caused significant environmental issues (Mangal, 2023). As a result, the creation of biodegradable and environmentally friendly fibers for both fashion and industrial uses has recently received a lot of attention.

Lyocell is an environmentally friendly recycled fiber manufactured from wood pulp, mostly eucalyptus, that was developed in the 1980s. This fiber's 100% biodegradability and renewable source of raw material, which led to its further development as TENCEL, are some of its environmental advantages. Like other regenerated cellulose fabrics, it is soft, drapes nicely, and has good absorbency. Additionally, it is wrinkle-resistant and has exceptional durability. The cost and energy consumption of manufacturing is still a problem.

The aim of the study is to investigate the influence of varying twist coefficients on the properties of lyocell yarn. Emphasizing the importance of low twist for reduced energy consumption is a key focus of this study.

## MATERIAL AND METHOD

Properties of lyocell fibers were given in Table 1.

**Table 1.** Properties of lyocell fibers

	<b>Fiber length (mm)</b>	<b>Fiber fineness (dtex)</b>	<b>Breaking Tenacity (cN/tex)</b>	<b>Elongation (%)</b>	<b>Breaking Tenacity (BISFA-modulus) (cN/tex)</b>	<b>Whiteness (CIE)</b>
<b>Lyocell</b>	38	1.30	3.80	12.00	2.20	68.00

Fiber properties were conducted following these standards: fiber length (mm) according to DIN 53808-1, fiber fineness (dtex) in accordance with ISO 1973, breaking tenacity (cN/tex) and elongation (%) according to ISO 5079, and whiteness (CIE) based on ISO 11475.

100% lyocell ring yarns with a count of Ne 30 were spun on an industrial ring spinner. 7 different Lyocell yarns with different twist coefficients were produced. 7 lyocell yarn types were given in Table 2.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

**Table 2.** Lyocell Yarn Types

Lyocell Yarn	Yarn Count (Ne)	Yarn Twist (t/m)	Twist Coefficient ( $\alpha$ )
L-1	30	910	4.2
L-2		860	4.0
L-3		820	3.8
L-4		770	3.6
L-5		730	3.4
L-6		690	3.2
L-7		650	3.0

Before testing, the yarns were conditioned under a temperature of  $20\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  and a relative humidity of  $65\% \pm 2\%$  (Booth, 1996). A Uster® Tester-5 was used to determine the unevenness, imperfections, and hairiness of the yarns. The sensitivity settings were  $-50\%$  for thin places,  $+50\%$  for thick places, and  $+200\%$  for neps. Mass variation was expressed using unevenness (U%) and co-efficient of variation (CVm%). Yarn strength and elongation were measured according to TS EN ISO 2062.

## RESULTS AND DISCUSSION

Physical Properties of Lyocell yarns were given in Table 3.

**Table 3.** Lyocell yarn properties

	Unevenness (U%)	Coefficient of Variation of Mass (CVm%)	Thin Place -50%	Thick Place +50%	Neps +200%	Hairiness	Elongation %	Breaking Force (cN)	Yarn Tenacity Rkm
L-1	8.681	10.952	1	4.1	25.7	5.439	9.126	554.887	28.747
L-2	8.637	10.901	0	3.3	19	6.601	8.606	577.919	29.598
L-3	8.733	11.025	0	5.1	21.2	5.659	8.379	561.702	29.099
L-4	8.764	11.069	0	6	35.4	5.921	8.656	562.126	29.121
L-5	8.738	11.022	0	4	19.7	6.436	8.41	557.128	28.863
L-6	8.653	10.904	0	2.5	19	6.771	8.606	570.84	29.573
L-7	8.74	11.01	0	3.5	8	7.288	8.312	536.577	27.799

As seen in Table 3, the unevenness of the yarn ranged from 8.637% (L-2) to 8.764% (L-4). The change in twist coefficient did not show a significant impact on yarn unevenness. Similar to unevenness, there was minimal variation in CVm due to the twist coefficient change. L-4 had the highest thick place value,

**INTERNATIONAL ANKARA CONGRESS ON  
MULTIDISCIPLINARY STUDIES-VI  
October 13-14, 2023**

suggesting a lower yarn quality. The highest increase was observed in L-7, with a 200% increase in neps. In addition, L-7 exhibited the highest hairiness, indicating a less smooth yarn surface. Moreover, the twist coefficient change had a minor impact on yarn elongation. Furthermore, L-2 exhibited both the highest breaking force and the highest yarn tenacity.

The decrease in twist coefficient from 4.2 to 3 resulted in several notable changes in yarn properties. The yarn became more prone to neps formation and had a higher hairiness, especially in L-7, indicating that lower twist can lead to reduced yarn smoothness. Thick places were more prominent in yarns with lower twist, suggesting potential issues in fabric quality. Despite these changes, yarn unevenness and CV<sub>m</sub> remained relatively stable, indicating that the overall mass distribution was not significantly affected. Yarn elongation, breaking force, and tenacity varied, but the differences were not substantial among the samples.

As a result, L-2 had the highest yarn tenacity, highest breaking force, L-2 had the lowest unevenness. However, increasing twist in yarn production can indeed lead to higher energy consumption, as it requires more energy to twist the fibers together tightly. Considering energy efficiency is important in textile manufacturing. Therefore, L-6 can be an alternative for an optimum twist value while maintaining good yarn properties and lower energy consumption.

L-6 has a moderate unevenness value, which is acceptable for many applications. Besides, L-6 has moderate hairiness. Furthermore, L-6 has a good breaking force value and yarn tenacity.

#### **CONCLUSION**

It can be concluded that L-6, with its moderate twist level, is likely to consume less energy during production compared to higher twist levels like L-1 or L-2. L-6 can be a viable alternative. It offers a good balance between yarn quality and energy efficiency.

**ÖZET**

Mutfak çalışanlarının çeşitli pişirme uygulamaları ve davlumbaz kullanımlarının değerlendirilmesi amacıyla planlanan bu çalışma, Ankara'da toplu yemek üretiminde çalışan toplam 88 gönüllü erkek bireyle yürütülmüştür. Aşçı ve aşçı yardımcıları ile servis personelleri çalışmaya dahil edilmiştir. Aşçı ve aşçı yardımcılarının iş yerinde pişirme ile meşgul oldukları ortalama süre 3,7±1,9 saattir. Aşçı/aşçı yardımcıları ve servis personellerinin evde bir günde yemek pişirmeye ayırdıkları ortalama süre benzer bulunmuştur (sırasıyla, 0,6±0,6 karşın 0,5±0,7, p>0,05). Bir günde pişirme için ayrılan toplam zaman (iş ve ev toplamı) sıcak mutfak çalışanlarında servis personeline göre anlamlı şekilde yüksek bulunmuştur (p<0,001). İş yerinde en sık tercih edilen pişirme yöntemleri arasında derin yağda kızartma, kavurma, ızgara ve fırında pişirme yer almaktadır. Aşçı/aşçı yardımcıları evde en sık kendi suyunda pişirme (%71,4) yöntemini kullanırken servis personelleri fırında pişirme (%47,1) ve kavurma (%29,4) yöntemlerini daha sık tercih etmektedir. Sıcak mutfak çalışanlarının dörtte biri pişirme işleminden önce kullanılacak yağın dumanının çıkmasını beklerken; %93,8'i kızartma işlemleri bittikten sonra sıcak yağ içeren ekipmanları ağız açık olarak pişirme yapılan alanda soğutmaktadır. Bireylerin tamamına yakını davlumbazları pişirme işlemi boyunca çalıştırmaktadır. Aşçılar ve aşçı yardımcılarının %60,4'ü pişirme alanındaki iklimlendirmeyi yeterli bulmuştur. Mutfakların sadece %40,0'ında davlumbazlar düzenli olarak temizlenmektedir. Toplu yemek hizmeti yöneticileri, havalandırma sisteminin etkin çalışma durumunu kontrol etmelidir. İlgili ekipmanların bakım planlarını hazırlamalıdır. Toplu yemek üretimi yapılan mutfaklarda çok yaygın olarak kullanılan kızartma, kavurma, ızgara gibi kuru ısıda pişirme işlemleri azaltılarak sulu ısıda pişirme yöntemleri artırılmalıdır.

**Anahtar Kelimeler:** pişirme emisyonu, pişirme dumanı, mutfak çalışanı, aşçı, davlumbaz.

*Bu çalışma Semra Navruz Varlı'nın doktora tezinden üretilmiştir.*

**ABSTRACT**

This study, planned to evaluate various cooking practices and hood usage of kitchen workers, was conducted with a total of 88 male volunteers working in mass food production in Ankara. Cooks, assistant cooks and service personnel were included in the study. The average time that cooks and assistant cooks spend cooking at work is 3.7±1.9 hours. The average time spent by cooks/assistant cooks and service personnel at home cooking per day was found to be similar (0.6±0.6 vs. 0.5±0.7, p>0.05, respectively). The total time allocated to cooking in a day (total of work and home) was found to be significantly higher in hot kitchen employees than in service personnel (p<0.001). The most commonly preferred cooking methods at work include deep-frying, roasting, grilling and baking. While cooks/cook assistants most frequently use the method of cooking in their own water (71.4%) at home, service

personnel more frequently prefer baking (47.1%) and roasting (29.4%) methods. While a quarter of the hot kitchen workers are waiting for the oil to smoke before cooking; 93.8% of them cool the equipment containing hot oil in the cooking area with their mouths open after the frying process is completed. 43.8% of individuals stated that they used a mask while cooking, and 95.8% stated that they left the hoods open throughout the entire cooking process. 60.4% of cooks and assistant cooks stated that ventilation was sufficient in the cooking area and 81.2% in other kitchen areas. Hoods are cleaned regularly in only 40% of kitchens. Catering managers should check whether the ventilation system is working properly. Dry heat cooking processes such as frying, roasting and grilling, which are widely used in kitchens where mass food production is made, should be reduced and wet heat cooking methods should be increased.

**Keywords:** cooking emission, cooking fume, kitchen worker, cook, kitchen hood.

## GİRİŞ

Pişirme dumanı maruziyeti yemek pişirme işleriyle uğraşan kişileri etkileyen önemli bir halk sağlığı sorunudur. Bu çevresel faktör özellikle aşçılar ve aşçı yardımcıları gibi sıcak mutfak çalışanlarında önemli bir sağlık riski oluşturmaktadır (Bordado et al., 2012).

Pişirme dumanı maruziyetinin azaltılmasında havalandırma önemli bir yer tutmaktadır. Bir çalışmada, yetersiz havalandırma, kapalı alan ve tavada pişirme gibi faktörlerin yemek pişirilen ortamlarda iç mekân hava kirliliğini daha da kötüleştirdiği belirtilmiştir (Yu et al., 2015). Mutfaklardaki davlumbazların emiş gücünün pişirme işlemine açığa çıkan partikül madde miktarını doğrudan etkilediği ve partikül madde konsantrasyonunun orta emiş gücüne kıyasla yüksek emiş gücünde %65'ten fazla azaltılabileceği belirtilmiştir (Lu et al., 2019). Pişirme dumanında bulunan benzoapiren düzeylerinin davlumbazlar çalıştığı ortalama %75 azaldığı belirlenmiştir (Chiang et al., 1999). Bir müdahale çalışmasında, davlumbazların içine yerleştirilen bir cihaz aracılığıyla yakalama verimliliği artırılmıştır. Aşçıların pişirme dumanından şikayetçi olduğu altı mutfaka bu cihaz kurulmuş ve mutfak havasındaki partikül seviyelerinin cihazlar takıldıktan sonra ciddi düzeyde azaldığı belirlenmiştir (Pan et al., 2011).

Bu çalışmanın amacı mutfak çalışanlarının çeşitli pişirme uygulamaları ve davlumbaz kullanımlarının değerlendirilmesidir.

## ARAŞTIRMA VE BULGULAR

Çalışma verileri Ocak 2018-Eylül 2019 tarihinde Ankara'da toplanmıştır. Çalışma grubu 18-65 yaş aralığında yer alan gönüllü 48 sıcak mutfak çalışanı (aşçıbaşı, aşçılar ve aşçı yardımcıları), kontrol grubu ise 40 servis personelinden oluşmuştur. Araştırma, Ankara'da toplu yemek üretimi yapılan beş farklı mutfakta gerçekleştirilmiştir.

Çalışanların sosyo demografik bilgileri, iş ve çalışma ortamıyla ilgili bilgiler, yemek pişirme yöntemlerinin sıklığı gibi bilgiler bir anket formu aracılığıyla alınmıştır. Evde yemek pişirme durumları ve sıklıkları, evde yemek pişirirken en sık uyguladıkları pişirme yöntemleri sorgulanmıştır.

Araştırma için Gazi Üniversitesi Klinik Araştırmalar Etik Kurulu onay vermiştir (No: 603, Tarih: 25/12/2017). Gazi Üniversitesi Bilimsel Araştırma Projeleri birimi araştırmanın bütçesini karşılamıştır (47/2019-09).

Aşçıların iş yerinde çalıştıkları süre boyunca yemek pişirdikleri ortalama süre  $3,7 \pm 1,9$  saat/gündür. Evde yemek pişirmeye ayrılan ortalama süre her iki grupta benzerdir (sırasıyla,  $0,6 \pm 0,6$  karşın  $0,5 \pm 0,7$  saat/gün,  $p > 0,05$ ). Pişirmeye ayrılan toplam zaman ise çalışma ve kontrol grubunda sırasıyla  $4,3 \pm 1,9$  ve  $0,5 \pm 0,7$  saat/gündür ( $p < 0,001$ ). Çalışma grubundaki bireylerin %58,3'ü, kontrol grubundaki bireylerin ise %42,5'i evde yemek pişirmektedir ( $p > 0,05$ ). Evde yemek pişirirken çalışma grubu en sık kendi suyunda pişirme (%71,4) ve fırında pişirme (%17,9) yöntemlerini, kontrol grubu ise en sık fırında pişirme (%47,1) ve kavurma (%29,4) yöntemlerini kullanmaktadır.

Toplu yemek üretiminde, besinlere yaygın olarak pişirme işleminden önce ön kızartma işlemi uygulanmaktadır. Bu nedenle kızartma sonucu oluşan maruziyet toplu yemek üretiminde artmaktadır. Endüstriyel mutfaklarda kavurma, yağda kızartma gibi hatalı pişirme yöntemlerinin daha sık uygulanmasının büyük miktarlarda pişirilen yiyeceklerin tat, lezzet, doku, görünüm gibi subjektif kalite parametrelerinin iyileştirilmesi amacıyla olduğu düşünülmektedir.

Çalışma grubundaki bireylerin %25,0'i pişirme işleminden önce kullanılacak yağın dumanının çıkmasını beklediğini; %93,8'i kızartma işlemleri tamamlandıktan sonra sıcak yağ içeren ekipmanları ağız açık olarak soğuttuğunu belirtmiştir. Bireylerin %43,8'i çalışma esnasında pişirme işlemi yapılırken maske kullandığını, %95,8'i davlumbazları tüm pişirme işlemi boyunca açık bıraktığını belirtmiştir. Çalışma grubundaki bireylerin %60,4'ü pişirme alanında havalandırmanın yeterli olduğunu, %81,2'si diğer alanlarda havalandırmanın yeterli olduğunu düşünmektedir. Mutfakların sadece %40,0'ında davlumbazlar düzenli olarak temizlenmektedir.

### **SONUÇ VE ÖNERİLER**

Mutfak çalışanları pişirme dumanı oluşumunun azaltılması için davlumbaz kullanımını önemsemektedir. Çalışanlar sıcak yağın soğutulması sırasında ortama yayılan duman kaynaklı maruziyetinin farkında değildir. Araştırma yapılan mutfaklardaki davlumbazlar nicelik olarak yeterlidir ancak nitelik bakımından ihtiyacı tam olarak karşılamamaktadır.

Toplu yemek hizmeti yöneticileri, havalandırma sisteminin düzgün çalışıp çalışmadığını kontrol etmelidir. Havalandırma ile ilgili ekipmanların rutin bakımları planlanmalı, mutfak yöneticilerinin filtre değişimleriyle ilgili farkındalıkları artırılmalıdır. Toplu yemek üretimi yapılan mutfaklarda çok yaygın olarak kullanılan kızartma, kavurma, ızgara gibi kuru ısıda pişirme işlemleri azaltılarak sulu ısıda pişirme yöntemleri artırılmalıdır.

### ÖZET

Günümüz dünyasında çeşitlilik, piyasadaki rakip sayısının fazlalığı ve artan müşteri odaklılık işletmelerin piyasaya tutunmasını güçleştirmiştir. Şirketlerin sürekli iyileştirme ve gelişme ihtiyacı, süreçlerin maliyetlerini azaltacak yönetim araçlarının araştırılmasına neden olmuştur. Prosedürlerin ve süreçlerin sürekli iyileştirilmesi konusu, birçok şirketi “yalın” felsefe stratejilerine yönlendirmiştir. Yalın felsefesinin temel kavramları ilk olarak 50’li yıllarda Japon şirketlerinde ortaya çıkmıştır. İşletmeler müşteri istek ve taleplerine cevap verebilecek şekilde en az kaynakla, en düşük maliyetle, en az israfla, üretim faktörlerini optimal kullanarak süreçleri iyileştirmeyi hedeflemiştir.

Sürekli iyileştirme gerektiren önemli alanlardan biri de iç lojistik faaliyetleridir. Üretim lojistiği olarak da tabir edilen iç lojistik; gelen malzeme ve parçaların mamule dönüştürülmesi esnasında yapılan taşımaları ve ara depolamaları içerir. Standart ve takip edilebilir olmayan bir iç lojistik sistemi, işletmelerde stok hareketlerinde dengesizliğe ve katma değersiz faaliyetlere sebep olmaktadır. Yüksek miktarda stok birikimi ya da malzemenin zamanında tedarik edilememesi, taşıma sistemindeki taşıma yapan aracın etkin kullanılmamasından dolayı operatörlerin katma değersiz işler yapması işletmeler için önemli bir maliyet unsurudur.

Bu çalışmada, bir gıda firması için iç lojistik faaliyetlerinde karşılaşılan problemlere yalın tekniklerden olan değer akışı haritalama, PUKÖ döngüsü ve spagetti diyagramı uygulanarak iyileştirmeler yapılmıştır. İlk olarak, süreçte yaşanan aksaklık ve değer katmayan işlemleri tespit etmek için değer akışı haritalamadan faydalanılmıştır. Bu uygulamaya sonucunda; proses akış süresi 265 dk.’dan 191 dk.’ya, katma değer süresi ise 434 dk.’dan 284 dk.’ya düşürülmüştür.

**Anahtar Kelimeler:** Yalın iç lojistik, süreç iyileştirme, değer akışı haritalama, PUKÖ döngüsü

### ABSTRACT

In today's world, diversity, the abundance of competitors in the market, and the increasing customer focus have made it challenging for businesses to thrive. The need for continuous improvement and development has led companies to explore management tools that reduce costs in their processes. The continuous improvement of procedures and processes has directed many companies towards the "lean" philosophy strategies. The fundamental concepts of lean philosophy first emerged in Japanese companies in the 1950s. Businesses aimed to improve processes by using minimal resources, minimizing costs, reducing waste, and optimizing production factors to respond to customer requests and demands.

One of the important areas that require continuous improvement is internal logistics activities. Internal logistics, also referred to as production logistics, includes the transportation and intermediate storage of incoming materials and components during the transformation into finished products. A non-standard

and untraceable internal logistics system can lead to imbalances in inventory movements and valueless activities within businesses. Accumulating a high volume of inventory or failing to supply materials on time due to inefficient use of transportation systems can result in operators performing valueless tasks, which is a significant cost factor for businesses.

In this study, improvements were made to the internal logistics activities of a food company by applying lean techniques such as value stream mapping, PDCA cycle, and spaghetti diagram to address the problems encountered. First, value stream mapping was used to identify bottlenecks and non-value-added processes in order to eliminate them. As a result of this application, the process flow time was reduced from 265 minutes to 191 minutes, and the value-added time was reduced from 434 minutes to 284 minutes.

**Keywords:** Lean internal logistics, process improvement, value stream mapping, PDCA cycle

## GİRİŞ

Yalın felsefesinin temel kavramları ilk olarak 50'li yıllarda Japon şirketlerinde ortaya çıkmıştır. (Antunes ve Sousa, 2013). Firmaların müşteri isteklerine en az maliyetle, en az israfla, kaynakları gereksiz kullanmadan en iyi üretimi yapabilme fikridir (Yangınlar ve Bal, 2019).

İsraflar Yalın Üretim'de en önemli konulardandır. Taiichi Ohno tarafından 1988 yılında 'Yedi Ölümcül İsrâf' başlığı altında "gereksiz üretim, fazla bekleme, üretimde hata, fazla stok, gereksiz taşıma, gereksiz işler ve gereksiz hareketler" olarak tanımlanmıştır (Topuz, 2021).

İşletmeler sektörde tutunmak için sürekli iyileşmek ve gelişmek zorundadır. Gelişme ve iyileştirme ihtiyacı da maliyetleri azaltacak yönetim araçları ve yöntemlerin incelenmesine yol açmaktadır. Bu ihtiyaçlar işletmelerin yalın düşünce sistemini anahtar olarak ele almasına yol açmıştır. Yeni yönetim kavramları ve süreç iyileştirmedeki süreklilik yalın felsefenin vurguladığı temel konulardan biri olmuştur (Antunes ve Sousa, 2013).

İşletmeler bünyesinde yalınlaşmaya gidilecek bir konu da lojistik faaliyetlerdir. Fabrika içinde yalın lojistik yaklaşımı üretilen ürünlerin az maliyetle ve kısa sürede işletme içerisinde taşınmasıdır. Bu da iç lojistik kavramı olarak karşımıza çıkmaktadır. (Topuz 2021) Standart ve takip edilebilir olmayan bir iç lojistik sistemi, işletmelerde stok hareketlerinde dengesizliğe ve katma değersiz faaliyetlere sebep olmaktadır. Yüksek miktarda yarımamül birikimi ya da malzemenin zamanında tedarik edilememesi, taşıma sistemindeki taşıma yapan aracın etkin kullanılmamasından dolayı operatörlerin katma değersiz işler yapması işletmeler için önemli bir maliyet unsurudur (Küçüköğlü vd., 2018).

Yalın düşünce kapsamında israfları yok ederken belli başlı araç ve yöntemler kullanılır. Bunlar 5S, SMED, Değer Akışı Haritalama, Sphagetthi Diyagramı, Milkrun, Hoshin Kanri, Poke-Yoke, A3, PUKÖ, Just In Time, Kök Neden Analizidir.

## ARAŞTIRMA VE BULGULAR

Çalışmanın uygulama aşaması paketli ekmek üretimi yapılan bir gıda işletmesinde gerçekleştirilmiştir. Firmanın iç lojistik süreçleri incelenmiş ve hammadde depodan malzeme transferleri sürecine ağırlık verilerek yalınlaşmaya gidilmiştir. Bu çalışmada aşağıdaki yöntemlerden faydalanılmıştır:

### Değer Akışı Haritalama

Değer Akışı Haritalama (DAH) israfların gün yüzüne çıkarılarak elimine edildiği bir yalın araçtır. İşletmelerde performansı arttırmak için ve değer yaratmak için kullanılır. DAH, bir kuruluşun mevcut ve gelecekteki senaryosunu gösterdiği için çeşitli yalın araçlar arasında önemlidir. DAH üretim hızını artırma, maliyetlerde ve süreçlerde fazla harcanan zamanı azaltma da önemli fırsatlar doğrudur (Batwara vd., 2023).

Haritalamada belirlenen süreçler, semboller ile gösterilir. Seçilen ürün ailesi veya sürecin ardından mevcut durum haritası çizilir. Ardından gelecek durum haritalandırılarak bir faaliyet planı hazırlanır (Sarı, 2018).

DAH'da bazı zaman ölçütleri kullanılmaktadır:

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Çevrim süresi(C/T): Bir prosesin tamamlanma sıklığıdır. İşleme süresine ek olarak yükleme, boşaltma ve hazırlık süreleri de dahildir.

Katma Değer Süresi (V/ A): Müşterinin değer olarak tanımladığı iş elemanlarının süresidir.

Akış Süresi (L/T): Bir üretim veya hizmet prosesinin başlangıç ve bitişi arasında geçen süredir.

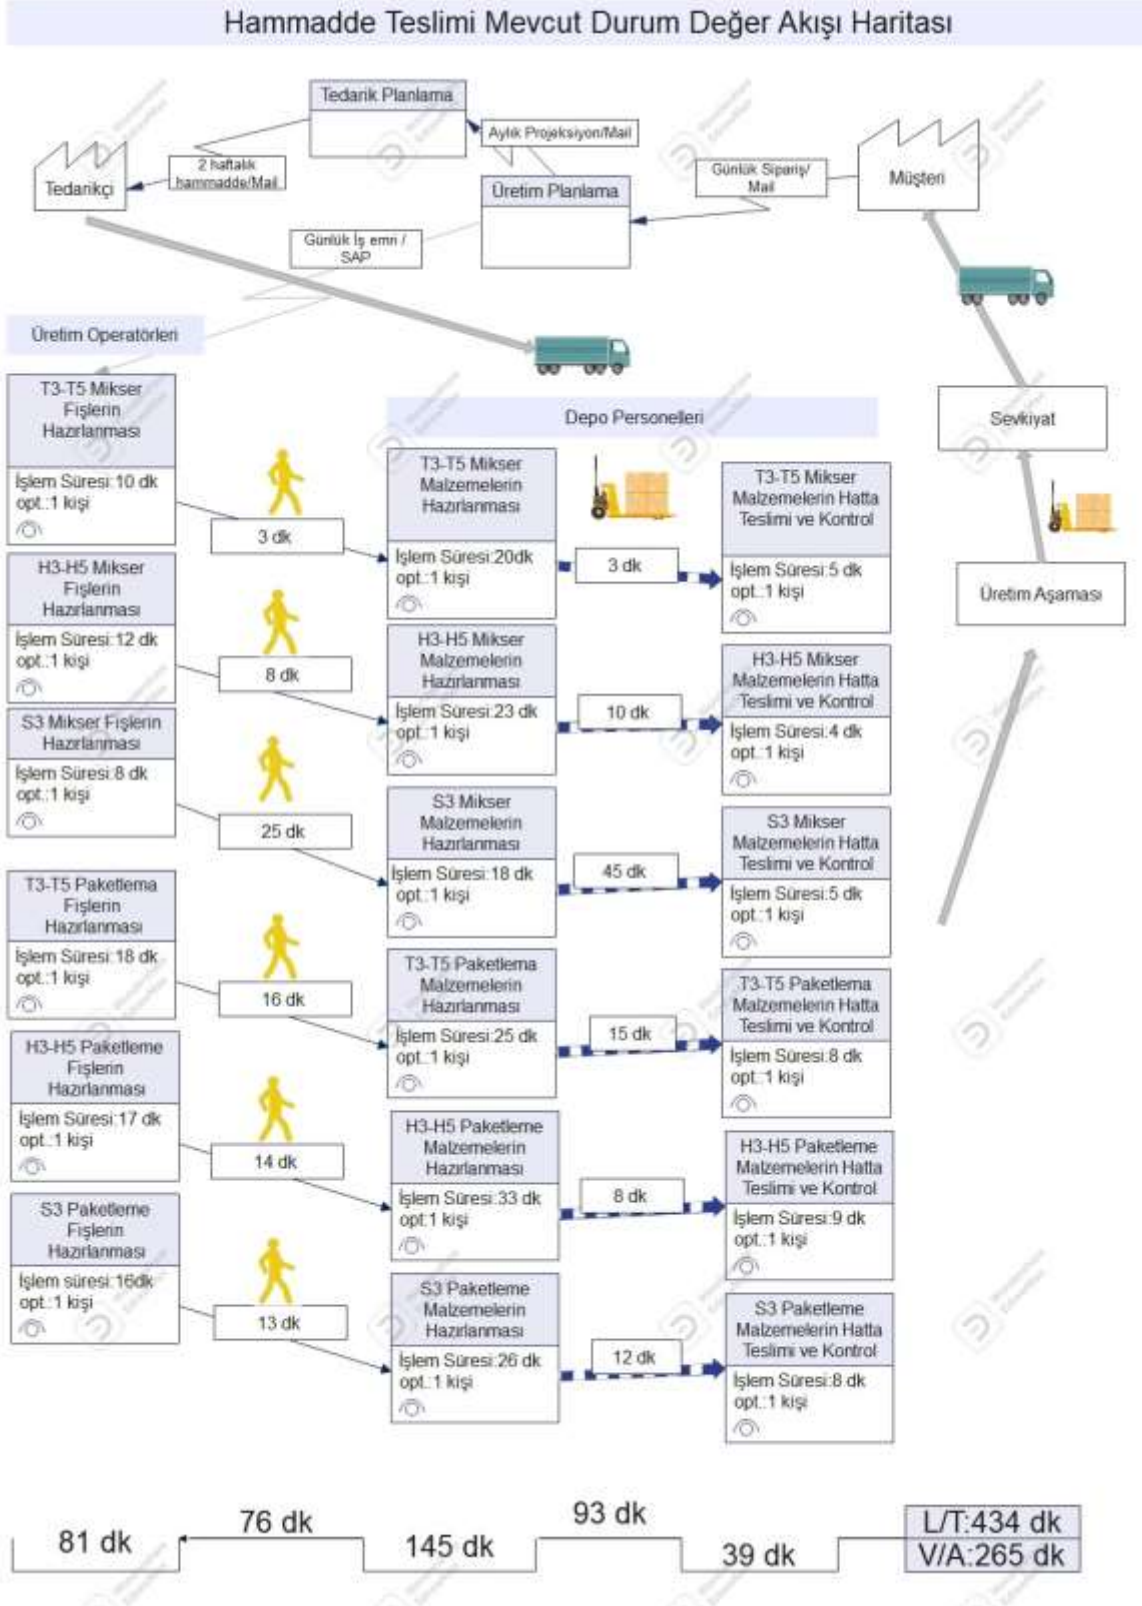

## **PUKÖ Döngüsü**

W. Edward Deming, firmalarda planlama ve araştırma, tasarlama, üretim aşaması ve satışın birbirini takip eden bir çevrim olduğunu ortaya koymuştur. Deming'in bu çevriminden esinlenen Japon yöneticiler, Deming'in bu çevrimini yönetimin tüm aşamalarına uygulayarak buna PUKÖ (Planla-Uygula-Kontrol Et-Önlem A1) döngüsü adını vermişlerdir (Efil, 1994).

Yalın yönetim sisteminde mükemmelliği aramanın ve ulaşmanın temelinde de PUKÖ döngüsü yatar. PUKÖ, süreçlerde iyileştirmenin önerilmesi, ilgili iyileştirmenin hayata geçirilmesi için uygun eylemlerin yapılması konusunda yol gösterici bir araç, bilimsel metoda dayalı bir iyileştirme çevrimidir (Akyüz ve Çetin, 2019).

## **Uygulama Çalışması**

Üç vardiya çalışma sistemine sahip olan bir gıda işletmesinde uygulama aşaması gerçekleştirilmiştir. Hammadde depodan üretim hatlarına olan transfer süreçleri incelenmiş ve iyileştirmeler yapılmıştır. Mevcut durumda üretim cep depolarına hammadde transferleri 16:00-00:00 vardiyasında gerçekleşmekte olup depo personellerine operatörler tarafından gelen ihtiyaç listelerine göre yapılmaktaydı. Her hattın operatörü öncelikle cep depo stoklarını kontrol ederek ihtiyaç listesini oluşturup depoya malzeme fişi götürmekteydi. Fişteki malzemeleri hazırlayan depo personeli, ilgili hatlara malzemeleri transpalet yardımı ile transfer etmekteydi. Süreçte manuel yapılan işler ve gereksiz taşımaların olduğu gözlemlenmiştir. Bu esnada katma değersiz faaliyetlerin tespiti için öncelikle değer akışı haritalama yönteminden faydalanılmıştır. Sahada kâğıt üzerinde elle çizilen çalışma, EdrawMax programına aktarılıp haritalandırılmıştır. Mevcut durum değer akışı haritası Şekil 1'deki gibidir.

Haritalama ve saha gözlemleri sonucunda operatörlerin manuel olarak fiş hazırlamaya harcadığı zaman ile fişleri depoya teslim ederken harcarcadığı zamanların minimize edilmesi üzerine çalışma yapılmıştır. Bu kapsamda manuel yürütülen işlemlerin SAP ile yürütülmesi ve günlük gelen iş emirlerine göre doğrudan ihtiyaç listelerinin oluşturulması üzerine SAP uzmanları ile çalışılmıştır. Sistemde yapılacak değişikliklerin ilgili birimlere de aktarılması ve sürekliliğin sağlanması yönünde PUKÖ döngüsünden

Çalışmaların ardından malzeme fişlerinin SAP’ye aktarılma süreci tamamlanmıştır. Günlük gelen iş emirlerinin üretim planlama departmanı tarafından sisteme aktarılmasının ardından SAP hazıredim ekranı her bir hat için çalıştırılacaktır. Bu işlemlerin ardından depo personellerine verilen bilgi ile ihtiyaç listeleri doğrudan depo personeli tarafından çekilecektir. Yapılan iyileştirme ile operatörlerin stoklarını kontrol edip malzeme fişi hazırlaması, depo teslim etmek için kat ettiği yol ve harcanan zaman ortadan kaldırılmıştır. İyileştirme sonrası değer akışı haritalama tekrar çizilmiştir (Şelik 4). Mevcut durumda toplam 434 dakikada yürütülen bu işlem iyileştirme sonrası 284 dakikaya düşmüştür. Operatörlerin malzeme transferine harcadığı atıl zaman ve yol minimize edilmiştir.

Şekil 4. İyileştirme sonrası değer akışı haritası

## SONUÇ

Çalışma kapsamında işletmeye ait iç lojistik süreçleri incelenmiş ve süreçler israflardan arındırılmaya çalışılmıştır. Başlangıçta malzeme transferi işlemi için sahada bir değer akışı haritalama yapılmış ve bunun sonucunda manuel yürütülmüş olan işlemlerin SAP üzerinden takibi üzerine bir iyileştirme çalışması yapılmıştır. Bu çalışma çıktısı sonuçlarında personellerin toplam 434 dakikasını alan bu süreç 265 dk'ya düşmüştür. Zaman açısından elde edilen kazancın yanında aşağıdaki faydalar da sağlanmıştır:

- Üretim cep depo stoklarının düzenli kontrol edilmesi görevi operatörlere verilerek personele sorumluluk bilinci aşılanmıştır.
- Malzeme teslim süreçlerinde personel kaynaklı hatalı veya eksik malzeme alımının önüne geçilmiştir.
- Depodan eksik malzeme talep etme kaynaklı ani malzeme ihtiyaçlarının ve bu ihtiyaç kaynaklı üretimde yaşanan aksaklıklar önlenmiştir.

### ÖZET

Sabit mıknatıslı senkron motorlar (SMSM), yüksek tork/ağırlık oranı ve yüksek dinamik performans gibi üstünlüklerinden dolayı hassas konum veya hız kontrolü gerektiren savunma sanayi ürünleri ile birçok endüstriyel cihazda yaygın olarak kullanılmaktadır. SMSM'nin doğrusal olmayan dinamikleri, motorun yük torku ve mekanik parametre değişimleri, geleneksel oransal+integral (PI) kontrolörlerin SMSM'nin yüksek hassasiyetli kontrolünü önemli ölçüde kısıtlar. Bu nedenle lineer kvadratik regülatör (LQR) gibi durum uzay yaklaşımları, bulanık mantık (BM), yapay sinir ağları (YSA), bulanık sinir ağları (BSA) gibi yapay zekâ algoritmaları ile SMSM'nin konum/hız kontrolüne yönelik çalışmalar yoğunlaşmaktadır. Bu çalışmada, değişen yük torku ve parametre değişimleri etkisindeki mekanik bir düzeneği (nöbetçi robot) tahrik eden Sabit Mıknatıslı Senkron Motorun (SMSM)' nin LQR tabanlı konum kontrolü gerçekleştirilmiştir. SMSM'nin matematiksel modeli kullanılarak tasarlanan LQR yönteminin, SMSM'nin konum kontrolüne uygulandığındaki farklı yaklaşımların sonuçları değerlendirilmiştir. Diğer taraftan bilinmeyen yük torku ve parametre değişimlerinin etkisini minimize etmek amacıyla motorun  $i_q$  akımının, motorun yük torkunu temsil ettiği dikkate alınarak motorun  $i_q$  akımı, pozitif geri besleme yapmak suretiyle basit bir yük torku gözleyici tasarlanmış ve ileri besleme tork kontrolörü olarak eklenmiştir. Öncelikle kontrol sisteminin Matlab/SIMULINK ortamında benzetimleri yapılmıştır. Benzetimi yapılan kontrol sistemi, Texas Instruments dijital sinyal işlemcisine (DSP-TMS320F28379D) yüklenerek SMSM'nin konum kontrolü deneysel olarak gerçekleştirilmiştir. Önerilen SMSM konum kontrol sisteminin etkinliğini gösteren benzetim ve deneysel sonuçlar, PI kontrolör sonuçları ile karşılaştırmalı olarak verilmiştir. Yük torku ve parametre değişimleri altındaki motor yükleri için LQR+ $i_q$  ileri besleme kontrol yöntemi ile dayanıklı bir kontrol sisteminin elde edilebileceği gösterilmiştir. Bu bildirinin giriş bölümünden sonra ikinci bölümünde SMSM'nin durum uzayında d-q eksenli modeli çıkarılmıştır. Üçüncü bölümde LQR kontrolörün tasarım yaklaşımları açıklanmış ve yük torku gözleyicisinin tasarımı verilmiştir. Dördüncü bölümde SMSM'nin PI, LQR, LQR+ $i_q$  kontrolör için benzetim ve deneysel sonuçları karşılaştırmalı olarak sunulmuştur. Beşinci bölümde benzetim ve deneylerden elde edilen sonuçlar değerlendirilmiştir.

**Anahtar kelimeler:** SMSM, LQR, yük torku gözleyici, konum kontrolü.

### ABSTRACT

Due to their advantages such as high torque/weight ratio and high dynamic performance Permanent Magnet Synchronous Motors (PMSM) are widely used in many industrial applications as well as defense industry products that require precise position or speed control. The nonlinear dynamics of the PMSM, the load torque and mechanical parameter variations of the motor significantly limit the high-precision control of the PMSM by conventional proportional+integral (PI) controllers. For this reason, studies on the position and/or speed control of PMSM are intensified with state space approaches such as Linear Quadratic Regulator (LQR), artificial intelligence algorithms such as fuzzy logic (BM), artificial neural networks (ANN), fuzzy neural networks (FNN).

In this study, position control of the Permanent Magnet Synchronous Motor (PMSM) based on Linear Quadratic Regulator (LQR) was carried out, which drives a mechanical mechanism (sentry robot) under the influence of changing load torque and parameter changes. The results of different approaches in the application of the LQR method to position control of PMSM were evaluated, which was designed using the mathematical model of PMSM. On the other hand, to minimize the effect of unknown load torque and parameter variations, a simple load torque observer was designed by using the motor's  $i_q$  current as a feedforward torque controller, considering that the motor's  $i_q$  current represents the motor's load torque.

Firstly, the proposed control system was simulated in Matlab/SIMULINK environment. The simulated control system was loaded into a Texas Instruments digital signal processor (DSP-TMS320F28379D) and the position control of the PMSM was carried out experimentally. Simulation and experimental results showing the effectiveness of the proposed PMSM position control system are given in comparison with the PI controller results. It has been shown that a robust control system can be obtained with the LQR+ $i_q$  feedforward control method for motor loads under load torque and parameter changes.

After the introduction part of this article, in the second part, the d-q axis model in the state space of PMSM is derived. In the third section, the design approaches of the LQR controller are explained and the design of the load torque observer is given. In the fourth section, simulation and experimental results of PMSM for PI, LQR, LQR+ $i_q$  controllers are presented comparatively. In the fifth section, the results obtained from simulations and experiments are evaluated.

**Key words:** PMSM, LQR, Load Torque Observer, position control.

## 1. GİRİŞ

Sabit mıknatıslı senkron motorlar (SMSM), yüksek tork/ağırlık oranı, yüksek dinamik performans, bakım gerektirmemeleri gibi avantajlarından dolayı, yüksek performans gerektiren endüstriyel uygulamalarda yaygın şekilde kullanılır [1]. Bununla birlikte SMSM'nin sahip olduğu doğrusal olmayan dinamikler, ölçülemeyen yük torku ve parametre değişimlerine karşı duyarlı olması, geleneksel oransal+integral (PI) kontrolör ile yüksek hassasiyetli kontrolünü kısıtlar [2-4]. Bu problemin üstesinden gelmek için uyarlamalı kontrol [5,6], bulanık mantık (BM) [7], yapay sinir ağları (YSA) [8], bulanık sinir ağları [9], kayan kipli kontrol (KKK)[10] gibi yüksek performanslı SMSM sürücülerin geliştirilmesi önerilmiştir.

Optimal kontrol tekniklerinden olan lineer kvadratik kontrol (LQR) tabanlı kontrolörler de motor sürücülerine uygulanmaktadır [11-13]. LQR kontrolörler, kontrol edilecek sistemin doğrusal durum uzay modelinden yararlanarak durumlardan geri besleme yapılmak suretiyle tasarlanır. LQR'nin en önemli avantajı durum geri besleme kontrol kazanç matrisinin sistematik bir şekilde bulunmasıdır [14]. Bununla birlikte LQR kontrolörün referans konum ve yük torku değişimlerinde performansının geliştirilmesi amacıyla yük torkunun tahmin edilmesi sürücü performansında önemli artış sağlar [15].

Tork gözleyiciler kontrol sistemlerinde bozulma ve belirsizliklerden kaynaklanan sorunları ortadan kaldırmak için telafi edici olarak çalışırlar [16]. Literatürde kalman filtresi [17], yapay sinir ağları [18], bulanık mantık [19], kayan modlu kontrol [20], tabanlı tork gözleyicilere rastlamak mümkündür. Bu çalışmada, değişen yük torku ve parametre değişimleri etkisindeki mekanik bir düzeneği (nöbetçi robot) süren SMSM'nin LQR tabanlı konum kontrolü gerçekleştirilmiştir. SMSM'nin matematiksel modeli kullanılarak tasarlanan LQR yönteminin, SMSM'nin konum kontrolüne uygulandığındaki farklı yaklaşımların sonuçları değerlendirilmiştir. Diğer taraftan bilinmeyen yük torku ve parametre değişimlerinin etkisini minimize etmek amacıyla motorun  $i_q$  akımının, motorun yük torkunu temsil ettiği dikkate alınarak motorun  $i_q$  akımı, bir kazanç katsayısı ile çarpılarak pozitif geri besleme yapılmak suretiyle basit bir yük torku gözleyici tasarlanmış ve ileri besleme yoluna tork kompanzatorü olarak eklenmiştir.

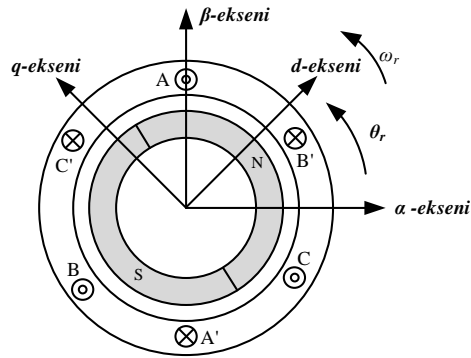

Öncelikle kontrol sisteminin Matlab/SIMULINK ortamında benzetimleri yapılmıştır. Benzetimi yapılan kontrol sistemi, Texas Instruments dijital sinyal işlemcisine (DSP-TMS320F28379D) yüklenerek SMSM'nin konum kontrolü deneysel olarak gerçekleştirilmiştir. Önerilen SMSM konum kontrol sisteminin etkinliğini gösteren benzetim ve deneysel sonuçlar, PI kontrolör sonuçları ile karşılaştırmalı

olarak verilmiştir. Yük torku ve parametre değişimleri altındaki motor yükleri için LQR+ $i_q$  ileri besleme kontrol yöntemi ile dayanıklı bir kontrol sisteminin elde edilebileceği gösterilmiştir.

Bu makalenin giriş bölümünden sonra ikinci bölümünde SMSM'nin durum uzayında d-q eksenli modeli çıkarılmıştır. Üçüncü bölümde LQR kontrolörün tasarımı yaklaşımları açıklanmış ve yük torku gözleyicisinin tasarımı verilmiştir. Dördüncü bölümde SMSM'nin PI, LQR, LQR+ $i_q$  kontrolör için benzetim ve deneysel sonuçları karşılaştırmalı olarak sunulmuştur. Beşinci bölümde benzetim ve deneylerden elde edilen sonuçlar değerlendirilmiştir.

## 2. SMSM'nin MATEMATİKSEL MODELİ

Bu çalışmada, rotoru yüzey montajlı sürekli mıknatısa sahip bir SMSM kullanılmıştır. 3 fazlı SMSM Şekil 1'de gösterildiği gibi stator referans düzlemi durağan ( $\alpha$ - $\beta$ ) ve rotor referans düzlemi ise dönen çerçeveye (d-q) dönüştürülerek incelenir [21].

**Şekil 1.**  $\alpha$ - $\beta$  stator referans düzlemi ve d-q rotor referans düzlemi.

3 fazlı SMSM'nin 3 faz denklemlerinin dönen referans düzlemine (d, q) dönüşümünden aşağıdaki eşitlikler elde edilir [22].

$$V_d = R_s i_d + L_d \frac{di_d}{dt} - \omega_e L_q i_q \quad (1)$$

$$V_q = R_s i_q + L_q \frac{di_q}{dt} + \omega_e L_d i_d + \omega_e \lambda_m \quad (2)$$

Denklem 1-2 de,  $V_d$  ve  $V_q$ , d-q eksen gerilimlerini (volt),  $i_d$  ve  $i_q$  d-q eksen akımlarını (A),  $\lambda_d$  ve  $\lambda_q$  ise d-q eksen akılarını (weber),  $\omega_e$  elektriksel hızı (rad/s),  $\lambda_m$  ise sabit mıknatısların neden olduğu manyetik akıyı göstermektedir.

Motorun ürettiği tork ise,

$$T_e = \frac{3}{2} P \{ \lambda_m i_q + (L_d - L_q) i_d i_q \} \quad (3)$$

Yazılabilir. Yüzey montajlı SMSM'lerde karşılıklı endüktanslar ( $L_d$  ve  $L_q$ ) genellikle eşit kabul edilir ve bu durumda Denklem 3'teki tork ifadesi, aşağıdaki gibi doğrudan  $i_q$  eksenli akımına bağlı hale gelir.

$$T_e = 1.5 P \lambda_m i_q = K_t i_q \quad (4)$$

Burada,  $K_t = 1.5 P \lambda_m$  tork sabitini göstermektedir. Motorun mekanik denklemi ise aşağıdaki eşitliklerde verilmiştir.

$$J \frac{d\omega_r}{dt} + B \omega_r = T_e - T_L \quad (5)$$

$$\frac{d\theta}{dt} = \omega_r \quad (6)$$

Burada  $\omega_r$  mekanik hız,  $T_e$  motorun ürettiği tork,  $T_L$  yük torku,  $J$  atalet momenti,  $B$  ise sürtünme katsayısıdır. Eşitlik (7)'de elektriksel hız ve mekanik hız arasındaki ilişki verilmiştir.  $P$  ise motordaki kutup çifti sayısıdır. Buna göre mekanik ve elektriksel hız ilişkisi aşağıdaki gibi elde edilir.

$$\omega_e = P\omega_r \quad (7)$$

Buradan vektör kontrollü motor için  $i_d = 0$  olacağından SMSM için motor konumu çıkış alınmak üzere SMSM' nin durum uzay modeli aşağıdaki gibi elde edilir.

$$\frac{d}{dt} \begin{bmatrix} \theta \\ \omega_r \\ i_q \end{bmatrix} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & -\frac{B}{J} & \frac{K_t}{J} \\ 0 & -\frac{P\lambda_m}{L} & -\frac{R}{L} \end{bmatrix} \begin{bmatrix} \theta \\ \omega_r \\ i_q \end{bmatrix} + \begin{bmatrix} 0 & 0 \\ 0 & -\frac{1}{J} \\ \frac{1}{L} & 0 \end{bmatrix} \begin{bmatrix} v_q \\ T_L \end{bmatrix} \quad (8)$$

$$\theta = \begin{bmatrix} 1 & 0 & 0 \end{bmatrix} \begin{bmatrix} \theta \\ \omega_r \\ i_q \end{bmatrix} \quad (9)$$

Diğer taraftan, vektör kontrollü SMSM'nin elektriksel devresi ve dolayısıyla akım kontrolörleri ideal alınabileceğinden  $i_q = i_q^*$  alınabilir ve buna göre Denklem 8-9'daki SMSM modeli elektriksel devresi ihmal edilerek,

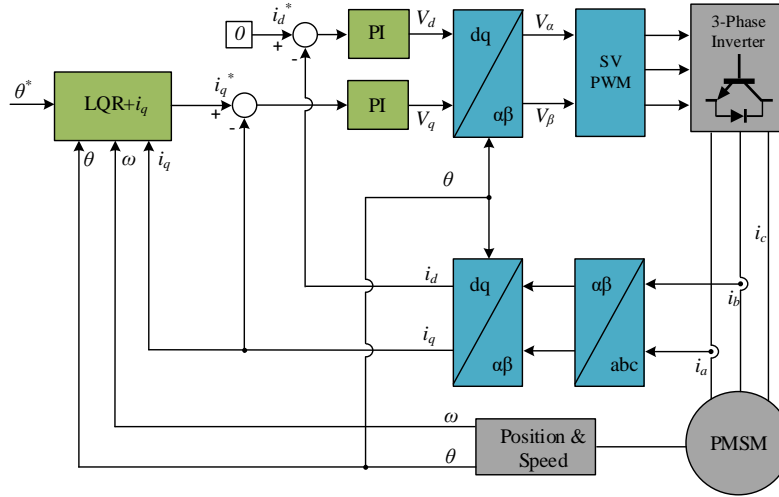

$$\frac{d}{dt} \begin{bmatrix} \theta \\ \omega_r \end{bmatrix} = \begin{bmatrix} 0 & 1 \\ 0 & -\frac{B}{J} \end{bmatrix} \begin{bmatrix} \theta \\ \omega_r \end{bmatrix} + \begin{bmatrix} 0 & 0 \\ \frac{K_t}{J} & -\frac{1}{J} \end{bmatrix} \begin{bmatrix} i_q^* \\ T_L \end{bmatrix} \quad (10)$$

$$\theta = \begin{bmatrix} 1 & 0 \end{bmatrix} \begin{bmatrix} \theta \\ \omega_r \end{bmatrix} \quad (11)$$

Olarak yazılabilir. Dolayısıyla vektör kontrolü ile denetimi yapılacak motorlarda, Denklem 10 -11'e göre kontrolör tasarlamak yeterli olacaktır.

### 3- SMSM için LQR TABANLI KONUM KONTROLÜ

AA motorlarda olduğu gibi SMSM'de de alan yönlendirmeli kontrol (AYK) kullanılarak motorun tork ve akı bileşenleri DA motorlardakine benzer şekilde ayrıştırılarak, SMSM'nin hız veya konumu kontrolü gerçekleştirilebilir [8]. AYK yönteminin esası, üç fazlı SMSM'nin faz akımlarını clark dönüşümü ile iki fazlı sabit referans çerçeveye, ardından park dönüşümü ile iki fazlı dönen referans çerçeveye dönüştürmektir. Elde edilen  $i_d$  akımı motorun alan akımına,  $i_q$  akımı ise tork akımına denk gelir. Motorda nominal hızın üzerine çıkılmayacaksa vektör kontrol yönteminde referans alan akımı  $i_d^* = 0$  çekilebilir ve motorun torku ve dolayısıyla hızı/konumu  $i_q$  akımı tarafından kontrol edilebilir [22,23]. Referans tork akımı  $i_q^*$  ise arzu edilen hız ya da konum referansını sağlayacak şekilde hız/konum kontrolöründen elde edilir. Şekil 2'de vektör kontrollü SMSM'nin LQR kontrolör tabanlı konum kontrol prensip şeması verilmiştir.

**Şekil 2.** Vektör kontrollü SMSM'nin LQR+i<sub>q</sub> tabanlı konum kontrol şeması.

Şekil 2'de konum kontrolörü olarak LQR kontrolör kullanılmıştır. Motorun torku ile orantılı olan  $i_q$  akımı, yük torku etkisini minimize etmek amacıyla, LQR kontrolöre pozitif geri beslemeli olarak eklenmiştir. Akım çevriminde ise geleneksel PI kontrolörler kullanılmıştır. PI kontrolör çıkışlarından elde edilen  $V_{dq}$  gerilimleri ters park dönüşümü yapılarak üç fazlı modülasyon sinyalleri elde edilmiştir.

Denklemler 10, durum uzayında,

$$\frac{d}{dt}x(t) = Ax(t) + Bu(t) \quad (12)$$

İle gösterilebilir. Bu sisteme,

$$u(t) = -Kx(t) \quad (13)$$

Durum geri beslemesi yapılarak elde edilen,

$$\frac{d}{dt}x(t) = (A - BK)x(t) \quad (14)$$

Sistemde, kontrol taleplerini karşılayacak şekilde geri besleme  $K$  kazanç matrisinin belirlenmesi durum geri beslemeli kontrol sistemi olarak bilinir. Optimal kontrol teorisi ise optimizasyon teorisinin kontrol sistemlerine uygulanması sonucu ortaya çıkan kuramlar bütünüdür [14]. Optimal kontrol yöntemlerinden olan LQR, durum geri beslemeli sistemlerde aşağıdaki gibi bir performans fonksiyonunu minimize edecek şekilde geri besleme kazanç matrisinin ( $K$ ) belirlenmesini ihtiva eder.

$$J = \frac{1}{2} \int_0^{\infty} (x^T Q x + u^T R u) dt \quad (15)$$

Bu minimizasyon problemi farklı yöntemlerle çözülebilir ancak genellikle problemin çözümü Matrisel Riccati denkleminin çözümüne indirgenebilir.

$$A^T P + P A - P B R^{-1} B^T P + Q = 0 \quad (16)$$

Denklemler 16'nın çözümünden bulunan  $P$  matrisi yardımı ile optimum geri besleme kazancı aşağıdaki gibi hesaplanır [11,14,24].

$$K = R^{-1} B^T P \quad (17)$$

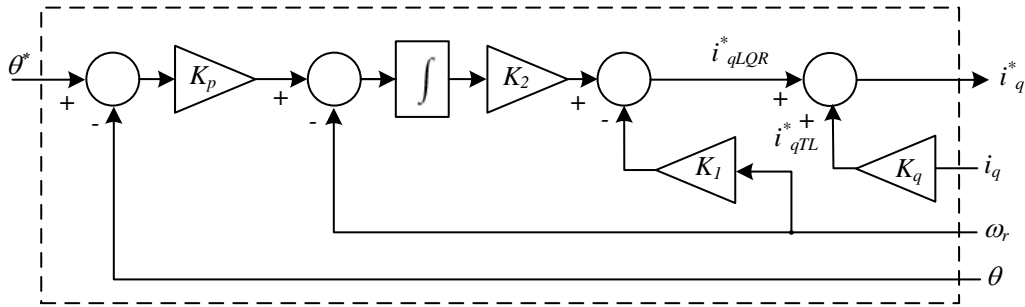

LQR yönteminin kontrol performansı, performans fonksiyonundaki  $Q$  ve  $R$  ağırlık parametrelerine bağlıdır. Köşegen ve pozitif tanımlı seçilen durum değişkenleri boyutundaki  $Q$  kare matrisi ve girişler boyutundaki  $R$  matrisi denemelerle bulunabilir.

Denklem 8-9'da modeli çıkarılan SMSM için farklı LQR tasarım yaklaşımları incelenebilir. Denklem 8-9 yerine yukarıda açıklandığı gibi Denklem 10-11'deki SMSM modeli kullanılarak kontrolör tasarlamak yeterlidir. Denklem 10-11'e göre konum çıkışı için sistem Tip 1'dir. Tip 1 sistemlerin LQR tasarım esasına göre konum kontrolörü Şekil 3'teki gibi belirlenebilir.

Şekil 3. LQR kontrolör yapısı.

Bu yaklaşımda, LQR kontrolör sabit motor parametrelerine göre tasarlandığından sabit motor parametreleri için kontrol performansı oldukça iyi olmakla birlikte parametre değişimleri ve yük torkuna karşı kontrol sisteminin duyarlı olduğu gözlemlenmiştir. Parametre değişimlerine ve yük torkuna karşı dayanıklılığı iyileştirmek amacıyla motorun hızı çıkışı alınarak Tip 0 olan hız çıkışı için bir LQR tasarlanabilir. Hız çıkışı için sistem Tip 0 olduğundan hız hatasına eklenecek integral kontrolör sistemi Tip 1'e yükseltecektir.

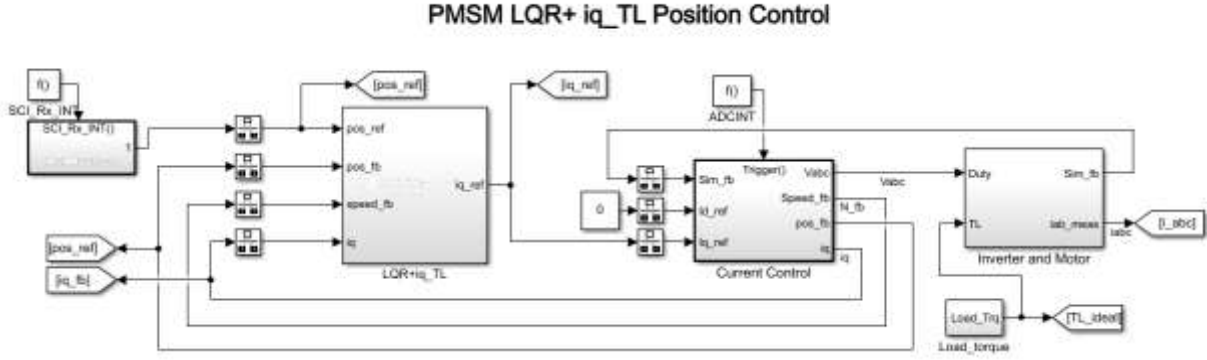

Şekil 4. SMSM'nin konum kontrolü için geliştirilen LQR+iiq kontrolör.

$K_1$  ve  $K_2$  Kazançları LQR kontrolör tasarımı ile belirlenir,  $K_p$  konum kontrolörü ise deneme-yanılma ile seçilebilir. Ayrıca yük torkunun etkisini minimize etmek amacıyla bir tork gözlemleyici tasarlanabilir. Ancak, motorun nominal parametreleri için çektiği akım  $i_{q0} \cong 0$  alınırsa motorun  $i_q$  akımının motor torkunun temsil ettiği anlaşılır. Dolayısıyla motorun referans  $i_q^*$  akımı,  $i_q^* = i_{qLQR}^* + i_{qTL}^*$  alınarak yük torkunun etkisi minimize edilebilir.

#### 4. BENZETİM VE DENEYSEL ÇALIŞMALAR

Şekil 5'te, deneysel çalışmada kullanılacak olan DSP ile de uyumlu olacak şekilde SMSM'nin Şekil 4'te verilen LQR ve tork gözleyici tabanlı vektör kontrolünün Matlab/SIMULINK ortamında oluşturulması verilmiştir.

Şekil 5. SMSM konum kontrolü için Matlab/SIMULINK kurulumu.

Diğer taraftan, Şekil 6'da uygulama çalışması yapılacak deney düzeneği verilmiştir. Deney düzeneğinden de görüleceği gibi, iki eksende hareket edebilen servo mekanizmanın tahriki SMSM'ler tarafından sağlanmaktadır. Ayrıca motorlarda devir/tork düşürücü/yükseltici mekanizmalar da kullanılmıştır. Deney düzeneğinde y eksenini hareketini sağlayan üst motor, üst motora bağlı mekanizmanın yükünü tahrik ederken, x eksenini hareketini sağlayan alt motor sistemin bütün yük torkunu karşılamak durumundadır.

Şekil 6. SMSM tahrikli iki eksenli hareket edebilen deney düzeneği

Çalışmada kullanılan motorun parametreleri;

Stator direnci  $R_s = 0,36 \Omega$ , d-q eksen endüktansları  $L = 0,2 mH$ , çift kutup sayısı  $P = 4$ , atalet momenti  $J = 7,06 \times 10^{-6} kg - m^2$ , motor sürtünmesi  $B = 2,36 \times 10^{-6} kg - m^2/s$ , zıt emk sabiti  $K_e = 4,64 Vpp/krpm$ , tork sabiti  $K_t = 0,0384 Nm/A$  şeklindedir. Üç fazlı sürücü giriş gerilimi 24 V DA'dır.

Şekil 5'teki LQR kontrolör için motorun nominal parametreleri kullanılarak denemelerle seçilen  $Q$  ve  $R$  matrislerinin uygun değerler  $Q = [0,12 \ 0; \ 0 \ 170]$ ,  $R = 0,5$  olarak elde edilmiştir. Buna göre MATLAB/lqr fonksiyonu ile hesaplatılan kazanç matrisi yaklaşık  $K = [0,5 \ -18]$  olarak bulunmuştur. Ancak,  $Q$  ve  $R$  matrislerinin seçimine göre kontrol performansının değişeceği de hatırlanmalıdır. Konum kontrolörünün kazancının en uygun değeri ise  $K_p = 0,2$  olarak, tork kompanzatorü olarak kullanılan  $i_q$  akım geri beslemesinin kazancı ise  $K_p = 0,6$  olarak elde edilmiştir.

Benzetim ve deneysel çalışmalarda LQR yerine PI, LQR ve LQR+ $i_q$  kontrolörlerin değişen bir konum referansını izleme performansı verilmiştir. Benzetim çalışmasında referans konum,  $-0,5 PU (-180^\circ)$

Şekil 9. TMS320F28379D DSP ve DRV8301 model üç fazlı sürücü

Kullanılan geliştirme kartının diğer bir avantajı ise izolasyonlu USB bağlantısı (JTAG) sayesinde gerçek zamanlı uygulamalarda PC ile arasında ek bir izolasyon arayüzüne ihtiyaç duymamasıdır. TMS320F28379D model geliştirme kartı Texas Instrument firması tarafından geliştirilen Code composer studio (CCS) ile programlanabileceği gibi hızlı prototipleme amacıyla kullanılabilen ve C/C++ kodlarını üretebilen Altair Embed, PSIM, Matlab/SIMULINK Embedded gibi programlar vasıtası ile de programlanabilir [25,26]. Bu çalışmada, Matlab/SIMULINK Embedded kullanılmış, oluşturulan SIMULINK modelinden C/C++ kodları elde edilmiş ve geliştirme kartına yüklenerek SMSM'nin farklı kontrolörler için konum kontrolü gerçekleştirilmiştir.

Şekil 6'daki servo mekanizmayı tahrik eden SMSM'nin sırasıyla PI, LQR ve LQR+i<sub>q</sub> kontrolör ile gerçek zamanlı olarak referans konumu takip performansı Şekil 10'da verilmiştir. Uygulama her bir kontrolör için 3 saniyelik periyotlar için tekrarlanmıştır. 1,5. saniyede konum referansı 0'dan 0,5 PU yani 180 dereceye arttırılmıştır. Benzetim çalışmasında yük torku başlangıçta %20'de tutulmuş ardından 1.sn'de %50'ye yükseltilmişti. Deneysel çalışmada ise servo sistemin yük torku belirsiz ve değişkendir.

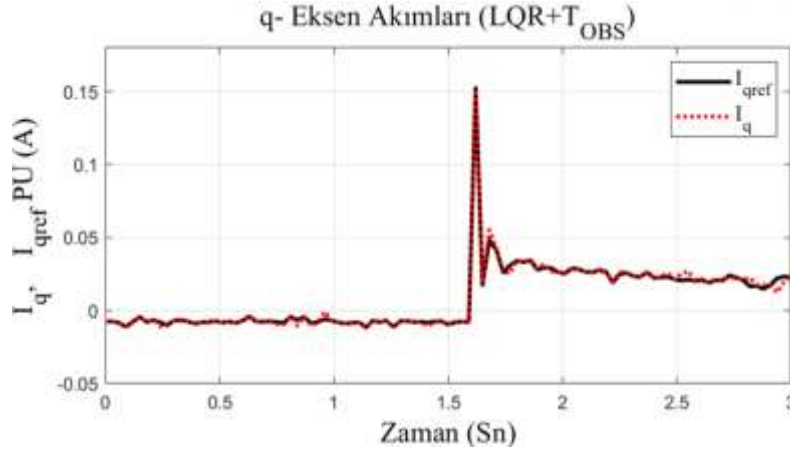

Şekil 10. SMSM'nin, PI, LQR, LQR+i<sub>qTL</sub> kontrolör ile referans konumu

Gerçek zamanlı izleme performansı

Şekil 10'dan, LQR+i<sub>q</sub> kontrolörün bilinmeyen bir yüke sahip motorun konumunu izleme performansının PI ve LQR kontrolöre göre çok daha tatmin edici olduğu görülmektedir. Ayrıca PI kontrolörün performansının, benzetim sonuçlarına göre kötüleştiği de gözlemlenmiştir.

Şekil 11'de LQR+i<sub>q</sub> kontrolör devrede iken ölçülen q eksen referans akımı ve q eksen akımı verilmiştir. Çizdirilen q eksen akımlarına göre vektör kontrolü yapılan motorun akım kontrolörlerinin yeterince uygun olduğu anlaşılmaktadır. Ayrıca bu akımın mekanik düzenekteki motor yükünü temsil ettiği de belirlenebilir.

Şekil 11. Gerçek zamanlı, q- eksen ve q- eksen referans akımı

## 5. SONUÇLAR VE TARTIŞMA

Denklem 10-11'e göre konum çıkışı için SMSM, Tip 1 sistem olduğundan PI kontrolörlerin doğrudan konum kontrolörü olarak kullanılması sistemi karasızlığa sürükler. Bu durum geleneksel kontrol teorileri ile kolayca gösterilebilir. Bu nedenle konum kontrolörü oransal ve içteki hız kontrolörü ise PI kontrolör olarak tasarlanır. Bu yapıya göre elde edilen yukarıdaki benzetim ve deneysel sonuçlardan ani binen yük torkunu toparlaması kabul edilebilir.

LQR kontrolörler, sistemin nominal parametrelerine göre tasarlandığından nominal parametrelerdeki kontrol performansı son derecede iyidir. Ancak parametre ve yük torku değişimlerinde önemli ölçüde bozulmalar ortaya çıkmaktadır. Bu bozulmaları azaltmak için konum kontrolörü olarak oransal, içteki hız kontrolörü için ise LQR kullanmak makul bir seçenektir. Bu yapıda da ani binen yük torkunda konumun toparlanmasının tatmin edici olmadığı görülmektedir. Bu durumda, bir yük tork gözleyici tasarlanarak motora binen yük torku hesaplanabilir ve bu torku karşılayacak kadar bir akım, motorun referans  $i_q^*$  akımına eklenebilir. Burada, motorun yüksüz  $i_{q0}$  akımının yaklaşık sıfır olduğu kabul edilirse motorun  $i_q$  akımının doğrudan yük torkunun karşılığı olduğu söylenebilir. Dolayısıyla ayrıca bir tork gözleyici tasarlamak yerine motorun  $i_q$  akımı, bir kazanç çarpanı üzerinden motorun referans  $i_q^*$  akımına eklenebilir. Sonuç olarak, benzetim ve deneysel sonuçlara göre önerilen yöntemin oldukça iyi performans gösterdiği görülmektedir. Eğer, motora binen gerçek yük torkunu en doğru hesaplayacak şekilde bir gözleyici tasarlanırsa sistemin konum kontrol performansının çok daha iyileşeceği de belirlenebilir.

### ABSTRACT

It is the duty of the teacher of each subject to make the study of technical subjects, including the subject "Machine Design" more effective, to determine more modern, proven methods in the teaching process and to bring the student's knowledge and skills to a high level. Machine design is the foundation of the engineering industry.

Machine building is the leading industry of the national economy and is a very complex, labor-intensive field. Providing students with the necessary level of science and technology in the training of future specialists requires multifaceted work. The knowledge and skills of mechanical engineers in all areas of production are invaluable experience. Studying and mastering the science of machine design and mechanical engineering in general, both require students to study mathematics, resistance of materials, mechanics, machine parts, etc. Applying the knowledge they have acquired in such subjects in the real process requires deep knowledge and skills from them. These requirements set great goals and responsibilities for the teachers who teach the subject. It is the responsibility of the teachers and laboratory assistants to acquire perfect knowledge and skills for discovering and solving problems that may arise in their future work for students studying in machine design, including engineering design.

University auditoriums are equipped with high-level teaching equipment, which enables the use of advanced technology and new teaching methods. Studying theory in lectures, testing knowledge in practical classes, conducting experiments in laboratory classes, group research work and virtual resources are great opportunities to achieve teaching effectiveness. These opportunities are expected to provide teachers with a wider range of teaching methods for teaching engineering and students to acquire the desired competencies.

**Key words:** machine design, engineering, teaching of technical subjects, lecture, curriculum

**INTERNATIONAL ANKARA CONGRESS ON  
MULTIDISCIPLINARY STUDIES-VI  
October 13-14, 2023**

**INTRODUCTION:** In modern times, various constructions, very complex construction objects, bridges, roads, technological, transport, information machines, etc. are already an integral part of our life. A large number of specialists specialized in engineering are involved in the realization of these structural solutions with complex functions. Engineering, and specialists engaged in the process of machine design (projecting) in particular, the design of machines and structures, various powerful engines, construction examples, mechanisms, transmissions, etc. create and implement.

Teaching the student the concepts of the machine design process has a number of objectives as an important starting point: to demonstrate how a structure works, why it is used, to determine what conditions its operation depends on and what it affects, with modern examples based on the basic scientific principles of engineering to introduce etc.

The following can be mentioned about machine building according to its connection with other fields and the purpose of its products:

- 1) it is the largest user of ferrous and non-ferrous metals and products of a number of other manufacturing sectors;
- 2) provides other industries with machinery and equipment;
- 3) depending on the purpose of the manufactured equipment, machine building mainly includes these large groups:
  - a) technological equipment for industry;
  - b) energy machines, vehicles;
  - c) agricultural machines, equipment for road construction;
  - d) devices and equipment for healthcare, etc;
- 4) provides significant employment of human resources;
- 5) plays a key role in the improvement of machines and the creation and production of new equipment;
- 6) realizes the achievements of scientific and technical progress by producing modern tools;
- 7) ensures comprehensive mechanization and automation of production.

**RESEARCH AND FINDINGS:** The engineering industry accounts for about 25% of the value of fixed assets and 20% of industrial output.

The fact that students know such information is a motivation in their study of mechanical engineering, assimilation of knowledge not only increases their worldview, but also in the future. They would like to see themselves as builders of society and production and can determine their jobs according to their qualifications.

The knowledge and skills of mechanical engineers in all areas of production are invaluable experience. Studying and mastering the science of machine design and mechanical engineering in general, both require students to study mathematics, resistance of materials, mechanics, machine parts,

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

etc. Applying the knowledge they have acquired in such subjects in the real process requires deep knowledge and skills from them. These requirements set great goals and responsibilities for the teachers who teach the subject. It is the responsibility of the teachers and laboratory assistants to acquire perfect knowledge and skills for discovering and solving problems that may arise in their future work for students studying in machine design, including engineering design. Communicating the process of machine design to students at a high level and encouraging them to solve problems plays a major role in the development of future engineers. The machine design process is the process of developing a project aimed at solving a specific technical problem.

At the initial stage of the project, work is carried out such as identification of potential problems in the machine, planning of work to be done, selection of prototypes. The next stages include product testing and design evaluation. The result of the product test can be positive or negative compared to the prototype. This indicates how correct the approach to solving the problem is. The student must accept the existence of these failures and start using other approaches.

Teachers should pay great attention to the process of machine design, because the process of machine design is a knowledge-summing process. As we mentioned, here students are required to have both mathematical, technological and engineering knowledge, and to successfully apply this knowledge in the design process.

Involving students in the teaching of "Machine design" subject in real conditions can greatly help them to get to know the construction materials well, to know the conditions of the processes, to absorb informative information and to keep the knowledge they received in their memory for a long time. The teaching of the subject "Machine design" should generally include the following stages:

1. Introduction to the topic. At this stage, the teacher should inform the students about the goals and objectives of the subject, what knowledge and skills they will have by studying this course. Also, at this stage, he can show examples of machines and discuss what problems there may be in their design and the importance of solving them.
2. The stage of studying the theoretical base. At this stage, students should learn basic theoretical information about the construction of technological machines. For example, they should learn the structural elements of machines (mechanisms, nodes, etc.), the working principles of structural elements and systems, their design and calculation methods. It is also important to give students practical skills to work with software materials used for machine design.
3. It should be noted that it is a great opportunity for "Machine Design" teachers to deliver the design process to students virtually during class. Several consistent approaches can be used to master the subject: (John A. Marshall, June E., 2005, p. 29)
4. Studying the purpose of the machine or a certain part of it and investigating its working principle;
5. Analysis of the malfunctions in the machine or a certain part and the defects detected in the work or product as a result;
6. Analysis of the operating mode of the investigated object, average values of work productivity;
7. Determination of the cause of the problem;
8. Discussion of the solution of the problem with students, examination of their suggestions for solving this problem;
9. Selection of prototype equipment and organization of a testable solution;
10. Finding a more efficient solution by changing the test conditions;
11. Mathematical processing of test results;
12. Completing the design process and compiling the results.

Below is an approximate plan of the lesson to explain a certain topic: Topic: Belt transmission, their use in machines and constructions.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Here, first, the information in the theoretical part: "Introduction. Geometric structure of the belt transmission, types of the transmission, characteristics, types of the belts, manufacturing material, various structural solutions of the belt transmission, purposes of their use in machines, calculation, defects in belts, etc.

In the practical part, the operation of the belt drive in installed equipment or virtual material should be demonstrated based on examples and changing conditions.

In the final part, an overview of theoretical and practical knowledge, giving results, evaluating the lesson with a discussion of the degree of achievement of the goal, and announcing the next topic.

Preparation of tests and use of written works are applied to each subject to study the subject and check the students' mastery level. In written tests, the student has the opportunity to demonstrate the ability to describe and explain, which plays a large role in self-examination and mastering the material. This approach is a very effective step in the machine design process. The questions in the tests can be devoted to ways of solving this or that problem. In small subgroups created in the group, it is possible to investigate the given problem, determine the reasons that created it, and then discuss and summarize the answers and suggestions of all group members. (J. E. Shigley, C. R. Mischke, and R. G. Budynas, 2003. p.57)

One approach is for the teacher to present a problem and then guide the students to find a solution to the problem. In this approach, the teacher sets certain conditions for solving the problem. One of these limitations is that students can use only certain materials, certain sizes, movement trajectories, etc. is that

In the reverse approach to the problem, the teacher presents the answer to the problem to the students, and the students analyze the answer and determine how it solves the problem. For example, a teacher shows a technological scheme to a student. The student determines how the machine works and what it can do. Here, the student can collect information from the teacher about the structural elements of the machine by asking certain questions and then give his opinion. The student begins the explanation by looking at a diagram or picture of the product, determining what they do and what the problem is. Then, they determine what the solution is or how the problem is solved. One of the main discussions here is the choice of materials and consideration of their properties. (John A. Marshall, June E., 2005, p. 32). It is also important for students to consider the physical requirements of the product. Physical requirements are indicators such as weight, size and structure. Students should be able to apply the function of the product they analyzed and the methods of finding a solution to the encountered problem to other products.

Studying the machine design process can be close to, or even simpler than, the traditional design problem approach. If the solution already exists, that is, if the students have already developed their own ideas about how to solve the problem, then only ways to move to the next stage are sought. Students can apply the research strategy for solving the problem in the machine design process to other products.

There are many points to consider when teaching the machine design process, so the engineering design process can be an excellent introduction to engineering problem solving. The teaching strategies of the subject usually involve practical learning such as design problem projects (Dr. Ahmadi Begum.2019, p.36). Carrying out these projects helps students to use the knowledge they have acquired in different stages of the design process. It is appropriate to do them in this order: Visual presentation of the studied object (machine part, mechanical transmission, etc.) and analysis of several suitable examples. When explaining a new topic, the visual presentation of the object helps the students to understand the lesson. While some students can grasp new information by hearing, others have difficulty visualizing the construction (mechanism, detail, etc.) and must see it. At this stage, the purpose of the given topic and the advantages and disadvantages of the studied object compared to others are brought to the student's attention.

For certain explanations, the teacher is also required to make a report on the board, draw a diagram and in many other cases provide a model. For example, when teaching a mathematical calculation, it is usually appropriate to demonstrate it on the board. Otherwise, students will miss the point without understanding it. In some cases, it is necessary to explain the same information several times or give

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

several examples. Demonstrating several different examples ensures that new knowledge is transferred to memory more effectively. The active participation of the student in solving the example, making the calculation on the calculator and giving the answers, affects their focus on the topic during the lesson. In between, the teacher also tests their attention by deliberately making mistakes (A. J. Dutson, Jan. 1997, pp. 17-28).

1. The teacher deliberately makes mistakes in giving examples and their properties and checks how focused the student's attention is.

When the teacher presents the plan of the lesson, of course, he collects the right material and presents it to the student. But the concept of making mistakes on purpose is a great approach for them to be careful. Praising the student who finds the error motivates others to be careful and competent as well. For example, applying the advantages of a belt drive to a gear drive or vice versa should raise a question and a negative thought in the student and he should join the argument. This creates excitement among students and leads to deep discussion.

2. Working in small groups, assigning them to solve the same problem.

This is an effective strategy where every small group aspires to be a leader. The lead student appointed in that group leads the task and distributes the work among the group members. It will be better if the students themselves choose the members of the group. They draw up a work plan together with the teacher, and then divide the work among themselves. The teacher sets a certain time limit for completing the task. The teacher supports them as needed and monitors the level of performance. This support includes the provision of literature, calculation methods, etc. as it may be.

1. To encourage the student to learn from experience.

For deeper understanding of lectures and seminars, students' contact with production should be organized as soon as possible. They describe the operation of mechanisms in real conditions, their application areas, structural features, material they are made of, sound they create, vibration, etc. seeing them will be an invaluable help in learning the educational material. In the next lesson, they gain the effectiveness of having basic knowledge by supplementing and generalizing the practical knowledge they received with theoretical knowledge.

Discussing what they have learned in a group and describing what they see on paper will greatly help students to understand how mechanisms transfer power and motion and perform related calculations. This knowledge will give them self-confidence and strong motivation to study the subjects.

2. To train students to prepare a report after the experiment and demonstrate their knowledge.

Students should prepare a report on the processes they see in production and how they are implemented by mechanisms and submit it to the teacher. The use of theoretical resources in the essay can also present the work using virtual material. This task can be given to students individually or by dividing students into groups. The goal of this approach is to demonstrate students' acquired knowledge, develop their skills, and lay the foundation for future inventions and improvements.

1. To use innovative interactive technology in teaching.

The use of innovative-interactive technologies in teaching in the subject "Machine design" greatly helps teaching and student understanding. Learning, of course, has many ways and means. Students' abilities and skills are as varied as they are. Some students master the theoretical part easily, the formulas do not scare them, and even if some students show weakness in the theory, the practical and logical side makes it stronger. To discover these, the teacher should make them talk, exchange ideas and determine what percentage of the material the student should master during the lecture. Just giving the lecture once may not give a good result in the student's understanding of the subject. That is why, before moving on to the next topic, the teacher should revisit the previous topics with the students, discuss the forgotten points again and make sure that they understand them to the maximum extent (R. L. Norton, p. 78).

Studies show that the student's thinking and understanding speed is several times lower than the teacher's lecturing speed. When the student takes time to absorb the information he heard, the teacher gives other information. The student's mind is already distracted. By the end of the lesson, the percentage of

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

knowledge acquisition is 10%. For this, the teacher should ask the students after each piece of information whether they have any questions or not, and make sure that they fully understand the information. A lecture given quickly is absorbed by the student late, that is, the student should be given time to pause and think at certain points ( R. L. Norton, 2006. p. 44)

The use of computers, laptops and tablets of the class allows to improve the educational activity. Thus, watching educational videos or completing a virtual task, using access to scientific resources with the help of browsers provides the student with great information opportunities. As a result, students use these resources to their advantage and their motivation to study the subject increases. They should be able to speak and write about the subject they have learned, present it at the appropriate level and sequence, know the fields of application of their knowledge and personalize those knowledge and skills (V. K. Meti, 2016, p. 76)

In the teaching of "machine design" and other technical subjects, the research authors recommend that the teacher ask the following questions to the students at the end of the lesson and answer them in writing. The first question is " What was the most important thing they learned from today's lesson ? ", and the second question is " What are the unclear points ? ". While examining these answers, the teacher should review his teaching technique and work on its further improvement.

## CONCLUSION:

Preparation for teaching should be done taking into account the following points: Checking the students' basic knowledge and determining what level it is will help the teacher to choose a strategy for mastering the subject taught by the teacher. Being aware of the students' mathematical and engineering knowledge, better connecting the subject's content with their previous knowledge when delivering the subject will give positive results. can Students should be aware of their theoretical and logical thinking levels in order to make the right decision about teaching methods. For the subject to be successful, students should be taught how to acquire data collection skills, how to use databases, and how to work in groups. Students should be taught what kind of teaching strategies to use in order to achieve good results. They should be taught to cooperate with others in small or large groups, and to solve problems and tasks. To keep students' attention for a long time during the lesson, providing a variety of teaching aids: oral explanation, video material, doing a small calculation, discussing the problems together, asking questions, announcing the next topic and completing the lesson can be considered more correct sequence.

**ÖZET**

İlhan Kemal (d. 13 Eylül 1968/ö. -) Adanalı bir şair olup şiir ve edebiyata olan ilgisi nedeniyle hayatı boyunca edebî çevrelerde bulunmuştur. Asıl adı Kemal Kaplan'dır. Şiir ve yazıları çeşitli dergi, fanzin ve antolojilerde yer almıştır: *Aykırısanat, Adalya, Akatalpa, Amanos Edebiyat, Bahçe, Çayyolu, Babylon Şiir Kenti, Budala, Dize, Ecinniler, Eliz, Etken, Hayal, Heves, İmgelem Çocukları, Kavram Karmaşa, Kurşunkalem, Kum, Kıydili, Lül Sanat, Mazruf, Mühür, Mortaka, Nordik, Patika, Papirüs, Sadece Şiir, Sanat ve Hayat, Söylem, Sincan İstasyonu, Şiiri Özlüyorum, Şiirsaati, Ücra, Varlık, Yeniyazı, Yom Sanat*. Bazı şiirleri ise İngilizce'ye çevrilerek *Destine Literare* (2015/Kanada), *World Antholog of Poetry* (2016/Taiwan), *Salt boundaries* (2017/İtalya), *Miletus* (2019/Amerika) gibi seçki, antoloji ve dergilerde yayımlanmıştır. Deneme, söyleşi, inceleme yazıları ve şiir üzerine eleştirileri de bulunur. *Türkiye Yazarlar Sendikası (TSY)* üyesi olan İlhan Kemal, *İmgelem Çocukları* ve *Lül Sanat* dergilerinin kurucularındandır. Ayrıca *Çukurova Edebiyatçılar Derneği* ve *Ötekileriz Kültür Sanat Girişimi*'nin üyeleri arasında bulunmuştur. Şimdilerde ise yayın hayatına yeni başlayan *Teş Dergi*'nin sanat danışmanlığını yapmaktadır. Aşk, çocukluk, gençlik, özlem temalarının hâkim olduğu şiirleri imgelerle örülüdür. Mısra uzunluğu ve noktalamadaki keyfi tutumu şiirlerinin ilk dikkat çeken yönüdür. Şairin imla ve noktalamadaki tavrı bir yandan akıcılığı sekteye uğratarken bir yandan da şiire bir sayıklama hâli verir. 2020 yılında yayımlanan *Çavlan Sözler* ismini taşıyan kitabı ise İlhan Kemal'in sekiz şiir kitabının (*Mağnum/Ocak 2006, Hiç, Kimsenin Bildiği/Nisan 2007, Ücra Söz/Ağustos 2009, Değişik/Haziran 2011, Yağmur Konalgası/Eylül 2012, Beni Güzlerimden Öp/Mart 2014, Ağır Çıvgın/Mayıs 2016*) gözden geçirilerek bir araya getirildiği eseridir. Eser, altı asır yaşamış divan edebiyatı geleneğinin izlerine rastlanması bakımından ilgi çekicidir. Şairin şiirlerinde âşık kimi zaman solgun benizli ve vuslatı arayan yolcu kimi zaman mumun etrafında dönen pervanedir. Sevgili kılıç kuşanmış ve gamze oklarıyla âşığı hedef alan bir vefasızdır. Bu çalışmada *Çavlan Sözler*'deki âşık ve sevgili tipi ile divan şiirindeki âşık-maşuk tipleri arasındaki ortaklıklara dikkat çekilecektir.

**Anahtar Kelimeler:** İlhan Kemal, Çavlan Sözler, Gelenek, Divan Şiiri.

**ABSTRACT**

İlhan Kemal (b. 13 September 1968/d. -) is a poet from Adana and has been in literary circles throughout his life due to his interest in poetry and literature. His real name is Kemal Kaplan. His poems and writings have appeared in various magazines, fanzines and anthologies: *Aykırısanat, Adalya, Akatalpa, Amanos Kitap, Bahçe, Çayyolu, Babylon Poetry City, Budala, Dize, Ecinniler, Eliz, Etken, Hayal, Heves, İmgelem Çocukları, Concept Karmaşa, Kurşunkalem, Kum, Kıydili, Lül Sanat, Mazruf, Seal, Mortaka, Nordic, Trail, Papyrus, Only Poetry, Art and Life, Discourse, Sincan Station, I Miss Poetry, Poetry Hour, Remote, Being, New Writing, Yom Sanat*. Some of his poems have been translated into English and published in selections, anthologies and magazines such as *Destine Literare* (2015/Canada), *World Antholog of Poetry* (2016/Taiwan), *Salt boundaries* (2017/Italy), *Miletus* (2019/America). He also has essays, interviews, reviews and criticisms on poetry. İlhan Kemal, a member of the Writers' Union of Turkey (TSY), is among the founders of *İmgelem Çocukları* and *Lül Sanat* magazines. He is also a member of the *Çukurova Literary Association* and the *Others Culture and Arts Initiative*. Nowadays, he works as the art consultant of *Teş Magazine*, which has just started its publishing life. His poems, dominated by the themes of love, childhood, youth and longing, are woven with images. The first striking aspect of his poems is the length of the lines and his arbitrary style of punctuation. The

poet's attitude in spelling and punctuation, on the one hand, interrupts the fluency and, on the other hand, gives the poem a state of delirium. His book, *Çavlan Sözler*, published in 2020, is a compilation of İlhan Kemal's eight poetry books (*Mağmum/January 2006, Nothing, Nobody Knows/April 2007, Ücra Söz/Ağustos 2009, Changed/June 2011, Yağmur Konalgası/September 2012, Kiss Me From My Eyes./March 2014, Ağır Çıvgın/May 2016*) has been revised and brought together. The work is interesting in that it contains traces of the divan literature tradition that has existed for six centuries. In the poet's poems, the lover is sometimes a pale-skinned traveler looking for reunion, and sometimes he is a moth revolving around the candle. The lover is an unfaithful person who is armed with a sword and targets the lover with dimple arrows. In this study, attention will be drawn to the similarities between the lover and beloved type in *Çavlan Sözler* and the lover-beloved types in divan poetry.

**Keywords:** İlhan Kemal, *Çavlan Sözler*, Tradition, Divan Poetry.

### Giriş

İlhan Kemal (d. 13 Eylül 1968/ö. -) Adanalı bir şairdir. Edebî çevresi kendisine “İlhan” adını müstear isim olarak verir. Asıl adı Kemal Kaplan olsa da şiirlerini İlhan Kemal ismiyle yayımlar. İlk şiiri *Aykırısanat* dergisinde çıkar. Bundan sonra onun şiirleriyle çeşitli edebiyat dergisi ve antolojilerinde karşılaşılır. Şiirlerinden bazıları ise İngilizce’ye çevrilir (Ezik, 2019; Işık 2017, İlhan Kemal 2020).

İlhan Kemal’in yayımlanmış şiir kitapları şöyle sıralanabilir: *Mağmum* (Ocak 2006), *Hiç, Kimsenin Bildiği* (Nisan 2007), *Ücra Söz* (Ağustos 2009), *Değişik* (Haziran 2011), *Yağmur Konalgası* (Eylül 2012), *Beni Güzlerimden Öp* (Mart 2014), *Ağır Çıvgın* (Mayıs 2016), *Yalnızlık Karnavalı* (Mart 2018), *Yitik Kitap* (Haziran 2019), *Şehrazat’ın Düğünü* (Mayıs 2020)<sup>1</sup>. *Çavlan Sözler* (2020, Toplu Şiirler), *İnci Buğusu/İssiz Yara* (2021), *Hüsün Kitabı* (2022), *Aşkla Çattığım Dünyadır* (2023).

Şairin imgelerle örülü şiirlerinde uzun mısraları tercih ettiği, hemen her kelimeyi küçük harfle kaleme alıp noktalama işaretlerinde kural tanımadığı görülür. Bu durum şairin özgünlüğü yakalama noktasındaki arayışını ve farklı bir tarzı olduğunu gösterir. Bununla birlikte şiirleri incelendiğinde altı asır süren divan şiiri geleneğine ait unsurlara sıklıkla başvurduğu, divan şiiriyle ilişkili kullanımlara gittiği görülür. Şairin gazel nazım şekline benzer şiirleri de vardır<sup>2</sup>.

Şiirde gelenek “*Türkçe’nin, İslâm estetiğine dayalı altı asırlık tecrübesini, yani halk ve divan şiirinin müşterek estetik zeminini karşılar*” (Macit, 1996, s. 11). Divan şiiri geleneğinin izi şu şairlerin mısralarında görülür: Âsaf Hâlet Çelebi (Apaydın, 2001; Aydemir, 2014; Coşkun, 2013; Günay & Koreli, 2019; Nayir Ekinci, 2019; Şen & Akgül, 2009; Uz, 2012), Ahmet Hikmet Müftüoğlu (Akgün, 2023), Behçet Necatigil (Arslan, 2018; Fedai, 2017; Uz, 2015); Abdullah Öztemiz Hacıtahiroğlu, Ali Günvar, Atillâ İlhan, Beşir Ayvazoğlu, Ebubekir Eroğlu, Sezai Karakoç, Hilmi Yavuz (Aka, 2012), Hüsrev Hatemi (Macit, 1996); Akif İnan, M. Nejat Sefercioğlu, Osman Sarı, Şahin Uçar, Turgut Uyar, Zemçi Çetinkaya (Ataman, 2016). 21. yüzyılda Çukurovalı bir şairin dizelerinde divan şiiri geleneğinin sıklıkla ve başarılı bir şekilde işlenmesi ise merak uyandırıcıdır.

*Çavlan Sözler*, şairin sekiz şiir kitabının gözden geçirilmiş ve yayımlanmış hâlidir. Eser, geleneğe ait birçok unsur barındırmaktadır. Bu çalışma ise İlhan Kemal şiirlerindeki âşığa ve sevgiliye ait özelliklerin gelenek kapsamında araştırılmasıyla sınırlandırılmıştır.

### İlhan Kemal’in Şiirlerinde Sevgili

Sevgili divan şiirinin “başkişisi” ve ıstırabın kaynağıdır. Âşığın acı içinde olması ona zevk verir. Cevr oku atar, âşığın canına kasteder. Gönlü taşa benzer ve merhameti yoktur (Pala, 1989, s. 437). Fitneler koparıp ortalığı birbirine katar.<sup>3</sup> Sevgili gamze okları, kılıç veya hançerle âşığı katlettiğinden bir celladı andırır (Nalçacıgil Çopur, 2020, s. 63). İlhan Kemal’in mısralarında da sevgili divan şiirindeki maşukun özelliklerine bürünür.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Şair kalbini “hançer uçlar”a, “ok eller”e emanet eder, akasya altında dünyaya gözlerini döker gibi ağlar, kanatıcı şeyleri (hançer ve ok kullanmada mahir) ustadan/sevgiliden öğrendiğini sezdirir. Sevgilinin kirpikleri hançer, elleri oktur:

*Kalbim, seni hançer uçlarına, ok ellerine*

*emanet etme hünerini hangi ustadan*

*öğrenmiştim. Şu kıyıda ağlayan akasya altında*

*dünyaya gözlerimi dökmeyi bir de...*

*İyi öğrenirim kanatıcı şeyleri,*

*aferin bana...*

(Kalbime, s. 212)<sup>4</sup>

Sevgili haindir. Âşık ise hâlâ ona inanır:

*Kınından aşk çıkaracaktı sevgili, hani, nerede!*

*Hain sözlerde deniz mi aramışım, ah aklım*

(Yollara, s. 214)

Can Bardak şiirinde sevgili, âşığın düşlerini yerle bir etmek için barbar rüzgârlar tasarlar. Bu durum şairi mahveder. Sevgili onu ok yağmuruna tutmasın diye yalvaran şair kan atlasında direnmenin kolay olmadığını söyler. Barbar, “kaba saba, ilkel” (Türkçe Sözlük, 2005, s. 199) anlamındadır. “Çöl” Mecnun’u, “barbar, ok yağmuru” Leylâ’yı hatırlatır. Kan atlası ise dünyanın kana bulanmış hâlini anımsatmak için kullanılmış olmalıdır. Sevgilinin oka benzeyen bakışları âşıkları kan içinde bırakır.

Müge “inci çiçeği” (Türkçe Sözlük, 2011, s. 1723) manasındadır. Gelenekte gözyaşı inciye benzetilir. İlhan Kemal’in “Unutma ki mahvıma mügeler açtırmak bezginiyim” sözündeki “müge”den kastının gözyaşı dökmekle ilgili olduğu söylenebilir. Hem ağlamaktan bezgin düşmeye hem de her mahvoluşta yeniden umuda tutunmaya işaret edilir. Şiirin “*Sen bağbancıysan ben bahçeyim, ne işe yararsın olmazsam?*” dizesinde ise sevgili “bağban”, âşık “bahçe”dir. Divan şiirinde bahar gelince bahçeler çiçek ve kuşlarla bezenir. Sevgili ancak bahar gelince dolaşmaya çıkar. Bu bahçede şairler kendini mutlu hissederler. Bahçe daima taze ve suya kanmış olmalıdır. Bir bahçivana ihtiyaç duyulur ve bu kişi sevgili olur (Pala. 1989, s. 67). İlhan Kemal de gelenekteki gibi sevgiliyi bahçivana kendini bahçeye benzetir. Âşık ancak sevgiliyle tazelenacaktır:

*düşlerimi yerle yeksan etmek için barbar rüzgârlar tasarlama!*

*unutma ki mahvıma mügeler açtırmak bezginiyim.*

*bir de sen vurma ok yağmurlu bu çölde, bunu yapma!*

*kolay değildi direnmek kan atlasında, anlıyorsun değil mi?*

...

*sen bağbancıysan ben bahçeyim, ne işe yararsın olmazsam?*

(Can Bardak, s. 28)

İlhan Kemal, âşık olmazsa sevgili ve onun güzelliğinin bir önemi olmadığını söyleyerek Âşık Veysel’in şu mısralarını akla getirir:

*Güzelliğin on par’ etmez*

*Bu bendeki aşk olmasa*

*Eğlenecek yer bulaman*

<sup>4</sup> Şiirler şu kaynaktan doğrudan alınmıştır: İlhan Kemal (2020). *Çavlan Sözler Bütün Şiirler I 1999-2018*. Ankara: Klaros Yayıncılık.

**INTERNATIONAL ANKARA CONGRESS ON  
MULTIDISCIPLINARY STUDIES-VI  
October 13-14, 2023**

*Gönlümdeki köşk olmasa*

(Âşık Veysel)<sup>5</sup>

Gözlerinin iriliği ve siyahlığı, ürkek oluşu gibi nedenlerle ceylan divan şiirinde sevgiliye benzetilir (Pala, 1989, s. 25). Şu dizelerde sevgili giz/sır dağından inmiş bir ceylandır. Âşığın yaraları eskise de yarayı (yaraya yakışacak şekilde) kör bıçakla deşmek için bekleyen bir sevgili vardır:

*sanırsınız, şehre ürkek bir ceylan inmiş giz dağından,  
sol gözünden kalbimi taşmış, en işlek caddede. –aaa!*

...

*solan güldeki eski yarayı, deşer mi bir kör bıçak, hâlâ*

(Deşer Eski Yarayı Bir Kör Bıçak, s. 108)

Sevgilinin dudakları kırmızıdır, ateşe benzer:

*Kıyısındaım şimdi kuruyarak akan tüm nehirlerin*

*Gözlerinde albatros şaşkınlığı büyütme*

*Bu, hiç bilmediğimdi daha önceleri*

*Çok şey değişmiş olmalı göğün altında*

*Yooo nar çatlamış dudaklarından söz etmeyeceğim.*

(Sular Öldüğünde, s. 157)

Siyah saçları nedeniyle kâfir, put vb. ilişkilerle divan şiirinde geçen sevgili İlhan Kemal'in şiirlerinde genellikle esmer bir güzel olarak öne çıkar. Siyahlık-kesret ilişkisiyle hareket edilen mısralarda sevgili dört kitapta olmayan "esmer sure"ler okur. Şairin sevgiliyi esmerliğinden dolayı "çingene kızı" olarak nitelenmesi ise geleneği dönüştürdüğüne bir örnek teşkil eder:

*uzatmış çiçek ellerini mahcup nar çingene kızı*

*esmer sureler okuyordu zamana dört kitap dışı*

(Güneş Saati, s. 31)

Maşuk'un kirpikleri ateş, gözleri rüzgâr olunca bakışları yangın yerine döner. Rüzgâr ateşi daha da artırır. Aslında kirpiklerin ateş olmasının nedeni gözlerdir. Gözler ateşi körüklemektedir:

*beyazın mihrabı, avuçların. kim doldurmuşsa ona, kül gülü?..*

*ateş asılmış kirpiklerine. gözlerin, rüzgâr. bakışların, yanıyor!*

*savrulmak! unutulmuş ezber, yeniden hatırladığın. neden-*

(Son Atlar, s. 144)

Vefasız sevgilinin kapısına kurşunlar kuruludur ve sevgili âşığı pusuda bekler. Şair "Kalk, yaya gidelim" derken hem cesurca buradan geçmeyi hem de "ok, yay" ilişkisiyle sevgilinin yaya benzeyen kaşlarına ulaşmayı hayal eder:

*sofana kurulmuş kurşun. burada vefa, yok. kalk, yaya gidelim*

(Son Atlar, s. 144)

### **İlhan Kemal'in Şiirlerinde Âşık**

Âşık "düta (iki büklüm), kararsız, sabırsız, yüreği kanla dolu, gözü kan ağlar, çaresiz, mest, şûride, gam yiyen, hayran ve kendinden geçmiş, başı dönmüş, sadık, gönlü kırık, inleyen, güçsüz, zayıf, takatsız,

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

ayağı bağlı, esir, gözü yaşlı” biri olarak divan şiirinde tasavvur edilir (Pala, 1989, s. 50). İlhan Kemal’in şiirlerinde gelenekteki âşığa ait özelliklerin hemen hepsine rastlanır.

Geleneğin şiirinde kan yutan, hasta ve divane âşığın derdine deva olabilecek kişi ancak sevgilidir. Aşağıdaki dizelerde de âşığın ilacı sevgilinin ardında bıraktığı şarap tortusudur. Kalan son damlayı içmek için sevgili elbet gelecektir. Bu ihtimal âşığı hayata bağlar.

Eskiden içki şişesinin dibinde kalan yudumu içmek âdetti. Son yudumu içmenin şarabın mucidi Cem’in hakkı olduğuna inanıp yere dökerlerdi. Bu şekilde Cem’in ruhunun şad olacağına inanılırdı (Pala, 1989, s. 108). İlhan Kemal’in şiirinde ise şarabın son yudumu âşığın yaralarına dökülmektedir. Sevgili için saklanan son yudumun yaraya dökülmesi sevgiliye kavuşmak demektir:

*ardında bıraktığın şarap şişesindeki son damla? –ilaç, açık yaralarım*

(Dilfigâr, s. 78)

Şair sarhoşluktan sallanır ve yatağı sevgilinin kapı eşiğidir:

*kaç gül dökümü yaptın koydun masaya, kaç almanak:*

*hep keskin virajlarda çektiirdiğin buğulu fotoğraf,*

*vaktin ellediği saçlarında çıkan yangınlı kasırga,*

*burgaç<sup>6</sup> yıllarda sallanarak yürüdüğün sarhoş yol*

*günü düinden güzel kılma andında dilinde pelesenk, hep*

...

*dağların ardında, uğultu ormanlarında, dipte kalmış huzur:*

*gözler yatırılmış dikenli uzağa, ufuk gözlenmiş sürgit,*

*eşikmiş şairin yatağı, kalakalmış. hep, esmer dizeler...*

(Tedirgin, s. 138)

Aşk şair için “sevgilisiz ve yorgansız üşünen yol” demektir. Soğuk gecelerde kalbine ateş dökülen şair, yaşamayı da “çırılçıplak sürgün edilen yurt” olarak tanımlar:

*Kar: gecenin yatağında yükselen ateş!*

*Beyaz: Karanlığa doğru tutulan fener!*

*Aşk: Üşüdüğümüz diyar yarsız yorgansız!*

...

*Ne derler sizin orada kalbe nâr dökülmesine?*

*Bıçak: Dilimizi buzla kesen bir fırtına makamı!*

*Yaşamak: Sürgün edildiğimiz yurt, çırılçıplak!*

*Her şeyi biz söyledikse, sana ne kaldı?*

(Fırtına Makamı, s. 163)

İlhan Kemal’in şiirlerinde âşık acıdan zevk alır. Ruhunda oluşan kesikler çıldırsa da acının devam etmesini ister:

*burası neresi, bu nasıl bahçe, ümit etmenin gülünü yontuyor*

*bir taş cambazı, bıçaklara itiyor beni. çıldırıyor ruhumdaki kesik!*

*kan ağıyor dünyanın barbar şakağına, dudaklarımın kıvrımlarından!*

<sup>6</sup> Burgaç: “beklenen hızından farklı bir biçimde ve beklenmeyen yönlerden gelen şiddetli hava akımı, türbülans”. bk.: *Türkçe sözlük* (2011) [haz.: Şükrü Halûk Akalın vd.]. Ankara: TDK Yay., s. 414.

*eskiden rüzgârı geçerdi atım, şimdi, kim dokunsa düşecek!*

...

*devam et kalbimi bıçak dudaklarınla öpmeye, aşkın arafta*

(Araf, s. 113)

*Leylâ ile Mecnûn* mesnevisinde de Mecnun aşk derdinin artması için dua eder:

*Sal gönlüme derd-i aşkdan gam*

*Her lahza vü her zamân ü her dem*

*Her handa ki 'âlem içre gam var*

*Kıl gönlümü ol gama giriftâr*

*Endişe-i 'akldan cüdâ kıl*

*'Aşk ile hemîşe âşinâ kıl*

*Artur mana zevk u şevk-i leylî*

*Dâim mana anda kıl tecellî*

*Çohdur Benî Âdem içre bîdâd*

*Et gönlümi vahşet ile mu'tâd*

(Leyla ile Mecnun, b. 1114-1119)<sup>7</sup>

İlhan Kemal'in şiirlerinde *Leylâ ile Mecnun* mesnevisine göndermeler yapılır. Âşık Mecnun, sevgili Leylâ'dır:

*bilinmez mi? –terleyen; nar soluğun; aşkın bin dalında, bir!*

*bu eğlenti konağında, az kalsın çok olan; odalardan taşan isyân hikâyesi!*

*burası da yalnızlık, leylâsızlık. her yer hüsrân berzahı, leyli leyli*

(Nar Terlemesi, s. 137)

*günler kırılmış hale. aşk, arasında. gelme. mecnun, bahtımda de-  
sen olur*

(Yüzüme Basarak Seyrettin Kenti, s. 121)

*Zamanın kaydını tutamadım, yırtıktı sayfası aklımın*

*Buradan sana bir yol çıkamadım, yüzünden çıkaramadım*

*Kimdi o, kollarında sarışın bir hüzne yer açmış tanıdık*

*Leyli! Ağlasam yağmur susmalı... Seversem aşk...*

(Zamana, s. 213)

*Çavlan Sözlere*'de varlık-yokluk, hiçlik, birlik/teklik vb. ifadelerle rastlanır. İlahî aşka kapı aralayan dizelerde âşık bir vuslat yolcusudur:

*ama biz hasar onarma töreniyiz,*

*iki kişilik: bir 'liğe çoğalırız!*

*işimiz yok ikilikle!*

(Hasar Onarma Töreni, s. 265)

<sup>7</sup> bk.: Onan, N. H. (1955). *Fuzuli, Leylâ ile Mecnun*. İstanbul: Maarif Basımevi.

Efsaneye göre Şirin, Hüsrev tarafından bir dağın arkasına hapsedilmiştir. Ferhad ise ona kavuşmak için dağı delmiş ve Şirin’in emriyle “Cûy-ı Şîr” isimli suyu getirmiş veya süt akıtmıştır. Ardından kazmasını havaya atıp altına başını tutmuş, beyni parçalanarak ölmüştür (Kurnaz, 2009, s. 193). *Çavlan Sözler’de* Âşık, Şirin’e kavuşmak için dağları delen bir Ferhad’dır:

*ferhad! bir daha savur külüngünü, yaşasın ölmek, orada kal  
(Ey Ferhad, s. 139)*

Şu mısralarda “deşmek, saklamak, dağ, ferhad, taş, baş, kız” kelimeleri birbiriyle uyumlu kullanılır, bağlam Ferhad ile Şîrîn hikâyesine bilinçli bir göndermedir. Ayrıca meşhur halk hikâyesi *Aslı ile Kerem*<sup>8</sup>’in sonunda yanarak ölen Kerem hatırlatılır:

*tarihin karnını deş, sor, sorgula: -neden saklamış zerdüşt’ü sabalan  
dağı, ferhad efkârını niçin taşlara işlemiş, yanmış kerem, ne’den?..  
yanıt, başucunda. uzansan dokunursun, bir kızın göğsü erir.  
yanıldıkça anlıyorsun, şu sonsuz uzamda insan insanın kıskacı!  
(Hayat: Pespayelik Kitabı, s. 69)*

October 13-14, 2023

Âşık, divan şiirinde olduğu gibi yanar kül olur, külleri rüzgârda savrularak yok olur. Şu mısralarda şair, ateşin içine çılgınlığını düşürür ve sözcükler kor olur. “Köz olmaya, kül olmaya ne kadar var, yetmez mi” diyen şair artık köz ve kül hâline gelip rahatlamak ister. “bekle dedin bekledik bir mümkününe kaç var?” sözüyle ise sevgiliye kavuşma ihtimali için beklediği, aşk ateşine bunun için katlandığı anlaşılmaktadır:

*ateşin ortasına çılgılığımı düşürdüm, yandım çok,  
sözcüklerim korardı, yetmez mi daha, köze kaç,  
küle kaç var? kalbim! var imkansıza, ona sor:  
bekle dedin bekledik bir mümkününe kaç var?*

(Vira Vira, s. 36)

Şair, aşağıda “*bu yüzden işte bu yüzden külden sayıldı gül*” diyerek hem “kül” ve “ateş” ilişkisini hem “kül” (كول ve “gül” (كول kelimelerinin eski harflerle yazımındaki benzerliği çağrıştırır<sup>9</sup>. Yanmaktan hastalığı iyice derinleşen âşık, her şey birbirinin yerine koyulsa da tek sevgilinin aynı kaldığını çeşitli kelime oyunlarıyla anlatır:

*sayrısı derindir yaşadığımız günlerin  
bu yüzden işte bu yüzden külden sayıldı gül  
tümünden sayıldı avucumuzda biriktirdiklerimiz  
bir senin sahiciliğın etmedi, inan buna çingene kızı  
sen bir güneş saati hep aydınlığı gösteren*

(Güneş Saati, s. 31)

Âşığın ahı “soluğunda duman gülleri” oluşturur. Yaşadığı yer ise “küllenen ah ocağı”dır:

*görölmüş! bir ateş yolculuktan sarkmışsın bu konalgaya,  
köz kokan soluğunda duman gülleri, açmaktaymış, rengini silerek  
ardında küllenen ah ocağında zelil bahçe, yanık dünlere delil*

(Yağmur Konalgası, s. 96)

## Sonuç

İlhan Kemal’in *Çavlan Sözler* isimli kitabında âşığa (hastalık, divanelik, kan içinde olma, yaralanma, acıdan zevk duyma, sevgiliye kavuşma isteği, sarhoşluk, yersiz yurtsuz ve yaralı olma) ve sevgiliye (öldürücülük, vefasızlık, ulaşılmaz olma, hainlik, tuzak kurma, tabiplik/derde deva olma, fiziki özellikler) ait unsurlar divan şiirindeki âşık-maşuk tipine ve ikisi arasındaki ilişkiye oldukça benzer. Şair aşkın anlatımında en fazla *Leylâ ile Mecnûn*’dan yararlanır. Leylâ sözcüğüne “leyli” şeklinde de yer veren şair, gece ile “leyl” arasında çağrışımlar yapar. Ok-sevgili-göz; ateş-şarap, dudak; çöl, barbar; bağban-bahçe/sevgili-âşık vb. birbiriyle bağlantılı kelimeleri geleneğe uygun kullanır. Bu durum İlhan Kemal’in divan şiiri geleneğine hâkim olduğunu gösterir.

Çukurova’nın yetiştirdiği şair, günümüz şiirini köklü bir gelenekle yoğurur ve dönüştürür. Şiirlerinde yerel dile ait söylemler veya unsurlarla divan şiiri geleneğini bir araya getirmesi İlhan Kemal’in şiirlerini farklı kılar.

## Kaynakça

Aka, B. (2012). Hilmi Yavuz’un ‘doğunun Geçitleri’ şiirini geleneğin yeniden üretilmesi bağlamında okuma denemesi. *Ç.Ü. Sosyal Bilimler Enstitüsü Dergisi*, 21(3), 411-418.

<sup>9</sup> “Kül” ve “gül” arasındaki yazım benzerliği çağrışımından birçok şiirde yararlanır. Sadece eski harfli yazımda değil, günümüz Türkçesinde de bu kelimelerin imlasi benzerlik gösterir. Sözcüklerin birbirine karıştırılması ise sıklıkla eski harfli okuma sırasında olur.

**ABSTRACT**

James Watt's invention of steam engines and the resulting implementation of machines in factories marked a turning point in production, facilitating the transition from workshop-based production to factory-based production. In 2011, Industry 4.0 was defined, signalling the emergence of a rigorous digital transformation process across all sectors and systems that worked collaboratively within its scope.

Following the Industry 4.0 process, the Industry 5.0 process has gained popularity. This approach prioritises both people and the environment, as fully elaborated in the Industry 4.0 process. Ergo, Industry 5.0 can be expressed as Industry 5.0 = Industry 4.0 + Human + Environment.

In addition to data and information, understanding the Industry 5.0 process is crucial for employees to adapt and collaborate with digital technologies and robots during the digital transformation of businesses.

This study will provide an overview of industrial revolutions and an in-depth analysis of the Industry 5.0 process.

**Keywords:** Industry 5.0, Information Systems and Technologies, Information Management, Sustainability

**ÖZET**

James Watt'ın buharlı makineleri ortaya çıkarması ve ardından makinelerin fabrikalarda kullanılmaya başlaması üretimde yeni bir sayfa açılmışını, atölye tipi üretimden fabrika tipi üretime geçilmesini sağlamıştır. 2011 senesinde Endüstri 4.0 süreci ile hem geçmiş sanayi devrimleri tanımlanmış hem de tüm sektörlerde yoğun bir dijital dönüşüm süreci başlamış ve bu süreç kapsamında iş birliği içerisinde çalışan sistemler ortaya çıkmıştır.

Endüstri 4.0 sürecinden sonra Endüstri 5.0 süreci de popüler olmaya başlamıştır. Endüstri 5.0 süreci Endüstri 4.0 sürecinde tam olarak açıklanmaya insana ve aynı zamanda çevreye odaklanmıştır. Yani Endüstri 5.0 süreci, Endüstri 5.0 = Endüstri 4.0 + İnsan + Çevre olarak ifade edilebilir.

İşletmelerin dijital dönüşümünde veri ve bilginin öneminin yanında, çalışanlarında bu sürece uyum sağlaması, robotlar ve dijital teknolojiler ile iş birliği içerisinde çalışabilmesi çok önemli olduğundan Endüstri 5.0 sürecinin iyi anlaşılması önemlidir.

Bu çalışmada genel olarak sanayi devrimleri anlatılmaya ve detaylı olarak da Endüstri 5.0 süreci incelenmeye çalışılacaktır.

**Anahtar Kelimeler:** Endüstri 5.0, Bilişim Sistemleri ve Teknolojileri, Bilgi Yönetimi, Sürdürülebilirlik

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

## Entrance

Industries are expected to take an active role in resolving the societal challenges, such as preserving global resources, addressing climate change, and achieving social stability. In this context, Industry 5.0 promotes practices to train and enhance employees' qualifications. This enables them to adopt digital technologies, choose circular production models and encourage sustainable production. As a result, natural resources can be preserved, and sectors can be better prepared for unanticipated threats, such as Covid-19 [1].

The Industry 5.0 process has also prioritised human and environmental considerations, which were not previously addressed in Industry 4.0. Like previous industrial revolutions, Industry 5.0 is driven by the emergence of disruptive technology. However, this latest revolution builds on the harmony between technology, humanity and the environment, achieved through the application of cutting-edge technology. When examined within this framework, the Industry 5.0 process may also be referred to as neo-Industry 4.0.

This paper will elucidate the Industry 5.0 process within the confines of this investigation.

### 1. Before Industry 5.0

Beginning in approximately 1780, Industry 1.0, commonly known as the Industrial Revolution, centred on industrial production using steam and water-powered machines. This marked the transition from workshop-style to factory-style production. In the early 1900s, Industry 2.0 began with the introduction of mass production through industrial production, electricity, and assembly lines. However, machines have also begun to replace the work of unskilled workers. During the 1970s, the third industrial revolution, known as Industry 3.0, emerged with the implementation of computer, electronic, and automated systems in manufacturing. This revolution was bolstered by globalization, which involved moving production to low-cost countries. It involved internal and external enterprises collaborating through the use of data and information as well as technologies like artificial intelligence and digital twins. In 2011, the Industry 4.0 process started to emerge. Moreover, the Industry 4.0 process led to the emergence of definitions and names for the 2nd and 3rd industrial revolutions. In summary, Industry 4.0 and the two subsequent industrial revolutions were named after the initial one, known as Industry 1.0 [2], [3].

### Industry 5.0 Process

Approximately a decade after the introduction of Industry 4.0, the concept of Industry 5.0 emerged. This transition represents a shift towards a sustainable, resilient, and human-centric industry. In contrast to Industry 4.0, Industry 5.0 places a greater emphasis on the human aspect, which is not fully elaborated upon in its predecessor. This new process can also be referred to as the neo-Industry 4.0 process. According to Rifkin, there exists a connection between energy and industrial revolutions. The energy link in the third industrial revolution is centered on sustainable energy. The Industry 5.0 process also prioritizes the concepts of carbon footprint and a sustainable environment, within this context. Moreover, given the predicted efficiency of systems in Industry 5.0, it is reasonable to suggest that there will be a more efficient use of energy [4] [2] [5] [6].

The Industry 5.0 process prioritises durability, human-centricity, and sustainability. Resilience denotes the capacity of a system to endure disruptions while maintaining safety and sustainability. Achieving resiliency presupposes critical interactions between humans, AI components, and low-level automation. The proposed concept of resilience initiates decision flow from human operators, developed through decision support components and then extends to AI-driven autonomous control components, and finally to low-level automation controls. By following this process, which covers all three situations, it is predicted that problems that may arise on a working system can be resolved more easily [4].

This process can be defined as follows. Industry 5.0 = Industry 4.0 + people (employees and society) + sustainability (environment and energy) + Resilience

This equation can be schematized as follows:

**Figure -2:** Industry 5.0 Process [4], [7]

**a. Industry 4.0 Process:**

The primary aim of Industry 4.0 is to optimize the internal environment of enterprises, including their units, employees, machinery, and equipment, with the help of data-driven technology. This process also facilitates collaboration with the external environment, which entails suppliers, customers, and government institutions, among others. The strategic incorporation of data and information underpins these goals. Technical terms are explained when they are first used, and there is a logical flow of information with causal connections between ideas. The language is objective, value-neutral, and free from bias and ornamental verbiage. Spelling and grammar follow British English conventions, while the vocabulary contains British English and subject-specific terms, where appropriate. This collaboration can be defined as a form of horizontal and vertical integration. Cyber physical systems define the virtual counterparts of physical systems in this process [8], [9].

The lights go out in factories of enterprises that operate in adherence to the Industry 4.0 process, as the level of autonomy of data and knowledge-based automation increases during production. In essence, unskilled workers in the production process are removed from the work setting.

The Industry 4.0 process can be briefly schematized as follows.

**Figure-1:** Industry 4.0 Process

**b. Employee & Society**

**Employee:**

In the Industry 5.0 process, the employee's status has been explicitly defined in accordance with the Industry 4.0 process. The aim is for human capabilities to collaborate with system capabilities, such as software, hardware, robotics, and others. This is in order for businesses to maximise the potential of their employees and reap greater benefits. The objective is to enhance the physical health, morale, and motivation of employees through employer investment [7].

This is not a cost for businesses operating within Industry 5.0, but a valuable asset. Achieving business goals requires investment in employees. Increasing their abilities and well-being can positively impact the strengthening of the business-employee value chain. In this context [10], it is anticipated that employees will acquire additional qualifications to enhance their

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI October 13-14, 2023

proficiency in the Industry 5.0 operation. While tedious and strenuous manual tasks are delegated to robots, the automation systems at this plant are deemed capable of collaborating with personnel, leveraging their expertise and contributing to overall productivity. Adequate training for employees to effectively collaborate with robotic technology is imperative. Newly developed technologies are being designed to enhance employees' ease of use [6], [10], [11].

Industries should prioritise education, training, and enhancing employee capabilities to acquire the skills required for digital transformation. It is crucial to have qualified human resources for a successful digital transition. However, it is not feasible for every employee to adapt to this process. If any employees are excluded during this process, it is imperative that the state takes measures to locate suitable employment opportunities that will prevent them from becoming marginalized due to social policies. Otherwise, there is a risk of social issues arising [10].

During the Industry 5.0 process, it is probable that companies will provide value-added solutions in order to attract skilled employees [12].

The types of robotic technology currently adopted in the workplace include robotic arms, autonomous cars and robotic machinery. Depending on developments in robot technology, there is a possibility that workplaces may soon use robots that resemble humans and can communicate like them. How these human-like robots will interact with human employees in the workplace is still uncertain, including employees' reactions to this situation, how social interaction with robots will be, what actions can be taken in case of artificial intelligence support, and the likelihood that artificial intelligence will perform incorrectly. Human resource departments responsible for staff-related matters may also have responsibility for robots [11].

One study that addresses employees is human cyber-physical systems (HCPS). Cyber-physical systems, implemented in the Industry 4.0 approach, embody representations of physical world objects in the virtual world. Through the Industry 5.0 method, human cyber-physical systems that form the infrastructure for the depiction of individuals in the physical world to the virtual world may unify human, physical, and virtual systems. Human cyber-physical systems aim to represent not only the physical appearance of individuals, but also their abilities, personality, and sensitivity in a virtual environment [7]. For instance, it is possible to assign suitable job roles to employees based on their abilities and predict the likely alternatives for employees who may fall ill in the future.

Thanks to human cyber-physical systems, it is possible that in the future, scenarios could occur where the conduct of business by employees may be commercialized amongst different companies. Thanks to human cyber-physical systems, it is possible that in the future, scenarios could occur where the conduct of business by employees may be commercialized amongst different companies. To illustrate, when identifying and repairing personnel machinery failures is delegated to a digital domain utilizing human-driven cyber-physical systems, this can act as a model for staff at other enterprises. However, the task of integrating the tacit knowledge of employees - recognized as one of the most challenging elements in the development of organisational memory within business settings - can be accomplished.

## **Society:**

Industry 5.0 has emerged as a vision for the future of industry that seeks to uphold human values and meet the essential needs of society, going beyond mere efficiency. The focus is on placing the well-being of workers at the heart of the manufacturing/production process, along with other key human values relating to employees, customers, and wider society [13].

It aligns with the principles of Industry 5.0 and promotes a society centred around humans that reconciles economic development with addressing societal issues through the integration of cyber and physical systems [14]. The concept of Society 5.0 was introduced by Keidanren, the leading business federation of Japan, in 2016 and has since garnered support from the Japanese government. Japan's dimensions of digitalisation and transformation are based on a comprehensive national strategy and policy, mainly focused on individual organisations and certain segments of society.

Society 1.0 and 2.0 correspond to pre-industrial times, up until the late 18th century. Society 3.0 marks the start of an industrial society and broadly corresponds to aspects of the first, second and third industrial revolutions. Society 4.0 strives to enhance the benefits obtained from technological

advancements in information gathering, sharing, storage, and preservation, without subjective evaluations. Society 5.0 seeks to achieve a balance between economic growth and addressing social and environmental challenges through a logical and comprehensible structure, clear, objective language, and a formal register. Throughout the document, technical term abbreviations shall be promptly explained, and grammatical correctness will be ensured. Society 5.0 is not confined to the manufacturing sector. It encompasses a society in which daily life is enriched by advanced information technologies, internet of things technology, robots, artificial intelligence and technologies like augmented reality, leading to outcomes such as rapid acquisition, sharing and analysis of information. The benefits are primarily enjoyed by every citizen, in fields including, but not limited to, industry and healthcare. Economic gain is not the primary goal [10].

**c. Sustainability and Environment**

Sustainable production is facilitated through circular production models aided by efficient resource utilization technologies. To mitigate a business's impact on the natural environment, measures can be implemented to minimize carbon footprint and the use of natural resources, toxic materials, and other harmful substances. Furthermore, active measures can be taken to eliminate waste, as well as to promote reforestation and repair of environmental damages [15], [16].

It is imperative for businesses to maximise their resource usage in the production of goods and services, enhancing their efficiency. Resource efficiency entails optimising the product output to the resource input ratio [10].

Businesses that adopt sustainable practices cultivate a positive customer perception, making them a more preferred choice among consumers [12].

Another aspect of sustainability in the Industry 5.0 process is Environmental Social Governance (ESG). ESG refers to the regulatory standards that organizations follow to safeguard the environment, mitigate climate change, and address social concerns such as discrimination and human rights abuses. ESG scores have recently gained prominence as a measure of a business's financial status [17].

The rise in popularity of concepts such as sustainability, environment and climate change can be attributed to the growing awareness of technology's negative impact on the environment and human health, including physical and nervous system health. Nevertheless, comparative analysis of past climate and environmental data, when technological influence was less pervasive, could considerably enhance research on these topics.

**Durability**

Resilience aims to enhance the durability of industrial production, enabling it to withstand disruptions and provide and sustain vital infrastructure during emergencies. According to [18], geopolitical crises, cyber security threats such as cyber attacks, wars, humanitarian crises, and similar factors, exert a significant influence on global industries and the economy, especially on Industry 4.0 and smart manufacturing. During the Covid-19 pandemic, worldwide production processes faced significant challenges. In order to overcome such obstacles, a heightened degree of process adaptability, production sustainability, and quality decision-making are essential. Our efforts are focused on sustaining this approach with Industry 5.0 [13].

The role of data-driven technological advancements in enhancing enterprises' resilience cannot be overstated. These technological advancements have resulted in a detrimental progression in acquiring, storing, analysing, sharing, and preserving data and information vital to businesses. It is important to note that these technologies being linked online also increases the likelihood of vulnerability to cyber attacks. It is just as imperative to conduct research in the field of cyber security as it is to carry out work in other areas for businesses to maintain their resilience [10].

**Result**

Industry 5.0 centres on the human factor, both in terms of employees and society, a concept that was not fully emphasised in the Industry 4.0 process. Consequently, there is a concerted effort to promote collaboration between people and smart technologies. It is evident that each industrial era has been instigated by technological advancements. However, the fifth industrial revolution, in contrast,

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

prioritises the wellbeing of both employees and the environment in addition to technological advancements. Building upon the Industry 4.0 process, the fifth revolution adopts and progresses the existing technology. At its core, this revolution places a heightened emphasis on addressing the environmental impact caused by human activity and protecting the rights of employees within the business world and society at large. [10]

Through the application of Industry 5.0 technologies, future enterprise corporate memories may access employee-based implicit knowledge and experiences.

This process values the welfare of both employees and society. As His Holiness Şeyh Edebali, one of our elders, famously stated: "Let the people live so that the state can live."

YOZGAT/SORGUN LİNYİT KÖMÜRÜNÜN FLOTASYONUNDA FARKLI  
KÖPÜRTÜCÜLERİN PERFORMANSININ ARAŞTIRILMASI

AN INVESTIGATION INTO THE PERFORMANCE OF DIFFERENT FROTHERS IN THE  
FLOTATION OF YOZGAT/SORGUN LIGNITE COAL

**ÖZET**

Kömür flotasyonu, ince kömürden (-500 µm) kül ve kükürtün uzaklaştırılması için en yaygın kullanılan yöntemdir. Bu yöntemde, ince kömür tanecikleri (-500 µm), çeşitli reaktiflerin eklendiği sulu çözeltilerde oluşan hava kabarcıklarına tutunarak yüzeye taşınır ve istenmeyen minerallerden (gang) ayrılır. Flotasyon yönteminde; köpük oluşturmak, köpüğü stabil tutmak, tanecik-hava kabarcığı temasını arttırmak ve istenilen minerallerin köpük ile taşınabilmesini sağlamak için köpürtücü reaktifler kullanılır. Bu çalışmada, linyit kömürü flotasyonunda farklı köpürtücülerin performansı incelenmiştir. Flotasyon deneylerinde köpürtücü reaktif olarak çamyacı, Dowfroth-250 ve Metil izobütil karbinol (MIBC) kullanılmıştır. Bu köpürtücüler deneylerde 25, 50, 75, 150, 250, 500 ve 1000 g/t miktarlarında test edilmiştir. Flotasyon deneylerinin sonuçları; verim (%), yanabilir verim (%) ve kül uzaklaştırma (%) ile birlikte değerlendirilmiştir. En iyi sonuçlar, 500 g/t Metil izobütil karbinol (MIBC) ile %61.56 verim, %63.01 yanabilir verim ve %40.73 kül uzaklaştırma ile elde edilmiştir. Metil izobütil karbinol (MIBC) Yozgat/Sorgun linyit kömürünün flotasyonu için en uygun köpürtücü olarak seçilmiştir.

**Anahtar kelimeler:** Flotasyon, kül uzaklaştırma, linyit kömürü, verim, yanabilir verim.

**ABSTRACT**

Coal flotation is the most widely used method of removing ash and sulphur from fine coal (-500 µm). In this method, fine coal particles (-500 µm) are carried to the surface by clinging to air bubbles formed in aqueous solutions to which various reagents are added and separated from unwanted minerals (gangue). In the flotation method; frothers reagents are used to create foam, to keep the foam stable, to increase particle-air bubble contact and to ensure that the desired minerals can be transported by foam. In this study, the performance of different frothers in lignite coal flotation was investigated. Pine oil, Dowfroth-250 and Methyl isobutyl carbinol (MIBC) were used as frother reagents in the flotation experiments. These frothers were tested in the experiments at 25, 50, 75, 150, 250, 250, 500 and 1000 g/t. The results of the flotation experiments were evaluated together with yield (%), combustible recovery (%) and ash rejection (%). The best results were obtained with 500 g/t Methyl isobutyl carbinol (MIBC) with 61.56% yield, 63.01% combustible recovery and 40.73% ash rejection. Methyl isobutyl carbinol (MIBC) was selected as the most suitable frother for flotation of the Yozgat/Sorgun lignite coal.

**Keywords:** Flotation, ash rejection, lignite coal, yield, combustible recovery.

## GİRİŞ

Kömür; bitkisel kökenli organik maddeler ile inorganik minerallerin yüksek basınç ve sıcaklığın etkisiyle sıkışması ve katılaşması sonucu oluşan tortul bir kayadır. Bir kömürün fiziksel ve kimyasal özellikleri, kömürlerin sınıflandırılması ve kalitesinin belirlenmesinde kullanılmaktadır. Kömür; ASTM (The American Society for Testing and Materials) standartına göre dört sınıfa ayrılır: linyit, alt bitümlü kömür, taş kömürü ve antrasit.

İnce kömürlerin (-500 µm) temizlenmesinde yaygın olarak kullanılan flotasyon yöntemi 1920'lerden beri taş kömürü ve antrasitlere uygulanmaktadır. Kömürün içerdiği, kullanım ve temizlemede önemli safsızlıklar üç grupta toplanmaktadır: kül, kükürt ve nem. Kömür flotasyonunda, kömürden kül yapıcı maddeler ve inorganik kükürt uzaklaştırılmaktadır. Kömür hidrofob (suyu sevmeyen) özellik gösterdiğinden, kömürün flotasyon ile yüzdürülmesi kolaydır. Buna rağmen, değişik kömür cinsleri farklı flotasyon özelliği göstermektedir. Linyit kömürü; yüksek nem, kül ve uçucu madde içeren düşük kalorifik değere sahip bir kömürdür. Bu nedenle linyitler en zor flote edilen kömürlerdir. (Drzymala, 2007; Laskowski, 2001)

Flotasyonda kömür ve istenmeyen minerallerin (gang) yüzey özelliklerindeki farklılığa bağlı olarak bir ayırma gerçekleşir. Kömür doğal hidrofobik (suyu sevmeyen) özellikte olduğundan pülpe ilave edilen toplayıcı reaktif ve köpürtücü sayesinde, kömür taneciklerinin yüzeyleri ince bir hidrokarbon tabakası ile kaplanır ve hava kabarcıklarına yapışarak köpüklerle birlikte temiz kömür (konsantre) olarak alınır (Glombotskii, Klassen and Plaksin, 1972).

Köpürtücüler, bir polar grup ve hidrokarbon gruptan oluşan, hava-su arayüzeyinde adsorbe olabilen heteropolar yüzey aktif bileşiklerdir. Köpürtücülerin flotasyondaki görevi, köpük oluşturmak, hava-su arayüzey gerilimi azaltarak istenilen minerallerin hava kabarcığına yapışarak köpük ile birlikte taşınmasını sağlamak ve oluşan köpüğün direncini arttırmaktır. Flotasyonda kullanılan köpürtücüler üç gruba ayrılabilir: alkol, alkoksi ilaveli parafinler ve poliglükoller (poliglükol ve poliglükol eter). Çamaşığı ve kresilik asit en yaygın kullanılan doğal alkol tipi köpürtücülerdir. Metil izobütil karbinol (MIBC) en yaygın kullanılan yapay alkol tipi köpürtücüdür. Dowfroth-250 ise poliglükol eter tipi köpürtücüdür (Khoshdast and Sam, 2011; Sis ve Yekeler, 2022).

Bu çalışmada çamaşığı, Dowfroth-250 ve Metil izobütil karbinol (MIBC) köpürtücülerinin linyit kömürü flotasyonunda etkisi incelenmiş ve bu köpürtücülerin flotasyon performansları karşılaştırılmıştır.

## MATERYAL VE METOD

### Materyal

Bu çalışmada Yozgat/Sorgun linyit işletmesinden alınan kömür numuneleri kullanılmıştır. Tablo 1'de deneylerde kullanılan kömür numunesinin kısa analiz sonuçları verilmiştir.

**Tablo 1.** Yozgat/Sorgun linyit kömür numunesinin kısa analiz sonuçları

Analiz	Kül (%)	Nem (%)	Kalorifik değer (kcal/kg)
Değer	38.66	6.59	3563

Flotasyon deneylerinde köpürtücü olarak çamaşığı, Dowfroth-250 ve Metil izobütil karbinol (MIBC) kullanılmıştır. Test edilen köpürtücülerin kimyasal bileşimi ve yoğunluk değerleri Tablo 2'de verilmiştir.

**Tablo 2.** Test edilen köpürtücülerin kimyasal bileşimi ve yoğunluk değerleri (Khoshdast and Sam, 2011)

Köpürtücü reaktif cinsi	Kimyasal bileşim	Yoğunluk (g/cm <sup>3</sup> )
Çamaşığı	CH <sub>10</sub> H <sub>17</sub> OH	0.875
Dowfroth-250	CH <sub>3</sub> (C <sub>3</sub> H <sub>6</sub> O) <sub>4</sub> OH	0.980
Metil izobütil karbinol (MIBC)	(CH <sub>3</sub> ) <sub>2</sub> CHCH <sub>2</sub> CHOHCH <sub>3</sub>	0.808

### Metod

Kömür flotasyonu deneylerinde Denver tipi flotasyon makinası kullanılmıştır. Deneyler; 1.2 L'lik flotasyon selülünde, %10 ağırlıkça katı oranında, 1100 rpm karıştırma hızında ve pülpün ortam pH değerinde (pH: 3-3.5) yapılmıştır. Bastırıcı olarak 750 g/t sodyum silikat ( $\text{Na}_2\text{SiO}_3$ ), toplayıcı olarak 750 g/t gazyağı kullanılmıştır. Köpürtücü olarak çamyağı, Dowfroth-250 ve Metil izobütil karbinol (MIBC) reaktifleri kullanılmıştır. Her bir reaktif ilave edildikten sonra 5 dakika kondisyon süresi verilmiştir. Flotasyon işlemi tamamlandıktan sonra yüzen (temiz kömür) ve batan (artık) ürünler susuzlandırılmıştır. Yüzen ürünler (temiz kömür)  $105 \pm 5$  °C'de etüvde kurutulmuş ve ASTM D3174 standartına göre kül analizi yapılmıştır. Verim (%), yanabilir verim (%) ve kül uzaklaştırma (%) aşağıdaki formüller kullanılarak hesaplanmıştır:

$$\text{Verim (\%)} = \frac{\text{Temiz kömür ağırlığı (g)}}{\text{Beslenen kömür ağırlığı (g)}} * 100$$

$$\text{Yanabilir verim (\%)} = \left( \frac{\text{Temiz kömür ağırlığı (g)}}{\text{Beslenen kömür ağırlığı (g)}} \right) * \left( \frac{100 - \text{Temiz kömür külü (\%)}}{100 - \text{Beslenen kömür külü (\%)}} \right) * 100$$

$$\text{Kül uzaklaştırma (\%)} = \left[ \frac{\text{Beslenen kömür külü (\%)} - \left( \text{Temiz kömürün külü (\%)} * \frac{\text{Temiz kömür ağırlığı (g)}}{\text{Beslenen kömür ağırlığı (g)}} \right)}{\text{Beslenen kömür külü (\%)}} \right] * 100$$

### BULGULAR

Bu çalışmada Yozgat/Sorgun linyit kömürünün flotasyonunda farklı köpürtücülerin performansı araştırılmıştır. Kullanılan köpürtücüler; kömür flotasyonunda yaygın olarak kullanılan, çamyağı, Dowfroth-250 ve Metil izobütil karbinol (MIBC)'dür. Flotasyon deneylerinde bu reaktifler 25, 50, 75, 150, 250, 500 ve 1000 g/t miktarlarında kullanılmıştır.

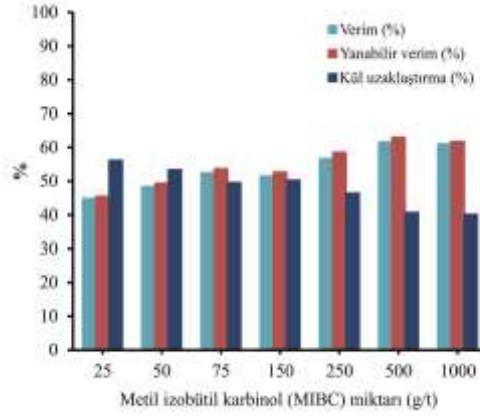

Şekil 1'de çamyağı miktarının flotasyon performansına etkisi, Şekil 2'de Dowfroth-250 miktarının flotasyon performansına etkisi, Şekil 3'de ise Metil izobütil karbinol (MIBC) miktarının flotasyon performansına etkisi gösterilmiştir. Çamyağı, Dowfroth-250 ve Metil izobütil karbinol (MIBC) miktarları arttığında, verim (%) ve yanabilir verim (%) değerleri artmıştır. En yüksek verim (%) ve yanabilir verim (%) değerleri; 500 g/t Metil izobütil karbinol (MIBC) kullanıldığında, %61.56 verim ve %63.01 yanabilir verim ile elde edilmiştir. Metil izobütil karbinol (MIBC) ile diğer iki köpürtücüden daha yüksek verim (%) ve yanabilir verim (%) elde edilmesi, bu köpürtücünün aynı zamanda toplayıcı özelliği sahip olması ile açıklanabilir. Test edilen her üç köpürtücünün miktarı arttığında, kül uzaklaştırma (%) değerlerinin ise azaldığı görülmektedir. En yüksek kül uzaklaştırma (%) değeri Dowfroth-250 ile 25 g/t kullanıldığında %83.04 olarak elde edilmiştir. Bu ilave miktarında Dowfroth-250 ile %17.15 verim ve %17.27 yanabilir verim ile en düşük değerler elde edilmiştir. Verim (%) değerlerindeki artış ile elde edilen temiz kömürün kül içeriği arttığından kül uzaklaştırma (%) değerleri azalmaktadır.

Şekil 1. Çamyağı miktarının flotasyon performansına etkisi

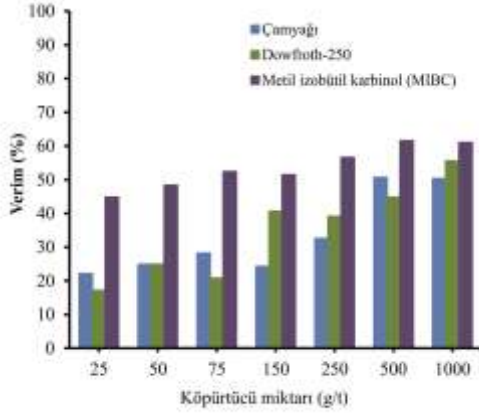

Şekil 2. Dowfroth-250 miktarının flotasyon performansına etkisi

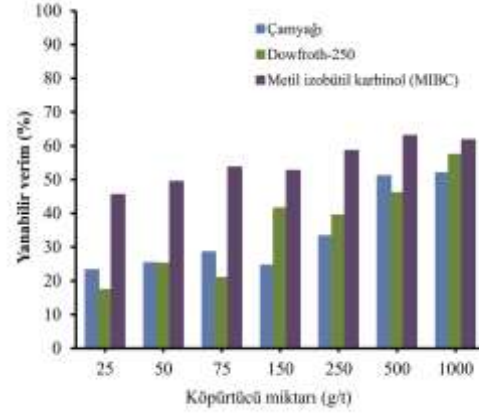

Şekil 3. Metil izobütil karbinol (MIBC) miktarının flotasyon performansına etkisi

Şekil 4’de köpürtücü cinsi ve miktarının verim üzerine etkisi, Şekil 5’de köpürtücü cinsi ve miktarının yanabilir verim üzerine etkisi, Şekil 6’da ise köpürtücü cinsi ve miktarının kül uzaklaştırma üzerine etkisi gösterilmiştir. En yüksek verim (%) ve yanabilir verim (%) değerleri sırasıyla; Metil izobütil karbinol (MIBC), Dowfroth-250 ve çamyağı ile elde edilmiştir. Kül uzaklaştırma (%) değerleri incelendiğinde ise; en iyi sonuçlar sırasıyla; çamyağı; Dowfroth-250 ve Metil izobütil karbinol (MIBC) ile elde edilmiştir.

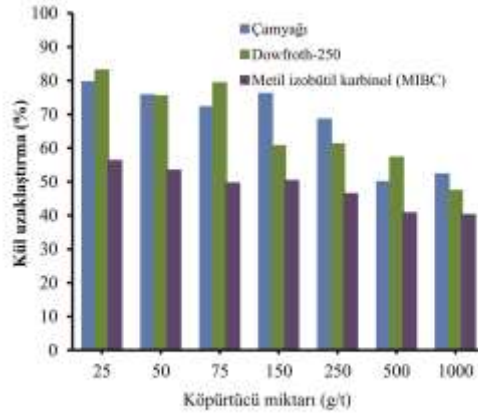

Flotasyon deney sonuçları; verim (%), yanabilir verim (%) ve kül uzaklaştırma (%) ile birlikte değerlendirilmiştir. Test edilen köpürtücüler arasında en iyi sonuçlar, 500 g/t Metil izobütil karbinol (MIBC) kullanıldığında %61.56 verim ve %63.01 yanabilir verim ve %40.73 kül uzaklaştırma ile elde edilmiştir.

Şekil 4. Köpürtücü cinsi ve miktarının verim üzerine etkisi

Şekil 5. Köpürtücü cinsi ve miktarının yanabilir verim üzerine etkisi

Şekil 6. Köpürtücü cinsi ve miktarının kül uzaklaştırma üzerine etkisi

## TARTIŞMA VE SONUÇ

Bu çalışmanın odak noktası Yozgat/Sorgun linyit kömürünün flotasyonunda farklı köpürtücülerin performansının araştırılmasıdır. Çalışmada; çamyacı, Dowfroth-250 ve Metil izobütül karbinol (MIBC) köpürtücü olarak kullanılmıştır. Test edilen köpürtücüler farklı miktarlarda (25, 50, 75, 150, 250, 500 ve 1000 g/t) kullanılarak flotasyon performansları incelenmiştir. Metil izobütül karbinolün (MIBC) flotasyon performansının test edilen diğer iki köpürtücüden daha iyi olduğu görülmüştür. En uygun köpürtücü 500 g/t miktarında Metil izobütül karbinol (MIBC) seçildiğinde, %61.56 verim ve %63.01 yanabilir verim ve %40.73 kül uzaklaştırma elde edilmiştir. Deneysel sonuçlar, Yozgat/Sorgun linyit kömürü için en uygun köpürtücünün Metil izobütül karbinol (MIBC) olduğunu göstermiştir.

**ÖZET**

Bu çalışma, reaktif mavi 19 maddesinin atık sulardan BAP polimeri yardımıyla etkin bir şekilde giderilmesi üzerine odaklanmaktadır. Reaktif mavi 19, tekstil endüstrisinde yaygın olarak kullanılan bir boya maddesidir ve çevresel etkileri nedeniyle önemli bir kirletici olarak kabul edilir. Çalışmanın kavramsal çerçevesi, reaktif mavi 19'un kimyasal özellikleri ve atık sulardaki varlığıyla ilgili bilgileri içermektedir. Ayrıca, atık su arıtımında kullanılan yaygın yöntemler ve bu yöntemlerin reaktif mavi 19'un giderilmesindeki etkinliği hakkında da bilgi sağlanmaktadır. Boyarmadde renk giderimi genellikle maliyetli bir süreç olabilmektedir. Bu nedenle, düşük maliyetli ve etkili yöntemler bulunması önem arz etmektedir. Adsorpsiyon, ucuzluğu, kullanım kolaylığı ve yüksek verimliliği nedeniyle atık suların arıtılmasında en etkili süreçlerden biri olarak düşünülebilir.

Çalışmada, boyarmaddenin uzaklaştırılması için farklı pH değerlerinde (3, 5, 7, 9) deneyler yapılmıştır. Ayrıca, boyarmaddenin uzaklaştırılması UV-VIS spektrofotometresi kullanılarak analiz edilmiştir. Bu spektrofotometre, bir çözümün belirli dalga boylarında ışığı absorbe etme yeteneğini ölçer. Bu çalışma, reaktif mavi 19 maddesinin atık sulardan giderilmesi konusunda daha ileri araştırmaların yapılmasına ve daha etkili arıtma yöntemlerinin geliştirilmesine yol açabilecek önemli bir adımdır. Sonuçlar, endüstriyel atık sulardan kaynaklanan reaktif mavi 19 kirliliğinin azaltılmasına yönelik çevresel koruma çabalarına katkı sağlayabilir.

**Anahtar kelimeler:** Reaktif mavi 19, Atık su, Adsorbsiyon, Polimer

**ABSTRACT**

This study focuses on the efficient removal of reactive blue 19 from wastewater with the help of BAP polymer. Reactive blue 19 is a widely used dyestuff in the textile industry and is considered as a major pollutant due to its environmental impacts. The conceptual framework of the study includes information on the chemical properties of reactive blue 19 and its presence in wastewater. It also provides information on the common methods used in wastewater treatment and their effectiveness in the removal of reactive blue 19. Dyestuff color removal can often be a costly process. Therefore, it is important to find low-cost and effective methods. Adsorption can be considered as one of the most effective processes in wastewater treatment due to its cheapness, ease of use and high efficiency.

In this study, experiments were conducted at different pH values (3, 5, 7, 9) for the removal of dyestuff. Furthermore, the removal of dyestuff was analyzed using UV-VIS spectrophotometer. This spectrophotometer measures the ability of a solution to absorb light at specific wavelengths. This study is an important step that could lead to further research on the removal of reactive blue 19 from wastewater and the development of more effective treatment methods. The results can contribute to environmental protection efforts to reduce reactive blue 19 pollution from industrial wastewater.

**Keywords:** Reactive blue 19, Wastewater, Adsorption, Polymer

## GİRİŞ

Su, yaşamın devamı için hayati bir kaynaktır. Ancak, endüstriyel faaliyetlerin artmasıyla birlikte atık suların kalitesi ciddi bir sorun haline gelmiştir. Atık sular, çeşitli kirleticiler içerdiği için çevre ve insan sağlığı açısından potansiyel tehdit oluşturur. Bu kirleticilerden biri de reaktif mavi 19 maddesidir. Reaktif mavi 19, tekstil endüstrisinde boyama işlemlerinde yaygın olarak kullanılan bir boya maddesidir. Yüksek renklilik özelliği nedeniyle tercih edilir, ancak çevresel etkileri nedeniyle önemli bir kirletici olarak kabul edilir. Reaktif mavi 19, atık sularla birlikte su kaynaklarına yayılarak su ekosistemlerinde olumsuz etkilere neden olabilir.

Bu nedenle, reaktif mavi 19'un etkili bir şekilde atık sulardan giderilmesi büyük bir önem taşır. Bu çalışma, reaktif mavi 19 maddesinin atık sulardan giderilmesi üzerine odaklanmaktadır. Amacı, farklı arıtma yöntemlerinin reaktif mavi 19'un giderilmesindeki etkinliğini değerlendirmektir. Çalışmanın kavramsal çerçevesi, reaktif mavi 19'un kimyasal özellikleri, atık sulardaki varlığı ve çevresel etkileri hakkında bilgi sağlamaktadır. Ayrıca, atık su arıtımında yaygın olarak kullanılan yöntemler ve bu yöntemlerin reaktif mavi 19'un giderilmesindeki etkinliği hakkında da bilgi verilmektedir.

Deneyler, farklı arıtma yöntemlerinin reaktif mavi 19'un giderilmesi üzerindeki etkisini belirlemek amacıyla gerçekleştirilmiştir. Deneylerde, farklı koşullar altında reaktif mavi 19'lu çözeltiler hazırlanmış ve adsorpsiyon yöntemiyle arıtma verimliliği değerlendirilmiştir. Bu çalışmanın sonuçları, reaktif mavi 19 maddesinin atık sulardan etkili bir şekilde giderilmesinde kullanılabilir arıtma yöntemleri hakkında önemli bilgiler sunacaktır. Bu bilgiler, endüstriyel atık suların arıtılması ve su ekosistemlerinin korunması konusunda ilerlemeyi teşvik edebilir. Ayrıca, gelecekteki araştırmalar için temel oluşturarak daha etkili arıtma yöntemlerinin geliştirilmesine katkıda bulunabilir.

## 1. BOYAR MADDELER

Boyalar, uygulandıkları yüzeye kimyasal reaksiyona girerek yüzeyi renklendiren maddelerdir. Boyaların renklendirici özellikleri, genellikle reaktif grupların yüzeydeki substrat molekülleriyle etkileşime girmesiyle ortaya çıkar. Bu reaksiyonlar sonucunda boyalar, yüzeyde kalıcı bir renk oluştururlar (Sevimli, 2000).

Boyaların renk verme mekanizmaları çeşitli olabilir. Örneğin, organik boyalar, kovalent bağlar oluşturarak yüzey molekülleriyle kimyasal reaksiyona girerler. Bu reaksiyonlar sonucunda boyalar, yüzeyde kalıcı bir bağ oluşturur ve renklenme gerçekleşir. Diğer bir mekanizma ise inorganik pigmentlerin yüzeyde çökelerek renk oluşturmasıdır. Bu pigmentler, yüzeyin üzerine yapışarak renkli bir tabaka oluştururlar (Uzun, 1997).

Boya belirli bir renk tonuna sahip olmalı ve yüzeye sıkıca yapışabilmelidir. Boya, pigment adı verilen renkli bir toz ile bir bağlayıcının karışımıdır, ancak çözünmez. Bu nedenle yüzeyleri dış etkilerden koruyarak daha güzel veya renkli hale getirmek için kullanılan maddelerdir. Boyalar uygulandıkları yüzey üzerinde bir film tabakası oluştururlar ancak yüzeye reaksiyona girmezler. Bu nedenle yüzeyden kazınarak kolayca çıkarılabilirler (Zollinge, 1991).

1856 yılında Henry Perkin ilk sentetik boyayı keşfetti. Anilini potasyum dikromat ile oksitleyerek "mauveine" veya "anilin moru" adı verilen siyah bir ürün elde etti. Bu durum birçok kimyager için umutsuz görünse de, daha sonra bu maddeyi çözücünden çıkarmayı başardı ve patentini aldı (Zollinge, 1991).

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Patentini 1876 yılında aldı. Witt, boyaların kimyasal yapısının iki gruptan oluştuğunu öne sürdü. Boyanın ilk grubu, yani rengi veren kısmı kromofor grubu olarak adlandırılır. Kromofor grupları genellikle doymamış bağlara sahiptir ve ışığı belirli bir dalga boyunda absorbe eder. Azo, nitro, nitroso, karbonil vb. içeren yapılar bu gruba örnektir. Diğer grup ise renk arttırıcı anlamına gelen oksikromik gruptur. Oksikrom grubu aynı zamanda suda çözünürlük sağlar. Bunlar karboksilik asit, hidroksil, metoksil, sülfonik asit, amino ve benzeri gruplardır (Zollinge, 1991).

Bu iki fonksiyonel grup boyanın yüzeye uygulanmasını kolaylaştırır ve renklendirme gücünü artırır. Bir kromojen, kromofor ve oksikrom gruplarının birlikte bulunduğu bir bileşiktir. Boyalar, spektrumun görünür bölgesinde 400 ile 800 nm arasında bir absorpsiyon piki oluştururlar. Bu dalga boyunda ışığı emen maddeler, emdikleri rengin tamamlayıcısı olan bir renkte görünürler. Örneğin, soğurma tepesi 425 ile 450 nm (mor) arasında olan bir maddenin görünür rengi sarı-yeşildir. Işığın soğurulan kısmı soğurulan renk, yansıyan kısmı ise tamamlayıcı renktir. İnsan gözü tarafından algılanan renk bu tamamlayıcı renktir (Vigo 1994, Sevimli 2000).

**Tablo 1** Absorblanan ve Yansıyan Renkler (Needles 1986)

Absorblanan Işığın Dalga Boyu (nm)	Absorblanan Renk	Komlementer Renk
400-435	Mor	Sarı-yeşil
435-480	Mavi	Sarı
480-490	Yeşil-mavi	Turuncu
490-500	Mavi-yeşil	Kırmızı
500-560	Yeşil	Eflatun
560-580	Sarı-yeşil	Mor
580-595	Sarı	Mavi
595-605	Turuncu	Yeşil-mavi
605-700	Kırmızı	Mavi-yeşil

## 1.1. Boyar Maddelerin Çevre ve İnsan Sağlığı Üzerine Etkileri

Tekstil endüstrisinden kaynaklanan atık su, içerdiği boyalar ve çeşitli kimyasallar nedeniyle arıtılması en zor olan atık sudur. Bu atık suyun arıtılması en zor olanıdır çünkü çevreye deşarj edilir ve çeşitli organik maddeler, çözünmüş tuzlar, ağır metaller, bulanıklık ve farklı pH değerleri içerir. Bu atık suların arıtılması, kullanılan boyalara eklenen yardımcı maddeler nedeniyle karmaşık bir hal almaktadır. Bu maddeler genellikle toksik, kalıcı ve oldukça kimyasaldır.

Boya, atık su çevreye (alıcı ortama) deşarj edilmeden önce giderilmesi gereken bir kirleticidir. Su kirliliği gölleri, nehirleri vb. renklendirir. Işık geçirgenliğinde ve suyun gaz çözünürlüğünde azalmaya neden olur. Ayrıca görsel olarak zayıf görüntülere neden olur (Banat, Nigam ve ark. 1996). Tekstil endüstrisi atık sularının biyolojik oksijen ihtiyacı, kimyasal oksijen ihtiyacı, askıda katı madde miktarı ve pH değeri çok yüksektir. Bu atık suların temiz su ile teması çirkin ve temiz sudaki canlı organizmaların yaşamını etkileyecek şekilde ışık geçirgenliğini bozar (Çeşmeli, 2011).

Krom boyalar çoğunlukla halı, kilim ve yün tekstil üretiminde kullanılmaktadır. Üretim sürecinde, ürünlerin boyanması ve yıkanmasından kaynaklanan atık sular doğaya, yani toprağa ve temiz su kaynaklarına boşaltılmaktadır. Bu durum, suda yaşayan organizmalar ve toprak verimliliği üzerinde olumsuz bir etkiye sahiptir. Boyaların ağız yoluyla vücuda emilmesi canlı organizmada ağrı, kusma ve ishale neden olabilir.

## 1.2. Boyar Maddelerin Sınıflandırılması

Boyaların kimyasal yapısı incelendiğinde katyonik, anyonik ve noniyonik gibi farklı yapılara sahip oldukları görülmüştür. Boyalar, boyanın sudaki çözünürlüğü, kimyasal yapısı, boyama özellikleri ve kullanım yerleri gibi birçok farklı özelliğe göre sınıflandırılabilir. Ancak genel olarak kimyasal yapılarına ve boyama özelliklerine göre sınıflandırılırlar.

### **Boyar Maddelerin Boyama Özelliklerine Göre Sınıflandırılması**

- Küp boyarmaddeler
- Reaktif boyarmaddeler
- Dispers boyarmaddeler
- Direkt boyarmaddeler
- Asit boyarmaddeler
- Bazik boyarmaddeler

### **Boyar Maddelerin Sudaki Çözünürlüklerine Göre Sınıflandırılması**

- Suda çözünen boyarmaddeler: Anyonik, katyonik ve noniyonik boyarmaddeler
- Suda çözünmeyen boyarmaddeler

### **Boyar Maddelerin Kimyasal Yapılarına Göre Sınıflandırılması**

- Azo boyarmaddeler
- Kükürt boyarmaddeler
- Nitro ve nitrozo boyarmaddeler
- Karbonil boyarmaddeler

Endüstride sıkça kullanılan bazı boyar maddelerin sınıfları, tanımları, kimyasal yapısı ve kullanım alanlarına göre sınıflandırılması Tablo 2’de belirtilmiştir (Husain, 2006).

**INTERNATIONAL ANKARA CONGRESS ON  
MULTIDISCIPLINARY STUDIES-VI  
October 13-14, 2023**

**Tablo 2** Endüstride sık kullanılan boyar maddelerin sınıflandırılması (Husain, 2006).

<b>Boyar Madde Sınıfı</b>	<b>Kullanım Alanı</b>	<b>Kimyasal Tipi</b>
Asit	Naylon, ipek, deri	Azo, nitro ve nitrozo, trifenilmetan, azin ve ksanten
Bazik	Kağıt, poliakrilonitril modifiye naylon, Polyester ve mürekkepler	Siyanin, azo, azin, triarilmetan, ksanten, oksazin ve antrakınon
Direkt	Pamuk, rayon, kağıt, deri ve naylon,	Azo, ftalosiyanın, stilben ve oksozin
Dispers	Polyester, poliamid, akrilik ve plastikler	Azo, antrakınon, stiril ve nitro
Reaktif	Pamuk, yün, ipek ve naylon	Azo, antrakınon, ftalosiyanın, formazon, oksazin ve bazik
Sülfür	Pamuk ve rayon	Bilinmeyen yapılar
Vat	Pamuk, rayon ve tahta	Antrakınon (polisiklik guaninler içerir) ve indigoidler

#### 1.2.1.Reaktif Mavi 19

Reaktif Mavi 19, antrakınon yapılı bir vinil sülfon boyadır. Tekstil endüstrisinde selüloz ipliklerin boyanmasında kullanılır. Kimyasal kararlılığı ve düşük biyolojik bozunabilirliği nedeniyle, genellikle endüstride ve araştırmalarda atık sulardan boyaları uzaklaştırmak için kullanılır. Selüloz ipliklerin boyanmasında kullanılır. Reaktif formu (vinil sülfon) ve 2-hidroksietil sülfon formu arasındaki fark nedeniyle, selüloz ile düşük bağlanma enerjisine (%75-80) sahip olduğu için birçok çalışmada model olarak kullanılır. Şekil 1, 2-hidroksietil sülfonun selüloz liflerine tamamen bağlanamadığını göstermektedir (Siddique, 2011).

Şekil 1 RM 19'un reaktif ve hidrolize formu arasındaki ilişki (Siddique, 2011)

Uygun analiz yapılmadığı takdirde RB 19 doğada uzun süre kalabilir. pH 7'deki yarılanma ömrü 46 yıldır. Kimyasal kararlılığı ve düşük biyolojik parçalanabilirliği nedeniyle, atık sulardan boyaları uzaklaştırmak için araştırmalarda sıklıkla kullanılır (Siddique, 2011).

## 2. ATIKSULARDAN BOYA GİDERİM YÖNTEMLERİ

Günümüzde boyarmadde endüstrisindeki yaygın kullanım, renkli atık suların miktarında artışa neden olmaktadır. Boyaların karmaşık karışımlarını içeren bu atık sular, gıda, tekstil, kağıt, deri, kozmetik, plastik ve biyomedikal endüstrilerinde kullanılan boyaların yaklaşık %10-15'ini içermektedir. Bu atık suların arıtılması, önemli bir çevresel zorluktur. Atıksu arıtma tesislerinde, boyaların aromatik içeriğinin bozunmaya karşı dirençli olması nedeniyle birincil ve ikincil arıtma süreçleri boyaların tamamen giderilmesinde zorluklar yaşamaktadır. Bu durum, boyaların çevreye zarar veren etkilerini azaltmak için geliştirilmiş atık su arıtma yöntemlerinin araştırılmasını gerektirmektedir (Vikrant vd., 2018).

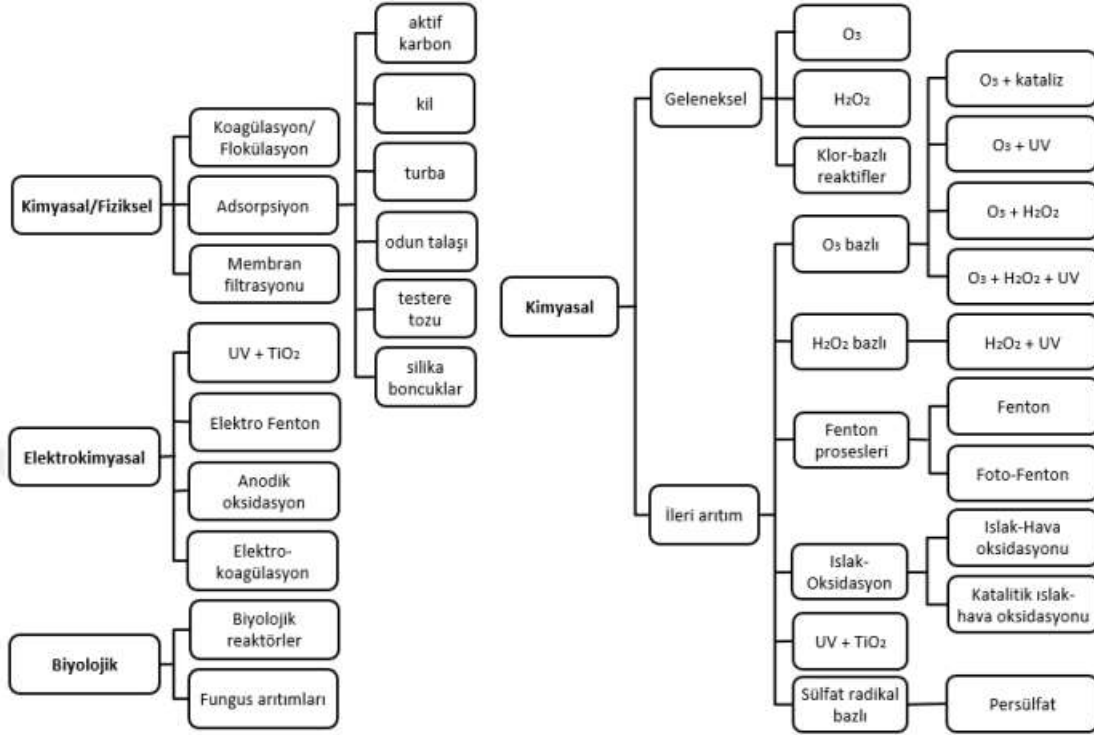

Su kütlelerindeki aşırı boya seviyeleri, ekoloji ve su kaynaklarının bozulması üzerinde çeşitli etkilere sahip olabilir (Vikrant ve ark., 2018). Boya atıklarının içerdiği kanserojen ve mutajen maddeler toprak ve su kaynaklarının kirlenmesine neden olarak çevresel bozulmaya yol açmakta ve canlı organizmalar için tehdit oluşturmaktadır. Boya atık sularının ekosisteme deşarjı, estetik olmayan kirliliğe, ötrofikasyona ve su ortamının bozulmasına yol açmaktadır (Moura vd., 2017). Bu nedenle, boya atık sularının etkisi çevreye deşarj edilmeden önce en aza indirilmelidir.

Araştırmacılar, atık sularından boyaları uzaklaştırmak için enerji tasarruflu, maliyet etkin, çevresel olarak güvenli ve yüksek verimli yeni yöntemler ve malzemeler geliştirmek üzerinde çalışmaktadır. Günümüzde, atık sulardan organik kirleticilerin giderilmesi için birçok biyolojik, fiziksel ve kimyasal yöntem kullanılmaktadır. Bu yöntemler, su kalitesini iyileştirmek ve çevresel etkileri en aza indirmek amacıyla yaygın olarak uygulanmaktadır (Silva vd., 2016).

Biyolojik arıtma sistemleri, mikroorganizmaların organik kirleticileri doğal olarak parçalayarak giderdiği proseslerdir. Örneğin, aktif çamur prosesi ve biyolojik filtreleme gibi yöntemler, organik maddelerin mikroorganizmalar tarafından metabolize edilerek çözülmüş organik bileşikleri ve biyokimyasal oksijen ihtiyacını azaltır. Fiziksel yöntemler arasında filtrasyon ve membran filtrasyonu bulunur. Filtrasyon, kirleticilerin suyun fiziksel engellerle ayrıştırıldığı bir süreçtir. Membran filtrasyonu ise mikrofiltrasyon veya ultrafiltrasyon gibi membranlar aracılığıyla partiküllerin ve organik

bileşiklerin ayrıştırılmasını sağlar. Ters ozmoz ise basınç uygulanarak suyun bir membran üzerinden geçirilerek organik kirleticilerin ve tuzun uzaklaştırıldığı bir prosesdir (Silva vd., 2016).

Şekil 2'de (Collivignarelli vd., 2019) atık suların boyaların gideriminde kullanılan yöntemler gösterilmektedir. Bu yöntemler arasında aktif karbon adsorpsiyonu, membran teknolojileri, fotokataliz, ileri oksidasyon işlemleri, biyolojik arıtma ve çökeltme/flokülasyon gibi farklı prosesler bulunmaktadır. Bu çalışmaların amacı, boyaların atık sularından etkin bir şekilde uzaklaştırılmasını sağlayacak daha verimli, sürdürülebilir ve çevre dostu arıtma yöntemlerini geliştirmektir.

Şekil 2 Atıksulardan boya giderim yöntemleri (Collivignarelli vd., 2019).

### 2.1. Adsorpsiyon

Atomların, iyonların veya moleküllerin bir katının yüzeyine yapışmasına adsorpsiyon, bu parçacıkların yüzeyden uzaklaştırılmasına ise desorpsiyon denir. Başka bir deyişle adsorpsiyon, yüzeydeki temas etkileri ve gerilme kuvvetleri nedeniyle bir maddenin başka bir maddenin yüzeyinde veya bir ara yüzeyde konsantrasyonunun artması olarak tanımlanmaktadır (Ateş, 2009). Adsorpsiyonda, adsorbe olan katıya adsorban, yüzeyde adsorplanan maddeye ise adsorbat denir.

Adsorpsiyon ve absorpsiyon birbirleriyle karıştırılmamalıdır. Absorpsiyonda emilen madde adsorbantın içine difüze olur. Adsorpsiyonda ise adsorbat adsorbantın ara yüzeyinde birikir. Adsorpsiyon derecesi, adsorbantın hidrofilik veya hidrofobik yapısına ve katı içindeki oranına bağlıdır. Sulu sistemlerde her iki koşul birlikte değerlendirilir. Adsorpsiyonu etkileyen bu koşullar büyük önem taşımaktadır (Aksu ve Gönen, 2000).

Çevre kirliliğini önlemek için teknik ve ekonomik olarak uygulanabilir yöntemlere ihtiyaç vardır. Bu nedenle doğal ve sentetik adsorbantlar üzerinde çok sayıda araştırma yapılmış ve son yıllarda adsorpsiyona dayalı ayırma işlemleri önem kazanmıştır (Aksu ve Gönen, 2000). Adsorpsiyon esas olarak toksik ve biyolojik olarak parçalanabilen maddelerin giderilmesinde kullanılır. Bu proses, özellikle biyokimyasal proseslerle arıtılmayan veya arıtılması çok zor olan kirleticilerin giderilmesinde alternatif bir yöntem olarak önem kazanmaktadır.

Adsorpsiyon, atık su arıtımında yaygın bir proses olmasa da, gelişmiş bir yöntem olarak tercih edilerek arıtılmış atık suyun kalitesini iyileştirmek için kullanılmaktadır. Gelecekte özellikle koku, organik maddeler, ağır metaller ve boyalar gibi kirleticilerin gideriminde etkili bir yöntem olarak kullanılması

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

beklenmektedir. Adsorpsiyon, endüstriyel atık sularında düşük konsantrasyonlardaki kirleticilerin gideriminde etkili olması ve düşük maliyeti nedeniyle tercih edilen bir yöntemdir.

Adsorpsiyon işleminin daha ucuz ve aktif olarak kullanılabilir hale getirilmesi için birçok araştırmacı, daha ucuz ve tekrar kullanılabilir adsorbent malzemelerin sentezlenmesi üzerine çalışmaktadır (Şahan, 2007). Aktif karbon, nanomalzemeler, polimerler, reçineler, alümina, jeller, silikatlar, talaş, killer ve zeolit gibi birçok farklı malzeme yaygın olarak adsorbent olarak kullanılmaktadır (Şahan, 2007).

## LİTERATÜR TARAMASI

Smith, J. et al. (2010). "Polymeric materials for dye removal from wastewater." Environmental Science and Pollution Research. Bu çalışma, polimerik malzemelerin atık su arıtımında boyar maddelerin giderilmesinde kullanımını incelemektedir. Farklı polimerik yapılar, adsorpsiyon kapasitesi, mekanizmaları ve uygulamaları üzerine ayrıntılı bir literatür taraması yapılmıştır.

Hu, J. et al. (2011). "Polymer nanofibers for water purification: a review." Journal of Membrane Science. Bu derlemede, polimer nanofiblerin su arıtımında kullanımı incelenmektedir. Çeşitli polimerlerin nanofibleri ve bunların boyar maddelerin giderilmesi için kullanımı üzerine yapılmış çalışmalar değerlendirilmiştir.

Wang, S. et al. (2014). "Adsorption of organic pollutants by graphene nanosheets: a review." Journal of Hazardous Materials. Bu derlemede, grafen nanosheetlerin organik kirleticilerin giderilmesindeki potansiyeli incelenmektedir. Boyar maddelerin adsorpsiyonu da dahil olmak üzere farklı organik kirleticilerin adsorpsiyon mekanizmaları ve uygulamaları üzerine bir literatür taraması yapılmıştır.

Crini, G. (2015). "Non-conventional low-cost adsorbents for dye removal: a review." Bioresource Technology. Bu derlemede, düşük maliyetli ve yaygın olarak bulunan doğal adsorbentlerin boyar maddelerin giderilmesinde kullanımı incelenmektedir. Polimerik malzemelerin yanı sıra, bitkisel atıklar, kitin, zeolitler gibi farklı adsorbentlerin kullanımı üzerine yapılan çalışmalar değerlendirilmiştir.

Zhang, S. et al. (2019). "Polymeric membranes for dye removal: a review." Journal of Membrane Science. Bu derlemede, polimerik membranların boyar maddelerin giderilmesindeki potansiyeli incelenmektedir. Farklı polimer türleri, membran yapıları, membran hazırlama yöntemleri ve boyar maddelerin membranlara adsorpsiyon mekanizmaları üzerine yapılan çalışmalar değerlendirilmiştir.

Kara, A. (2004). Çalışmasında poli(EGDMA-VIM) boncuklar şişme çalışmaları ve taramalı elektron mikroskobu (SEM) ile karakterize edilmiştir. Şişme oranı %78 olan bu poli(EGDMA-VIM) boncuklar ağır metal giderim çalışmaları için kullanılmıştır. Boncukların seçilen metal iyonları, yani Cd(II), Hg(II) ve Pb(II) için şelasyon kapasitesi, bu iyonların farklı miktarlarını (10-750mg/l) içeren sulu ortamda ve farklı pH değerlerinde (3.0-7.0) araştırılmıştır.

Kara, A. (2006). Çalışmasında poliamid içi boş fiberler taşıyan Reaktif Yeşil HE 4BD, klorofenollerin (yani fenol, o-klorofenol, p-klorofenol ve 2,4,6-triklorofenol) uzaklaştırılması için boya afiniteli adsorbanlar olarak araştırdı. Klorofenollerin adsorpsiyon oranları çok yüksekti. Dengeye yaklaşık 30 dakikada ulaşıldı. Sahte birinci derece ve sözde ikinci derece modeli içeren iki kinetik modelin uygulanabilirliği, ilgili hız parametrelerinin, denge kapasitesinin ve korelasyon katsayılarının karşılaştırmalı analizine dayanarak tahmin edilmiştir. Sonuçlar, kemisorpsiyon işleminin adsorpsiyon işleminde hız sınırlayıcı adım olabileceğini göstermektedir.

### ARAŞTIRMA VE BULGULAR

Bu çalışmada öncelikle pH 3, 5, 7 ve 9 olmak üzere NaOH ve HCl kullanarak çözeltiler hazırlandı. Her biri 250 ml olan dört adet balon jöjeye 0,0250 g tartılmış reaktif mavi 19 boyarmaddesi eklendi. Üzerlerine pH' ları 3, 5, 7 ve 9 olarak hazırlanan 100 ppm'lik çözeltiler eklenerek tamamlandı.

**Resim 1** pH 3, 5, 7 ve 9 dan 100 ppm hazırlanmış RM19

Bu 100 ppm'lik dört çözeltilerden 3, 5, 7 ve 9 pH' larında 10, 20, 30, 40, 50 ve 60 ppm olmak üzere yirmi dört çözeltiler balon jöjeye hazırlandı.

**Resim 2** pH=3,5,7 ve 9 için hazırlanmış 10, 20, 30, 40, 50 ve 60 ppm'lik reaktif mavi 19 boyarmaddesi çözeltileri

Reaktif mavi 19 boyarmaddesinin UV-VIS spektrofotometresinde 592 nanometre dalga boyunda maksimum değeri verdiği ölçülmüştür. Çözeltilerin absorbands değerleri UV-VIS spektrofotometresinde ölçülerek tabloya ve grafiğe aktarıldı.

Şekil 3: Absorbans- Konsantrasyon Grafiği (pH=3)

Şekil 4: Absorbans- Konsantrasyon Grafiği (pH=5)

Şekil 5: Absorbans- Konsantrasyon Grafiđi (pH=7)

Şekil 6: Absorbans- Konsantrasyon Grafiđi (pH=9)

Bir sonraki aşamada BAP polimerinden 0,01 g tartılarak 8 adet vial e ayrı ayrı aktarıldı ve üzerlerine 60 ppm' lik pH' ları farklı çözeltilerden 10 ml alınarak eklendi.

**Resim 3** Viallere alınmış RM19 ve BAP polimeri

Vialler karanlık ortamda 24 saat bekletildi. 24 saat geçtikten sonra UV-VIS spektrofotometresinde absorbans değerlerinin değişimi kontrol edildi. Bu değerler tablo ve grafiğe aktarıldı.

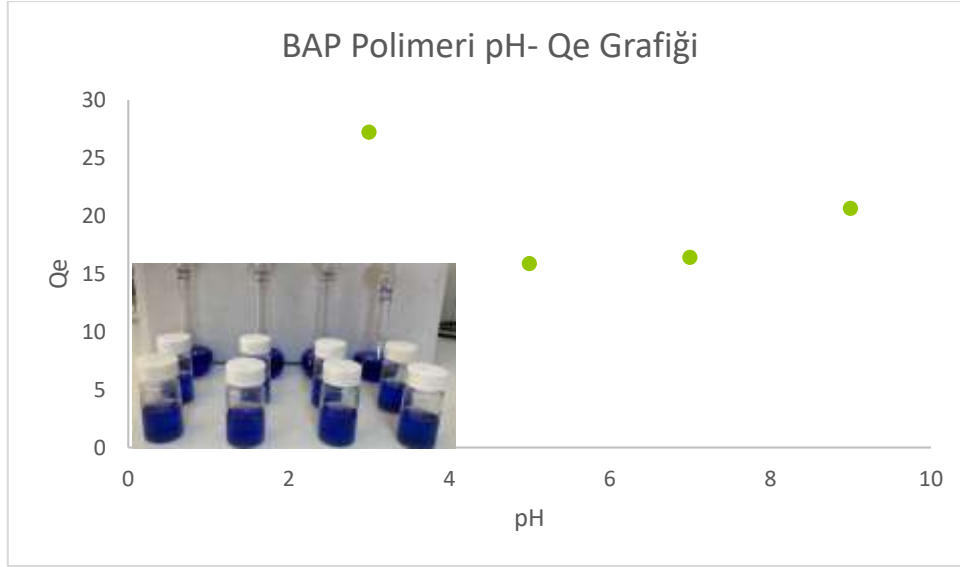

#### TARTIŞMA VE SONUÇ

Bu çalışmada atık sulardan BAP polimerinden yararlanarak reaktif mavi 19 boyarmaddesinin giderilmesi amaçlanmıştır. Absorbans değerleri ölçülmek üzere 24 saat karanlık ortamda bırakılan vialler UV-VIS spektrofotometresinde ölçüldü. Bu ölçülen değerlerden yola çıkılarak Qe değerleri hesaplandı ve Qe-pH grafiği oluşturuldu. Grafik sonuçlarına göre boyarmadde gideriminin pH=3' te maksimum olduğu görüldü.

**Resim 4** RM19 ve BAP polimerinin deney sonundaki görüntüsü

**ÖZET**

Gıda endüstrisinden tekstil, ilaç ve mobilya endüstrilerine kadar birçok sektörde boyaların kullanımı artmış olup, atık sularda görünür kirleticiler haline gelmelerinin yanı sıra giderilmeleri de güncel bir sorundur. Boyalar, alıcı ortamdaki ışığın iletimini azaltarak fotosentetik yaşamı dolaylı olarak etkiler. Tekstil ve hazır giyim sektörü gelişmekte olan ülkelerin ilk tercihi olup, sanayileşme sürecinde önemli rol oynayan sektörlerden biridir. Her alanda olduğu gibi teknolojinin gelişmesi tekstil sektörünün de gelişmesine yol açmış ve çevre sorunlarının ortaya çıkmasına neden olmuştur. Bu sektördeki farklı üretim yapılarından dolayı oluşan atık su ve özellikleri de üretimde kullanılan yöntem ve proseslere bağlı olarak farklılık göstermektedir. Ayrıca bu atıksular biyolojik olarak toksik kimyasallar içermekte, alıcı ortamdaki organizmaları tehlikeye atmakta, toprak kirliliği yoluyla bitkilerde birikmekte, hayvan ve insan gıdalarına karışarak ekosistemde toksikolojik riskler oluşturmaktadır. Boyarmaddeler toprak yüzeyine nüfuz ederek yeraltı suyuna karışırlar. Boyalar kimyasal yapılarına bağlı olarak azo, diazo, bazik, asidik vb. olarak sınıflandırılır.

Bu çalışmada, boyarmadde olan reactive orange-122'nin atık sudan absorpsiyon değeri, polimerik malzeme olan YAP polimeri sayesinde UV-VIS spektrofotometre kullanılarak okunup hangi pH'ta boyanın ne kadar giderildiği tespit edilmiştir. Bu yöntemin amacı atık suyun yeniden kullanılmasına olanak sağlamaktır. Reactive Orange-122 için 3,5,7 ve 9 pH değerleri dikkate alınarak çözeltiler hazırlanmıştır. Absorbans değerleri sonucunda reaktif Orange-122 boyasının 496 nm'de uzaklaştırılmasının pH=3'te en iyi sonuçları verdiği görülmüştür.

**Anahtar Kelimeler:** Polimer madde, Atık su, Boyarmadde, Reaktif Orange-122, UV-VIS Spektrofotometresi

**ABSTRACT**

The use of dyes has increased in many sectors, from the food industry to the textile, pharmaceutical and furniture industries, and their removal is a current problem, as well as becoming visible pollutants in wastewater. Dyes indirectly affect photosynthetic life by reducing the transmission of light in the receiving environment. Textile and ready-made clothing sector is the first choice of developing countries and is one of the sectors that play an important role in the industrialization process. As in every field, the development of technology has led to the development of the textile industry and caused the emergence of environmental problems. The wastewater and its properties resulting from different

production structures in this sector also vary depending on the methods and processes used in production. In addition, these wastewaters contain biologically toxic chemicals, endanger organisms in the receiving environment, accumulate in plants through soil pollution, and mix with animal and human foods, creating toxicological risks in the ecosystem. Dyes penetrate the soil surface and mix with groundwater. Dyes can be classified as azo, diazo, basic, acidic, etc. depending on their chemical structure. It is classified as.

In this study, the absorption value of the dyestuff reactive orange-122 from wastewater was read using a UV-VIS spectrophotometer, thanks to the polymeric material YAP polymer, and it was determined how much dye was removed at which pH. The purpose of this method is to enable the reuse of wastewater. Solutions were prepared for Reactive Orange-122, taking into account pH values of 3, 5, 7 and 9. As a result of the absorbance values, it was seen that the removal of the reactive Orange-122 dye at 496 nm gave the best results at pH = 3.

**Keywords:** Polymer substance, Wastewater, Dye, Reactive Orange-122, UV-VIS Spectrophotometer

### GİRİŞ:

Bugünün dünyasında, renk indeksine 9000'den fazla farklı boya türü dahil edilmiştir ve bu kimyasal bileşenler tekstil, deri, kâğıt, kozmetik, plastik, ilaç, gıda ve daha birçok alanda geniş ölçüde kullanılmaktadır. Bu boyaların içerildiği atık sular genellikle doğrudan yakındaki kanalizasyon sistemlerine, nehirler, göletler ve lagünler gibi su kaynaklarına deşarj edilir. Boyaların su kaynaklarına salınması, su teminini ve kalitesini tehlikeye atan, su ekosistemine ve çevrenin biyolojik çeşitliliğine ciddi zararlar verecek bir dizi soruna yol açar. [3][4] Bu boyalar, zorlu koşullar altında çözünmeyen, toksik, biriken ve besin zinciri boyunca yayılan bileşikler içerdiği için ciddi bir tehdit oluşturur. Ayrıca atık sular, canlı organizmalara ve insan sağlığına zararlı, kanserojen ve mutasyona sebebiyet veren etkilere neden olan belirgin renklere sahip olmasıyla bilinir. Boyaların yapısındaki karmaşık aromatik bileşenler, onları çözünmesi ve ayrıştırılması zor aynı zamanda kararlı hale getirir, bu da sorunun çözümünü daha da karmaşıklaştırır. [4]

Azo boyalar tüm boyalar arasında en yaygın kullanılan boyalardır. Bunların tüm boyaların yüzde 60 ila 70'ini oluşturduğu tahmin edilmektedir. Tekstil endüstrisinde yaygın olarak kullanılan azo boyaları aromatik gruplarında karakterizesi  $-N=N$  bağlarının bulunmasıyla elde edilir. Bu bağlara kromoforlar denir, boyanın renginden ve boyanın bozulmaya karşı direncinden sorumludurlar. [5] Aşağıdaki şekil-1'de verilen bileşik bir azo boya olan Reactive Orange 122 boyarmaddesidir.

(Şekil-1) [6]

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Reaktif boyalar, selüloz liflerine kovalent bağların bağlanması için kullanılır. Bunlar selülozun hidroksil grupları (-OH) ile reaksiyona giren suda çözünebilir anyonik boyalardır. [7]

Reaktif boyarmaddelerin diğer boyalara göre bazı avantajları vardır. Bunlar; parlak renkler, çeşitli boyama yöntemleriyle tekrarlanabilirlik, düzgün renk gelişimi, geniş renk aralığı ve boyanın elyaf içerisine hızlı difüzyonu ve kovalent bağ oluşumu nedeniyle güvenilir özellikleridir. Düşük enerji ihtiyacı, kolay uygulama ve yüksek dayanıklılık gibi avantajlara da sahiptirler. Reaktif boyaların dezavantajları ise şunlardır: Kolayca hidrolize edilir ve atık sularda bol miktarlarda bulunur. Boyama işleminde büyük miktarda kimyasal ve su kullanılmasına sebep olur. [8]

Reaktif boyarmaddelerin atık sulardan giderimi için filtrasyon, koagülasyon/flokülasyon, iyon değişimi, adsorpsiyon, fenton reaktifi, ozonlama, fotokatalitik yöntemler, aerobik bozunma ve anaerobik bozunma kullanılmaktadır. Aşağıda verilen çizelge-1'deki gibi fiziksel, kimyasal ve biyolojik yöntemler başlıklarında üçe ayrılarak incelenmektedir. [9]

Fiziksel yöntemler	Kimyasal yöntemler	Biyolojik yöntemler
Adsorpsiyon	Fenton reaktifi	Aerobik bozunma
İyon değişimi	Ozonlama	Anerobik bozunma
Filtrasyon	Fotokatalitik yöntemler	
Koagülasyon/Flokülasyon		

(Çizelge-1, [9])

Atık sularda boyaların zararlı etkileri bu yöntemler kullanılarak azaltılabilir. Fiziksel yöntemlerden biri olan adsorpsiyon yöntemi bu çalışmada kullanılmıştır.

Adsorpsiyon, atomların, iyonların veya moleküllerin katı bir yüzeye bağlanmasıdır. Metaller ve plastikler de dahil olmak üzere tüm katılar, kristal yapıya sahip olsun ya da olmasın az ya da çok adsorpsiyon kapasitesine sahiptir. Yüksek adsorpsiyon kapasitesine sahip doğal katılar arasında karbon, kil, zeolit ve çeşitli metal tomurcuk formları bulunur. Yapay katılar arasında aktif karbon, yapay zeolitler, silika jeller, metal oksitler, katalizörler ve bazı özel seramikler bulunur. Boyaların sulu ortamlardan adsorpsiyonla uzaklaştırılması için çeşitli optimal koşulların sağlanması gerekir. Adsorpsiyon yöntemi, kullanılan malzemenin türü, ortam sıcaklığı ve çözeltinin pH'ı gibi fizikokimyasal faktörlerden etkilenir. Sulu bir çözeltiden adsorpsiyon sırasında katı ve sıvı fazlar temas eder. Adsorban katılar hem çözünen maddeleri hem de çözücülerini adsorbe edebilir. Yalnızca çözünen maddenin adsorbe edildiği adsorpsiyona pozitif adsorpsiyon denir. Bazı durumlarda adsorbanlar katı solventleri de adsorbe edebilir. Bu durumda çözeltinin konsantrasyonu artar. Bu olaya negatif adsorpsiyon denir.[10]

## LİTERATÜRDEN BENZER ARAŞTIRMALAR:

Benzer bir çalışmada, asidik bir boyarmadde olan Asit Mavi 193 (Isolan Dark Blue 2S-GL-03)'ün sulu çözeltiden yeni sentezlenen poli(Akrilamid Vinilimidazol) (poli(AAm-VI)) hidrojelini kullanılarak adsorpsiyon ile giderimi incelenmiştir. Sentezlenen hidrojelini SEM, FTIR ve TGA yöntemleri ile karakterizasyonu yapılmıştır. Adsorpsiyon prosesi üzerine boyarmaddenin başlangıç derişimi, çözeltinin başlangıç pH değeri, hidrojel miktarı, temas süresi ve karıştırma hızının etkileri araştırılmıştır.[11]

Polimer maddesinin yer aldığı başka bir çalışmada, poli(EGDMA-VIM) taneciklerinin, atık sulardan Pb(II)'nin uzaklaştırılmasında etkili bir adsorban olarak kullanılabileceği belirlenmiştir. Pb(II)'nin adsorpsiyonu büyük ölçüde yatak derinliğine ve akış hızına bağlıdır. Poli(EGDMA-VIM) verimli bir şekilde yeniden üretilebilir ve birkaç kez tekrar kullanılabilir. Poli(EGDMA-VTAZ)'ın rejenerasyonu ve daha sonraki kullanımı, adsorpsiyon işleminin kolon işlemi kullanılarak uygulanabileceğini göstermektedir. Bu, poli(EGDMA-VTAZ) kullanılarak Pb(II)'nin uzaklaştırılmasında ekonomik olma seçeneğini artıracaktır.[12]

Bir diğ er çalışmada ysa, m-poli(etilen glikol dimetakrilat-vinil imidazol) [m-poli(EGDMA-VIM)] mikro tanecikler reaktif siyah boya için adsorban olarak kullanılmıştır. 5. m-poli(EGDMA-VIM) hazırlanıp giderim işlemine uygulanmıştır. Sulu çözeltilerden reaktif siyah 5'in sıcaklık etkileri m-poly(EGDMA-VIM) üzerinde adsorpsiyonla incelenmiştir. M-poli(EGDMA-VIM) mikro boncukları, taramalı elektron mikroskobu (SEM), Fourier dönüşümü kızılötesi spektroskopisi (FTIR) çalışmaları ve şişme çalışmaları ile karakterize edilmiştir. Bu çalışmada sıcaklığın adsorpsiyona etkisi araştırılmıştır. Sıcaklığın adsorpsiyon üzerindeki etkisi pH=2 ve pH=12'de detaylı olarak incelenmiştir. Yapılan deneylerde m-poli (EGDMA-VIM) mikrokürelerine maksimum reaktif siyah 5 adsorpsiyonu pH 2,0'da gözlemlenmiştir. Sonuçlar m-poli'nin (EGDMA-VIM) iyi reaktif siyah 5 adsorbanlar olabileceğini ve çevre korumada büyük potansiyel uygulamalara sahip olabileceğini göstermektedir.[13]

## ARAŞTIRMA VE BULGULAR:

Bu çalışmada öncelikle deney süresince kullanılmak üzere pH'ları 3, 5, 7 ve 9 olacak şekilde saf su 1M NaOH, 1M HCl ve 0,01M NaOH damlatılarak pH ölçüm cihazında ayarlandı. Devamında Reactive Orange 12 boyarmaddesi 0,0250 g tartılarak 250 mL'lik pH'ları 3, 5, 7 ve 9 olacak şekilde dört adet balon jodede ayrı ayrı hazırlandı. 100 ppm 250 mL'lik balon jodelerdeki bu stok çözeltiler 10, 20, 30, 40, 50 ve 60 ppm olacak şekilde sırasıyla 5, 10, 15, 20, 25 ve 30 mL halinde 50 mL'lik balon jodelerde seyreltildi. Bu hazırlananlardan bir tanesi UV-VIS spektrofotometresinde absorban değeri belirlenmek üzere ölçüldü ve grafik-1'de gösterildiği gibi dalgaboyu taraması yapılarak  $\lambda=496$  nm olarak belirlendi.

(Grafik-1: Dalgaboyu taraması,  $\lambda=496$  nm)

Bu sayede aşağıda verilen tablolardaki gibi 50 mL'lik çözeltilerin absorban değeri ppm değerlerine göre ölçüldü.

pH=3		pH=5		pH=7		pH=9	
ppm	absorban	ppm	absorban	ppm	absorban	ppm	absorban
10	0,178	10	0,199	10	0,196	10	0,192
20	0,334	20	0,364	20	0,359	20	0,355
30	0,481	30	0,521	30	0,521	30	0,517
40	0,64	40	0,674	40	0,686	40	0,678
50	0,785	50	0,839	50	0,843	50	0,845
60	0,932	60	0,993	60	1,007	60	1,002

(Tablo-1)

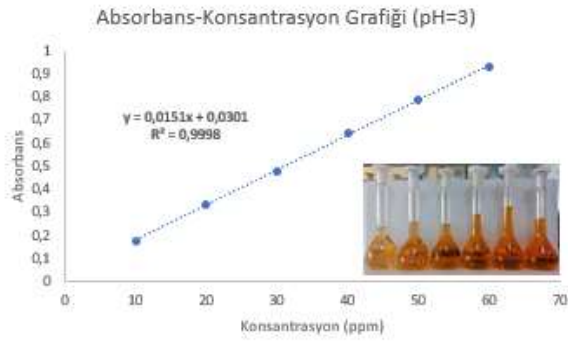

(Tablo-2)

(Tablo-3)

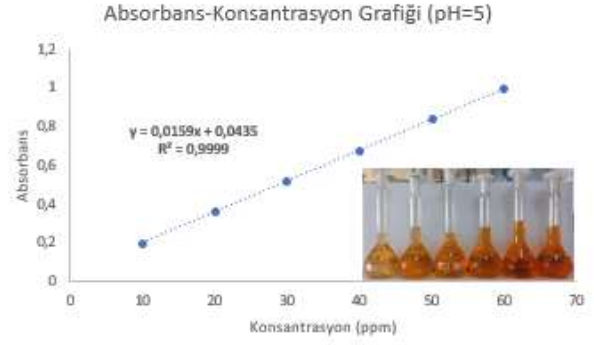

(Tablo-4)

Bu ölçümler doğrultusunda deney esnasında kullanılmak üzere kalibrasyon grafikleri her pH için ayrı olacak şekilde aşağıdaki gibi oluşturuldu.

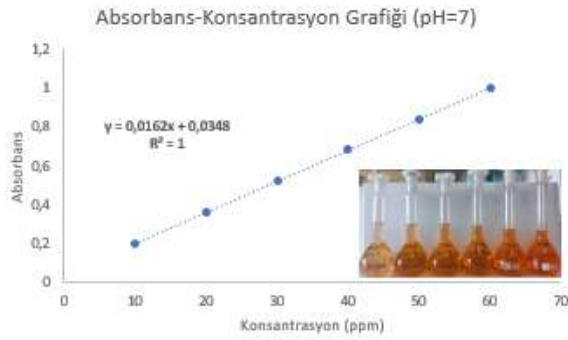

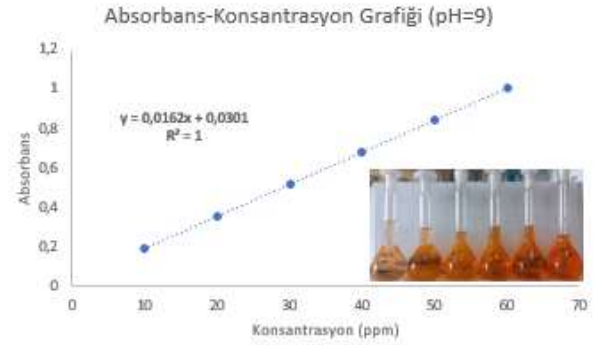

(Grafik-2)

(Grafik-3)

(Grafik-4)

(Grafik-5)

Bir sonraki ařamada YAP polimer maddesi 0,01 g tartılıp ikiřer adet olacak řekilde 50 ppm pH 3, 5, 7 ve 9 boyarmadde bulunan řözeltile bir vialde 0,01 g polimer ve 10 mL řözelti halinde toplam 8 vialde buluřturuldu. (řekil-2)

(řekil-2)

Iřıktan izole bir ortamda YAP polimer maddesi bulunan řözeltile absorbans deđerlerindeki deđiřime bakılmak üzere 24 saat bekletildi.

Ertesi gün pH'ları göz önünde bulundurularak UV-VIS spektrofotometresinde 8 ayrı vialin de absorbans deđerleri sırasıyla ölçüldü;

pH=3'te 0,232 nm ve 0,217 nm

pH=5'te 0,254 nm ve 0,273 nm

pH=7'de 0,340 nm ve 0,329 nm

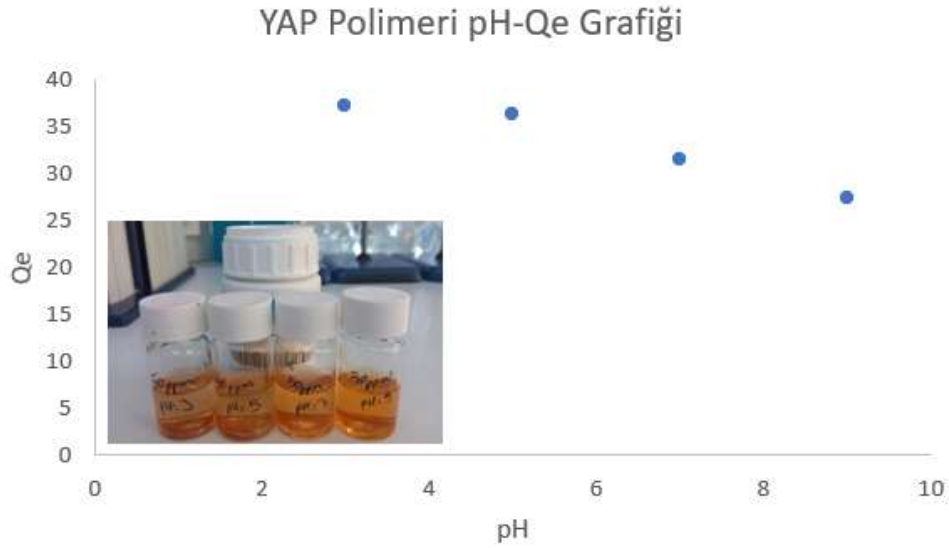

pH=9'da 0,308 nm ve 0,485 nm

değerleri bulundu ve her pH'ın ayrı olacak şekilde absorbans değerlerinin ortalaması alındı.

50 ppm için 24 Saatlik Süre Sonucu						
pH değeri	C <sub>0</sub>	abs değeri (24 saat sonra)	C <sub>son</sub>	polimer miktarı	Q <sub>e</sub>	
3	50	0,2245	12,87417219	0,01	37,12582781	
5	50	0,2625	13,77358491	0,01	36,22641509	
7	50	0,3345	18,5	0,01	31,5	
9	50	0,3965	22,61728395	0,01	27,38271605	

(Tablo-5)

Kalibrasyon grafiklerinde bulunan y denklemlerinden hareketle tablo-5'teki değerler bulundu ve bunun üzerine aşağıdaki YAP Polimeri pH-Q<sub>e</sub> Grafiği çizildi.

(Grafik-6)

## SONUÇ

Deney boyunca YAP polimerinin Reactive Orange 122 boyarmaddesini atık sudan temizleyip temizleyemediği ve hangi pH'ta temizlediği amaçlanmıştır. Bulgular sonucunda pH=3'teyken YAP polimerinin 24 saatlik bekleme sonucunda Reactive Orange 122 boyarmaddesini diğer pH'lara göre daha iyi temizlediği gözlemlenmiştir.

(Şekil-3)

Deney bitiminden sonra bu vialler tekrar karanlık ortama alınmış ve 4 gün sonra şekil-3'te görüldüğü gibi kontrol edildiğinde boyarmaddenin YAP polimerinin etrafında konumlanıp çöktüğü incelenmiştir.

**ÖZET**

Kentsel alanlardaki popüler arama ve genişleme faaliyetleri ile artan endüstriyel faaliyetler, atık su üretiminin artmasından sorumlu olan temel faktörlerdir. Nüfus artışı doğal su kaynakları üzerindeki olumsuz etkiyi de arttırmaktadır. Bütün bu faktörler içme suyunun toksisitesine yol açar. Tekstil, gıda, kağıt, deri ve kozmetik endüstrisinde oluşan ihtiyaç nedeniyle sanayide boyar madde kullanımı da arttı. Bu durum aynı zamanda endüstriyel faaliyetlerden kaynaklanan atık su oluşumunu da arttırmaktadır. Çevre kirliliğine neden olan bu faktörlerin azaltılması için gerekli önlemlerin alınması gerekmektedir. Dolayısıyla güncel araştırmalar tekstil atıksularından boyarmaddelerin ayrılması için fizikokimyasal yöntemlerin geliştirilmesi üzerinde yoğunlaşmıştır. Bu yöntemler arasında kimyasal yükseltgenme, membran filtrasyonu ve adsorpsiyon teknikleri sayılabilir. Yükseltgenme ve adsorpsiyon tekstil atıksularının işlenmesinde kullanılan ana teknolojilerdir. Kullanılan farklı yöntemlerin arasında adsorpsiyon, uygulama kolaylığı, düşük enerji tüketimi ve düşük maliyeti nedeniyle önemli bir yere sahiptir. Adsorpsiyonun atık sudan boya maddesinin uzaklaştırılmasında etkili bir yöntem olduğu kanıtlanmıştır. Yapılan çalışmada; EAP polimerinin tekstil atık sularında yaygın olarak bulunan Reaktif Sarı 186 boyar maddesinin adsorpsiyonları incelenmiştir. Başlangıç pH'ının boya giderimine etkisi incelenmiştir. pH :3,5,7 ve 9 da çalışılmıştır. Bu değerler aralığında en iyi renk giderimi pH:3'te gerçekleşmiştir. Yapılan taramalı UV ölçüm sonuçları. Maksimum absorbans Reaktif Sarı 186 için  $\lambda=426$  nm olarak belirlenmiştir.

**Anahtar Kelimeler:** Reaktif Sarı 186, EAP polimeri, adsorpsiyon, boyarmadde, atık su, UV-VIS

**ABSTRACT**

Popular exploration and expansion activities in urban areas and increasing industrial activities are the main factors responsible for the increase in wastewater production. Population growth also increases the negative impact on natural water resources. All these factors lead to toxicity of drinking water. Due to the need in the textile, food, paper, leather and cosmetics industries, the use of dyestuffs in the industry has also increased. This situation also increases wastewater generation resulting from industrial activities. Necessary measures must be taken to reduce these factors that cause environmental pollution. Therefore, current research has focused on the development of physicochemical methods for the separation of dyestuffs from textile wastewater. These methods include chemical oxidation, membrane filtration and adsorption techniques. Oxidation and adsorption are the main technologies used in the treatment of textile wastewater. Among the different methods used, adsorption has an important place due to its ease of application, low energy consumption and low cost. Adsorption has proven to be an effective method for removing dyes from wastewater. In the study, the adsorption of EAP polymer and

Reactive Yellow 186 dyestuff, which is commonly found in textile wastewater, was examined. The effect of initial pH on dye removal was examined. It was studied at pH:3, pH:5, pH:7, pH:9. Within these values range, the best color removal was achieved at pH:3. Scanned UV measurement results. Maximum absorbance was determined as  $\lambda= 426$  nm for Reactive Yellow 186.

**Keywords:** Reactive Yellow 186,EAP polymer,adsorption,dyestuff,wastewater,UV-VIS

## GİRİŞ

Hızlı nüfus artışı, sanayileşme ve plansız kentsel büyüme nedeniyle temel yaşam ihtiyacını karşılayan doğal kaynaklar yenilenemeyecek kadar azalmakta ve çevre sorunlarını da beraberinde getirmektedir. Bu sorunlardan birisi de su kirliliği olup, çevre sorunlarının önemli bir bölümünü oluşturmaktadır [3,4]. Dünyada ekonomik büyümenin ve gelişmenin temel göstergelerinden birisi de içme ve sanayi suyu tüketimidir [4]. Birçok endüstri dalı suya büyük ihtiyaç duymaktadır. Fabrikasyon, yıkama, buharlaştırma, kurutma ve enerji üretimi gibi alanlarda çok miktarlarda su kullanılmaktadır. Endüstride su tüketimi her on yılda bir iki katına çıkmaktadır. Bu nedenle su bilinçli bir şekilde tüketilmeli ve gerekli önlemler alınmalıdır [5]. Endüstriyel atık sular nehirlere, göllere, okyanuslara veya diğer alıcı ortamlara boşaltılır. Uygulamadan önce çeşitli şekillerde arıtılması ve atık su mevzuatına uygun olması gerekmektedir. Toksik maddelerin ve inhibitörlerin belli bir oranda uzaklaştırılması gerekir[6]. Aksi halde bu kirlilik doğanın dengesini bozmakta ve canlı yaşamını tehdit etmektedir[7]. Boyar maddeler, endüstriyel atık sularında bulunan yüksek orandaki organik maddelerdir. Karmaşık aromatik moleküler yapıları boyar maddelerin stabilitesini artırır ve biyolojik yöntemlerle bozunmayı önler. Dünya piyasasında 10.000'den fazla ticari boyarmadde mevcuttur [8]. Başta tekstil olmak üzere kağıt, deri, gıda ve kozmetik endüstrisinde kullanılan pek çok doğal ve sentetik boyar maddeler vardır. Günümüzde kullanılan boyaların çoğu, petrol veya kömür katranından elde edilmektedir[9]. Reaktif boyarmaddeler tipik olarak farklı tiplerde reaktif gruplar ile bağlanmış, azo temelli kromoforlardır. Diğer boyarmaddelerle aralarındaki en temel fark tekstil liflerine kovalent bağlarla bağlanmasıdır [10]. Azo boyaları, kullanılan tüm tekstil boyalarının %60-70'ini oluşturan en yaygın kullanılan boyalardır ve boya atıklarındaki başlıca kirleticilerdir[11]. Azo boyalar çözelti içinde kolay çözünürler ve klasik arıtım teknikleriyle arıtılmaları zordur[12]. Birçok fizikokimyasal süreç (koagülasyon, flokülasyon, aktif karbon, adsorpsiyon, ters osmoz) azo boya atık suyundan rengin giderilmesi için biyolojik arıtma prosesleri ve ileri oksidasyon ve biyolojik arıtma kombinasyonları uygulanmıştır. Uygulanan bu yöntemlerin birçok dezavantajı ve avantajı vardır. Fotostabilitesi yüksek boyaları uzaklaştırmak için geleneksel biyolojik işlemler kullanılır. Çok etkili olmasa da fiziksel ve kimyasal işlemler çamur ve adsorban oluşumuna yol açmaktadır. Yenilenme ihtiyacı gibi dezavantajları nedeniyle boyanın uzaklaştırılmasında yetersiz kalmaktadır [7]. Boyarmaddelerin tekstil atıksulardan uzaklaştırılmasında adsorpsiyonun etkili bir işlem olduğu tespit edilmiştir [13].

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Yöntem	Avantaj	Dezavantaj
Ozonlama	Atık çamur oluşmaması ve atıksuyun arıtıldıktan sonra tekrar kullanılabilmesi.	Yüksek maliyet ve ozonun yarılanma süresinin kısa oluşu.
Fotokimyasal yöntem	Atık çamur oluşmaması.	Yan ürün oluşumu.
Sodyum hipoklorit (NaOCl) ile yükseltgenme	Azo bağının kırılmasını sağlar.	Klorun çevre üzerindeki olumsuz etkileri.
Elektrokimyasal yöntem	Atık çamur oluşmaması.	Elektrik enerjisinin fazla kullanımı.
Membranla ayırma	Sistemin sıcaklığa, beklenmedik bir kimyasala ve bakteriyel aktiviteye karşı dirençli olması.	Yüksek maliyet, membranın tıkanma olasılığı ve rejenerasyonunun gerekliliği.
İyon değişimi	Rejenerasyonla iyon değiştirici kaybının olmaması ve çözünebilir boyarmaddelerin etkin şekilde giderilebilmesi.	İyon değiştiricilerle arıtılarak olumlu sonuç alınan boyarmadde sınıfının kısıtlı olması ve yüksek maliyet.
Fenton	Ekipman basit ve kullanım kolaylığı COD'nin azaltılması (Reaktif boyarmaddeler dışında).	Çamur oluşumu, uzun reaksiyon süresi, tuz oluşumu, tehlikeli atıklar.
Fenton çamur geri kazanım sistemi (FSR)	Ekipman basit kullanım kolaylığı (Reaktif boyarmaddeler dışında).	Tuz ve gaz oluşumu.
UV/H <sub>2</sub> O	Çamur, tuz oluşur işletme kolaylığı ve güvenlik.	Tüm boyalara uygulanmaz, askıda kalan partiküllerinin ayrılması.
O <sub>3</sub> /H <sub>2</sub> O <sub>2</sub>	Çamur ve tuz oluşmuyor. Kısa reaksiyon süresi (Reaktif boyalar için çok kısa reaksiyon süresi).	Tüm boyalara uygulanmaz, toksit, tehlikeli ve problemli kontrol, COD azaltılmaz.

Ticari olarak uygulanan adsorpsiyon işlemleri (Çizelge-1[14])

## ADSORPSİYON

Sıvı faz aktifleştirilmiş katı ile temas ettiğinde sıvı fazın bir kısmının (veya bazı bileşenlerinin) katı tarafından tutulduğu gözlenir. Katının yüzeyinde gerçekleşen tutunma adsorpsiyon olarak adlandırılır. Adsorpsiyon olayında katı faz adsorplayıcı, akışkan faz da adsorplanan olarak adlandırılır.[15]

Şekil-1[14]

Boyar maddeler gibi parçalanması zor veya imkansız olan organik maddeler atık su malzemelerinin uygun adsorbanlar üzerinde adsorpsiyon yoluyla uzaklaştırılmasıyla olur. Bazen adsorpsiyon mekanizması yüksek oranda çözüdür boyarmaddeleri ile renk giderimi daha zor olmaktadır.[16] Aktif karbon, organik maddeleri adsorbe etme kapasitesinin yüksek olması nedeniyle en çok kullanılan adsorbandır. Ancak yüksek dozlarda kullanıldığından kullanımı sınırlıdır, bu da maliyetleri artırır, bu da daha ucuz ve etkili maddeler arayışlarına yol açar. Son yıllarda polimer araştırmaları hızla gelişti. Özellikle poliakrilamid su arıtımında, biyolojik araştırmalar, tekstil endüstrisi ve yağ çıkarma gibi farklı alanlarda çeşitli amaçlarla kullanılmaktadır. Araştırmalarda adsorban olarak poliakrilamid kullanılarak aktif karbona göre daha düşük maliyetle daha yüksek verim elde edilebilmektedir.[17]

## LİTERATÜR ÇALIŞMALARI

Benzer çalışmada;Endüstriyel ve tekstil atık suları büyük miktarda kimyasallar ve boyarmaddeler içermelerinden dolayı dikkat çekiyorlar. Bu boyar maddeler su kaynaklarında, nehirlerde ve okyanuslarda işlenmeden kaldığında, suda yaşayan hayvanları ve besin zincirini olumsuz etkilenmektedir. Bu zararlı etkileri azaltmak için endüstriyel atık suyun arıtılması hayati biyolojik öneme sahiptir. Bu çalışmada, akrilik elyafların boyanmasında kullanılan iki farklı bazik karakterdeki tekstil boyar maddesi (Basic Blue 41-BB41 and Basic Red 46-BR46) farklı pH, süre, sıcaklık ve başlangıç boyar madde konsantrasyonlarında sülfonik asit esaslı polimerik membran ile çözelti ortamından % 75 ile % 100 aralığında boyar madde giderme yüzdesi ile giderildi. Gibbs serbest enerjisi ( $\Delta G$ ) değerleri BB41 ve BR46 boyar maddeleri için 318 K'de sırası ile -5.2 kJ/mol ve -5,52 kJ/mol olarak bulundu. Adsorpsiyon izotermeleri incelendiğinde her iki boyar maddenin polimer membranına adsorpsiyonunun Freundlich izotermine uyduğu tespit edildi.[18]

Bir diğer benzer çalışmada;Atık suyun rengi tekstil terbiye sektörünün karşılaştığı sorunlardan biridir. Bu konuda yasal sınırlamalar mevcuttur. Manyetik polimerler, güçlü adsorpsiyona sahip olmaları ve dış manyetik alandan kolayca ayrılabilme özellikleri nedeniyle etkili bir adsorpsiyon sergilerler. Manyetik polimerler, genellikle güçlü adsorpsiyon ve indirme etkinliğine sahiptir. Üstün yüzey ve kütle aktarım özellikleri, onu seçici ayırma ve uzaklaştırma işlemleri için uygun hale getirir. Kimyasal bileşim sayesinde, atık sulardan arındırılması etkili bir şekilde gidermede önemli bir rol oynar.Bu araştırmada, sulu çözeltilerden Reaktif Siyah 5 ve Reaktif Turuncu 16 adlı reaktif boyaların uzaklaştırılmasının pH etkileri üzerindeki adsorpsiyonunun, poli (divinilbenzen-1-vinilimidazol) [poli (DVB-VIM)] ve manyetik poli (divinilbenzen-1-vinilimidazol) [mpoli (DVB-VIM)] ile seçildi. Poli (DVB-VIM) ve manyetik poli (DVB-VIM) mikroküreler sentezlendi ve büyütüldü; Lineer regresyon analizi ile pH etkilerinin adsorbana etkisi araştırıldı. Poli (DVB-VIM) mikroküreleri, divinilbenzenin (DVB) ve 1-vinilimidazol (VIM) ile kopolimerleştirilerek hazırlanır. Taramalı elektron mikroskobu (SEM), fourier-transform spektroskopisi (FTIR) çalışmaları ve şişme çalışmaları ile poli (DVB-VIM) ve manyetik poli (DVB-VIM) mikroküreler yapıldı. Bu mümkün, adsorpsiyon üzerindeki pH etkilerinin lineer regresyon analizi, pH değerleri arasında [2 ile 12 arasında] ayrıntılı bir şekilde incelendi. [19].

Son benzer çalışmada ise ;Poli(etilen glikol dimetakrilat-2-vinil piridin)-TiO<sub>2</sub> [poli(EGDMA-2-VP)] -TiO<sub>2</sub> mikro küreleri, tekstil boyar maddelerinin sulu çözeltilerden fotokatalitik renk giderimi için süspansiyon polimerizasyon yöntemi ile sentezlendi. Sentezlenen çapraz bağlı [poli (EGDMA-2-VP)] -TiO<sub>2</sub> mikro küreleri, taramalı elektron mikroskobu (SEM), X-ışını difraktometresi (XRD) ve fourier dönüşümlü kızılötesi spektroskopisi (FTIR) ile karakterize edildi. Elde edilen mikro kürelerin boyar madde renk gidermede kullanılabilirliğini araştırmak için pH, polimer miktarı, zaman ve boya konsantrasyonu parametreleri, hem güneş ışığı altında hem de 366 nm UV ışığı altında incelendi. Boyar maddenin maksimum fotokatalitik renk gideriminin meydana geldiği optimum koşullar pH 3, polimer miktarı 0.05 g, boya konsantrasyonu 30 mg/L ve süre 5 saattir[20].

### ARAŞTIRMA VE BULGULAR

#### Boylar ve kimyasallar

Reactive Yellow 186 (RY 186) (IUPAC adı: benzensülfonik asit,2-[2-[5-(aminokarbonil)-1-etil-1,6-dihidro-2-hidroksi-4-metil- kullanılarak araştırıldı. 6-okso-3-piridinil]diazetil]-4-[[4-kloro-6-[[3-[[2-(sülfoksi)etil]sülfonil]fenil] amino]-1,3,5-triazin-2 -il]amino]-, sodyum tuzu (1:2)).

HCl ve NaOH, pH'ı ayarlamak için geniş ölçüde kullanıldı.

Kimyasal yapı	Moleküler formül	Moleküler ağırlık	Amaks (nm)	CAS Numarası:	Safılık (%)
	C <sub>26</sub> H <sub>24</sub> ClN <sub>9</sub> Na <sub>3</sub> O <sub>12</sub> S <sub>3</sub>	832.1494	426	84000-63-5	98

(Çizelge-2[21])

Bu çalışmada ilk olarak deney boyunca kullanılacak pH'ları 3,5,7ve 9 olacak şekilde saf su ile 1M HCl, 1M NaOH damla damla eklenerek pH ölçüm cihazında ayarlandı.Ayrıca 0,01M NaOH kullanılarak daha doğru bir pH incelemesi için ince ayar yapılmıştır.Reactive Yellow 186 boyarmaddesi 0,0250 g tartılarak 250 mL'lik pH'ları 3,5,7,9 olacak şekilde balon jöjelerde ayrı ayrı hazırlandı.100 ppm 250 mL'lik balon jöjelerde stok çözeltiler hazırlanıp 10,20,30,40,50 ve 60 ppm de 5,10,15,20,25,30 mL halinde 50 mL'lik balon jöjelerde seyreltme işlemi yapıldı.Bu hazırlanan çözeltiler UV-VIS spektrofotometresinde absorbans değeri belirlemek için viallere eklendi.Çıkan ölçüm sonuçlarına göre maksimum absorbans değeri için  $\lambda = 426$  nm olarak belirlenmiştir.

(Grafik1)

50 ml 'lik balon jöjelerde hazırlanmış olan boyar madde çözeltilerinin absorbanları aşağıda verilen tablolarda görüldüğü gibi ölçüldü ve değerler kaydedildi. Veriler doğrultusunda ppm ve absorban değerleri için pH ları ayırt edilerek Absorbans-Konsantrasyon Grafikleri çizildi.

pH=3		pH=5		pH=7		pH=9

(Tablo 5)

Kalibrasyon grafiklerinde bulunan y denklemlerinden hareketle Tablo 5 'teki değerler bulundu ve bununla beraber aşağıdaki EAP polimeri pH-Qe Grafiği çizildi.

### EAP Polimeri pH-Qe Grafiği

### SONUÇ

EAP polimerinin Reactive Yellow 186 boyarmaddesinin tekstil atık suyundan temizlenip temizlenmediğini ve temizlendiyse de hangi Ph'ta temizlendiği amaçlandı. Bulgular sonucunda pH=3'te EAP polimerinin karanlık ortamda 24 saat boyunca bekleme sonucunda Reactive Yellow 186 boyarmaddesini pH=5,7,9 a göre daha iyi temizlendiğini gözlemlenmiştir.

## ÖZET

Polimerler, üç boyutlu geometrik dizilime sahip moleküllerden oluşan ve doğal yollarla ya da yapay üretim teknikleri ile üretilen malzemelerdir. Uygun takviye malzemesi ilavesi ile fiziksel ve kimyasal davranışları geliştirilebilmektedir. Farklı üretim tekniklerinin kullanılabilir olması mühendislik uygulamalarında polimerlerin popüler hale gelmesine yol açmıştır. Bu çalışmada amorf karaktere sahip olan iki farklı polimerin kombinasyonu sonucu üretilen yüzeyler üzerinde üretim yönteminin etkisi incelenmiştir. Hazırlanan polimer çözeltisinden solvent casting ve elektrospinning yöntemleriyle yüzey üretimi gerçekleştirilmiştir. Bu yüzeylerin morfolojik özellikleri SEM, XRD ve FTIR analizleri ile incelenmiş ve kalınlıkları kıyaslanmıştır. Solvent casting yöntemiyle daha ince ve yarı kristalin ancak kusurlu yüzey özelliklerine sahip kırılğan bir film eldesinin sağlandığı görülmüştür. Elektrospun yüzeyin ise daha yumuşak, kalın, gözenekli ve geçirgenliği yüksek yüzey özelliklerine sahip olduğu tespit edilmiştir. Üretilen farklı yüzeylerde PS ve PVC polimerlerinin karakteristik piklerinin korunduğu ancak solvent casting yöntemiyle üretilen yüzeyde elektrospun yüzeye kıyasla benzer dalga boylarında daha derin pik oluşumlarının gözlemlendiği tespit edilmiştir. Solvent casting yöntemiyle üretilen yüzeyin %T değerinin daha düşük olduğu ve elektrospun yüzeylerde mevcut olan lifsi yapının yüzey özelliklerinin geliştirilmesinde etkili olduğu tespit edilmiştir.

**Anahtar kelimeler:** bismut oksit, elektrospinning, polistiren, polivinil klorür, solvent casting

## ABSTRACT

Polymers are materials having molecules embedded in three-dimensional geometry and synthesized by naturally or artificial manufacturing techniques. Their physical and chemical properties can be improved by addition of proper reinforcing agent. Practicability of polymer with various different manufacturing techniques has increased popularity of polymeric materials in engineering applications. This study examines the effect of manufacturing technique on surface properties of structure produced by combination of two different amorphous polymers. Morphological properties of solvent casted or electrospun surfaces are investigated by SEM, XRD and FTIR analysis and also thickness of these surfaces are compared. By the help of solvent-casting technique, thinner and semi-crystalline films with imperfect surface characteristic are manufactured. With respect to solvent-casted film, electrospun mat is softer, thicker and has high porosity and transmittance value. Characteristic peaks of PS and PVC polymers are available in different surfaces but more intensive peaks are observed in solvent casting with respect to electrospun surface at similar wavelengths. Transmission percentage of solvent casted surfaces are found as lower than that of electrospun surfaces and fibrous structure of electrospun surface improves surface characteristic properties of manufactured en product.

**Keywords:** bismuth oxide, electrospinning, polystyrene, polyvinyl chloride, solvent casting

### GİRİŞ

Polimerler farklı üretim tekniklerinde kullanılabilirliklerinden olayı odak noktası haline gelmiştir. Polimer esaslı malzemelerden nanolif mat, film ve hidrojel gibi farklı formlarda malzeme üretimi söz konusu olmaktadır [Walicova et.al., 2016; Ahmed et.al., 2017]. Elektrospinning ve solvent casting yöntemleri polimer esaslı film üretiminde yaygın şekilde kullanılan iki farklı üretim tekniğidir. Elektrospinning işleminde lif yayılımının ve lif çapının kontrol edilebilir olması bu üretim yönteminin popüler olmasındaki en büyük etkenlerdir [Fridrikh et. al., 2003; Zhu et. al., 2017; Rashid et.al., 2012]. Lifsi yapılardan oluşan film eldesini mümkün kılan elektrospinning yöntemi, hafif ve dayanıklı malzemelerin üretilmesinde tercih edilen basit bir üretim tekniğidir. Solvent casting yöntemi ise çok katmanlı yapıların üretilmesinde kullanılan basit bir teknik olarak bilinmektedir. Üretim prosesinin kısa ve basit olması, elektrospinning yöntemine göre bir avantaj gibi gözükse de solvent casting yöntemiyle üretilen ürünlerde çözücü tipine göre değişmekle birlikte zararlı kalıntılar bulunabilmektedir. Bu yüzeylerin kırılman olmaları, düşük yüzey alan/hacim oranına sahip olmaları ve düşük oranda takviyelendirilmeye müsait olmaları nedeniyle elektrospun yüzeylere kıyasla dezavantajlı duruma düşmektedirler [Chachlioutaki et.al., 2020]. Solvent casting yöntemiyle esnek film eldesi sağlamak için plastifiyan malzemelere ihtiyaç duyulmasına karşın, elektrospinning yönteminde üretilen yüzeylerin lifsi yapıda olmaları nedeniyle esnekliği artırıcı yardımcı kimyasallar kullanılmaksızın kırılmanlığı düşük film üretimi mümkün olmaktadır [Zu et.al., 2002; Rabek et.al., 2014; Ghosal et.al., 2018] İlaveten elektrospinning yöntemiyle yumuşak, düzgün yüzey özelliklerine sahip ve orta düzeyde mukavemet özellikleri sergileyen film üretimi mümkün olmaktadır [Yin et.al., 2016; Li et.al., 2014]. Literatürde bu iki tekniğin kıyaslandığı ve farklı polimerler kullanılarak yapılan çeşitli çalışmalar mevcuttur. Ghosal et. al. (2018) polikaprolakton polimeri kloroform içerisinde çözerek %12 polimer konsantrasyonuna sahip çözeltilerden solvent casting ve elektrospinning yöntemiyle filmler üretmiştir. Rohani Shirvan et.al.(2021) yaptığı çalışmada fenilalalin aminoasit NT içeren kitosan/PVA elektrospun ve solvent-casted filmlerin özelliklerini incelemiştir. Kalınlık ve ağırlıkça yakın değerlere sahip olduklarını ancak elektrospun filmlerin, solvent casting yöntemiyle üretilen filmlere kıyasla katlanma dayanımının yüksek olduğunu, daha hidrofobik karakter sergilediklerini, gözenekli yapıya sahip olduklarını rapor etmişlerdir. Elektrospun yüzeylerde NT kaplama etkinliğinin daha yüksek olduğunu tespit etmişlerdir. Feng et.al. (2019) polilaktik asit/TiO<sub>2</sub> kompozit yapıların çekme dayanımını kıyaslamışlardır. Solvent casting ve elektrospinning yöntemiyle üretilen yüzeylerin çekme dayanımlarının sırasıyla 14.5 MPa ve 2.71 MPa olduğunu rapor etmişlerdir. Kwak et. al. (2017) kafein takviyeli jeatin yüzeylerin özelliklerinin üretim yöntemine göre değişimini incelemiştir. Solvent casting yöntemiyle üretilen yüzeylerde sadece 5 katlamadan sonra kırılma ya da çatlak oluşumunun gözlemlendiğini ancak elektrospun yüzeylerde herhangi bir kırılmanın var olmadığını ifade etmişlerdir.

Bu çalışmada amorf karaktere sahip olan PS ve PVC polimerleri ikili çözücü içerisinde çözülmüştür. Hazırlanan PVC/PS polimer çözeltilerine Bi<sub>2</sub>O<sub>3</sub> takviyesi yapılmış ve solvent casting ve elektrospinning işlemi ile yüzey üretimi gerçekleştirilmiştir. Elde edilen yüzeylerin morfolojik özellikleri SEM, XRD ve FTIR analizleri ile incelenmiş ve kalınlıkları kıyaslanmıştır. PS ve PVC polimerlerinin bir arada bulunduğu polimer çözeltisi ile belirtilen üretim yöntemleri ile yüzey eldesinin sağlanmamış olması bu çalışmanın özgünlüğünü ifade etmektedir.

### MATERYAL VE METOT

#### Materyal

Çalışmada kullanılan polimerler olan PS (CAS: 9003-53-6; Mw: 35.000 g mol<sup>-1</sup>) ve PVC (CAS: 9002-86-2; Mw: 80.000 g mol<sup>-1</sup>) polimerleri ile bu polimerleri çözmek için kullanılan THF (C<sub>4</sub>H<sub>8</sub>O; % 99.9 saflık, CAS: 109-99-9) ve DMF (C<sub>3</sub>H<sub>7</sub>NO, % 99.8 saflıkta, CAS: 68-12-2) çözücüleri Sigma Aldrich firmasından temin edilmiştir. Bizmut oksit tozu (Bi<sub>2</sub>O<sub>3</sub>, %99,9 saflık, 8.9 gr cm<sup>-3</sup>, CAS: 1304-76-3) ise Acros Organics firmasından temin edilmiştir.

#### Metot

Solvent casting ve elektrospinning işlemi için toplamda 50 gr lık polimer çözeltisi hazırlanmıştır. %35 PS polimer konsantrasyonuna sahip 20 gram PS/THF ve %15 polimer konsantrasyonuna sahip 20 gram PVC/DMF çözeltileri [Huang et. Al., 2003] 80 C sıcaklıkta 2 sa manyetik karıştırıcıda karıştırılmıştır. Bu sırada katı madde oranı %25 olan Bi<sub>2</sub>O<sub>3</sub>/DMF karışımı 2 sa 80 C sıcaklıkta ultrasonik banyoda

karıştırılarak homojen bir karışım elde edilmiştir. PS ve PVC polimerlerinin aynı çözücülerde çözüldüğü bilindiğinden, PS/THF ve PVC/DMF polimer çözeltileri tek bir beherde birleştirilerek 80 C 45 dk süresince manyetik karıştırıcıda karıştırılmıştır ve polimerlerin çapraz çözeltiler içerisindeki çözünürlüğü artırılmaya çalışılmıştır. Ultrasonik banyodan alınan  $\text{Bi}_2\text{O}_3$ /DMF homojen çözeltisindeki olası çökelmeyi önlemek için, aynı süre ve sıcaklık değerinde manyetik karıştırıcıda işleme tabi tutulmuştur. Belirtilen süre sonunda  $\text{Bi}_2\text{O}_3$ /DMF çözeltisi polimer çözeltiline ilave edilerek 17 sa boyunca oda sıcaklığında karıştırılmıştır.  $\text{Bi}_2\text{O}_3$  katkılı polimer çözeltisinin 25 gramı 22 ml (70 mm) petri kabına dökülmüş ve 3 sa 100 C sıcaklıkta etüvde bekletilmiştir. Geri kalan 25 gram çözelti enjektöre çekilerek dikey eksenli elektrospinning işlemine tabi tutulmuştur. Elektrospinning işlemi 21 G iğne ve distile su dolu kollektör kullanılarak 16 kV voltaj değeri, 1.25 ml/h besleme hızı ve 13 cm kollektör mesafesinde yapılmıştır.

Şekil 1. Numune üretiminde takip edilen proseslerin şematik gösterimi

## BULGULAR

### SEM Analizi

Şekil 2 de eş değer hazırlık sürecine tabi tutulan polimer çözeltilerinden elde edilen solvent-casted ve elektrospun filmlerin SEM mikrografileri verilmiştir. Elektrospun filmlerde lif oluşumunun gözlemlendiği ve ortalama lif çapının 979.18 nm olduğu tespit edilmiştir. Polimer çözeltisi içerisine eklenen  $\text{Bi}_2\text{O}_3$  tozunun partikül boyutunun 650.4 nm-1.754  $\mu\text{m}$  arasında değiştiği ve ortalama partikül çapının 1.246  $\mu\text{m}$  olduğu [Aygün ve Alma, 2020] dikkate alındığında, elektrospinning işleminin elektrostatik alan farkı vasıtasıyla çekilen polimer çözeltileri ile partikülleri kapsüle ettiği görülmektedir. Boncuk oluşumunun gözlemlendiği 10 farklı noktadan alınan çap ölçümlerine göre ortalama boncuk çapının 3.583  $\mu\text{m}$  olduğu (S.D.: 0.345) ve durumun partikül boyutunun küçültülmesi için daha uzun süre ultrasonik işleme tabi tutulması yada polimer çözeltisi içerisindeki  $\text{Bi}_2\text{O}_3$  konsantrasyonunun azaltılması sonucu aşılacağı kanaatine varılmıştır [Zhu et. al., 2022; Kolahi et. al., 2022; Wang et. al., 2008] Solvent-casting yöntemiyle üretilen filmlerde ise, 10 farklı noktadan alınan ölçümlere göre 0.741  $\mu\text{m}$  den 2.569  $\mu\text{m}$  e değişen ölçülerde ortalama büyüklüğü 1.692  $\mu\text{m}$  (S.D.:0.035) düzensiz kristalin partiküller gözlemlenmiştir. Bu filmlerin daha sert ve pürüzlü yüzeye sahip kırılğan filmler oldukları tespit edilmiştir. Elektrospun yüzeylerin nanolifler arasında gözlenen amorf yapılarının yüzey esnekliğine katkı sağladığı, solvent casting filmlerde bu durumun olmamasının kırılğanlığı artıran faktör olduğu bilinmektedir [Gosal et. al., 2018].

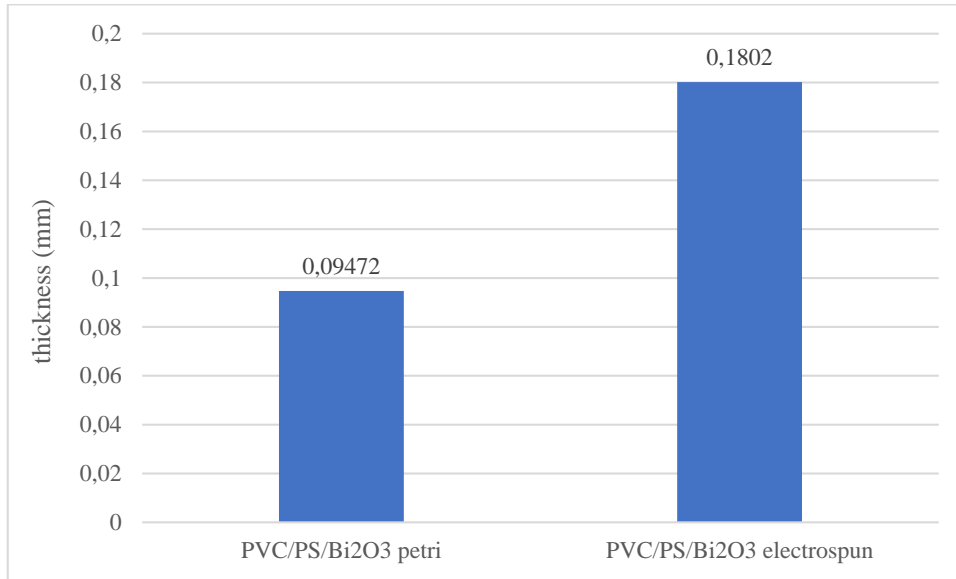

Şekil 2. Solvent-casting ve elektrospinning yöntemleri ile üretilen filmlerin SEM görüntüleri

### Numune kalınlığının ölçümü

Şekil 3 de solvent-casted ve elektrospun filmlerin kalınlıkları kıyaslanmıştır. 5 farklı ölçüm alınarak hesaplanan ortalama kalınlık değerlerine göre, solvent-casting yöntemiyle daha ince film üretiminin gerçekleştiği görülmektedir. Her bir üretim tekniği için kullanılan polimer çözeltisi miktarının 25 g olduğu dikkate alındığında, 1 sa eğirme işlemi sonrasında elde edilen elektrospun film kalınlığının solvent-casting yöntemiyle üretilen numuneye kıyasla %90 oranda daha kalın olduğu görülmektedir.

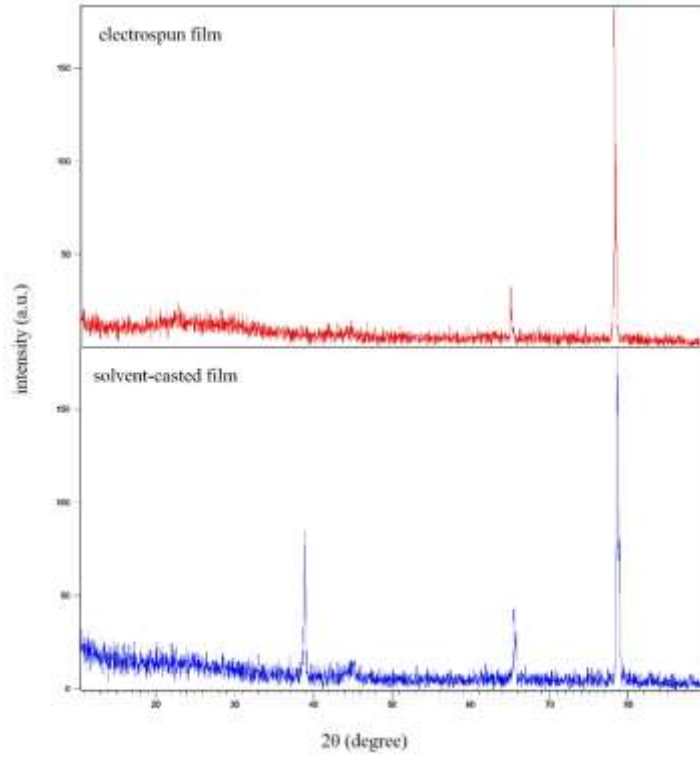

Şekil 3. Casted ve elektrospun filmlerin kalınlıklarının kıyaslanması

### XRD analizi

Şekil 4 de üretilen yüzeylerin XRD grafikleri kıyaslamalı olarak verilmiştir. Solvent casting yöntemiyle üretilen yüzeyin elektrospun yüzeye kıyasla daha kristalin yapıda olduğu görülmektedir. Bu yüzeylerde 78.56, 38.83 ve 65.56 2θ derecelerinde sırasıyla 186 (D spacing: 1.2166), 85 (D spacing: 2.3169) ve 44 (D spacing: 2.02191) şiddetlerinde dar aralıklı güçlü piklerin mevcut olduğu tespit edilmiştir. 2θ: 44.78 derecesinde ise düşük şiddetli (16 a.u.) zayıf bir pik görülmektedir. Elektrospun yüzeylerin ise daha amorf yapıda oldukları ve 2θ: 78.31 derecesinde 260 a.u. şiddetinde dar aralıklı (D spacing: 1.2182) bir pik verdikleri gözlenmiştir. Bu yüzeylerde 65.58 (D spacing: 1.4299) 2θ derecesinde görülen diğer pikin şiddeti ise 46 a.u. olarak ölçülmüştür. PVC ve PS elektrospun yüzeylerin sırasıyla 2θ:12°-35° ve 2θ:~21°

geniş pikler sergiledikleri ve amorf karakterde oldukları rapor edilmiştir [Zulfi et.al., 2023; Huang et.al., 2012]. Solvent casting yöntemiyle elde edilen PVC ( $2\theta: \sim 17-25^\circ$ ) ve PS filmlerin ise geniş pikler sergiledikleri ve herhangi bir kırılma piki sergilemediklerinden dolayı amorf karakterde oldukları tespit edilmiştir [Ancharya et.al., 2019; Taha, 2018]. XRD grafiklerinde görülen piklerin  $\text{Bi}_2\text{O}_3$  ihtivasından kaynaklandığı [Taha, 2018; Sindhu et.al., 2015], elektrospinning işleminde partiküllerin polimerik yapı ile kaplandığı ancak solvent casting yönteminde partikül kaplama ve dağılım sorununun olmasının bu sonucu ortaya çıkardığı alınan SEM görüntüleri ve XRD grafiklerinden anlaşılmaktadır. Üretim yönteminin üretilen yüzeyin kristalin yapısı üzerinde önemli bir etkiye sahip olduğu görülmektedir.

Şekil 4. Üretilen numunelerin XRD grafikleri

### **FT-IR analizi**

PVC/PS/ $\text{Bi}_2\text{O}_3$  içeren numunelerin FTIR spektrumu incelendiğinde, solvent casting yöntemiyle üretilen numunenin % geçirgenlik (%T) değerinin elektrospinning yöntemiyle üretilen numuneden daha az olduğu görülmektedir. Elektrospun numunede  $1491,18 \text{ cm}^{-1}$  ve  $1452,3 \text{ cm}^{-1}$  dalga boyları PS polimerin benzen halkasındaki C-C bağlarının gerilim titreşimlerini,  $749,05 \text{ cm}^{-1}$  ve  $696,89 \text{ cm}^{-1}$  ise sırasıyla CH katlanması ve aromatik halka deformasyonunu ifade etmektedir [Martin et.al., 2017; Esmaili et.al., 2017; Liang ve Krimm, 1958; Imhof, 2002; Huang et. al., 2012].  $2908,85 \text{ cm}^{-1}$ ,  $1427 \text{ cm}^{-1}$ ,  $964 \text{ cm}^{-1}$  ve  $613 \text{ cm}^{-1}$  deki düşük şiddetli ve geniş aralıklı pikler ise PVC polimer zincirinden kaynaklıdır ve sırasıyla C-H gerilimi,  $\text{CH}_2$  deformasyonu, CH salınımını ve C-Cl gerilimini göstermektedir. [Da Silva et.al., 2011; Ul-Hamid et.al., 2015, Ramesh et. al., 2007; Le Quoc et. al., 2021]  $1385,32 \text{ cm}^{-1}$  dalga boyunda gözlenen geniş aralıklı pikin ise O-O gerilmesinden kaynaklandığı düşünülmektedir [Aygün ve Alma, 2020; Wang et. al., 2014]. Solvent casting ve elektrospinning yöntemleri ile üretilen numunelerin benzer spektrumlar sergilediği ve üretim yöntemine özgü herhangi bir karakteristik pik göstermedikleri görülmüştür. Bu durum PVC ( $\text{C}_2\text{H}_3\text{Cl}$ )<sub>n</sub>, PS ( $\text{C}_8\text{H}_8$ )<sub>n</sub> ve  $\text{Bi}_2\text{O}_3$  bileşenlerinin yapısal özelliklerini koruduklarını ve yüzeylerde üretim yöntemine göre yapısal bir değişiklik sergilenmediğini ortaya koymaktadır.

Şekil 5. Üretilen numunelerin FTIR spektrumlarının kıyaslanması

## TARTIŞMA VE SONUÇ

Elektrospinning yöntemi ile PVC/PS polimerleri ile  $\text{Bi}_2\text{O}_3$  tozlarının kapsüle edildiği görülmüştür. Elektrospun yüzeyde kontinü lif üretiminin sağlandığı, yer yer boncuk oluşumunun gözlemlendiği ve üretilen liflerin nano boyutta olduğu tespit edilmiştir. Elektrospinning işlemi ile gözenekli ve kalınlığı yüksek yüzey eldesi sağlanmışken, solvent casting ile üretilen filmlerin yüzey özelliklerinin düzgün olmadığı ve gözenekli yapı özellikleri sergilemediği görülmüştür. Solvent casting yöntemi ile üretilen ince filmin, elektrospun yüzeye kıyasla yüksek kristalin özellik sergilediği, düşük % geçirgenlik değerine sahip olduğu ve daha kırılğan olduğu görülmüştür. Plastifiyan kullanımı olmaksızın PVC/ PS yüzey üretimi elektrospinning yöntemiyle sağlanmış ancak bu polimerlerin kombine kullanımında solvent casting yöntemi ile film üretimi yapılmak istenmesi halinde mutlak suretle plastifiyan kullanımının gerekli olduğu görülmüştür.

## RUBRİK TÜRLERİNİN KARŞILAŞTIRILMASI: HOLİSTİK PUANLAMA MI ANALİTİK PUANLAMA MI?

### A COMPARISON OF RUBRIC TYPES: HOLISTIC SCORING VS. ANALYTIC SCORING

*Dr. Öğretim Üyesi Sait ÇÜM*

*Dokuz Eylül Üniversitesi, Buca Eğitim Fakültesi, Eğitimde Ölçme ve Değerlendirme Anabilim Dalı,  
İzmir, Türkiye.*

#### ÖZET

Holistik ve analitik rubrik türleri hakkında literatürdeki tartışmalar, paydaşlara sağladıkları geribildirim düzeyi, kullanım kolaylığı açısından puanlama süresi, puanlayıcılar içi (intra-rater) ve puanlayıcılar arası (inter-rater) güvenilirlik düzeyleri ve ölçülen performansları birbirlerinden ne kadar iyi ayırtılabildiği üzerine süregelmektedir. Bu tartışmalardan hareketle, bu çalışmada literatürde yer alan ve sözü geçen konuları teorik değil uygulamalı olarak ele alan çalışmaların incelenmesi ve sonuçlarının karşılaştırılması amaçlanmıştır. Bir doküman inceleme çalışması olan bu çalışmada hakemli bilimsel dergilerde yayımlanmış sekiz araştırma makalesi incelenmiştir. Makalelerin seçilmesinde kriter olarak aynı performansı ölçmeye yönelik hazırlanmış holistik ve analitik rubriklerin uygulama sonrası elde edilen veriler üzerinden karşılaştırılmasını içeren bir araştırma tasarımına sahip olması aranmıştır. Bu kriter doğrultusunda ulaşılabilen ve rubrik türlerini çeşitli bağlamlarda karşılaştıran araştırmaların sonuçları analitik rubriğin pek çok açıdan daha avantajlı olduğunu göstermiştir. Özellikle geribildirim sağlama ve performansları birbirinden ayırt etme konularında analitik rubriğin elde ettiği üstünlük onun eğitimde ve sınıf içi uygulamalarda kullanımını daha fazla önerilir hale getirmektedir.

**Anahtar Kelimeler:** analitik rubrik, holistik rubrik, güvenilirlik, geribildirim

#### ABSTRACT

Debates in the literature regarding holistic and analytic rubric types continue to revolve around the level of feedback they provide to stakeholders, the ease of use in terms of scoring time, intra-rater and inter-rater reliability levels among raters, and how effectively they can differentiate measured performances from each other. Building upon these discussions, this study aims to examine and compare studies that address the aforementioned issues theoretically and, more importantly, through practical applications. This study, which is a document review, analyzed eight research articles published in peer-reviewed scientific journals. The criteria for selecting these articles included having a research design that involved comparing holistic and analytic rubrics prepared to measure the same performance using post-application data. In line with these criteria, the results of the studies that compared rubric types in various contexts have shown that analytic rubrics have several advantages. Particularly, the superiority of analytic rubrics in providing feedback and distinguishing performances from each other makes them more recommended for use in education and in-class applications.

**Keywords:** analytic rubric, holistic rubric, reliability, feedback

#### GİRİŞ

Etimolojide "rubrik" terimi, kökenini "kırmızı" anlamına gelen Latince "ruber" kelimesinden alır. Çağdaş pedagojik bağlamda rubrik, öğrencilerin çalışmalarını değerlendirmek için açık kriterleri kapsayan, bu kriterlere uygun performans kalitesinin değişen düzeylerinin açıklamalarıyla zenginleştirilmiş tutarlı bir çerçeve rolünü üstlenir. Bir renkle ilişkilendirilen bir kelimenin bir dizi kriteri veya bir eğitim kılavuzunu ifade eden bir yapıya bürünmesi, Avrupa tarihine bakıldığında Orta

October 13-14, 2023

Çağ'a kadar uzanan süreçte, belirli hizmetlere ilişkin kuralların genellikle kırmızı mürekkeple yazıldığı bilgisine bakılarak açıklanabilir (Brookhart, 2013).

Sadece sonuçlara değil sürece de odaklanması, ortaya konan performansın ve ürünün kişiye özgüllüğü ve özgünlüğü üzerine kurgulanan günümüz eğitim sistemlerinde, objektif değerlendirmeler yapabilmek için farklı değerlendirme araçlarına ihtiyaç duyulmaktadır. Çünkü artık gözlem gerektiren ve ölçülmesi gereken durumlar eskisine göre çok daha çeşitli, karmaşık ve bireyseldir. Bu nedenle, rubrikler yaygın olarak kullanılan bir araç haline gelmiştir. Rubrikler, öğrenci çalışmalarının değerlendirilmesinde subjektifliği bertaraf etmenin yanısıra öğretmenlere, öğrencilere ve paydaşlara somut geribildirimler sağlar ve onlara kılavuzluk eder. Rubrikler yazma çalışmaları, projeler, sözlü sunumlar, tartışmalar, laboratuvar raporları, portfolyolar, posterler, grup çalışmaları, uygulama performansları gibi çok sayıda iş ve ödev için kullanılabilir (Stevens & Levi, 2005). Rubrikler bir iş veya ödevle ilgili beklentileri ortaya koyduğu için öğrencilere yol gösterir ve bu bakımdan hem öğrenme düzeyini hem de ortaya çıkan işin ya da ürünün niteliğini artırabilir. Bunun yanısıra rubrikler öğrencilerde değerlendirmenin adil olacağı hissi yaratırken öğretmeni de ödevle ilgili uzun açıklamalar yapmaktan kurtarır. Puanlanması bakımından rubrikler “holistik” ve “analitik” olarak ikiye ayrılır.

## Holistik Rubrik

Holistik (bütüncül) rubriklerde yapılması beklenen iş ya da performans bir bütün halinde en iyiden en kötüye doğru seviyelere ayrılır. Holistik rubrikteki değerlendirme sonucu ürünün veya performansın bütünsel olarak karşılık geldiği seviyenin puansal karşılığı olan tek bir puan şeklinde belirlenir. Eğer ölçülecek olan ürün, performans vb. kendisini meydana getiren farklı bileşenlerin toplamından oluşmuyorsa bu tür bir puanlama tercih edilebilir (de Boer vd., 2021). Bu durumda sorun, ölçülecek performansın toplamda kendisini yansıtacak bileşenlere ve kriterlere net bir şekilde ayrıştırılamıyor olması veya bileşenlerin ağırlıkları (toplama etkileri) arasında önemli farklar olması olabilir. Tablo 1’de holistik rubriklere bir örnek verilmiştir.

**Tablo 1.** Makale değerlendirmeye yönelik holistik rubrik örneği

Puan	Kriter
4	Makale, konuya özgün bir bakış açısı sunarak önemli bir katkı sağlamaktadır. Literatür taraması eksiksiz ve kapsamlıdır ve konuyla ilgili genel bağlamı ustalıkla ele almaktadır. Makalenin amacı ve önemi açıkça belirtilmiştir. Analizler, belirlenen hedeflerle uyumlu ve doğru bir şekilde gerçekleştirilmiştir. Sonuçlar ve tartışma, diğer araştırmaların sonuçlarıyla karşılaştırmalı şekilde sunulmuştur ve gelecekteki araştırmalara yol gösterecek şekilde zengin ve kapsamlıdır.
3	Makale, alana önemli bir katkı sağlar, ancak yeterince özgün değildir. Literatür taraması yeterlidir. Makalenin amacı ve önemi açıkça ifade edilmiştir ancak daha fazla detay ve bağlam gereklidir. Analizler çoğunlukla hedeflerle uyumludur, ancak bazı alanlarda düzeltmeler gerekebilir. Sonuçlar ve tartışma, konuyu daha iyi anlamamıza ve ileriye yönelik araştırmalara temel sağlar.
2	Makale, ilgili alana sınırlı bir katkı sağlar ve özgünlük eksikliği veya literatür taramasının yetersizliği dikkat çekmektedir. Makalenin amacı ve önemi belirtilmiştir, ancak daha fazla açıklama ve bağlam gereklidir. Analizler, hedeflerle tutarlılık konusunda sorunlar içerebilir ve düzeltilmesi gereken hatalar bulunmaktadır. Sonuçlar ve tartışma eksik veya yetersizdir.
1	Makale, ilgili alana anlamlı bir katkı sağlamaz ve konusu özgün değildir. Literatür taraması yetersiz veya hatalıdır. Makalenin amacı ve önemi belirsiz veya açıkça ifade edilmemiştir. Analizler hedeflerle uyumsuz veya yanlıştır. Sonuçlar ve tartışma eksik veya anlamsızdır.

## Analitik Rubrik

Analitik (çözümçül) rubriklerde değerlendirilmesi amaçlanan ödev, performans vb. onu meydana getiren bileşenlerine ayrıştırılır ve her bir bileşen ayrı ayrı seviyelendirilir. Sınıf içi amaçlar için, analitik rubrikler daha iyi bir seçenektir. Bileşenlere tek tek odaklanmak, geribildirim için daha verimlidir çünkü

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

öğrenciler çalışmalarının hangi yönlerinin ne tür bir dikkat gerektirdiğini görebilirler (Brookhart, 2013; de Boer vd., 2021). Algısal olarak analitik rubriklerin çok sayıda bileşene ait kriterlerin ayrı ayrı puanlanmasını gerektirdiği için holistik rubriklere göre daha yavaş puanlandığı ve hız bakımından dezavantajlı olduğu düşünülmektedir. Öte yandan analitik rubriklerde kriterler daha belirgin ve işaret ettiği yönler daha net olduğu için bir puanlama kolaylığı sağlayacağı da düşünülebilir. Tablo 2’de analitik rubriklere bir örnek verilmiştir.

**Tablo 2.** Makale değerlendirmeye yönelik analitik rubrik örneği

Bileşen/ Puan	1	2	3	4
Analiz, Bulgular ve Tartışma	Bulguların sunumu genellikle belirsiz ve düzensizdir, grafiklerin kullanımı yetersiz veya hatalıdır. İstatistiksel belirlemeler hatalıdır. Tartışmalar araştırma soruları veya hipotezlerle yeterince ilişkilendirilmemiştir.	Bulguların sunumu düzenlidir fakat bazı belirsizlikler vardır. Grafikler ve tablolar iyileştirilebilir. Tartışmalar araştırma soruları ile ilişkilendirilmiştir fakat bu ilişkiler belirsizdir.	Bulguların sunumu düzenli ve anlaşılırdır. Grafik ve tablolar etkili kullanılmıştır. İstatistiksel işlemler doğrudur. Tartışmalar hipotezlerle açık bir şekilde ilişkilendirilmiştir.	Bulguların sunumu son derece düzenli ve anlaşılırdır. Grafik ve tablolar ustalıkla kullanılmıştır. Tartışmalar araştırma sorularıyla açık ve derinlemesine bir ilişki içerir.
Metodoloji ve Araştırma Tasarımı	Metodoloji araştırma sorularını cevaplama konusunda yetersizdir. Örnekleme yöntemi zayıftır. Belirtilen analiz yöntemleri yetersizdir.	Metodoloji ve araştırma tasarımında bazı eksiklikler göze çarpmaktadır. Örnekleme yönteminin uygulanmasında hatalar vardır.	Metodoloji ve araştırma tasarımı açık ve yeterli görünmektedir. Örnekleme yöntemi uygundur ve iyi uygulanmıştır. Veri analiz yöntemleri araştırma için uygundur.	Metodoloji ve araştırma tasarımı mükemmel dizayn edilmiştir. Örnekleme yöntemi ve örneklem kusursuzdur. Veri analiz yöntemleri problemin çözümü noktasında son derece işlevseldir.
Literatür taraması ve argümantasyo	Literatür taraması yetersiz argümanlar özgün değil, zayıf ve tutarsızdır.	Literatür taraması kapsamlı fakat güncel değil. Argümanlar zayıf fakat tutarlıdır.	Literatür taraması kapsamlı ve güncel, argümanlar açık ve tutarlıdır.	Literatür taraması kapsamlı ve güncel, argümanlar özgün, güçlü ve tutarlıdır.
Alana katkı ve özgünlük	Makale alana katkı sağlamamaktadır ve özgün değildir.	Makale alana sınırlı katkı sağlamaktadır ve yeterince özgün değildir.	Makale alana önemli katkı sağlamaktadır ancak yeterince özgün değildir.	Makale alana önemli katkı sağlamaktadır ve yeterince özgündür.
Yazım ve dil bilgisi	Makale yazım ve dil bilgisi konusunda çok sayıda hata içermektedir.	Makale yazım ve dil bilgisi konusunda bazı hatalar içermektedir.	Makale yazım ve dil bilgisi konusunda hatasızdır.	Makale yazım ve dil bilgisi hatasızdır.

\*Rubriğin hazırlanmasında ChatGPT’den faydalanılmıştır.

Bu iki rubrik türü hakkında literatürdeki tartışmalar, paydaşlara sağladıkları geribildirim düzeyi, kullanım kolaylığı açısından puanlama süresi, puanlayıcılar içi (intra-rater) ve puanlayıcılar arası (inter-rater) güvenilirlik düzeyleri ve ölçülen performansları birbirlerinden ne kadar iyi ayrıştırabildiği üzerine

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

süregelmektedir. Bu tartışmalardan hareketle bu çalışmada literatürde yer alan ve bu konuları teorik değil uygulamalı olarak ele alan çalışmaların incelenmesi ve sonuçlarının karşılaştırılması amaçlanmıştır.

## YÖNTEM

Bu çalışma bir doküman inceleme çalışması olup çalışma kapsamında hakemli bilimsel dergilerde yayımlanmış sekiz araştırma makalesi incelenmiştir. Makalelerin seçilmesinde aranan kriterler aynı performansı ölçmeye yönelik hazırlanmış holistik ve analitik rubriklerin uygulama sonrasında elde edilen istatistikler üzerinden karşılaştırılmasını içeren bir araştırma tasarımına sahip olması olarak belirlenmiştir. Yapılan literatür taraması sonrasında ulaşılan çalışmalardan sekizinin (Badia, 2009; Çetin, 2011; Ghalib & Al- Hattami, 2015; Imbler vd., 2023; Koizumi vd., 2020; Ounis, 2017; Wahyuni vd., 2020; Wiseman, 2011) sözü edilen kriterlere uyduğu belirlenerek çalışmaya dahil edilmiştir.

## Verilerin Analizi

İncelenen araştırmalarda holistik ve analitik rubriklerin farklı bağlamlarda birbirleri ile karşılaştırılmış olması ve aynı bağlamda yapılan karşılaştırmalarda bile farklı istatistiksel tekniklerin kullanılmış olması gibi nedenlerle araştırma sonuçlarını istatistiksel olarak bir araya getirmenin mümkün olmadığı düşünülmüştür. Bu düşünceden hareketle incelenen araştırma sonuçları “Daha iyi” ve “Benzer” olmak üzere iki kategoride özetlenmiş ve anlaşılır olması bakımından şekilleştirilmiştir.

## Bulgular

İncelenen çalışmalardaki karşılaştırmalar, ortaya çıkan sonuçları ortaklaştırmak adına basitleştirilmiş ve Şekil 1’de sunulmuştur.

Şekil 1. Çeşitli bağlamlarda holistik ve analitik rubriğin karşılaştırılması

Holistik Rubrik	Daha İyi	Benzer	Daha İyi	Analitik Rubrik
	Sağlanan Geribildirim			
	-	-	2	
	Puanlama Zamanı			
	-	1	-	
	Puanlayıcılar İçi Güvenirlik (Kararlılık)			
	-	1	1	
	Puanlayıcılar Arası Güvenirlik (Tutarlılık)			
	4	-	1	
	Performansı Ayırt Etme			
	-	-	3	

Şekil 1 incelendiğinde, iki farklı rubrik türünün öğrencilere, öğretmenlere ve velilere sağladığı geribildirimlerin yeterliği bakımından karşılaştırdığı iki çalışma olduğu ve bunların ikisinde de analitik rubriğin geribildirim sağlama konusunda daha iyi olduğunun rapor edildiği anlaşılmaktadır.

Bu iki rubrik türünü değerlendiricilerin ilgili performansı puanlamak için harcadıkları süre bakımından karşılaştıran bir çalışma vardır ve bu çalışmada ortalama puanlama sürelerinin birbirine çok yakın olduğu sonucuna ulaşılmıştır.

Puanlayıcılar içi güvenilirliğin karşılaştırıldığı iki çalışmanın birinde puanlayıcıların aradan bir süre geçtikten sonra aynı performansı analitik rubrikle tekrar puanladıklarında yaptıkları puanlamaların holistik rubriğe göre birbirine daha yakın olduğu görülmüş ve analitik rubrik önerilmiştir. Diğer çalışmada ise her iki rubrik türünün de benzer kararlılıkta olduğu belirlenmiştir. Puanlayıcılar arası güvenilirlik karşılaştırıldığında yani farklı puanlayıcıların aynı rubriği kullanarak aynı performansı değerlendirdikleri durumda holistik rubrikle yapılan puanlamaların daha tutarlı olduğu sonucunu ortaya koyan çalışma sayısı dördür. Yalnızca bir çalışmada bu konuda analitik rubriğin daha iyi olduğu belirlenmesi yapılmıştır.

İncelenen sekiz çalışmanın üçünde hangi rubrik türüyle yapılan değerlendirmelerin performanslar arasındaki farkları daha iyi ortaya koyduğu incelenmiş ve üç çalışmada da bu konuda analitik rubriğin daha hassas olduğu ortaya konulmuştur. Analitik rubrikte puanlayıcıların performansın bileşenlerini tek tek ele aldığı ve değerlendirdiği düşünüldüğünde bu tür rubrikle elde edilen puanların varyasyonunun daha fazla olmasının beklenen bir durum olduğu söylenebilir.

### SONUÇ VE TARTIŞMA

Bu çalışma kapsamında ulaşılabilen ve rubrik türlerini çeşitli bağlamlarda karşılaştıran sekiz çalışmanın sonuçları analitik rubriğin pek çok bağlamda daha avantajlı olduğunu göstermiştir. Özellikle geribildirim sağlama ve performansları birbirinden ayırt etme konularında analitik rubriğin elde ettiği üstünlük onu eğitimde ve sınıf içi uygulamalarda daha önerilir hale getirmektedir. Holistik rubriğin analitik rubriğe göre daha üstün olduğu tek bağlam değerlendiriciler arası güvenilirlik olmuştur. Holistik rubrikte performansa verilebilecek puan ranjının çok daha az olduğu ve bu durumun puanlar arası varyasyonu azaltarak performanslar arasındaki daha küçük ayrımları göz ardı edeceği düşünüldüğünde puanlayıcılar arası güvenilirliğin analitik rubriğe göre daha yüksek olması anlaşılabilir bir durumdur. Fakat performanslar arası ayrımları görmezden gelmenin öğrencilerin eksik yönlerini görmelerine ve gelişimlerine olumsuz etki edeceği unutulmamalıdır.

Değerlendiricinin puanlama için daha az zaman harcaması literatürde yaygın olarak holistik rubriğin avantajı olarak belirtilmektedir (Brown, 2017; Hunter vd., 1996; Jonsson & Svingby, 2007). Bu çalışmada incelenen ve iki rubrik türünü puanlama zamanı bakımından karşılaştıran tek karşılaştırmada puanlamaya harcanan ortalama zamanların benzer olduğu sonucuna ulaşılmıştır. Yaygın düşüncenin tersine holistik rubriklerde kriterlerin iç içe geçmişliğinden dolayı puanlama zamanı artabilir. Oysa analitik rubriklerde bileşenler ve kriterlerin ayrı ve daha belirgin olması karar vermeyi kolaylaştırabilir (Badia, 2019).

Daha detaylı geribildirim sağlama ve performansları daha iyi ayırt etme gibi nitelikleri bakımından eğitim ortamlarında eğer özetleyici değerlendirme yapılması amaçlanmıyorsa analitik rubriğin kullanılması önerilebilir. Bu konuda araştırma yapmak isteyen diğer araştırmacılara puanlayıcılar içi ve puanlayıcılar arası güvenilirliğin rubriğin farklı niteliklerinden nasıl etkilendiği konusunda araştırma yapmaları önerilebilir.

**ABSTRACT**

The present investigation entailed the examination of historical data obtained from a cohort of 40 cattle within a single institution. The objective of this study was to investigate the impact of conventional semen and sexed semen on transferrable embryo counts in dairy Holstein cattle. The research utilized a cohort of 40 cattle that were in good health as the subjects for the investigation. The study implemented an estrus synchronization technique to divide the cow population into two distinct groups: the conventional semen group (C, n= 20) and the sexed semen group (S, n=20). The division was based on factors such as age, body condition score, lactation number, and live weight. Cattle in parts C and S were subjected to artificial insemination using conventional semen and sexed semen, respectively. Embryo recovery was conducted on cows in all experimental groups on the seventh day following insemination. The findings of the embryo recovery experiment yielded values of 5.40 and 4.50 for the C and S groups, respectively. There was no statistically significant difference observed between groups C and S ( $P>0.05$ ). In summary, the results of the present investigation suggest that there is no substantial discrepancy in the number of transferable embryos when using conventional sperm compared or sexed sperm during insemination.

**Keywords:** Cattle, Embryo, Superovulation, Sexed Semen

**ÖZET**

Mevcut araştırmada, tek bir kurumdaki 40 büyükbaş hayvandan oluşan bir gruptan elde edilen veriler incelenmiştir. Bu çalışmanın amacı, sütçü Holştayn sığırlarında konvansiyonel sperma ve cinsiyeti belirlenmiş spermanın transfer edilebilir embriyo sayılarının üzerine etkisini araştırmaktır. Araştırmada, araştırma konusu olarak sağlık durumu iyi olan 40 adet inek kullanılmıştır. Çalışmada, inek popülasyonunu iki farklı gruba ayırmak senkronizasyon protokolü uygulandı. Gruplar; konvansiyonel sperma grubu (C, n=20) ve sexed sperma grubu (S, n=20) şeklinde oluşturuldu. Grupların oluşturulmasında yaş, vücut kondisyon skoru, laktasyon sayısı ve canlı ağırlık gibi faktörler dikkate alındı. C ve S gruplarındaki sığırlar sırasıyla konvansiyonel ve sexed sperma kullanılarak suni tohumlama işlemlerine tabi tutuldu. Tüm deney gruplarındaki ineklerde tohumlamayı takip eden yedinci günde embriyo yıkama işlemleri gerçekleştirilmiştir. C ve S gruplarında sırasıyla, ortalama, 5.40 ve 4.50 transfer edilebilir embriyo elde edilmiştir. C ve S grupları arasında istatistiksel olarak anlamlı bir fark gözlenmedi ( $P>0.05$ ). Sonuç olarak, mevcut araştırmanın sonuçları tohumlama sırasında sexed sperma ile konvansiyonel sperm karşılaştırıldığında elde edilen transfer edilebilir embriyoların sayısında önemli bir fark olmadığını göstermektedir.

**Anahtar Kelimeler:** Sığır, Embriyo, Süperovulasyon, Cinsiyeti Belirlenmiş Sperma.

## INTRODUCTION

Sexed semen is commonly utilized in farms as a means to secure the birth of female progeny, hence facilitating the expansion of the herd through the addition of newborn females or enhancing corporate profitability through the sale of heifers. Sexed semen, a technology that enhances herd growth and productivity, does possess several drawbacks. Sexed semen straws typically exhibit a reduced quantity of spermatozoa in comparison to regular semen straws, typically about  $2 \times 10^6$ /straw (Siedel, 2014). In commercial enterprises that employ the use of sexed sperm for insemination purposes, it is possible to face unfavorable outcomes, such as reduced fertility rates (Oikawa et al., 2019; Siedel, 2014). According to available reports, a reduction in the number of transferrable embryos has been seen in animals who underwent superovulation protocols when inseminated with sexed sperm (Schenk et al., 2006).

The current study involved the analysis of retrospective data from a sample of 40 cows within a single organization. The study aimed to assess the quantity of transferable embryos achieved through superovulation, taking into consideration the type of sperm used. Additionally, the impact of sexed sperm on the quantity of transferable embryos was examined.

## MATERIAL AND METHODS

The present investigation was conducted in accordance with the established ethical guidelines of Bursa Uludağ University, adhering to Protocol no. 2021-13 and Decision number: 02. The study utilized a sample size of 40 records from healthy cows as the animal material. The cows were separated into two distinct groups: the conventional semen group (C, n=20) and the sexed-semen group (S, n=20). Cows in groups C and S were subjected to artificial insemination using conventional semen and sexed-semen, respectively. Embryos were obtained from each of the donor cows. The donor cows utilized in this study were between the ages of 3 and 4 years. These cows had body condition scores ranging from 2.75 to 3.25, indicating their overall physical condition. Additionally, these cows demonstrated consistent estrus patterns, further confirming their reproductive health. Identical bovine straws were utilized in the artificial insemination of donor animals.

The superovulation and estrus synchronization methods, as well as the embryo recovery protocol, were implemented following the methodology outlined by Alcay et al. (2022).

### Statistical Analysis

The data acquired from the study were analyzed utilizing IBM SPSS software, version 28.0 (Chicago, IL, USA). The data were expressed in terms of the mean value plus or minus the standard deviation. The Shapiro-Wilk test was employed as a means of assessing the normality of the data. The semen variables were analyzed using the Kruskal-Wallis test to determine the means of obtaining them. The Mann-Whitney U test was utilized to ascertain the statistical disparities among the mean values of the different treatment groups. Statistical significance was attributed to differences with values of  $p < 0.05$ .

## RESULTS

The number of follicles, corpus luteum and transferable embryos resulting from superovulation according to groups are given in Table 1.

**Table 1.** Comparison of conventional and sexed semen in the number of transferable embryos

	Conventional Semen (n=20)	Sexed Semen (n=20)
<b>Number of Follicles</b>	13.20±0.64	12.20±0.61
<b>Corpus Luteum Count</b>	9.60±0.44 <sup>a</sup>	9.40±0.42 <sup>a</sup>
<b>Transferable Embryo Count</b>	5.40±0.43 <sup>a</sup>	4.50±0.26 <sup>a</sup>

<sup>a</sup>: Values with different superscripts in the same line for each variable are same ( $P > 0.05$ ).

There was no statistical difference in the number of corpus luteum and transferable embryos between the groups ( $p>0.05$ ).

## **DISCUSSION**

Embryo transfer, an assisted reproductive procedure, contributes to the enhancement of herd quality by facilitating the transfer of embryos from high-yielding and healthy animals to carrier cows with lower-yielding capabilities (Yüceer and Özbeyaz, 2007). The enhancement of herd productivity through increased genetic value yields favorable economic outcomes for breeders. Dairy farms employing sexed semen have the potential to expedite genetic advancements in their female livestock and achieve elevated rates of live births, primarily attributable to the facilitated parturition process of female offspring (Holden and Butler, 2018; Siedel, 2014). Nevertheless, the utilization of sexed semen in reproductive processes presents a potential hazard for enterprises, as it may result in decreased fertility rates (Boneya, 2021).

Various rates of pregnancy outcomes have been documented following the utilization of sexed sperm during insemination. Several studies have documented comparable pregnancy rates between insemination using sexed and conventional sperm (Bayrıl, 2023). However, a separate study documented that conventional semen attained a pregnancy rate of 56%, while sexed semen achieved a pregnancy rate of 39% (Norman et al., 2010). The research conducted by Oikawa et al. (2019) revealed that the pregnancy rate following insemination with conventional sperm was 56.9%, while the pregnancy rate following insemination with sexed sperm was 47.3%. The researchers' study findings indicated a statistically significant fall in the pregnancy rate when insemination was performed using sexed sperm. In a separate investigation, the efficacy of sexed semen at a concentration of  $2 \times 10^6$  and conventional semen at a concentration of  $40 \times 10^6$  was assessed in Holstein breed heifers undergoing superovulation. The findings indicated that the group utilizing conventional semen exhibited a greater proportion of transferable embryos compared to the group utilizing sexed semen (Schenk et al., 2006). In the study being presented, it was shown that among the groups where a comparable number of corpus luteum were acquired during superovulation, a statistically similar number of transferrable embryos were obtained following insemination with both conventional and sexed sperm. Nevertheless, it is important to highlight that there is a quantifiable reduction in the quantity of embryos acquired following insemination using sex-selected sperm. Numerous variables exert influence on the processes involved in embryo formation. The above description encompasses various elements that can be considered, including the AMH level of the donor animal, age, race, genetics, quality of the sperm utilized in insemination, as well as the timing and location of the insemination procedure (Mikkola et al., 2020). It is hypothesized that the observed disparities in the research outcomes may be attributed to these aforementioned causes.

In conclusion, the findings of the current study indicate that there is not a significant disparity in the quantity of transferrable embryos following insemination with conventional sperm versus sexed sperm. Nevertheless, it is essential to conduct further comprehensive investigations prior to the widespread adoption of sexed semen as a substitute for conventional semen, unless specific circumstances necessitate its utilization.

## ÖZET

Emniyet valfleri, CO<sub>2</sub> (karbondioksit) akışkanların kullanıldığı soğutma sistemlerinde, sistemin güvenliği ve verimliliği açısından son derece kritik bir rol oynamaktadır. Bu tesislerde, çevresel duyarlılıklarıyla bilinirler ve özellikle transkritik çevrimler sırasında yüksek sıcaklık ve basınçta çalışan soğutucu akışkanlar kullanılmaktadır. Bu yüksek basınçlı koşullar altında, emniyet valfleri, sistemdeki basınç artışlarına karşı güvenlik sağlamak için hayati öneme sahiptir. Bu çalışma, CO<sub>2</sub> tabanlı soğutma sistemlerinde karşılaşılan yüksek sıcaklık sorununu ayrıntılı bir şekilde ele almaktadır. Bu sorun, istenmeyen basınç değişikliklerine ve soğutucu sıvı kaybına neden olarak sistem performansını olumsuz etkileyebilir ve ciddi arızalara yol açabilir. Sistemdeki sıcaklık probleminin kökenini anlamak ve çözmek için CO<sub>2</sub> akışkanının kullanıldığı soğutma sistemlerindeki maksimum sıcaklık ve basınç değerleri araştırılmıştır. Ayrıca, emniyet valfleri bileşenlerinin yüksek sıcaklıklarda nasıl çalıştığını incelemek amacıyla parçalar, üç boyutlu tasarım programları kullanılarak modellenmiştir.

Bu çalışma, üç boyutlu akış modellemesi üzerinden yapılan analizleri de içermektedir. Bu analizler, hava akımı için süreklilik, Navier-Stokes denklemi, viskoz kayma gerilmesi, entalpi ve kinetik enerji hesapları, Nusselt sayısı hesapları gibi temel akışkan dinamiği prensiplerini ele almaktadır. Elde edilen simülasyon verileri, çözüm yöntemlerini belirlemek ve iyileştirmek için kullanılmıştır. Sonuçlar, tasarım önerileri olarak konik yaylar, özel conta tasarımları ve gövde değişikliklerini sunmuştur. Bu tasarım değişikliklerinin, yüksek sıcaklık sorununu etkili bir şekilde çözdüğü ve sistem performansını iyileştirmeye yardımcı olduğu görülmüştür. Farklı parçalar üzerinde yapılan iyileştirme denemelerinin

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

sonuçlarında, nihai tasarımda birleştirilerek istenmeyen basınç düşüşlerini ve soğutucu sıvı kaybını minimize etmeye katkı sağlamıştır. Tasarım değişikliklerinin termal dayanıklılığı artırarak sistem güvenliğini daha da sağlamlaştırdığını göstermiştir. Emniyet valfleri üzerinde yapılan tasarım değişiklikleri, CO2 tabanlı soğutma sistemlerinde yüksek sıcaklık sorununun üstesinden gelmek ve sistem verimliliğini artırmak için kritik öneme sahiptir. Yapılan iyileştirmeler, üretilen prototip mamul üzerinde de yapılmıştır ve sıcak ortam testlerindeki ısınma ve ısı taşınımı performansında %14 oranında iyileşme görülmüştür.

**Anahtar kelimeler:** R744 transkritik soğutma, Emniyet valfleri, Termal analiz, Isı transferi, Taşınım

## ABSTRACT

Safety valves play a critical role in ensuring the safety and efficiency of cooling systems using CO2 (carbon dioxide) refrigerants. These systems are renowned for their environmental sensitivity and are particularly used in transcritical cycles where refrigerants operate at high temperatures and pressures. Under such high-pressure conditions, safety valves are vital in providing security against pressure increases within the system. This study comprehensively addresses the issue of high temperatures encountered in CO2-based cooling systems. This problem can adversely affect system performance by causing undesirable pressure fluctuations and refrigerant loss, potentially leading to serious malfunctions. To comprehend the root causes of temperature issues within the system and find solutions, this study investigates the maximum temperature and pressure values in cooling systems employing CO2 refrigerants. Furthermore, components of safety valves are modeled using three-dimensional design software to examine their performance under high-temperature conditions.

This study also includes analyses conducted through three-dimensional flow modeling. These analyses delve into fundamental fluid dynamics principles, including continuity for airflow, the Navier-Stokes equation, viscous shear stress, enthalpy, kinetic energy calculations, Nusselt number calculations, and other essential aspects. Simulation data are utilized to identify and enhance solution methods. The results propose design recommendations such as conical springs, special gasket designs, and body modifications. It is observed that these design alterations effectively resolve the high-temperature issue and contribute to the improvement of system performance. Improvement trials conducted on various components have been consolidated into the final design to minimize unwanted pressure drops and refrigerant loss. Moreover, these design changes are demonstrated to enhance thermal durability, further bolstering system safety. The design modifications made to safety valves are critically important in overcoming the high-temperature issue in CO2-based cooling systems and enhancing system efficiency. The improvements were also made on the prototype product produced, and a 14% improvement was observed in the heating and heat transfer performance in hot environment tests.

## GİRİŞ

Emniyet valfleri, tesisat sistemlerinde kullanılan gaz, buhar ve yüksek sıcaklıktaki sıvı akışkanların olası durumlardaki basınç artışının sistem komponentlerine zarar vermeden güvenliğini sağlamak amacıyla kullanılan güvenlik cihazlarıdır. Yüksek basınç veya sıcaklık koşullarında otomatik olarak etkinleşerek fazla basıncı tahliye eden emniyet valflerinin temel işlevleri, tehlikeli durumların önlenmesi veya yönetilmesi, böylece tesislerin ve süreçlerin güvenli ve sorunsuz bir şekilde işlenmesini temin etmektir. Bu valfler içerisindeki yayın akışkan basınç kuvvetine denk gelecek şekilde ayarlanarak üretilmektedir. Sistemde bir basınç artışı olduğunda, ayarlanan basınç değerinin üzerine çıkılırsa, valf otomatik olarak açılır ve güvenlik sağlar. Bir miktar akışkan boşaldıktan sonra, tesisattaki basıncın düşmesiyle klape tekrar kapanır. Bu valfler, sistemin içinde oluşabilecek muhtemel zararları sınırlandırır, patlama riskini en aza indirir ve işçi güvenliği için esas bir rol oynar. Ayrıca, süreçlerin ve tesislerin kesintisiz işlenmesini desteklerler. Bu nedenle, emniyet valflerinde ortaya çıkan erken açılma sorunları, ciddi bir endişe

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

kaynağıdır ve bu bildiri, bu sorunun giderilmesine yönelik adımları ele alacaktır (Yan, Zhou ve Yu, 2020).

Kompresörler, soğutma sistemlerinde soğutucu akışkanın sıkıştırılarak yüksek basınçlara çıkartılma görevini üstlenen kritik bir elemandır. Sistemin temel elemanı olan kompresörler, evaporatörden gelen düşük basınçlı gazı sıkıştırarak yüksek basınçlı gaz haline getirirler. Bu basıncı yükseltmiş gaz, ardından kondansatöre gönderilir, burada ısısını dış ortama vererek sıvı hale dönüşür. Sıvı fazdaki akışkan genleşme vanasında faz değiştirerek buharlaşma basıncına kadar basıncı düşer ve evaporatöre geçerek sistemdeki ısıyı içine çekerek döngü devam eder. Yüksek basınçlı soğutucu akışkanı sıkıştırmak, sıcaklığın ve basıncın artmasına neden olur ve yüksek basınçlara erişmek için de güçlü kompresörlerin kullanılması gerekmektedir. Bu nedenle, bu tür sistemlerde aşırı basınç ve sıcaklık koşullarıyla başa çıkmak için kompresör çıkışlarında veya kompresör üzerine montajlanan emniyet valflerine ihtiyaç duyulur. Emniyet valfleri, bu tür aşırı koşullarda fazla basıncın tahliye edilmesini sağlayarak sistem güvenliğini sağlar çünkü yüksek basınçlı CO<sub>2</sub> gazının kontrolsüz bir şekilde boşalması tehlikeli olabilmektedir (Çengel, 2000).

Soğutucu sistemlerde, geçmişte sıkça kullanılan CFC ve HCFC gazları, çevreye (özellikle ozon tabakasına) zarar verdiği için 1987'de imzalanan Montreal Protokolü ile sınırlamalara tabi tutulmuştur. Bu zararlı gazların yerine doğal bir alternatif olan CO<sub>2</sub> (R744), özellikle orta büyüklükteki soğutma sistemlerinde kullanılmaktadır (Sapçı ve Heperkan, 2018). CO<sub>2</sub>'nin ozon delme potansiyeli diğer gazlara göre çok daha düşüktür. R744, karbondioksit (CO<sub>2</sub>) gazının soğutma sistemlerinde kullanılan çevre dostu bir soğutucu akışkanıdır. Düşük global ısınma potansiyeline (GWP) sahiptir, bu nedenle ozon tabakasına zarar vermez ve sera gazı etkisi minimaldir. Yüksek basınçlara kadar çıkartılarak verim alınabilen CO<sub>2</sub> gazının bu tür uygulamalarda güvenli bir şekilde işlemesi ve kontrol edilmesi için emniyet valfleri, sistemlerin bütünlüğünü ve işçi güvenliğini sağlamak için hayati bir öneme sahiptir. CO<sub>2</sub> sistemleri, enerji verimliliği ve çevresel sürdürülebilirlik açısından önemli avantajlar sunsa da bu tür uygulamalarda doğru işleyiş ve güvenlik son derece önemlidir.

Transkritik çevrim süreci, kompresör yardımıyla sıkıştırma işlemiyle başlar ve bu işlem sırasında sistem sıcaklığı önemli ölçüde artar, CO<sub>2</sub> için sıcaklık yaklaşık 150°C'ye ulaşabilir. Özellikle yüksek basınçlarda (120 bar ve üzerinde) ve 150°C civarındaki sıcaklıklarda çalışabilen CO<sub>2</sub> akışkanlı sistemler için emniyet valfleri gereklidir. Bu tür aşırı koşullar için özel olarak tasarlanmış emniyet valfleri ve parça serileri geliştirilmelidir. Tasarım ve geliştirme süreçlerinde valf yayları ve hammaddeleri, elastomerler gibi tüm iç parçaların yüksek sıcaklıklarda nasıl çalıştığı ve işlevlerindeki değişiklikler dikkate alınmalıdır (İyim, Altıntaş ve Almış, 2019).

Emniyet valflerinde görülen kusurlar araştırıldığında, karşılaşılan en büyük teknik sorunlardan birisi de valfin erken açma problemi. Erken açılma gibi yaygın bir problem, valflerin hassas ayarlarına odaklanarak ele alınabilir. Ayrıca, sızıntı sorunları, valflerin malzeme seçimi ve tasarımının iyileştirilmesi ile önlenmeye çalışılır. Bakım eksikliği sonucu meydana gelen sorunları ele almak için daha dayanıklı valf bileşenleri ve azaltılmış bakım gereksinimlerine sahip gelişmiş valf tasarımları kullanılır. Yanlış ayarlama gibi ayarla ilgili sorunlar, valflerin daha hassas ayarlanabilirlik özelliklerini içeren yeni nesil valf tasarımları ve otomasyon ve ayar tezgahlarının yatırımlarıyla çözülebilir. Ülkemizdeki eski ağırlık yüklemeli emniyet valflerinin, yay yüklemeli ve pilot işletimli valflerle değiştirilmesi gerekmektedir. Emniyet valfleri, statik ekipmanlar gibi değil, dinamik ve termal streslere maruz kalır, bu nedenle dikkatli seçilmelidir. (Özgül, 2007). Sadece basınçlı sistemlerde değil, tüm önemli faktörler göz önüne alınarak en uygun valf seçilmelidir. Teknik iyileştirmeler ve teknik sorunların giderilmesi, emniyet valflerinin daha güvenli ve sağlam bir şekilde çalışmasını sağlamak için hayati öneme sahiptir ve sistemlerinin güvenilirliğini artırır. (Lim, Park ve Jang, 2004).

Huang, Ding ve Quack (2007) tarafından yürütülen araştırma, CO<sub>2</sub> soğutma sistemlerindeki emniyet valfleri için özgü bir sorunu ele almıştır. Bu sorun, katı CO<sub>2</sub> oluşumu ve emniyet valfinin tahliye yolunun tıkanmasıyla ilgilidir. Araştırma, farklı emniyet valfi tiplerinin tıkanma özelliklerini deneysel olarak incelemiş ve mansap hattında ciddi tıkanmalara yol açabilecek bu tür bir tıkanmanın sistemi tehlikeye atabileceğini belirlemiştir. Bu nedenle, katı CO<sub>2</sub>'nin tıkanmasını önlemek için emniyet valflerinin tasarımı ve mansap hattının dayanıklılığı önemlidir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Yüksek sıcaklık ve basınçlarda çalışan emniyet valflerindeki erken açma probleminin sebepleri irdelendiğinde, yüksek ısının valf komponentleri üzerindeki termal etkilerinden kaynaklanan sorunlar en önde gelmektedir. Isı iletimi yoluyla oluşan termal gerilmeler ve malzeme özelliklerindeki değişimler genellikle vana elemanları, basınç kontrol havası, ortam havası ve akışkan arasında gerçekleşir (Zong, Li, Zheng, Chen, Li ve Song, 2022). Özellikle R744 gibi yüksek sıcaklık ve basınç altında çalışan bir akışkanın valf klapesi tarafından açıldığında ortaya çıkan ısı transferi ve geçişi, ısı yüksek hızlı türbülans akıştan dolayı ısı taşınımı olarak adlandırılır. Bu durum, akışkanın yüksek hızda valfin içinden geçtiği bir iletişim anında meydana gelir, bu da ısı transferinin zorlanmış bir türüdür. Aynı şekilde, emniyet valfi ile vana gövdesi arasındaki ısı transferi doğal ısı taşınımı olarak kabul edilir. Vana elemanları, katı bir yapıya sahiptir ve soğutucu akışkan R744 ile iç valf iç boşlukları, akışkanın temas ettiği bir alan olarak tanımlanır. Bu çalışma, temelde ısı iletimi ve ısı taşınımı yöntemlerine odaklanarak katı parçalar ile gaz akışkanı ve gaz ortamı arasındaki termodinamik özellikleri ele alır. Çalışmamızda, kompresör tarafından üretilen ısı ve dış ortamın aşırı sıcak durumları göz ardı edilmiştir ve vana ile çevresel ortam arasındaki ısı radyasyonu ihmal edilebilir olarak kabul edilmiştir.

Prasad, Babu, ve Raj (2018) yapmış oldukları araştırmalarda montajı yapılan emniyet valfinin, valf girişindeki akışkanın ısısına maruz kalması, yüksek termal yüklerin oluşmasına neden olur ve bu durum da valfin arızasına yol açar. Bu nedenle, valfi optimum termal koşullarda tutarak sıcaklık artışlarını azaltmak veya valfin ısı koşullarını optimize ederek ısı transferi etkisini artırmak için bir soğutma önlemi gereklidir. Soğutma önlemleri, valfi içi boş hale getirerek sodyum ile doldurmak veya valfin dış yüzeyine ısı bariyeri kaplamaları uygulayarak sağlanır. Tam yük koşulları altında valf geometrisi üzerinde farklı yaklaşımlarla termal analiz yaparak soğutma öneminin incelenmesi amaçlanmıştır. Valf geometrisi, CAD yazılımı kullanılarak modellenmiş ve ısı analiz, FEA temelinde Ansys kullanılarak sabit durumda gerçekleştirilmiştir. Beklenen sonuçlar arasında sıcaklık değişimi, ısı akışı ve ısı transfer hızı bularak tasarımsal optimizasyon sonucu termal etki gözle görülmüştür. Üç farklı materyalden yapılan egzoz valf sapındaki termal iletim hızının malzeme cinsine göre değişimi net bir şekilde görülmüştür. Toplam ısı akışı, valf sapının ucuna ve egzoz valfinin baş bölgesine yakın bir bölgede en düşük olarak gözlenir. Alüminyum nitrit için maksimum toplam ısı akışı fazlayken, silikon nitrit için aynı değer daha düşüktür ve malzemelerin mekanik özelliklerine ve ısı dağılımına dayanarak, silikon nitrit malzemesi motor egzoz valfi için en uygun seçenek olarak öngörülmüştür. Bu çalışmadan yapılan çıkarım ile emniyet valflerindeki yaylarda malzeme araştırmaları yapılması kararlaştırılmış ve mevcut kullanılan yay çeliği yerine Inconel Alloy X-750 malzeme ile üretilen bası yayının denemeleri yapılmıştır. Yay katsayısının sıcaklığın artmasıyla yay katsayısının düşerek yayın daha da sünekleştiği fakat bu azalmanın inconel malzemedeki daha az olduğu görülmüştür (Mehan, 1959).

Bu çalışma kapsamında, yüksek sıcaklıklarda erken açılma sorununu daha iyi anlamak ve olası çözüm yollarını araştırmak amacıyla gerçekleştirilmiştir. Deneyler sayesinde erken açılma problemleri saptanmış ve oluşan müşteri şikayetlerinin azaltılması ve mevcut üründeki ürün geliştirme çalışmalarına başlanmasına ön ayak olmuştur. Valf komponentlerinin malzemeleri ve tasarımlarındaki değişikliklerin termal iletime olan etkileri incelenmiştir. Ayrıca, farklı çözüm önerileri sunulmuş ve her birinin avantajları ve dezavantajları değerlendirilecektir. Akışkanın valf açılma basıncı öncesinde valfe aktardığı ısının valf üzerindeki etkisi ve her parçalardaki ısı akışının miktarı değerlendirilerek tasarımlar arası karşılaştırmalar yapılmıştır.

## ARAŞTIRMA VE BULGULAR

Soğutma sistemlerinde kompresörler yardımıyla gaz akışkan sıkıştırılır ve basıncı artırılır. Sıkıştırma işlemi sırasında akışkanın termal değişimine ek olarak kompresörde de ısınma meydana gelmektedir. Meydana glene ısı üretimi fan aracılığıyla dışarıya dağıtılmaktadır. Kompresörün basıncıyla sıvılaşan gaz, kompresörün basıncını düşürerek gaz haline döner. Endüstriyel Soğutma (gıda, kimya, gaz, çimento, çelik vb. sanayi uygulamaları) sektörlerinde yaygın kullanılan R744 gazının kullanımı çevreci olması sebebiyle son yıllarda artmıştır.

## CO<sub>2</sub> Akışkanların Kullanıldığı Soğutma Çevrimleri

Soğutma sistemlerinde, sistem elemanları, farklı gereksinimlere uygun olarak tasarlanır ve üretilir. Transkritik karbondioksit çevrimleri gibi yeni sistemlerde, özellikle valf sistemleri üzerinde odaklanmak

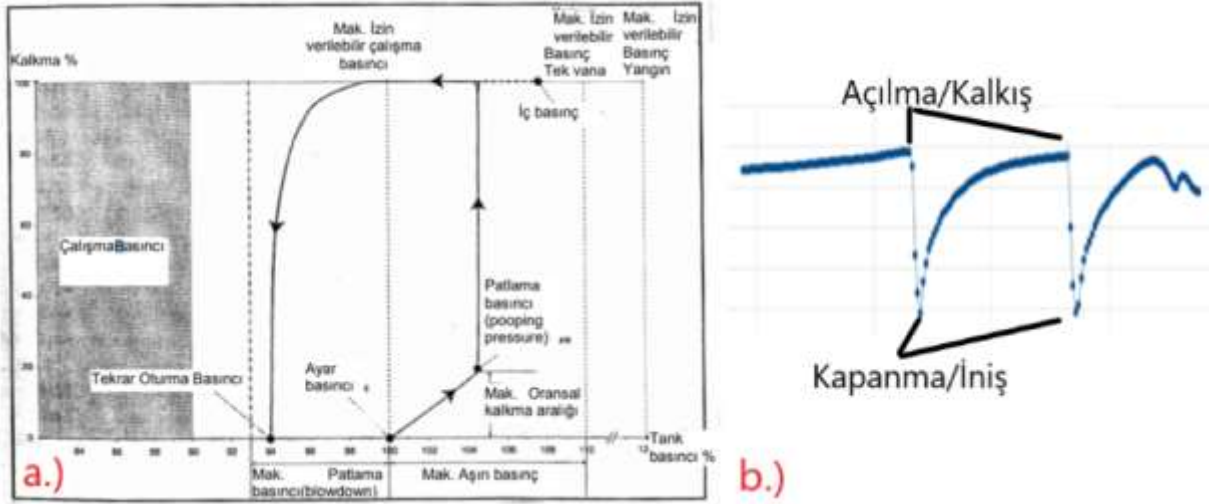

önemlidir. Bu sistemlerin ilk yatırım maliyetleri küçük sistemler için yüksek olabilir, bu nedenle genellikle orta ve büyük ölçekli sistemlerde tercih edilirler. Birden fazla kompresör ve evaporatör içeren sistemler, daha basit soğutma sistemlerine göre daha yaygındır ve valf sayısını artırır. Yüksek basınca dayanıklı sistemdeki bileşenler de buna göre tasarlanmalıdır. Şekil 1’de transkritik karbondioksit soğutma çevrimi P-h diyagramı verilmiştir. Subkritik çevrimler daha geleneksel ve düşük maliyetli, transkritik çevrimler ise yüksek verimlilik ve çevresel sürdürülebilirlik potansiyeline sahiptir. Temel fark, basınç ve sıcaklık koşullarının kritik noktanın aşılmamasında yatar. Subkritik çevrimler düşük basınçta çalışırken, transkritik çevrimler kritik noktayı geçebilir ve basınç değişimi ile ısıl işlem kontrol edilir. Transkritik sistemlerde, kompresör çıkışında kızgın buhar fazındaki gaz akışkanın maksimum 135 bar basınca ve 150°C derece sıcaklığa kadar ulaştığı bilinmektedir. Bu sebeple, kompresör emniyet valflerinde sıcaklığa dayanıklı valf yayı ve elastomerler kullanılması önerilir (Toth, 2015).

Şekil 1. Transkritik karbondioksit soğutma çevrimi P-h diyagramı (Toth, 2015)

### Emniyet Valflerinin Çalışma Prensibi

Emniyet valfinin yüksek basınca erişilmesi sonucunda açılıp kapanırken, akış karakteristiği ve basınç değerleri gibi önemli faktörlerin dikkate alınması gerekmektedir. Ayar basıncı, valfin açılacağı belirli bir basınç değerini temsil eder ve bu değere yaklaşıldığında emniyet valfinin açılma komutu verilir. Emniyet ventili üreticileri, korunacak tankın dayanıklılık sınırına yakın bir ayar basıncı seçerler.

Şekil 2. a.) Emniyet Ventili çalışma çevrimi ve açma kapama tanımları, b.) açılma ve kapanma basınç değişimi (Aydemir, 2013)

Aşırı basınç, emniyet valfinin bu ayar basıncının yüzdesi olarak ifade edilen bir değerdir ve bu değer üreticiler tarafından sağlanır. Emniyet ventili işleyişi sırasında iç basınç da büyük önem taşır. İç basınç, emniyet valfi için oldukça kritik bir parametredir çünkü ayar basıncı ile aşırı basıncın toplam değeri ya eşit ya da daha büyük olmalıdır. Bu, valfin güvenilir çalışmasını temin eder. Ayrıca, geri basınç da unutulmamalıdır, bu basınç emniyet valfi akışkanı atarken valf ve atma donanımı üzerinde oluşur ve valfin doğru işleyişini etkiler. Son olarak, tekrar oturma basıncı, emniyet valfinin kalkışının tam olarak sıfır olduğu basınç seviyesini ifade eder ve aşırı basınç azaltılması için akışkanın bir kısmını atmış olan valfin tekrar yerine oturduğu anlamına gelir. Bu da valfin güvenli çalışmasını sağlama noktasında büyük bir öneme sahiptir. Bu nedenle, bu faktörler, emniyet valflerinin güvenilir ve etkili bir şekilde işlenmesini sağlamak için göz önünde bulundurulmalıdır.

Gaz akışı kritik ve kritik altı durumlarında meydana gelir. Her iki akış türünde de emniyet valfi akışın ideal bir lüle içinde gerçekleştiği ve adyabatik olduğu kabul edilir, bu nedenle enerji kaybı genellikle göz ardı edilir. Bu koşullarda, özgül hacim ile basınç arasındaki ilişki aşağıdaki gibi ifade edilir. Gazlar ve buharlar genellikle gaz olarak adlandırılır. Buhar fazı, sıvı fazı ile dengededir ve buharın sıvı, gaz veya katı halde bulunma durumu, bulunduğu basınca bağlıdır. Eğer gaz, saf bir tek tip gaz veya gaz karışımı değilse, o zaman ideal bir gaz olarak kabul edilir. Kızgın buharın sıkışması ile emniyet valfinin açılma teorisi ele alındığında, bu çalışmadaki yüksek sıcaklık ve basınç altındaki R744 gazının, emniyet valfinin içinden geçerken 40 m/s ile 60 m/s hızlarda türbülans akış ile contayı kaldırarak valf iç hacminden tahliye deliklerine geçiş yapmaktadır.

Şekil 3. Emniyet Valfi Çalışma Prensibi

### Soğutucu Akışkanların Termodinamik Özelliklerinin Hesaplanması

Soğutucu akışkanların termodinamik özellikleri, modern teknolojik gelişmeler ve bilgisayar tabanlı hesaplama yöntemleri sayesinde oldukça erişilebilir hale gelmiştir. Bu bilgilere bilgisayar ortamında kolayca ulaşmak, ısı transferi ve soğutma işlemleri gibi ısı proses hesaplarını yapmayı büyük ölçüde kolaylaştırırken, sayısal proses optimizasyonunu hızlandırmaktadır. Soğutucu akışkanların termodinamik özelliklerini hesaplamak için kullanılan denklemler, genellikle bu amaç için tasarlanmış yazılımlar aracılığıyla kullanılır. Bu yazılımlar, farklı sıcaklık, basınç ve kompozisyon koşullarında akışkanın entalpi, entropi, yoğunluk, viskozite gibi özelliklerini hesaplamak için geliştirilen matematiksel denklemleri içerir. Bu sayede mühendisler, tasarım ve optimizasyon süreçlerinde doğru ve güvenilir termodinamik verilere erişebilirler, bu da enerji verimliliği, malzeme tasarrufu ve proses performansı açısından önemli avantajlar sağlar.

Soğutucu akışkanların termodinamik özelliklerinin hesaplanmasında kullanılan denklemler allta verilmiştir.

- Maxwell ve Classius -Clapeyron Bağlantıları
- ISO17584:2005 (E) Helmholtz Hal Denklemi (*R744 – CO2 Soğutucu akışkan için*)
- Martin-Hou Hal Denklemi
- Benedict-Webb-Rubin Hal Denklemi
- Peng-Robinson-Stryjek-Vera Hal Denklemi
- Japon Soğutma Derneği Hal Denklemi
- Su Buharı ve Amonyak için Geliştirilen Helmholtz Hal Denklemi
- R. D. Goodwin Tarafından Geliştirilen Hal Denklemi

### ISO 17584:2005 (E) Helmholtz Hal Denklemleri

Uluslararası standartlar enstitüsü (ISO) soğutkanların termodinamik özelliklerini hesaplayan çok çeşitli formüller olması nedeniyle ve bu özelliklerdeki değişmelerin uluslararası ticareti etkileyebileceğini göz önüne alarak standart hal denklemleri yayınlamış ve mümkün olduğuna bu denklemlerin kullanılmasını istemiştir.

$P = RT\rho\left(1 + \delta \frac{\partial \phi_r}{\partial \delta}\right)$	Doyma bölgesi denklemleri hal denkleminde $P(\tau, \delta_{suv}) = P(\tau, \delta_{gaz})$
$u = RT\left(\tau \frac{\partial \phi_{id}}{\partial \tau} + \tau \frac{\partial \phi_r}{\partial \tau}\right)$	$g(\tau, \delta_{suv}) = g(\tau, \delta_{gaz})$
$h = RT\left(1 + \tau \frac{\partial \phi_{id}}{\partial \tau} + \tau \frac{\partial \phi_r}{\partial \tau} + \delta \frac{\partial \phi_r}{\partial \delta}\right)$	$s = R\left(-(\phi_{id} + \phi_r) + \tau \frac{\partial \phi_{id}}{\partial \tau} + \tau \frac{\partial \phi_r}{\partial \tau}\right)$
$C_p = C_v + R \frac{\left(1 + \delta \frac{\partial \phi_r}{\partial \delta} - \delta \tau^2 \frac{\partial^2 \phi_r}{\partial \tau \partial \delta}\right)}{1 + 2\delta \frac{\partial \phi_r}{\partial \delta} + \delta^2 \frac{\partial^2 \phi_r}{\partial \delta^2}}$	$g = RT\left(1 + \phi_{id} + \phi_r + \delta \frac{\partial \phi_r}{\partial \delta}\right)$
	$C_v = R\left(-\tau^2 \frac{\partial^2 \phi_{id}}{\partial \tau^2} - \tau^2 \frac{\partial^2 \phi_r}{\partial \tau^2}\right)$

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Termodinamik hesaplamalar, genellikle entalpi farklılıklarına dayanır, yani  $\Delta h$  (entalpi) veya  $(h_2-h_1)$  değerlerine dayalıdır. Bu nedenle, farklı sıfır entalpi noktaları olsa bile, entalpi farkı olan  $\Delta h$ ,  $(h_2-h_1)$  her zaman aynıdır ve yazarlar arasındaki farklar genellikle %1'den daha düşüktür. Termal analizde kullanılan bu entalpi farklarını hesaplamak, özellikle karışık kaynaklardan gelen farklı sıfır entalpi noktalarıyla uğraşırken, termodinamik denge ve enerji akışlarının doğru bir şekilde belirlenmesinde önemlidir. Steady-state veya sürekli durum, termal analizde kullanıldığında, sistemin dengede ve enerji akışının sürekli olduğu bir durumu ifade eder. Bu, enerji dengesi ve entalpi değişikliklerinin doğru hesaplanması için önemlidir, özellikle makineler, ısı değiştiriciler ve diğer termal sistemlerin tasarımı ve iyileştirilmesi için yaygın kullanılmaktadır.

## Steady-State Termal Analiz

Çalışma kapsamında emniyet valfine yapılacak olan iyileştirmelerde ısı transferinin komponentlere olan etkisinin araştırılması oldukça önemlidir. Bu ısı transferi, soğutucu akışkan, vana elemanları, basınç kontrol havası ve ortam havası arasında gerçekleşir. İç içe geçerek montajlanmış bir vana elemanı çifti veya tek bir vana elemanı içinde, ısı transferi esas olarak ısı iletimi yoluyla gerçekleşir. Soğutucu akışkan, emniyet valfi klapesinden çıktığında ortam havası ile vana elemanları arasında ısı transferi süreci yaşanır ve bu durum ısı taşınımı olarak adlandırılır. Akışkan, doğrudan vana elemanlarına temas ettiğinde, ısı iletimi gerçekleşir fakat yüksek sıcaklık ve basınçta çalışan R744 akışkanı, valften 40-60 m/s gibi yüksek hızda geçtiğinden, soğutucu akışkan ile vana elemanları arasındaki ısı transferi, zorlanmış ısı taşınımı olarak kabul edilir. Emniyet valfi veya ortam havası ile vana gövdesi arasındaki ısı transferi ise doğal ısı taşınımı olarak kabul edilir. Vana elemanları katı malzemelerden oluşur ve soğutucu akışkan R744 ile iç valf iç boşlukları akışkan bölgesi olarak kabul edilir. Bu çalışma, temel olarak ısı iletimi ve ısı taşınımı yöntemlerini ele almaktadır ve katı parçalar ile gaz akışkan ve gaz ortam arasındaki termodinamik özellikleri incelemektedir. Ayrıca, kompresör tarafından üretilen ısı ve dış ortamın aşırı sıcak koşulları göz ardı edilmiştir. Vana üzerinden çevreye ısı radyasyonu da ihmal edilebilir bir faktördür. İlk olarak, emniyet valfinin yapıldığı malzemenin termal özellikleri, özellikle ısı iletkenlik katsayısı (k) olmak üzere dikkatlice belirlenmelidir. Ayrıca, işlem sırasında valfin altından giriş sıcaklığı ile çıkış sıcaklığı arasındaki sıcaklık farkı ( $\Delta T$ ) hesaplanmalıdır, bu da valf üzerindeki ısı transferini önemli bir şekilde etkiler. Isı transfer hızı, Fourier'un ısı iletkenlik denklemi kullanılarak hesaplanır. Soğutma akışkanının valf etrafındaki etkileri de dikkate alınmalıdır, bu akışkanın özellikleri ısı transferini etkiler ve Newton'un soğutma yasasına dayalı olarak ısı transferi yeniden hesaplanır. Simülasyon sırasında, emniyet valfi kapalı pozisyonda akış tahliyesi yapılmadığı kabul edilir. Valf tahliye delikleri ve ayar vidası üst boşluğunun doğal konveksiyon koşulu olarak kabul edildiği bu analizde, yüksek sıcaklıktaki soğutucu akışkana maruz kalan valf gövdesi ve conta yüzeyleri için belirlenen sınır koşulları da hesaba katılır. Bu bilgiler, termal analizin doğru bir şekilde gerçekleştirilmesi ve emniyet valfinin performansının iyileştirilmesi için temel teşkil eder.

$$Re = \frac{U_{max} \times d_0}{\gamma} = \frac{\rho \times U_{max} \times d_0}{\mu}$$

Kinematik Viskozite @120 °:  $14,4 \times 10^{-6}$

Dinamik Viskozite @120 °:  $19,38 \times 10^{-6}$

D: 7 mm

Yoğunluk: 115 kg/m<sup>3</sup>

U<sub>max</sub>: 60 m/s

Re:  **$14,5 \times 10^6$**

Şekil 6. Reynolds Sayısı Hesaplaması

Simülasyon sırasında, emniyet valfi kapalı pozisyonda akış tahliyesi yapılmadığı durum kabul edilir. Dış ortam havasıyla temas eden valf tahliye delikleri ve ayar vidası üst boşluğu doğal konveksiyon durumu olarak kabul edilir. Yüksek sıcaklıktaki soğutucu akışkana maruz kalan valf gövdesi ve conta yüzeyleri için belirlenen sınır koşulu doğal konveksiyon koşulu için Reynold sayısı  $14,5 \times 10^6$  (türbülans akış) ve Prandtl sayısı 0,75'tir. Pilot kontrollü basınçlı hava ve ortam havası için konveksiyon katsayısı  $h_c$ 'nin aynı olduğu ve  $10,07 \text{ W}/(\text{m}^2 \cdot ^\circ\text{C})$ 'ye eşit olduğu hesaplanabilir. Zorlanmış konveksiyon koşulu için diğer değerler CO<sub>2</sub> gazı için elde edilen Şekil 5'te verilmiştir. Yüksek sıcaklığın parçalar üzerindeki dağılımı farklı tasarımlara göre Şekil 6'da verilmiştir. Emniyet valfinin sıcaklık dağılımı, termal gerilimi ve termal gerilimi simülasyonda daha ayrıntılı olarak hesaplanabilir ve hesaplanan değerler termal akış hesaplamasında da kullanılabilir. Toplam ısı transferi, logaritmik ortalama sıcaklık farkı ve toplam ısı transfer katsayısı sırasıyla:

$$Q_{top} = \dot{m}c_p(T_{c2} - T_{c1}), \quad \Delta T_{ln} = \frac{(T_w - T_{c1}) - (T_w - T_{c2})}{\ln\left(\frac{T_w - T_{c1}}{T_w - T_{c2}}\right)}, \quad U = \frac{Q_{top}}{A_{top} \Delta T_{ln}}$$

Şekil 7. Isı transferi, logaritmik ortalama sıcaklık farkı ve toplam ısı transfer katsayısı sırasıyla (Kucur ve Yağız, 2007)

Şeklinde ifade edilir. Burada,  $\dot{m}$  akışkanın kütleli debisi,  $c_p$  akışkanın özgül ısısı,  $T_{c1}$  ve  $T_{c2}$  sırasıyla akışkanın giriş ve çıkış sıcaklıkları,  $T_w$  boru yüzey sıcaklığı,  $A_{top}$  toplam ısı transfer yüzey alanıdır.

Analiz çalışması boyunca, analizin adım süresi ve toplam süresi deneysel ve teorik olarak tahmin edilemediğinden sistem steady-state koşullarında (ANSYS'de steady-state thermal modülünde) incelenmiştir. Valfin açılmadan önceki kapalı pozisyonundaki ısı transferi inceleneceği için steady-state analiz yapılır. Altaki şekilde süreye bağlı olarak değişen ısı iletiminin steady-state bölümde doğrusal ve sabit olduğu görülmektedir (Shakya ve Dhakar, 2018).

Şekil 8. Zamana bağlı ısı iletimindeki değişim (Shakya ve Dhakar,2018).

Emniyet valfinde kullanılan parçaların malzemeleri ve bu malzemelerin ısı iletim katsayıları öncelikli olarak programa tanıtılır. Emniyet valfinden geçecek olan CO<sub>2</sub> akışkanının basınç ve sıcaklık değerleri analize başlamadan önce atanarak girdi parametreleri tanımlanır. Proje kapsamında oluşturulan altı farklı tasarımda her bir model tek tek incelenerek emniyet valfinin maruz kaldığı ısı akıları ve ısı transferi değerleri çıktı olarak elde edilir.

### Boşaltma Kapasitesi-Debisi Hesaplamaları

Yapılacak olan tasarımlarda emniyet valfi elemanlarının tasarımlarında yapılacak olan değişikliklerin boşaltma debisini etkilememesi için debi hesaplamaları da kontrol edilmiştir. Bu hesaplamalar sonucunda emniyet valfinin olası durumda açılmasıyla birlikte birim zamanda tahliye edeceği akışkan miktarı hesaplanmıştır (Özgül, 2007; Aydemir, 2013).

**Emniyet Valfi Boşaltma Kapasiteleri**

$$Q_m = 0,2883 \times C \times A \times K_{dr} \times \sqrt{\frac{P_0}{V_0}}$$

**C değeri ile ilgili olarak:**

$$C = 3,948 \times \sqrt{k \times \left(\frac{2}{k+1}\right)^{(k-1)/(k+1)}}$$

$$Q_m = \text{Boşaltma Kapasitesi} \left(\frac{\text{kg}}{\text{h}}\right)$$

$$k = \frac{c_p}{c_v} = \text{Isı sığası oranı}$$

$$A = \text{Akış Geçiş Alanı}$$

$$K_{dr} = \text{Belgelendirilmiş düşük boşaltma katsayısı}$$

$$K_d = \text{Boşaltma Katsayısı}$$

$$K_{dr} = 0,9 \times K_d$$

$$P_0 = \text{Gerçek basınç tahliyesi (bar)}$$

$$P_0 = 1,1 \times P_{set} + P_{atm} \text{ (bar)}$$

$$V_0 = \text{Özgül Hacim} \left(\frac{\text{m}^3}{\text{kg}}\right)$$

### Optimize Tasarım Çalışmaları

Emniyet valfi tasarımı için elimizde bulunan ilk valf tasarımında yaptığımız iyileştirmeler ve değişiklikler sonucunda Solidworks 3D tasarım programı kullanarak 7 farklı emniyet valfi tasarımı gerçekleştirmiştir. Yaptığımız mevcut tasarıma ek tasarımlar alttaki gibidir:

- 3 adet conta (Conta 1, Conta 2, Conta 3)
- 2 adet yay (Helisel yay, Konik yay)
- 2 adet yay tutucu (Yay tutucu 1, Yay tutucu 2)
- 3 adet conta yuvası (Deliksiz conta yuvası, 2 Delikli conta yuvası, 4 Delikli conta yuvası)

5. 2 adet gövde (4 Delikli gövde, 6 Delikli gövde)

**Model 1**

Mevcut emniyet valfinin parçalarının 3D tasarımları alttaki gibidir.

Mesh Örgü Modeli

Mesh örgü modeli, sonlu eleman analizlerinin temelini oluşturan bir yapı veya sistem analizi yöntemidir. Bu model, karmaşık yapıları veya sistemleri daha küçük ve matematiksel olarak analiz edilebilir parçalara böler. Her parça, sonlu eleman olarak adlandırılır ve geometri, malzeme özellikleri ve sınırlayıcı koşullarla tanımlanır. Sonlu eleman analizi, mühendislerin gerçek dünya problemlerini sayısal olarak çözmelerine ve çeşitli fiziksel olayları simüle etmelerine yardımcı olur. Mesh örgü modeli, bu elemanların birbirleriyle nasıl etkileşime girdiğini ve nasıl bağlandığını tanımlar, böylece sonuçlar hesaplanabilir. Bu yöntem, mühendislik tasarımı, yapısal analiz, ısı transferi, akışkan dinamiği ve diğer birçok uygulamada kullanılır.

Gösterilen şekil, bir yapısal sürecin bir parçası olarak ANSYS analizi için kullanılan rijit malzemenin örgülü modelini temsil eder. Statik bir analiz bağlamında, flanş bağlantısının davranışını incelemek amacıyla sonlu elemanlar yöntemi (FEM) kullanılır. Bu analiz için, ANSYS yazılımında üçgen şeklinde ağ tipi bir mesh kullanılır. Bu meshleme işlemi sırasında toplamda 71,441 sonlu eleman ve 122,228 düğüm kullanılır.

Şekil 18. Mesh Örgü Modeli

Materyallerin Tanımlanması

Gövde

Gövde, emniyet valfinin ana yapısını oluşturan ve dayanıklılığını sağlayan kritik bir bileşendir. Gövde, genellikle yüksek kaliteli ve dayanıklı metallere imal edilir. Emniyet valfi gövdesi, basınç altında çalışacak şekilde tasarlanır ve sızdırmazlık sağlamak için sıkı toleranslara sahip olmalıdır. Basınca dayanıklı yapısı, sistemdeki yüksek basınçlara karşı güvenilir bir koruma sağlar. Ayrıca, yüksek sıcaklık ve agresif kimyasallara karşı dayanıklı olmalıdır. Sızdırmazlık elemanları ve kapatma mekanizmasıyla birlikte çalışarak, emniyet valfinin güvenilir ve etkili bir şekilde çalışmasını sağlar. Çalışmada gövde malzemesi olarak bakır-kurşun alaşımlarından biri olan CuZn40Pb2 diğer adıyla C38500 malzemesini kullanılmıştır.

## Conta Malzemesi

Valfin conta malzemesi fiber partikül takviyeli PTFE ortotropik bir malzemedir. İzotropik malzeme olarak tanımlanarak daha doğru sonuçlar elde edilmek amaçlandı . Kompozit olarak tanımlanmamıştır. PTFE malzemesi seçilmiştir. PTFE (Politetrafloroetilen), yaygın olarak bilinen marka adıyla Teflon, teflon kaplamaları ve yalıtım malzemeleri gibi çeşitli endüstrilerde kullanılan bir polimer malzemedir. PTFE kimyasal olarak inert ve zararsız olmasına rağmen, -240°C'lik kriyojenik sıcaklığın altında ve 260°C'nin üzerindeki sıcaklıklarda bozulmaya başlamakla birlikte erime sıcaklığı ise 327°C olup, 350°C'nin üzerinde yapısı tamamen bozulur.

## Yay Malzemesi

Yay malzemesi olarak AISI 301 (1.4310) bir diğer ismiyle X10CrNi188 olan paslanmaz yay çeliği malzemesi kullanılmıştır. AISI 301 paslanmaz yay çeliği, yaygın olarak kullanılan bir malzemedir ve

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

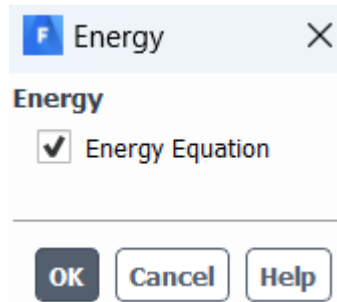

çeşitli endüstrilerde geniş bir kullanım alanına sahiptir. Yüksek mukavemeti, iyi korozyon direnci ve yüksek esneklik özellikleriyle bilinir. Bu özellikler, AISI 301'in birçok uygulamada tercih edilen bir seçenek olmasını sağlar. AISI 301 paslanmaz yay çeliğinin ana bileşeni, krom ve nikel içeren bir alaşımdır. Genellikle %17-19 krom ve %7-9 nikel içerir. Bu alaşım, malzemeye mükemmel bir korozyon direnci sağlar ve paslanmaz özelliğini korumasına yardımcı olur. Ayrıca, AISI 301'in yüksek mukavemeti, çelik yayların uzun süre dayanabilmesini sağlar.

Model 7 Analiz Sonuçları

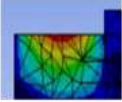

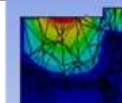

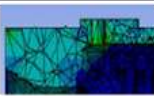

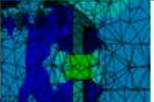

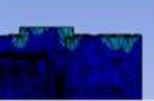

Şekil 30. a) Temperature analizi, b) Total heat flux analizi

Bu çalışmada, soğutucu sistemlerin güvenliği ve performansı açısından önemli bir sorun olan yüksek sıcaklıklarda erken açma problemini anlamak ve çözüm yöntemleri geliştirmek için bir adım olmayı hedeflemiştir. Emniyet valflerinde yüksek sıcaklıklarda erken açma probleminin gerçek bir sorun olduğunu ve soğutucu sistemlerin performansını ve güvenliğini olumsuz etkileyebileceğini doğruladık. Bu sorun, istenmeyen basınç düşüşlerine ve soğutucu sıvı kaybına yol açarak sistemin verimliliğini azaltabilir ve arızalara neden olabilir.

Yapılan analiz ve simülasyonlar, yüksek sıcaklıklarda erken açma problemini doğrulamış ve bu sorunun temel nedenlerini belirlememize yardımcı olmuştur. Özellikle, yüksek sıcaklık ortamında malzeme genişmesi ve termal etkilerin emniyet valflerinin erken açılmasına yol açtığını gözlemledik. İstatistiksel analizler ve veri değerlendirmesi sonucunda, erken açma probleminin çözümü için çeşitli yöntemlerin önerilebileceğini belirledik. Örneğin, emniyet valflerinin termal etkilere karşı daha dayanıklı malzemelerle üretilmesi veya emniyet valfi bölümleri üzerinde yapılan tasarımsal değişiklikler gibi çözümler üzerinde durulabilir. Bu değişikliklerden birincisi; yay seçimi ve yay seçiminde etken olan yay katsayısıdır.

7	Kendi contası + kendi conta yuvası +Gövde 6 delikli+ helisel yay	155.23	66	4.3818	7,6948x10 <sup>4</sup> (-8)			<ul style="list-style-type: none"> <li>•max sıcaklık genel olarak valfin her bölümünde aynı görüldü.</li> <li>•max ısı akısı tahliye deliğinde görüldü.</li> </ul>

Yay katsayısı ise; tel çapı, eksen çapı ve sarım sayısı gibi parametrelere bağlıdır. Bir anlamda yay katsayısı seçilerek, yay üzerine etkiyen kuvvete göre yayın sıkışma miktarı, dolayısıyla da vananın basınç değeri belirlenir. Bu bakımdan yay, emniyet vanasının çalışma basıncı değerlerini ve limitlerini belirleyen en önemli etkenlerden biridir. Çalışmamızda kullandığımız 2 farklı yay türü arasında yaptığımız incelemeler ve analizler doğrultusunda konik yay'ın daha verimli ve istediğimiz sonuçlara daha yakın olduğunu gözlemlenmiştir.

Yapılan bir diğer değişiklik ise klapeyi dolduracak şekilde uç figürlü conta tasarımı üzerinde olmuştur. Conta üzerinde yapılan değişiklikler doğrultusunda contanın gövdeye temas ettiği açı artırılarak contanın merkeze daha düzgün bir biçimde oturması sağlanmıştır. Ayrıca contanın temas ettiği yüzey alanı da artırılmıştır. Temas yüzey alanının büyük olması, aynı kuvvete karşında birim alana düşen kuvvetin azalmasına yani basıncın azalmasını sağlar. Yapılan çalışmalar ve analizler doğrultusunda tasarlanmış olduğumuz temas yüzey alanı en büyük olan "Conta 3" ün daha verimli ve istediğimiz sonuçlara daha yakın olduğunu gözlemledik. Yaptığımız son değişiklik ise gövde tasarımı üzerinde gerçekleştirilmiştir. Analizleri incelediğimizde "4 delikli gövde" yerine "6 delikli gövde" tasarımı kullanılmasının daha verimli ve istediğimiz sonuçlara daha yakın olduğunu gözlemlenmiştir. Bu sayede emniyet valfi içerisinde çıkan soğutucu akışkanın daha stabil ve eşit bir şekilde deliklerden çıktığı gözlemlenmiştir. Farklı çözüm önerilerinin avantajları ve dezavantajları üzerine tartışmalar yaptık. Her bir çözümün maliyeti, uygulanabilirliği ve etkinliği gibi faktörleri dikkate alarak, hangi yöntemin belirli bir soğutucu sisteme en uygun olduğunu değerlendirilmiştir.

Sonuç olarak, yapılan analizler ve değerlendirmeler sonucunda, konik yay, 3 numaralı conta ve 6 delikli gövdenin bulunduğu emniyet valfi tasarımının yüksek sıcaklıklarda erken açma probleminin çözümü için en iyi sonucu sağladığı görülmüştür. Bu tasarım, termal etkilere karşı daha dayanıklıdır ve istenmeyen basınç düşüşlerini ve soğutucu sıvı kaybını en aza indirirken, sistem performansını olumsuz etkileme olasılığını azaltmaktadır. Ancak, bu tasarımın avantajları ve dezavantajları detaylı bir şekilde değerlendirilmeli ve özellikle sistemin gereksinimlerine ve çalışma koşullarına uygunluğu dikkate alınmalıdır. Çalışmanın endüstriyel uygulamalarda soğutucu sistemlerin verimliliğini artırmaya ve güvenlik standartlarını iyileştirmeye yönelik katkı sağladığına inanılmaktadır. Emniyet valflerinde yüksek sıcaklıklarda erken açma probleminin daha iyi anlaşılması ve çözüm yöntemlerinin geliştirilmesi, bu sistemlerin güvenli ve verimli bir şekilde çalışmasını sağlamak için önemli bir adımdır. Gelecekteki araştırmaların, bu sorunu daha da derinlemesine incelemek ve yeni inovatif çözümler sunmak için yapılması gerektiğine inanılmaktadır.

**ÖZET**

Yapay zekâ John McCarthy'in 1956 yılında dile getirdiği bir kavram olarak hayatımıza dahil olmuş, günümüzde en çok konuşulan konuların başında gelmeye başlamıştır. Gerek yapay zekâ programları ve yapay zekâ ürünleri robotlar gerekse yapay zekâ kullanılarak oluşturulan sanal haber spikerleri bazı meslek grupları açısından düşündürücü bir etki oluşturmuştur. Bu etki, çeviri alanı için de önemli bir yer teşkil etmektedir. Nitekim, zekâ kavramının bile tartışıldığı günümüz dünyasında yapay zekâ kavramı doğru anlaşılabilir mi? Bununla birlikte yapay zekâ programları insan zekasının, yani çevirmenlerin yerini alabilir mi? Yapay zekâ denilince akla robot çevirmenlerin gelmesi doğru bir düşünce midir? Söz konusu programlarla yapılan çeviriler yeterli ve kabul edilebilir çeviriler mi? Diller mekanikleşme tehlikesiyle karşı karşıya mı? gibi tartışma soruları oldukça fazla tartışılmakta ve bu tartışmalar zaman zaman yapay zekanın pozitif etkileri olduğu kadar büyük bir sorunsal haline gelmeye başladığına da dikkat çekmektedir. Söz konusu bu çalışmada önce yapay zekâ kavramının ortaya çıkışına değinilecek, insan zekâsı ve yapay zekâ arasındaki farklılıklar ve varsa benzerliklere değinilecek bu kapsamda yapay zekanın insan zekasının yerine geçebilme ihtimalinin olup olmadığı konularından bahsedilecektir. Çeviri alanında yapay zekâ kullanımlarına değinilen bölümden sonra, insan zekâsı ile çevrilmiş olan bazı çevirilerin birtakım yapay zekâ uygulamalarındaki çevirileri gösterilecek, böylelikle aradaki farklar ve eşdeğerlik sorunları ortaya konacaktır.

**Anahtar Kelimeler:** Çeviri, İnsan çevirisi, Yapay zekâ çevirisi.

**ABSTRACT**

Artificial intelligence entered our lives as a concept expressed by John McCarthy in 1956 and has become one of the most talked about topics today. Both artificial intelligence programs, robots, artificial intelligence products and virtual news anchors created using artificial intelligence have created a thought-provoking effect for some professional groups. This effect is also important for the field of translation. So, can the concept of artificial intelligence be understood correctly in today's world, where even the concept of intelligence is discussed? So, can artificial intelligence programs replace human intelligence, that is, translators? When it comes to artificial intelligence, do robot translators come to mind? Are the translations made with these programs sufficient and acceptable? Are languages in danger of becoming mechanistic? Such discussion questions are widely discussed, and these discussions point out that artificial intelligence, in addition to its positive effects from time to time, is starting to become a big problem. Following the section where the uses of artificial intelligence in the field of translation are explained, translations of some translations translated by human intelligence in some artificial intelligence applications will be shown, thus revealing differences and equivalence problems.

**Keywords:** Translation, human translation, artificial intelligence translation.

### GİRİŞ

Gelişen ve değişen dünya ihtiyaçları birçok alanda teknolojinin kullanımının da artmasıyla yenilikçi yöntemlerle karşılanmaya başlanmıştır. Bu yöntemlerden en önemlilerinden biri de yapay zekâ ürünleri olmuştur. Endüstriden mühendisliğe, sağlıktan matematiğe pek çok alanda etkin bir rol oynayan yapay zekâ, yabancı dil çevirisi söz konusu olduğunda da benzer bir öneme sahip olmaktadır. Özellikle daha ucuz ve daha hızlı olması bakımından yayıncıların ilgisini çeken yapay zekâ konusunu bu çalışmada çeviri açısından ele alacağız.

Yapay zekâ kavramı ilk olarak 1956 yılında Dortmund Konferansı'nda John McCarthy, Marvin L. Minsky, Nathaniel Rochester ve Claude E. Shannon tarafından sunulan bir öneri mektubunda dile getirilmiştir. Ancak bu kavramın öncüsü olarak John McCarthy kabul edilmektedir (Alpaydın, 2013). McCarthy (2004, s.7) zekâyı, "Dünyada hedeflere ulaşma yeteneğinin hesaplayıcı bir parçasıdır. Değişen türde ve derecede zekâ insanlarda, birçok hayvanda ve bazı makinelerde görülür" şeklinde tanımlarken, yapay zekâyı, "insan benzeri zeki makineler özellikle de zeki bilgisayar programları yapma bilimi ve mühendisliği" olarak ifade etmiştir. Bu tanıma göre, bir bilgisayarın akletme, sorun çözme, anlam çıkarma ve genelleme gibi insansı, üst seviye bilişsel becerileri kullanması yapay zekâ olarak tanımlanabilir.

Yatırımlar ve teknolojik gelişmelerle yapay zekâ uygulamaları, maliyet açısından gün geçtikçe düşerken, performans ve bilinirlik bakımından her geçen gün artmaktadır. Günlük hayatımızda bazen arka planda kalsa da etki bakımından bütünlük, yaygın ve kaçınılmaz olmuştur. Ve bu teknoloji, Siri'den, dijital gazeteciliğe, hisse senedi hareketleri tahmininden suçu tahmin etmeye, yüz tanımadan tıbbi teşhislere kadar çok farklı alanlarda etkin şekilde kullanılmaktadır (Holmes ve diğerleri, 2019).

Yapay zekâ, ilgilendiği alanlar bakımından üç başlıkta toplanabilir. Bunlar, veri tabanlı (data-based), mantık tabanlı (logic-based) ve bilgi tabanlı (knowledge-based) yapay zekâ yaklaşımlarıdır. 1980'lerden 2000'li yıllara kadar, yapay zekanın eğitimsel uygulamaları çoğunlukla bilgi tabanlı bir yaklaşıma dayanıyordu (Sleeman ve Brown, 1982). Belirtilen dönemde araştırma alanları, çoğunlukla akıllı öğretim sistemleri adı altında, domain, öğrenci ve pedagojik olmak üzere üç modülden oluşan yapılar üzerineydi (Woolf, 2009). Bugün eğitimde yapay zekâ çalışmalarına bakıldığında, "sadece bilgi-tabanlı değil, veri ve mantık-tabanlı ve yapay zekâ uygulamalarının hemen hemen her alanda yer aldığı farklı uygulamalar görülebilir. Bunlar arasında, kişiselleştirilmiş eğitim veya diyalog eğitim sistemleri, öğrencilerin makale analizleri, akıllı ajanlar, chatbots, otomatik test oluşturma sistemleri vb yer almaktadır" (Arslan, 2020, s.81).

### Çeviri ve Yapay Zekâ

Yapay zekanın hayatımızın her alanına nüfuz ettiği günümüzde etki alanına girdiği diğer bir çalışma alanı çeviri hususu olmuştur. İnsansı tepkiler ve düşünceler üretebilen makineler her geçen gün karşımıza farklı farklı şekillerde çıkmaktadır. En son Kuveytte bir medya kuruluşunun yapay zekâ ile oluşturduğu "Fedha" adlı spiker ve gelişmiş yapay zekâ, bilgisayar ve robotik teknolojilerinin birleşimiyle gerçekleşmiş olan "Sophia" isimli robot, dikkatleri yapay zekâ ile üretilen bu sistemlerin insanların yerini alıp alamayacağına yönelmiştir. Temmuz 2023'te Cenevrede Birleşmiş Milletlerin düzenlediği "İyilik için yapay zekâ" zirvesine katılan robotların vermiş olduğu "dünyayı insanlardan daha iyi yönetebilecekleri" mesajı da dikkat çekici olmuştur. Bu ve benzeri gelişmelerle birlikte yapay zekâ gelecekte çevirmenlerin yerine de geçebilecek mi sorusunu akıllara getirmiştir. Çeviri işlemi yazılı ve sözlü olarak ayrılan, zorlu ve zahmetli bir iştir. Özellikle kültürel ifadelerin, bağlamın, kaynak ve hedef dile tam hakimiyetin çok önemli olduğu bu alanda yapay zekanın ne kadar ileri gidebileceği belirsizdir. Bu çalışmada da yazılı çevirinin en zorlu dallarından biri olan şiir çevirisi üzerinden bir inceleme yapılmıştır. Şiir çağrışımlarla yüklü, yan anlamlar barındıran, içerisinde çokça sözcük oyunları olan, duygu yüklü bir edebi türdür. Bu durum, çeviride ciddi sorunlara yol açmaktadır (Yıldırım & Durmuş, 2019).

Eleştirmen Maurice Blanchot, şiiri çevirmenin zorluğunu şu sözleriyle dile getirmektedir: "Şiirin anlamı, şiirin bütün kelimelerinden, bütün devinimlerinden, bütün vurgularından ayrı oluşamaz. Şiirin anlamı, sadece bu bütün içerisinde var olur ve onu, şekil aldığı bu biçimden ayırmaya çalıştığımız anda kaybolur. Şiirin neyi ifade ettiği, olduğu şey ile tamamen uyuşmaktadır" (Yıldırım & Durmuş, 2019, s.39).

Ve kıyı, senin yanında sessizce uzandığını bilir misin?

Ve nehirler, kendilerinin senden sana aktığını bilirler mi?

Dalgaların isyan ettiği zaman ne dediğini bilmiyorum."

Söz konusu çeviriler incelendiğinde kaynak metinde var olan كَمْ مَضَتْ أَلْفٌ عَلَيْكَ cümlesindeki sorusunun yapay zekâ çevirisinde olmadığını görmekteyiz. Aynı zamanda "ve kıyı, senin yanında sessizce uzandığını bilir misin?" çevirisinde cümlenin diziminde ve anlamında hatalar olduğu açıktır. مَا الَّذِي وَشَرِبْنَاكَ وَقُلْنَا قَدْ أَكَلْنَا الثَّمَرَا أَمْ أَصَوَابٌ مَا زَعَمْنَا أَمْ ضَلَالٌ لَسْتُ أَدْرِي şeklinde çevirdiği cümlede özne yüklem uyumsuzluğunun olduğu görülmektedir.

### İnceleme 3

تُرْسِلُ السُّحْبَ فَتَسْقِي أَرْضَنَا وَالشَّجَرَا  
وَقَدْ أَكَلْنَاكَ وَقُلْنَا قَدْ أَكَلْنَا الثَّمَرَا  
وَشَرِبْنَاكَ وَقُلْنَا قَدْ شَرِبْنَا الْمَطَرَا  
أَصَوَابٌ مَا زَعَمْنَا أَمْ ضَلَالٌ لَسْتُ أَدْرِي  
إِلَهِي أَبِومَضَى لِي طَالِمْ

### İnsan Çevirisi (Prof. Dr. Rahmi Er)

Göndererek bulutları sularsın toprağımızı ve ağaçları,

Aslında biz seni yeriz de meyve yedik deriz,

Seni içeriz de yağmur suyu içtik deriz,

Doğru mu bu söylediklerimiz, yoksa yanlış mı? Bilmiyorum!

### Yapay Zekâ Çevirisi (ChatGpt)

"Bulutları gönderir ve topraklarımızı ve ağaçlarımızı sulatırsın,

Seni yedik ve şöyle dedik: 'Meyveleri yedik.'

Seni içtik ve şöyle dedik: 'Yağmuru içtik.'

Doğru bir şey mi iddia ettik yoksa bir sapıklık mı, bilmiyorum."

Çeviriler incelendiğinde kaynak metinde kullanılan mazi fiil ifadelerinin insan çevirisinde şiirin duygusunu hedef okura hissettirmek amacıyla çevirinin geniş zaman kipiyle yapıldığı düşünülmekte, aynı cümleler yapay zekâ çevirisinde kaynak dildeki gibi mazi fiil kipinde çevrilmiştir. Ancak her ne kadar zaman uyumunda birebirlik söz konusu olsa da eş değerlik sağlanmış denilememekte, şiirin düz yazı türü gibi çevrildiği görülmektedir. زَعَمْنَا ضَلَالٌ أَمْ أَصَوَابٌ مَا زَعَمْنَا أَمْ لَسْتُ أَدْرِي "iddia ettik", ضَلَالٌ "sapıklık" olarak çevrilmiş, kelime anlamları doğru olsa bile, kaynak şiirde kullanılan anlamın bozulduğu ve anlam düzeyinde eş değerliğin sağlanamadığı görülmüştür.

### İnceleme 4

İsim taşımayan bir soyum  
Bir ülkede sabırla yaşayan  
Öfkenin hızıyla yaşar  
Köklerim...  
Ve dönemin açılmasından önce  
Ve selvi ağaçları ve zeytinlerden önce  
Ve ot yeşermesinden önce  
Zamanın doğuşundan önce yerleşti.

Çeviriler incelendiğinde kaynak metinde yer alan سچل emir fiil kipinde gelmiş olan ve “yaz, kaydet” gibi anlamlarda kullanılan bir ifadedir. Yapay zekâ çevirisine bakıldığında “kayıt” anlamının verildiği görülmüş, bu da sistemin kelimenin çekimini algılayamadığı, kelimeyi bir fiil olarak değil de isim haliyle çevirdiği anlamına gelmektedir. Aynı zamanda كئل مافي ه صيورفي بلاد كئل مافي ه cümlesindeki كئل مافي ه da algılayamamış görülmektedir. Öyle ki كئل مافي ه denildiğinde “ondaki herkes” anlamı barınmakta sonra gelen beyit bu ifadenin anlamını sürdürmektedir. Böylece “orada yaşayan herkes öfkeyle dolup taşar” gibi bir anlam barındıran cümlenin eş değerliği yapay zekâ çevirisinde sağlanamamıştır. قبل فتح ليل ب cümlesinde de قبل ليل ب kelimesi tarihin çağları anlamını barındırmakta ancak yapay zeka çevirisinde bu dönem olarak çevrilmiştir. Genel olarak bakıldığında kaynak metnin duygusunu hedef okura geçiremediği barizdir.

### İnsan Çevirisi (Prof. Dr. Rahmi Er)

Yaz! Ben bir Arabım.  
Sen atalarımın bağlarını,  
Çocuklarımla ekip işlediğimiz  
Toprağımızı gasp ettin.  
Bize ve bütün torunlarıma  
Bıraka bıraka bu kayaları bıraktın  
Hükümetiniz onları da alacakmış,  
Doğru mu?

### Yapay Zekâ Çevirisi (ChatGpt)

"Kayıt  
Ben Arap'ım  
Atalarımın bağlarını ve bereketli toprakları aldınız  
Ben ve tüm çocuklarım  
Ve tüm torunlarım için sadece bu kayaları bıraktınız  
Acaba hükümetiniz bunları alacak mı, denildiği gibi?

Çevirilere bakıldığında bir diğer örnekte olduğu gibi burada kaynak metinde yer alan **سجل** fiil kipinde gelmiş olan ifade “kayıt” şeklinde çevrilmiş, eş değerlik hem anlam hem yapı düzeyinde sağlanamamıştır. **سجل** ile başlayan beyitte ise **سجل** fiili yağmalamak, gasp etmek, zorla almak gibi anlamlara sahiptir. Yapay zekâ çevirisinde her ne kadar “aldınız” kelimesi kullanılsa da kaynak metindeki anlamı ve vurguyu tam olarak taşımamaktadır.

وأرض ألقنت فقلخ ه  
أنا وجهيغ أولادي

Beyitinde ise “çocuklarımla ekip biçtiğimiz toprağımız” anlamı mevcuttur ancak yapay zekâ çevirisinde “ekip biçtiğimiz toprağımız” kısmı yer almamaktadır.

فهل سبت أخذها  
حكوتك.. كم اقوى لا؟

Söz konusu bu beyitte ise yapay zekâ çevirisi insan çevirisine göre kaynak metne daha sadık bir çeviri yapmış ancak şiir söz konusu olduğunda amaç kaynak metne sadık kalmak mıdır? Kaynak okurun hissettiğinin hedef okurunda hissetmesi midir? Sorularına binaen insan çevirisinde kaynak metindeki anlamın ve vurgunun daha etkili verildiği görülmektedir. Yapay zekâ programının şiiri, şiir türünün özelliklerini bilerek değil düz yazı-şiir ayırt etmeksizin çevirdiği, verilen tüm örneklerde görülmektedir. Böylelikle denilebilir ki, insan çevirisinin yaptığı çeviriler yüzde yüz başarılı olmasa bile henüz insandan daha iyi bir şiir çevirisi yapacak bir yapay zekâ sistemi kurulamamıştır. Bu ilerde çevirmenlere

rakip olmayacağı anlamına gelmemekle birlikte, Arapçada ضرب kelimesi gibi farklı söylemlerle göre çok farklı anlamlar kazanabilen kelimeleri bu programların nasıl algılayacağı da merak konusudur. Zira söz konusu bu sözcük çeşitli sözlüklerde “bir şeyi bir şeye vurmak” anlamda olsa da yağmurun yağmasını ifade etmek الرضبالمطر şeklinde de kullanılabilir ve bu ifadenin vurmakla bir ilgisi yoktur. Ayrıca, para basmayı ifade etmek üzere ضرب الدرهم para darp etmek” şeklinde bir kelime vardır ki bu kelime Türkçeye “darphane” olarak geçmiştir. Ancak kelime Arapçada “dayak atılan yer manasını” taşımaya müsait olmakla beraber böyle bir anlamla hiç alakası yoktur. Arapça özelinde bu ve bunun gibi binlerce örnek verilebilecek olup, söz konusu bu programlar insan zekasının yerini alsa da özellikle edebi çevirilerde anlamın farklı katmanlarını nasıl ayırt edeceği bir belirsizlik olarak kalmaya devam etmektedir.

**ÖZET**

Bir elektrik güç sisteminde üretilen elektriğin frekansının değişen tüketime göre ayarlanması yük frekans regülasyonu (YFR) denilmektedir. YFR güç sistemi tasarımı ve operasyonunda oldukça önemlidir. Bu çalışmada iki bölgeli çok kaynaklı bir güç sisteminde YFR ele alınmıştır. İkincil denetleyici olarak bulanık PID denetleyici tercih edilmiş ve önerilmiştir. Denetleyicinin düzgün parametre ayarı için literatürde sıkça kullanılan simbiyotik organizmalar arama (SOA) algoritmasından faydalanılmıştır. Benzetimi gerçekleştirilen güç sistemi MATLAB/Simulink ortamında modellenmiş, SOA kodları ise MATLAB/M-file ortamında yazılmıştır. Elde edilen sonuçlar saygın dergilerde yayımlanan sonuçlarla karşılaştırılmıştır. Elde edilen verilere göre önerilen denetleyicinin frekans ve bağlantı hattı güç değişim eğrilerindeki osilasyon, oturma zamanı, maksimum pozitif aşım ve maksimum negatif aşım gibi zaman alanı performans kriterleri bakımından diğer yaklaşımlardan daha iyi performans sergilediği gözlenmiştir.

**Anahtar Kelimeler:** yük frekans regülasyonu, iki bölgeli çok kaynaklı güç sistemi, bulanık PID denetleyici, simbiyotik organizmalar arama algoritması, optimizasyon

**ABSTRACT**

In an electric power system, adjusting frequency of the electricity generated with respect to the changing consumption is named load frequency regulation (LFR). LFR is quite significant in power system design and operation. In the present research, LFR in a two-area multi-source power system is considered. As secondary controller, fuzzy PID controller is preferred and proposed. For proper parameter adjustment, widely-used symbiotic organisms search (SOS) algorithm is benefitted. The simulated power system is modelled in MATLAB/Simulink platform and the SOS codes are written in MATLAB/M-file script. The obtained results are contrasted again the results published in prestigious journals. According to the obtained findings, it is observed that the proposed controller yields better performance than other approaches from the viewpoints of time domain performance criteria such as oscillations, settling time, maximum overshoot and maximum undershoot in the frequency and tie-line power deviations.

**Keywords:** load frequency regulation, two-area multi-source power system, fuzzy PID controller, symbiotic organisms search algorithm, optimization

### GİRİŞ

Güç sistemlerini optimum çalışma durumunda tutmak için sistemlerin kontrol edilmesi gerekmektedir. Bütün elektrik enerjisi üretim merkezleri birbirine ve sisteme senkronize şekilde bağlı olduğu için her bir sistem aynı frekansa sahiptir. Bundan dolayı güç sistemlerinin verimli ve kararlı çalışabilmesi için frekans sabit kalmalıdır. Güç sistemlerinin sabit frekansta çalışabilmesi güç dengesi ile mümkündür [1]. Güç dengesinde üretilen aktif güç toplamı, sistemdeki kayıp ve iletim hatları üzerinden geçen güç toplamına eşit olmalıdır. Frekansı etkileyen en önemli parametrelerden biri aktif güçtür. Kastedilen güç dengesi, aslında aktif güç dengesini sağlayarak olacaktır. Üretilen enerji fazla ise frekans değeri artacaktır. Tüketilen enerji fazla ise bu kez frekans değeri azalacaktır. Tüketilen enerjinin karmaşık ve sürekli değiştiği günümüz dünyasında üretilen ve tüketilen güç arasındaki dengeyi sağlayabilmek için etkin ve hızlı cevap üretebilecek bir denetime ihtiyaç vardır.

İki veya daha fazla bölgenin birbirlerine bağlı/enterkonnekte güç sistemlerinde sistem frekansında meydana gelen değişimlerin kontrol edilmesi ve iletim hatlarındaki yüklenmelerin belirlenen değerler içinde kalacak şekilde generatörlerin aktif güç çıkışlarının ayarlanması yük frekans regülasyonu (YFR) olarak adlandırılır [2]. Bu manada YFR'nin görevi sistemde yük talebinin değişmesi durumunda veya meydana gelen herhangi bir bozucu etki anında veya parametre belirsizliklerinde sistem frekansını önceden belirlenmiş nominal seviyede tutmak ve farklı enerji üretim tesisleri arasındaki güç akışını kontrol etmektir [3]. Bu sayede üretilen gücün kalitesi artarak güç sisteminin güvenliği, güvenilirliği ve kararlılığı iyileştirilmiş olacaktır.

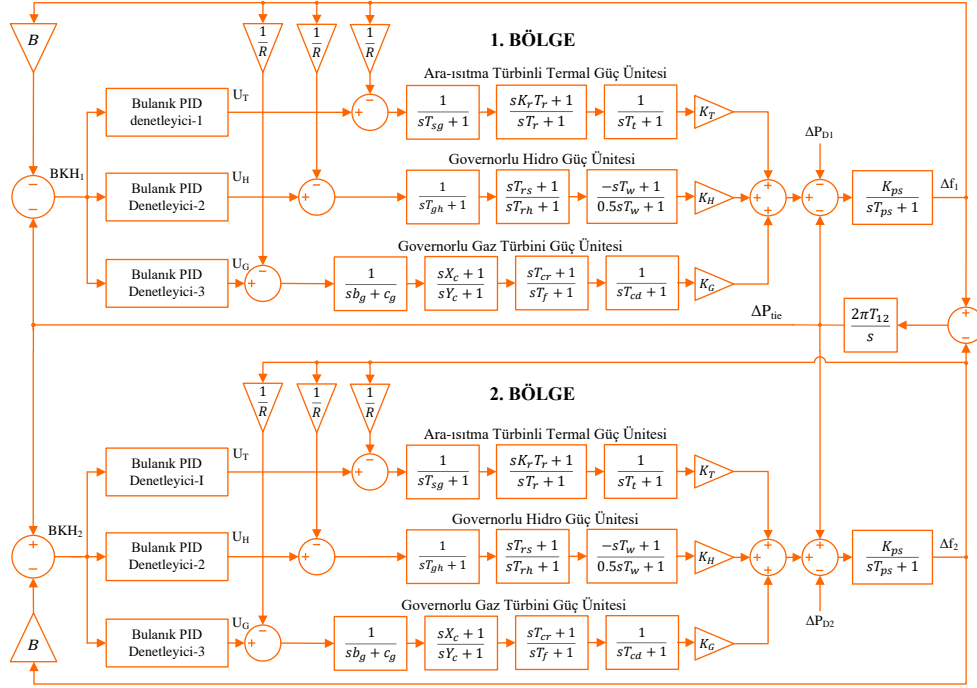

Literatürde YFR ile ilgili çok çeşitli çalışmalar bulunmaktadır. Bu çalışmalarda denetleyici parametrelerinin optimizasyonu sürecinde aday çözümlerin uygunluğunu/kalitesini değerlendirmek için genelde dört amaç fonksiyonunun kullanıldığı göze çarpmaktadır. Bunlar; zaman ağırlıklı mutlak hatanın integrali (Integral Time-Weighted Absolute Error (ITAE)), hata karelerinin integrali (Integral Squared Error (ISE)), zaman ağırlıklı hata karelerinin integrali (Integral Time-Weighted Squared Error (ITSE)) ve mutlak hatanın integrali (Integral Absolute Error (IAE)) olarak sayılabilir. Bu hedef fonksiyonları içerisinde ITAE'nin minimizasyonu sistem cevabında yerleşme zamanı ve aşım bakımından iyileşme sağlamaktadır [4].

Bazı çalışmalarda ITAE amaç fonksiyonu kullanılarak bakteriyel besin arama algoritması (BBAA) [5], hibrit bakteriyel besin arama algoritması-parçacık sürü optimizasyonu (hBBAA-PSO) [6] ve diferansiyel gelişim algoritması (DGA) [7] ile klasik PI denetleyici parametreleri elde edilmiştir. Hibrit stokastik fraktal arama algoritması-desen arama tekniği (hSFAA-DA) [8] ve DGA [9, 10] ile ITAE amaç fonksiyonu kullanılarak PID denetleyici parametreleri elde edilmiştir. Bir başka etkili çalışmada geliştirilmiş stokastik fraktal arama algoritması PID denetleyici parametrelerinin en uygun değerlerinin bulunmasında kullanılmıştır [11]. Bu çalışmada ITAE amaç fonksiyonundan farklı olarak daha makul yeni bir amaç fonksiyonu önerilmiştir. [12] ve [13] numaralı çalışmalarda öğretme-öğrenmeye dayalı optimizasyon algoritması (ÖÖOA) ile ITAE amaç fonksiyonu yardımıyla PID ve iki serbestlik dereceli PID (2SD PID) denetleyici parametreleri elde edilmiştir. [14]'de hibrit parçacık sürü optimizasyonu-desen arama (hPSO-DA) tekniği ile ITAE amaç fonksiyonu kullanılarak bulanık PI denetleyici parametreleri elde edilmiştir. Bir başka çalışmada çığırnlığa dayalı parçacık sürüsü optimizasyonu (CRAZY-PSO) ile ISE ve ITSE amaç fonksiyonları yardımıyla PI denetleyici parametreleri elde edilmiştir [15]. [16]'da ise geliştirilmiş gri kurt optimizasyon (GGKO) algoritması kullanılarak ITAE amaç fonksiyonu ile PI, PID ve eklemeli PI-PD denetleyici parametrelerinin en uygun değerleri bulunmuştur.

Bu çalışmada iki bölgeli çok kaynaklı bir güç sistemi düşünülmüş ve bu sistemin YFR performansını iyileştirmek için bulanık PID denetleyici tasarlanmış ve önerilmiştir. Denetleyici parametrelerinin optimizasyonu için güçlü yapısı ile bilinen simbiyotik organizmalar arama (SOA) algoritması tercih edilmiştir. Benzetimi gerçekleştirilen güç sistemi MATLAB/Simulink ortamında modellenmiş, algoritma ise MATLAB/M-file ortamında kodlanmıştır. Önerilen yaklaşımın performansını test etmek için elde edilen sonuçlar literatürde yayımlanan sonuçlarla karşılaştırılmıştır. Karşılaştırma sonuçlarında frekans ve bağlantı hattı güç değişim eğrilerindeki salınım, oturma zamanı, maksimum negatif aşım ve maksimum pozitif aşım gibi zaman alanı performans göstergeleri analiz edilmiştir.

İKİ BÖLGELİ ÇOK KAYNAKLI GÜÇ SİSTEMİNİN TRANSFER FONKSİYONU MODELİ

Bu bölümde iki bölgeyi çok kaynaklı güç sisteminin benzetim çalışmalarında kullanılan dinamik modeli verilmiştir. Şekil 1’te bu modelin YFR tasarımı ve analizi için yaygın olarak kullanılan transfer fonksiyonu modeli görülmektedir. Bu sistem iki ayrı çok kaynaklı bölgenin birbirlerine AA bağlantı hattı ile bağlanmasıyla oluşturulur. Her bölge termik ünite, hidro ünite ve gaz ünitesi olmak üzere üç farklı üniteye sahiptir. Sistemdeki her kontrol bölgesinin 5 girişi 2 çıkışı bulunmaktadır. Örneğin; 1. bölgenin girişleri denetleyici çıkışları  $U_T$ ,  $U_H$  ve  $U_G$ , yük değişimi  $\Delta P_{D1}$  ve iki bölge arasındaki bağlantı hattı güç değişimi  $\Delta P_{tie}$ ’dir. Çıkışlar ise frekans değişimi  $\Delta f_1$  ve bölge kontrol hatasıdır (BKH<sub>1</sub>).

Şekil 1. İki alanlı çok kaynaklı güç sistemi modeli

BKH şu şekilde hesaplanır;

$$\begin{aligned} BKH_1 &= -B\Delta f_1 - \Delta P_{tie} \\ BKH_2 &= -B\Delta f_2 + \Delta P_{tie} \end{aligned} \quad (1)$$

Her ünitenin üretilen güce katkı miktarı  $K_T$ ,  $K_H$  ve  $K_G$  sabitleriyle belirlenmektedir.  $B$  frekans yönelim faktörüdür. Termik ünite için sistem parametreleri şu şekildedir:  $R$  hız regülatör sabiti,  $K_T$  ünitenin katılım faktörü,  $T_{sg}$  hız regülatörü süresi,  $K_r$  ara-ısıtma kazancı,  $T_r$  ara-ısıtma zaman sabiti ve  $T_t$  buhar türbini zaman sabitidir. Hidro ünite için sistem parametreleri şu şekildedir:  $K_H$  ünitenin katılım faktörü,  $T_{gh}$  hidro-türbin hız regülatörünün ana servo zaman sabiti,  $T_{rs}$  hidro türbin hız regülatörünün sıfırlama süresi,  $T_{rh}$  geçici düşüş zaman sabiti ve  $T_w$  cebri borudaki suyun nominal başlangıç zamanıdır. Gaz ünitesi için sistem parametreleri şu şekildedir:  $K_G$  ünitenin katılım faktörü,  $c_g$  gaz türbini valfi konumlandırıcısı,  $b_g$  valf konumlandırıcısının gaz türbini sabiti,  $X_c$  ve  $Y_c$  sırasıyla gaz türbini hız regülatörünün sağlama ve gecikme süresi sabiti,  $T_{cr}$  gaz türbininin yanma reaksiyonu zaman gecikmesi,  $T_f$  yakıt zaman sabiti ve  $T_{cd}$  kompresör deşarj hacmi zaman sabitidir. Benzetim çalışmalarında kullanılan parametre değerleri şu şekilde ayarlanmıştır:  $f = 60$  Hz,  $B = 0.4312$  p.u MW/Hz,  $R = 2.4$  Hz/p.u,  $T_{sg} = 0.08$  s,  $K_r = 0.3$ ,  $T_r = 10$  s,  $T_t = 0.3$  s,  $T_{gh} = 0.2$  s,  $T_{rs} = 5$  s,  $T_{rh} = 28.75$  s,  $T_w = 1$  s,  $b_g = 0.05$  s,  $c_g = 1$ ,  $X_c = 0.6$  s,  $Y_c = 1$  s,  $T_{cr} = 0.01$  s,  $T_f = 0.23$  s,  $T_{cd} = 0.2$  s,  $K_T = 0.543478$  p.u,  $K_H = 0.326084$  p.u,  $K_G = 0.130438$  p.u,  $K_{ps} = 68.9566$  Hz/p.u,  $T_{ps} = 11.49$  s,  $T_{12} = 0.0433$  p.u MW/rad.

SİMBİYOTİK ORGANİZMALAR ARAMA ALGORİTHMASI

Simbiyotik organizmalar arama (SOA) algoritması Cheng ve Prayoga tarafından geliştirilen yeni, etkili ve güçlü yapıya sahip metasezgisel bir optimizasyon tekniğidir [17]. Popülasyon tabanlı, doğadan ilham

alan SOA'da çözüm kümesi ekosistem olarak adlandırılır ve ekosistemdeki her bir çözüme organizma adı verilir. Ekosistemdeki iki organizma arasındaki biyolojik etkileşim taklit edilerek yeni çözümler üretilir. Bir organizmanın ekosistemde hayatta kalabilmek için diğer organizmalarla kurduğu simbiyotik ilişkiler sırayla ortak yaşam (mutualism), fayda (commensalism) ve asalaklık (parasitism) olarak verilmektedir [17-19].

Ortak yaşam fazı; karşılıklı yarar sağlanan iki farklı organizmanın simbiyotik ilişkisini gösterir. Bu fazın çalışma mantığı Eş. 2 ve Eş. 3'de verilmiştir.  $X_i$ , ekosistemdeki organizma,  $X_j$  ise  $X_i$  ile etkileşime girecek ekosistemden rastgele seçilen bir başka organizmadır.  $BF_1$  ve  $BF_2$  fayda faktörleri,  $X_{best}$  ise ekosistemde adaptasyon derecesi en yüksek olan en iyi bireydir.

$$X_{i\text{new}} = X_i + \text{rand}(0,1) \times (X_{best} - \text{Mutual\_Vector} \cdot BF_1) \quad (2)$$

$$X_{j\text{new}} = X_j + \text{rand}(0,1) \times (X_{best} - \text{Mutual\_Vector} \cdot BF_2) \quad (3)$$

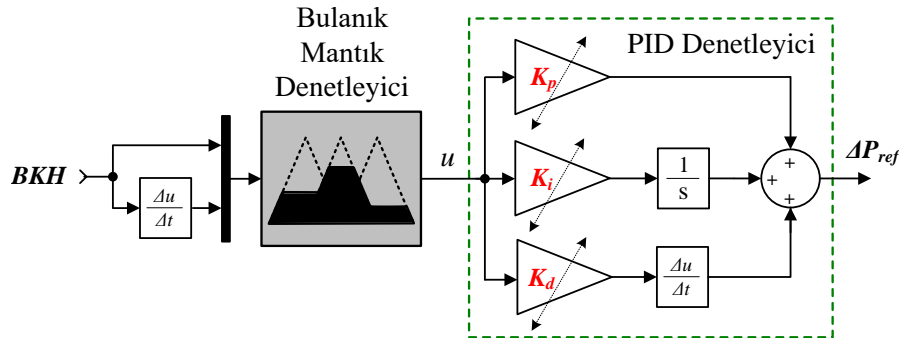

Fayda fazı; iki farklı organizmadan birinin yarar sağladığı, diğerinin ise etkilenmediği simbiyotik ilişkiyi gösterir. Bu fazın çalışması Eş. 4 ile tanımlanmıştır.

$$X_{i\text{new}} = X_i + \text{rand}(-1,1) \times (X_{best} - X_j) \quad (4)$$

Son olarak asalaklık fazı organizmalardan birinin yarar diğerinin zarar gördüğü simbiyotik ilişkidir. [17] no'lu kaynaktaki blok diyagramı kullanılarak SOA algoritması MATLAB/M-file ortamında kodlanmıştır.

### ÖNERİLEN DENETLEYİCİ YAPISI VE OPTİMİZASYONU

Önerilen denetleyici yapısı Şekil 2'de görülmektedir. Burada bulanık mantık denetleyici ile PID denetim organının art arda, eklemeli şekilde bağlandığı görülmektedir. BKH sinyali tasarlanan denetleyici ile işlendikten sonra güç sistemi için gerekli referans sinyal  $\Delta P_{ref}$  üretilmektedir. Bulanık mantık denetleyicinin girişlerinde herhangi bir kazanç kullanılmamıştır. PID denetleyicinin oransal  $K_p$ , integral  $K_i$  ve türev  $K_d$  parametreleri denetleyicinin çıkışında kazanç olarak görev yapmaktadırlar. Bulanık PID denetleyiciden maksimum performansı elde edebilmek için  $K_p$ ,  $K_i$  ve  $K_d$  parametrelerinin en iyi şekilde ayarlanması gerekir. Bu çalışmada bu parametreler deneme-yanılma yoluyla değil, SSA ile optimal şekilde ayarlanmaya çalışılmıştır.

Şekil 2. Eklemeli bulanık PI denetleyicinin yapısı

Bulanık mantık denetleyicinin 2 girişi ve 1 çıkışı için 7 adet üyelik fonksiyonu tanımlanmıştır. Üyelik işlevlerinde kullanılan dilsel etiketler şu şekilde tanımlanır; NB: negatif büyük, NO: negatif orta, NK: negatif küçük, S: sıfır, PK: pozitif küçük, PO: pozitif orta and PB: pozitif büyük. Tüm üyelik fonksiyonları üçgen formundadır ve Şekil 3'te görüldüğü gibi  $[-1,1]$ 'da tanımlanmışlardır.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Şekil 3. Tanımlanan üçgen üyelik işlevleri

Girişler için 7 üyelik fonksiyonu olduğundan tanımlanması gereken bulanık kural sayısı  $7 \times 7 = 49$ 'dur. Kurallar uzman bilgisi ve benzetim çalışmalarında elde edilen sonuçlara göre Tablo 1'deki gibi tanımlanmışlardır.

Tablo 1. Bulanık mantık denetleyicide kullanılan kural tablosu

		BKH türevi						
		N B	N O	N K	S	PK	PO	PB
B K H	N B	N B	N B	N B	N O	N O	N K	S
	N O	N B	N O	N O	N O	N K	S	PK
	N K	N B	N O	N K	N K	S	PK	PO
	S	N O	N O	N K	S	PK	PO	PO
	PK	N O	N K	S	PK	PK	PO	PB
	PO	N K	S	PK	PO	PO	PO	PB
	PB	S	PK	PO	PO	PB	PB	PB

Giriş kısmında belirtilen amaç fonksiyonlarının matematiksel ifadeleri sırasıyla Eş. 5, Eş. 6, Eş. 7 ve Eş. 8'de verilmiştir. Bu eşitliklerde;  $t$  zamanı,  $T$  benzetim süresini,  $\Delta f_1$  ve  $\Delta f_2$  bölgelerdeki frekans değişimlerini ve  $\Delta P_{tie}$  iki bölgeyi birbirine bağlayan iletim hattındaki güç değişimini göstermektedir. YFR çalışmalarında ITAE'nin diğer integral tabanlı hata kriterlerine göre daha iyi sonuçlar ürettiği görülmüştür [20, 21].

$$IAE = \int_0^T (|\Delta f_1| + |\Delta f_2| + |\Delta P_{tie}|). dt \quad (5)$$

$$ISE = \int_0^T [(\Delta f_1)^2 + (\Delta f_2)^2 + (\Delta P_{tie})^2]. dt \quad (6)$$

$$ITSE = \int_0^T [(\Delta f_1)^2 + (\Delta f_2)^2 + (\Delta P_{tie})^2]. t. dt \quad (7)$$

$$ITAE = \int_0^T (|\Delta f_1| + |\Delta f_2| + |\Delta P_{tie}|). t. dt \quad (8)$$

Yürütülen algoritmada ITAE değerinin minimizasyonu ile salınım/sapma miktarı küçük, 0 p.u referans değere en küçük oturma zamanı ile çabucak yerleşen cevap eğrilerinin elde edilmesi amaçlanmıştır. Sonuç olarak bulanık PID denetleyici tasarım problemi kısıtlı optimizasyon problemi olarak düşünülerek edilerek çözülmeye çalışılmıştır. Optimizasyon problemindeki kısıtlar denetleyici parametrelerinin alt ve üst sınırlarıdır. Optimizasyon problemi basitçe Eş. 9'daki gibi tanımlanabilir.

Aşağıdaki eşitsizlik kısıtlarını dikkate alarak ITAE değerini minimum yap

Eşitsizlik kısıtları:

$$\left. \begin{array}{l} K_p^{min} \leq K_p^* \leq K_p^{max} \\ K_i^{min} \leq K_i^* \leq K_i^{max} \\ K_d^{min} \leq K_d^* \leq K_d^{max} \end{array} \right\} \quad (9)$$

Eş. 9'da *min* ve *max* üst indisleri denetleyici parametrelerinin sırasıyla alt ve üst sınırlarını göstermektedirler. Bu çalışmada sınırlar -3 ve 3 olarak ayarlanmıştır. Optimizasyon sonrasında minimum ITAE değeri için elde edilen  $K_p^*$ ,  $K_i^*$  ve  $K_d^*$  değerleri benzetim çalışmalarında kullanılmışlardır.

### BENZETİM SONUÇLARI VE TARTIŞMA

Transfer fonksiyonu Şekil 1'de gösterilen sistemde iki bölge benzer olduğu için bu bölgelerde kullanılan denetleyiciler de benzer kabul edilmişlerdir. Bu manada toplam 6 parametrenin belli koşullar altında en iyi değerlerinin bulunması gerekir. 1. Bölgedeki basamak yük değişiminin %2 ( $\Delta P_{D1}=0.02$  puMW), diğer bölgedeki yük değişiminin sıfır olduğu ( $\Delta P_{D2}=0$  puMW) kabul edilerek SAA ile elde edilen denetleyici parametreleri Tablo 2'de verilmiştir. Bu parametreler kullanılarak elde edilen  $\Delta f_1$ ,  $\Delta f_2$  ve  $\Delta P_{tie}$  sinyallerinin oturma zamanı (ST), maksimum negatif aşım (US), maksimum pozitif aşım (OS) ve ITAE değerleri de bu tabloda gösterilmiştir. Oturma zamanı için  $\pm 0.0004$  tolerans bant kullanılmıştır. Karşılaştırmalı en iyi değerler kalın fontla vurgulanmıştır. Aynı zamanda elde edilen sonuçların literatüre katkısını göstermek için çeşitli çalışmalarla benzer şartlarla karşılaştırmalar yapılmıştır. Bu çalışmalar diferansiyel gelişim algoritması (DGA) [9]/geliştirilmiş gri kurt optimizasyonu (GGKO) algoritması [16]/hibrit stokastik fraktal arama algoritması-desen arama (hSFA-DA) tekniği [8] ile ayarlanan PID denetleyici ve yusufçuk arama algoritması (YAA) ile ayarlanan kesirli dereceli PID (KDPID) denetleyicidir [20].

Tablo 2'de verilen ITAE değerleri incelendiğinde SOA algoritması ile ayarlanan bulanık PID denetleyicinin diğer yaklaşımlara nazaran daha düşük ITAE değeri sunduğu görülür (ITAE=0.1416). Bu sonuç cevap eğrilerinin iyileştiği anlamına gelir. Nitekim önerilen yaklaşım ile elde edilen ST/US/OS gibi zaman alanı karakteristik değerlerinin literatürde bulunan diğer sonuçlardan daha iyi olduğu görülmüştür (ST:  $\Delta f_1=8.46$ ,  $\Delta f_2=5.05$ ,  $\Delta P_{tie}=4.93$ ; US:  $\Delta f_1=0.0155$ ,  $\Delta f_2=0.0081$ ,  $\Delta P_{tie}=0.0027$ ; OS:  $\Delta f_1=7.65E-04$ ,  $\Delta f_2=3.15E-04$ ). Öte yandan YAA tabanlı KDPID denetleyici,  $\Delta P_{tie}$  cevap eğrisi için daha düşük OS değeri sunmuştur. Son olarak, GGKO tabanlı PID denetleyici tepkilerinin yavaş olduğu, 0 p.u değeri aşmadan referans değere oturduğu gözlemlenmiştir. Bundan dolayı OS değerleri ölçülemediğinden Tablo 2'de n/a olarak işaretlenmiştir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Tablo 2. Denetleyici parametreleri ve cevap eğrilerinin ST/US/OS/ITAE değerleri

Tablo 2’de sunulan denetleyici parametreleri kullanılarak benzetim çalışmaları gerçekleştirilmiş ve elde edilen  $\Delta f_1$ ,  $\Delta f_2$  ve  $\Delta P_{tie}$  tepkileri [0, 30]s için Şekil 4’de verilmiştir. Şekilden açıkça anlaşılacağı üzere 1. Bölge’deki 0.02 puMW’lık yük değişimiyle frekans ve bağlantı hattı güç değişim eğrileri önce düşmüş, akabinde toparlanarak referans değere oturmuşlardır. Başka bir deyişle; artan yük miktarına karşı önce frekans düşmüş, sonrasında enerji üretim tesisleri çıkışlarındaki güç miktarlarını artırarak frekans değerini nominal değere geri getirmişlerdir. Önerilen denetleyici ile elde edilen tepkiler incelendiğinde diğerlerine göre daha hızlı toparlandıkları, önemsiz bir aşım ile referans 0 p.u değere çabucak yerleştikleri görülmüştür.

Şekil 4. Birinci bölge’de 0.02 puMW’lık basamak yük değişimi sonrası elde edilen cevap eğrilerinin karşılaştırılması (a)  $\Delta f_1$  (b)  $\Delta f_2$  (c)  $\Delta P_{tie}$

## SONUÇLAR

Çalışmada YFR sistemi için ikincil denetleyici olarak bulanık PID denetleyici tasarlanmış ve denetleyici parametreleri insan yardımı olmadan SOA yöntemi ile elde edilmiştir. Ortaya konulan yöntemin performansı iki bölgeli çok kaynaklı güç sistemi üzerinde test edilmiştir. Elde edilen benzetim sonuçları literatürde bulunan sonuçlarla benzer şartlarda karşılaştırılmıştır. Karşılaştırma sonuçlarına göre önerilen yaklaşımın diğer yöntemlere kıyasla sistem tepkilerinden hesaplanan ST/US/OS/ITAE gibi zaman alanı performans göstergeleri açısından daha iyi sonuçlar sunduğu görülmüştür. Önerilen yaklaşımla elde edilen eğriler hızlı toparlanarak arzu edilen kararlı durum değerine çabucak oturmaktadırlar.

**ÖZET**

Bu çalışmanın amacı, MinK geni S38G ve ACE geni polimorfizmlerinin SİRFA (Serum İrrigasyonlu Radyofrekans Ablasyon) cerrahisinin başarısındaki rolü araştırmaktır. Kliniğimizde 2003 – 2008 tarihleri arasında kapak hastalığı beraberinde AF tanısı ve kapak cerrahisi beraberinde SİRFA uygulanan hastaların 64’ü kadın, 26’sı erkek olmak üzere toplam 90 hasta çalışmaya alındı. SİRFA cerrahisi sonrasında sinüs ritminde olan 30 hasta (grup I), AF devam eden 30 hasta (grup II), preoperatif kapak hastalığı olup sinüs ritminde olan 30 hasta kontrol grubu (grup III) olarak sınıflandırıldı. Genetik laboratuvarında MinK geni S38G ve ACE geni polimorfizm analizlerinin standardizasyonu yapıldı. MinK 38G allelinde yapılan çalışmalar sonucunda GG genotipine sahip hastalarda SİRFA başarısının daha düşük olduğu saptandı ( $p<0.03$ ). ACE geni ile I/D genotipine sahip hastalarda SİRFA başarısının daha az olduğu ancak istatistiksel olarak anlamlı olmadığı görüldü ( $p<0.38$ ). Sol atriyal trombusun AF grubunda daha fazla görüldüğü ve bu durumun SİRFA başarısını azalttığı saptandı ( $p<0.01$ ). AF ile ilişkisi olduğu bilinen ACE geni I/D genotipi ve MinK geni GG genotipine sahip kişilerde SİRFA başarısı azalmakla birlikte, MinK geni GG genotipine sahip kişilerde istatistiksel olarak anlamlı şekilde SİRFA başarısının azaldığını saptadık. SİRFA cerrahisi başarısını azaltan faktörler içinde genetik faktörlerin değerlendirilmesi gerektiğini düşünmekteyiz.

**Anahtar Kelimeler:** SİRFA, MinK S38G, ACE

**ABSTRACT**

In this study our aim is to research the role of MinK S38G gene and ACE gene polymorphisms in the success of Radiofrequency Ablation with Serum Irrigation (RFASI) surgery. Between 2003-2008 patients with valve disease along with AF and applied RFASI to patients who underwent to valve surgery along with AF was studied. 64 of patients were female, 26 of patients were male. Totaly 90 patients has been researched in our clinic. After RFASI surgery, 30 patients with sinus rhythm were classified as group I, 30 patients with continued AF were classified as group II and 30 patients with preoperative valve disease in sinus rhythm were classified as control group III. For the DNA analysis, MinK S38G gene and ACE gene polymorphism analysis standardization were performed at genetic laboratory. The mean age was  $48.74 \pm 10.07$  years respectively. As a result of the studies done on the MinK S38G allele, in patients with GG genotype RFASI success was lower ( $p<0.03$ ). With ACE gene, in patients with I / D genotype, RFASI success was lower but not statistically significant. ( $p<0.38$ ). Left atrial thrombuses were more in AF group and this situation is revealed on the low success of RFASI ( $p<0.01$ ). In people with the ACE gene I / D genotype and minK gene GG genotype known to be associated with AF, RFASI success is reduced, but in individuals with MinK gene GG genotype RFASI success was reduced statistically significant. We considered that the factors in reducing SİRFA surgery success, genetic factors should be evaluated.

**Keywords:** Radiofrequency Ablation with Serum Irrigation, MinK S38G, ACE

## **GİRİŞ**

Atrial fibrilasyon (AF) günümüzde en sık rastlanan uzun süreli bir aritmidir. Mortalite ve morbiditeyi önemli ölçüde artırmaktadır. AF'ye yönelik değişik enerji kaynaklar: krioablasyon, mikrodalga, elektrokoterizasyon, ultrason, lazer ve radyofrekans ablasyon gibi tedavi yöntemleri geliştirilmiştir (Ravn et al. 2008; Kazaz et al. 2006). Bu kaynaklar arasında uygulama kolaylığı ve geniş bilgi birikimi nedeniyle en sık kullanılan kaynak radyofrekans ablasyondur. SİRFA (Serum İrrigasyonlu Radyofrekans Ablasyon) cerrahisi AF bulunan hastalarda sinüs ritmini sağlamak amacıyla kullanılmaktadır. Ancak, SİRFA cerrahisi uygulanmasına rağmen bazı hastalarda sinüs ritmi görülmemektedir (Kazaz et al. 2006; Duran et al. 2003). Çalışmalarda AF ile genetik değişiklikler arasındaki ilişki ortaya konulmuştur. Bu çalışmada; SİRFA cerrahisi uygulanan AF'li hastalarda, SİRFA cerrahisinin başarısına Min K geni ve ACE geni polimorfizmlerin etkisi araştırılmıştır.

## **YÖNTEM**

Kliniğimizde 2003 – 2008 tarihleri arasında kapak hastalığı beraberinde AF tanısı ve kapak cerrahisi beraberinde SİRFA uygulanan hastaların 64'ü kadın, 26'sı erkek olmak üzere toplam 90 hasta çalışmaya alındı. Çalışmaya dahil edilen hastaların ekokardiografi ile preoperatif sol atrium çapları ve sol atriyal trombus varlığı, pulmoner arter basıncı (PAB), EKG ile hastaların preoperatif ve postoperatif ritimleri, preoperatif ve postoperatif ilaç kullanımı, pompa ve kros klemp süreleri, yapılan operasyonlar ve eşlik eden hastalıkları incelenmiştir.

Preoperatif dönemde AF ritminde olup, SİRFA cerrahisi sonrasında sinüs ritmine dönen 30 hasta grup I (sinüs grubu), AF devam eden 30 hasta grup II (AF grubu), preoperatif ve postoperatif sinüs ritminde olan 30 hasta grup II (kontrol grubu) olarak incelendi. 65 yaş üstünde olan, sol atrium çapının preoperatif ve postoperatif dönemde 6 cm'den geniş olan hastalar ve koroner arter hastalığı olan hastalar çalışma dışı bırakılmıştır.

### **Cerrahi Teknik**

Tüm hastalar median sternotomiye takiben, bikaval kanulasyon sonrası kros klemp konularak interatriyal sulkusun posteriorundan sol atriometri uygulanarak sol atrioma direkt giriş sağlandı. Mitral kapak yapısına göre replasmanlarda posterior ve/veya anterior leaflet koruma, korda transferi, kordal kısaltma gibi, mitral tamirlerde quadrangular trinagular rezeksiyon, Alfieri plasti ve ring-band anuloplasti gibi kapak kuruyucu yöntemler uygulandı. Ek cerrahi girişim olarak aort kapak replasmanı, triküspid yetmezliğinde kapak yapısına göre anuloplasti yöntemlerinden biri uygulandı. AF nedeni ile endokardiyal ablasyon uygulamak için serum irrigasyonlu Cardioblate Surgical Ablasyon Pen kullanıldı. Isı 75-80 °C olacak şekilde ortalama 10-15 saniye süreyle 25-30 Watt radyofrekans enerjisi kullanıldı. Sol atriumda trombusu bulunan vakalarda trombektomi uygulandı. İlk önce sol pulmoner venler yarım ay şeklinde yakılarak her iki uçtan sol atriometri insizyonu ile birleşecek şekilde izole edildi. Sonrasında sol pulmoner venler elips şeklinde yakılarak izole edildi. İzole edilen iki adacık düz bir hatla birleştirildi. Sol atrium apendiksine ve mitral kapak posterior anulüsüne sol pulmoner adacığından düz bir hatla yakılarak ablasyon sonlandırıldı. Sonrasında apendiksine internal ligasyon uygulandı. Ablasyondan önce kapak dikişleri termal hasar görebileceği için işlem tamamlandıktan sonra mitral kapak cerrahi prosedürüne ve ek cerrahi girişimlere geçildi. Bu çalışmada uygun DNA analiz yöntemleri ACE ve MinK gen çoğaltma analizleri yapıldı, elektroforez, agaroz jel elektroforezi, SSCP (Single strand confirmation polymorphism) yöntemleri kullanılmıştır.

### **İstatistiksel Analiz**

Verilerin istatistiksel analizinde SPSS 16.0 programı kullanıldı. Kategorik ölçümler sayı ve yüzde olarak, sürekli ölçümle ortalama ve standart sapma olarak özetlendi. Kategorik ölçümlerin gruplar arası karşılaştırılmasında Ki Kare test istatistiği kullanıldı. 2 grubun sürekli ölçümlerinin genel karşılaştırılmasında varsayımların sağlanması durumunda Student T testi, 3 grubun sürekli ölçümlerinin genel karşılaştırılmasında Tek Yönlü Varyans Analizi (One Way Anova) kullanıldı. Varyasyon homojenliği Levene testi ile ölçüldü. Tüm testlerde istatistiksel anlamlılık düzeyi 0.005 olarak alındı.

## BULGULAR

Çalışmaya 64 kadın (%71), 26 erkek (%29) olmak üzere 90 hasta alındı. Hastaların yaş ortalaması 48.74±10.07 idi. Her grup kendi içinde Yaş ortalaması, cinsiyet, ek hastalıkları demografik olarak incelenmiştir. Preoperatif antiaritmik ilaç kullanımı diğer gruplarla kıyaslandığında anlamlı olarak daha az bulundu ( $p<0.05$ ) (Tablo 1).

**Tablo 1.** Grupların demografik özelliklerinin karşılaştırılması

	Sinüs (n:30)	AF (n:30)	Kontrol (n:30)	P
Yaş	50.41±10.72	47.21±9.39	48.63±11.51	0.5
Cinsiyet				
Kadın	21 (%70.0)	19(%63.3)	24 (%80.0)	
Erkek	9 (%30.0)	11 (%36.7)	6 (%20.0)	0.35
DM	10 (%33.3)	11 (%36.7)	10 (%33.3)	0.95
HT	9 (%30.0)	10 (%33.3)	7 (%23.3)	0.68
KOAH	3 (%10.0)	3 (%10.0)	1 (%3.3)	0.53
KBY	-	1 (%3.3)	1 (%3.3)	0.99
Sigara	10 (%33.3)	9 (%30.0)	7 (%23.3)	0.68
Preoperatif Antiaritmik	18(%60.0)	24(%80.0)	9 (%30.0)	0.04

Tüm grup hastalar Trans Torasik Ekokardiografik olarak incelenmiştir. Gruplar arasında EF, sol atrium, çap ve trombüs karşılaştırılmasında EF ortalamaları ve sol atriyum çap ortalaması değerlendirildiğinde gruplar arasında istatistiksel olarak anlamlı bir farklılık belirlenmedi ( $p>0.05$ ). Sol atriyal trombüs oluşumunun AF grubunda daha fazla görülmesi istatistiksel olarak anlamlı bulundu ( $p<0.05$ ) (Tablo 2).

**Tablo 2.** Grupların preoperatif Transtorasik EKO bulgularının karşılaştırılması

	Sinüs (n:30)	AF (n:30)	Kontrol (n:30)	P
EF	50.76±4.63	49.76±5.88	49.96±4.95	0.73
LA çapı	46.40±5.18	47.80±5.71	44.00±4.97	0.06
LA trombüs	2 (%6.7)	13 (%43.3)	2 (%6.7)	*0.004
PAB	40.74±4.82	42.12±6.51	39.76±5.95	0.12

*İstatistiksel değerlendirmede, ANOVA testi (ortalama değer ± standart deviasyon) kullanıldı. \* ile işaretli olanlarda  $\chi^2$  testi kullanıldı.*

Çalışmaya katılan tüm hastalara mitral kapak replasmanı yapılmıştır. Yapılan ek cerrahi girişimler, cross-klomp süreleri ve pompa süreleri değerlendirilmiştir. Yapılan değerlendirmede, pompa süresi ortalaması en yüksek AF grubunda, en kısa kontrol grubunda belirlendi, gruplar arasındaki bu fark istatistiksel olarak anlamlı bulundu ( $p<0.05$ ). Yapılan tukey analizi AF ve sinüs grubu ile kontrol grubu arasındaki farkların anlamlı olduğu ( $p<0.05$ ), sinüs ve AF grupları arasındaki ilişkinin ise anlamlı olmadığı belirlendi ( $p>0.05$ ).

Kros klomp süresi en yüksek AF grubunda, en az kontrol grubunda olduğu istatistiksel olarak anlamlı buldu ( $p>0.05$ ). Yapılan ileri analizde AF grubu ve kontrol grubu ile sinüs grubu ve kontrol grubu arasındaki ilişki anlamlı buldu ( $p>0.05$ ).

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Gruplar arasında MinK genotipleri açısından yapılan çalışmada AF grubunda GG genotipine daha çok rastlanması istatistiksel olarak anlamlı bulundu ( $p<0.05$ ) (Tablo 4). ACE genotiplerin karşılaştırılmasında AF grubunda I/D gen polimorfizmine daha çok rastlanmasına rağmen yapılan istatistiksel çalışmada anlamlılık bulunmadı ( $p>0.05$ ) (Tablo5).

**Tablo 4.** MinK genotipleri açısından grupların karşılaştırılması

Sinüs	AF	Kontrol			P
		(n:30)	(n:30)	(n:30)	
GS		10(%33.3)	8(%26.7)	11(%36.6)	0.15
SS		11(%36.7)	4(%13.3)	7(%23.4)	0.09
GG		9 (%30.0)	18 (%60.0)	12(%40.0)	0.03

İstatistiksel değerlendirmede,  $\chi^2$  testi kullanıldı.

	Sinüs	AF	Kontrol	P
	(n:30)	(n:30)	(n:30)	
D/D	8 (%26.7)	7 (%23.3)	13 (%43.3)	0.09
I/I	6 (%20.0)	4 (%13.3)	5 (%16.7)	0.11
I/D	16 (%53.3)	19 (%63.3)	12 (%40.0)	0.38

**Tablo 5.** ACE genotipleri açısından grupların karşılaştırılması

İstatistiksel değerlendirmede,  $\chi^2$  testi kullanıldı.

Sinüs+AF grupları ile kontrol grubunun MinK genotiplerin karşılaştırılmasında Sinüs - AF grubu kontrol grubuyla karşılaştırıldığında Min K gen polimorfizmi açısından aralarındaki ilişki anlamlı bulunmadı ( $p>0.05$ ). ACE genotiplerinin karşılaştırılmasında Sinüs + AF grubu kontrol grubuyla karşılaştırıldığında; I/D genotipine sinüs+AF grubunda daha fazla rastlanması istatistiksel olarak anlamlı bulundu ( $p<0.05$ ).

Cinsiyete göre ACE genotiplerinin karşılaştırılmasında her iki cinsiyette de I/D genotipinin daha çok görüldüğü belirlendi ancak kadın ve erkekler arasında ACE genotipleri görülmesi açısından istatistiksel olarak anlamlı bir fark görülmedi ( $p>0.05$ ). MinK genotiplerinin karşılaştırılmasında her iki cinsiyet arasında Min K genotipleri görülmesi açısından istatistiksel olarak anlamlı bir fark görülmedi ( $p>0.05$ ).

## TARTIŞMA

Atriyal fibrilasyon, açık kalp cerrahisinde periopertif morbidite insidansını artıran ciddi bir risk faktörü olmaya devam etmektedir. Bu nedenle çeşitli tedavi yöntemleri denenmiştir. 1980 yılından itibaren çeşitli haritalanmalarla bu aritmiye cerrahi olarak bir tedavi seçeneği olarak bir tedavi yöntemine dönüşmüştür.

Zaman içerisinde Cox Maze ve SİRFA yöntemleri ile başarı oranları ciddi anlamda artmış, ancak bazı hastalarda AF'nin perziste etmesi engellenememiştir. Yapılan subseleler ve klinik çalışmalarda AF'nin patogenezi daha aydınlanmış, buna yönelik medikal tedaviler geliştirilmiş ve sol atrium 3 boyutlu olarak küçültme işlemleri AF tedavisinin başarısını artırmıştır.

Son zamanlarda yapılan genetik çalışmalarda ise bir takım genlerin AF'nin ortaya çıkışı, seyri ve tedaviye yanıtında etkinliği çalışılmıştır.

Ravn ve ark. (2008) tarafından yapılan çalışmada, anjiyotensinojen a-20c genotipinin tek başına veya ACE I/D genotipi ile birlikte atriyal fibrilasyon riskini artırdığı belirlenmiştir.

Ogimoto ve ark. 2002 yılında, hipertrofik kardiyomiyopatide RAS ve AF arasındaki ilişkiyi araştırmışlar; 138 hastada (26'sı AF, 112'si sinüs ritmi) ACE I/D gen polimorfizmine rastlamışlar, ACE genotipleri arasında I/D ve I/I'nın hipertrofi kardiyomiyopatili hastalarda AF gelişimi açısından risk faktörü olduğunu ve D/D genotipinin daha az önemli olduğunu belirlemişlerdir.

2004 yılında Tsai ve ark. (2004) tarafından yapılan genetik vaka-kontrol çalışmasında (250 AF, 250 kontrol), RAS genlerinin ailesel olmayan yapısal AF'de etkili oldukları belirlenmiştir. ACE gen I/D polimorfizmi, anjiyotensinojen genin T174M, M235T, G-6A, A-20C, G-152A ve G-217A polimorfizmleri ile anjiyotensin II tip I receptor geni A1166C polimorfizmi araştırılmış, haplotip analizinde anjiyotensinojen gen haplotip profili gruplar arasında önemli ölçüde farklı bulunmuş, AF grubunda M235T, G-6A ve G-217A allelleri, I/D polimorfizmi kontrol grubundan daha yüksek bulunmuş.

Bu çalışmanın kontrol grubunda D/D genotipine, sinüs+AF grubunda I/D genotipine daha çok rastlandı ve bu durum istatistiksel olarak anlamlı bulundu ( $p<0.05$ ). Yani preoperatif AF grubu ile kontrol grubu arasında ACE I/D genotipinin AF riskini artırdığını belirledik. Gruplar arası karşılaştırmada bu farklılığın SİRFA cerrahisinin azalttığı yönünde bulgular belirlendi ancak bu istatistiksel olarak anlamlı bulunmadı.

Gensini ve ark. (2003) yaptıkları çalışmada ise, 148 persistan atriyal fibrilasyonlu hasta ile 210 kişilik kontrol grubu karşılaştırılmış ve atriyal fibrilasyon riski ile ACE D/D genotipi arasında önemli bir ilişki bulunmuştur. Bu çalışmanın sonuçları bizim çalışmamızı desteklememektedir. Çalışmalar arasındaki farklılık seçilen popülasyonlar arasındaki farklılıklardan kaynaklanabileceği öne sürülmüştür.

Watanabe ve ark. (2009) yaptıkları çalışmada, lone AF grubunda kalp bloğu ve PR intervali ile ACE I/D gen polimorfizmi arasında pozitif ilişki belirlemişlerdir, D allelinin PR intervalinin uzamasıyla ilişkili olduğunu belirtmişlerdir. Tziakas ve ark. (2007) tarafından yapılan çalışmada; 158 hipertansiyon+AF'li, 174 hipertansiyon+sinüs ritimli hasta gruplarında 332 hastanın 74 (%22.3)'ünde I/I, 158 (%47.6)'inde I/D ve 100 (%30.1)'ünde D/D genotipine rastlanmıştır. Xiao ve ark. (2004) fareler üzerinde yaptığı çalışmada ise, kardiyak ACE artışının sol atriyumda büyümeyi tetikleyerek aritmiye yol açtığını belirtmişlerdir. Bizim çalışmamızda 90 hastanın 47 (%52.2)'sinde I/D, 28 (%31.1)'inde D/D ve 15 (%16.7)'inde I/I genotipine rastlandı. Literatürde I/D genotipinin fazla görülmesi bizim çalışmamızla benzerlik göstermektedir. Çalışmamızda I/D gen polimorfizminin kardiyak elektrofizyolojiyi etkileyerek AF riskini artırdığı preoperatif AF (Sinüs+ AF grubu) ve kontrol grubu karşılaştırıldığında istatistiksel olarak anlamlı ( $p<0.05$ ) bulunmasına rağmen ve SİRFA cerrahisinin başarısını istatistiksel olarak ( $p>0.05$ ) etkilemediği yönünde bulgular saptandı.

Lai ve ark. (2002) yaptıkları çalışmada, AF ve MinK geni (38G, 38S) arasındaki ilişkiyi araştırmışlardır (108 AF, 108 kontrol). Sonuçta minK 38G alleli ile AF arasında ilişki olduğu belirlenmiştir.

Prystupa ve ark. (2006) yaptığı çalışmada, MinK gen G38S polimorfizmi görülmesi açısından 69 lone AF'li hasta, 60 kişilik kontrol grubuyla karşılaştırıldı. MinK G allele AF grubunda önemli ölçüde sık rastlandı. AF grubunda hastaların, %55.07'sinde GS genotipi, %34.78'inde GG genotipi, %10.14'inde SS genotipine rastlandı. AF riskinin artması ile GG genotipi varlığı önemli ölçüde ilişkilendirilmiş, çalışma popülasyonunda S alleli varlığının AF'ye karşı koruyucu faktör olduğu saptanmıştır.

Ellinor ve ark. (2006) yaptığı çalışmada, 96 hastanın 83'ünde lone AF, 13'ünde AF ve hipertansiyon saptandı. Potasyum kanallarının KCNJ2 ve KCNE1 (minK)-5 gen mutasyonlarının AF'ye neden olabileceğini belirlediler. 331 AF'li ve 441 kontrol grubunda Fatini ve arkadaşları (2006) tarafından yapılan çalışmada minK gen 38G alleli ile atriyum fibrilasyonuna yatkınlığın artması bağlantılı bulunmuştur.

Çalışmamızın sonuçları bu araştırmalarla benzerlik göstermektedir. Preoperatif AF ile başvuran hastalar (sinüs+AF grubu) ile kontrol grubu arasında AF'li hastalarda GG genotipine daha çok rastlandı, ancak yapılan istatistiksel analizde anlamlılık saptanmadı. MinK GG genotipi olan hastalarda SİRFA cerrahisi başarısının olumsuz etkilendiği görüldü. Çalışmamızda, literatürle uyumlu olarak sol atriyal trombus riskinin, AF'li hastalarda, normal sinüs ritimli hastalara göre daha fazla olduğu belirlendi (Fustar et al.,

2006; Handa et al. 1999). Çalışmamızın sonuçlarında, preoperatif AF olan gruplarda (sinüs ve AF grubu) sol atriyal trombüsün kontrol grubuna göre daha fazla görülmesi istatistiksel olarak anlamlı bulunmuştur. Bu durumun AF'a bağlı sol atriyum dokusunun efektif kasılmamasına bağlı olduğu düşünüldü. SİRFA cerrahisi sonrası AF'u devam eden hasta grubunda (AF grubu) sol atriyal trombüsün eşlik ettiği hasta sayısının daha fazla görülmesi istatistiksel olarak anlamlı bulundu. Tüm bu bilgiler ışığında AF'un sol atriyal trombüs riskini artırdığı, sol atriyal trombüsü bulunan hastalarda da SİRFA başarısının azaldığı istatistiksel olarak belirlendi. Çalışmamızda diğer çalışmalarda olduğu gibi kadın cinsiyet hakimiyeti mevcuttu (Kazaz et al. 2006; Duran et al. 2003; Gensini et al. 2002; Prystupa et al. 2006). Yapılan istatistiksel incelemede cinsiyet ile ACE ve MinK gen değişiklikleri arasında ilişki anlamlı ilişki saptanmadı.

### SONUÇ

İleri yaş, Sol atrium çapının preop ve postop antiaritmik ilaçların kullanımının SİRFA başarısını etkilediği bir çok çalışmada bildirilmiştir. Ancak, genetik değişikliklerin aritmi cerrahisi sonuçlarına etkisi literatür tarandığında bir çok çalışma yapılmıştır. Çalışmamız sonucunda MinK geni GG genotipine sahip kişilerde SİRFA başarısının azaldığını tespit ettik. Ayrıca ACE geni I/D genotipine sahip hastalarda AF gelişme oranını istatistiksel olarak anlamlı bulmakla beraber, bu gen değişikliğinin SİRFA başarısını azaltmadığını belirledik. Çalışmamızda ayrıca sol atriyal trombüs oluşumunun literatürle uyumlu olarak AF'li hastalarda anlamlı olarak arttığını, sinüs ve AF grubu karşılaştırıldığında ise preoperatif sol atriyal trombüs varlığının SİRFA başarısını azalttığını saptadık. Sonuç olarak, AF ile ilişkisi olduğu bilinen ACE geni I/D genotipi ve MinK geni GG genotipine sahip kişilerde SİRFA başarısı azalmakla birlikte, MinK geni GG genotipine sahip kişilerde istatistiksel olarak anlamlı şekilde SİRFA başarısının azaldığını belirledik. Bu bilgiler ışığında SİRFA cerrahisi başarısını azaltan faktörler içinde genetik faktörlerinde değerlendirilmesi gerektiğini düşünmekteyiz.

## LİBERALİZM VE CUMHURİYETÇİLİK DÜŞÜNCELERİNDE KAMUSAL ALAN TASAVVURU

### CONSIDERATION OF PUBLIC SPACE IN THE THOUGHTS OF REPUBLICANISM AND LIBERALISM

*Dr. Öğr. Üyesi Veysel ERGÜÇ*

#### ÖZET

Modern ulus-devletlerin inşa edilmesinden sonra devlet ve toplum ilişkileri siyaset bilimi kapsamında önem arz eder. Modern ulus-devletlerdeki devlet-toplum ilişkisi kamusal alan biçiminde tecessüm eder. Modern toplumlarda farklı kimliklerin ve çıkarların birlikte var olabildiği bir alan olarak beliren kamusal alan, çatışma ya da uzlaşma sonucu kurulmuş bir iktidara işaret eder. Bu anlam dairesi içerisinde farklılıkları ihtiva ettiği farz edilen kamusal alan sürekli biçimde toplumsal kesimler tarafından yeniden tanımlanan ve kurgulanan bir niteliktedir. Bu izlek takip edildiğinde iki farklı siyasal ve düşünsel pozisyon olarak neşet eden liberalizm ve cumhuriyetçilik bağlamında da kamusal alanın tanımı mümkün olmaktadır. Bu çalışma kapsamında liberalizm ve cumhuriyetçilik çerçevesindeki kamusal alan tasavvurları incelenecektir. Bahse konu edilen düşünce akımlarının kamusal alana ilişkin olan tahayyüllerinin irdelenmesinden evvel kamusal alanın serencamı aktarılacaktır. Kamusal alan kapsamında ifade edilen düşüncelerin özel alana mesafe bağlamında uzlaştıkları belirtilecektir. Bununla amaçlanan şeyin kamusal alanın sınırlanması olduğu söylenecektir. Başka bir cümleyle ifade edildiğinde belli bir ahlâk üzerinden tasarlanan kamuya uygun olmayan konuların özel alana itildiği, bundan dolayı kamusal alanın sınırlandırıldığı ifade edilecektir. Kamusal alanın tanımından sonra liberalizm kapsamında tasavvur edilen kamusalın nüvesi mercek altına alınacaktır. Liberal siyaset teorisi dâhilinde toplumsal, siyasal ve ekonomik alandaki özgürlük ilkesinin önemi teslim edilmekle beraber kamusal alandaki iletişiminin kısıtlandığı beyan edilecektir. Bundan hariç olarak liberalizme dayanan kamusal alanda farklı toplumsal grupların çıkar odaklı ve pragmatik davrandıkları, ayrıca her grubun sonuca odaklandığı ve böylelikle farklılıkların ve anlaşmazlıkların üzerinin örtüldüğü ilan edilecektir. Böyle bir kamusal alanda sadece belirli konularda bir mutabakata varılabildiği söylenecektir. Bu açıdan etnik kimlik, kadın sünneti, kürtaj ve şiddet gibi mevzuların tartışılmasından ziyade özel alana itilme ihtimalinden söz edilecektir. Liberal kuram çerçevesinde ileri sürülen bireysel çıkarların aksine toplumun ortak yararını savunan cumhuriyetçiliğin kamusal alan tasarımı da incelenecektir. Cumhuriyetçi kamusal alandaki yurttaşın kamu yararına feda edilmesine erdem atfedildiği anons edilecektir. Bu açıdan yurttaşın feda olarak özneleşme imkânı verildiği belirtilecektir. Böyle bir durumda sözü edilen davranışı sergilemeyen yurttaşın kamusal alanın kapısının kapatılma ihtimalinden söz edilecektir. Nihai olarak, gerek liberalizm gerekse cumhuriyetçilik kapsamında tasavvur edilen kamusal alan modelinden kendi yaşamını kendi iradesiyle belirleyen özne tipolojisinin türemediği ileri sürülecektir.

**Anahtar Kelimeler:** Kamusal alan, liberalizm, cumhuriyetçilik.

#### ABSTRACT

After the construction of modern nation-states, state and society relations become important within the scope of political science. The state-society relationship in modern nation-states is embodied in the form of public space. The public sphere, which appears as an area where different identities and interests can co-exist in modern societies, points to a power established as a result of conflict or compromise. The public space, which is assumed to contain differences within this circle of meaning, is constantly redefined and reconstructed by social segments. When this path is followed, it is possible to define the

public sphere in the context of liberalism and republicanism, which are two different political and intellectual positions. Within the scope of this study, public space conceptions within the framework of liberalism and republicanism will be examined. Before examining the imaginations of the mentioned thought movements regarding the public space, the serendipity of the public space will be conveyed. It will be stated that the ideas expressed within the scope of public space are reconciled in the context of distance from private space. It will be said that what is intended by this is the limitation of public space. In other words, it will be expressed that issues that are not suitable for the public, designed with a certain morality, are pushed to the private sphere, and therefore the public sphere is limited. After the definition of the public sphere, the core of the public envisioned within the scope of liberalism will be examined. Although the importance of the principle of freedom in the social, political and economic fields within the liberal political theory is acknowledged, it will be declared that communication in the public sphere is restricted. Apart from this, it will be declared that in the public sphere based on liberalism, different social groups act interest-oriented and pragmatic, and that each group focuses on the result, thus covering up differences and disagreements. It will be said that in such a public sphere, agreement can only be reached on certain issues. In this respect, rather than discussing issues such as ethnic identity, female circumcision, abortion and violence, the possibility of them being pushed to the private sphere will be discussed. The public space design of republicanism, which advocates the common good of society as opposed to the individual interests put forward within the framework of liberal theory, will also be examined. It will be announced that virtue is attributed to the sacrifice of the citizen for the public good in the republican public sphere. In this respect, it will be stated that the citizen is given the opportunity to become a subject as a sacrifice. In such a case, the possibility of closing the door of the public space to the citizen who does not exhibit the mentioned behavior will be mentioned. Ultimately, it will be argued that the typology of the subject who determines his own life with his own will does not derive from the public sphere model envisioned within the scope of both liberalism and republicanism.

**Keywords:** Public sphere, liberalism, republicanism.

## GİRİŞ

17. yüzyılda modern ulus-devletlerin belirmeye başlaması ile devlet ve toplum ilişkileri gerek siyaset biliminin gerekse siyaset sosyolojisinin önemli araştırma konusu olmuştur. Devletin toplumu yönettiği bir sistemde ihtiyaç duyduğu iktidar muhakkak kendisini toplum tarafından kabul edilebilir bir nedene dayandırmak zorundadır. Devletin toplumu yönetmesi anlamına gelen iktidarın toplum tarafından kabul edilmesinin yolu ise meşru olmasından geçmektedir. Meşruiyet kavramı toplumun, devletin iktidarına rıza göstermesi ve benimsemesi anlamına gelmektedir. Bu bağlamda siyasal iktidar, meşru bir organ olarak, toplum adına karar verme yetkisini elinde bulunduran, meşru güç kullanma tekeline sahip ve bu şekilde toplumsal istikrarı sağlayan bir güç biçimidir (Çetin, 2014: 51).

Devletin toplumla ilişkisinde siyasal iktidarın muhtaç olduğu meşruiyet ilkesinin sağlanmasının bir yolu iktidarın uygulandığı toplumun değerlerine ve normlarına uygun olmasından geçmektedir. Bu anlamda iktidar, Seyla Benhabib'in tabiriyle "*meşrulaştırılması gereken bir toplumsal ilişkidir*" (Akt. Köker, 2008: 357). Bu bağlamda meşruiyet ilkesi, bir iktidar ilişkisi ağını diğer ağlara göre daha tercih edilebilir kılan haklı nedenlerin söz konusu olmasıdır. Nihai olarak toplumun rızasını içermeyen ve buna bağlı olarak meşruiyete dayanmayan bir güç ilişkisinin siyasal iktidar olması mümkün görünmemektedir (Çetin, 2014: 52).

Devlet ve toplum ilişkileri temelinde devletin elinde bulundurduğu siyasal iktidara meşruiyeti diğer bir deyişle toplumun rızasını sağlayacak olan kamusal alandır. Modern toplumlarda farklı kimliklerin ve çıkarların birlikte var olabildiği bir mekân olan kamusal alan, çatışma ya da uzlaşma sonucu kurulmuş bir iktidarın göstergesidir. Bu anlamda farklılıkları barındıran kamusal alan sürekli biçimde toplum tarafından yeniden tanımlanan ve kurgulanan bir niteliktedir. Toplumu oluşturan bireyler kamusal alanın tanımlanmasına katıldıkları oranda toplumsallığın farkına varır, içinde yaşadığı toplumsal şartları ve kendi yaşamlarını belirleyen bir özne durumuna gelirler ve bu şekilde siyasal olana yabancılaşmamış olurlar.

Bu çalışma kapsamında devlet ve toplum arasındaki ilişki üzerine geliştirilmiş refleks olarak beliren kamusal alan kavramının cumhuriyetçilik ve liberalizm düşüncelerindeki karşılığı irdelenecektir.

Metinde öncelikle kamusal alanın farklı düşünürler tarafından nasıl tanımlandığı anlatılacaktır. İkinci adımda liberalizm kapsamında tahayyül edilen kamusal alan modeli irdelenecektir. Üçüncü olarak ise cumhuriyetçi siyaset modelinde tasarlanan kamusal alan modeli merceğe alınacaktır.

### KAMUSAL ALAN NEDİR?

Kamusal alan dendiğinde akla ilk gelen çağrışımın devlet ve toplum ilişkisi olduğu giriş bölümünde belirtildi. Kamusal alan devlet ve toplumun arasında olan, ikisinin de suretini taşıyan ve ikisi arasındaki ilişkiyi tanzim eden, yansıtan bir mekândır. Devletin toplumla olan ilişkisinde toplumun üyesi olan bireyin kamusal alanda olmasından anladığımız görünür olması ve katılım yapmasıdır. Bu anlamda kamusal alanda görünür olan birey, politika yoluyla görünmeyen özel alandaki sorunlarını ve farklılıklarını da kamusal alanda dillendirme imkânı bulmaktadır.

Kamusal alanın tanımlanmasında dikkat edilmesi gereken husus bu alanın özel alan karşısında konumlanmış olmasıdır. Tabiatıyla, kamusal alan tanımlandığında özel alanla arasındaki ayrımın dikkate alınarak tanımlanması gerekir. Bu anlamda kamusal alanın kamuoyuna benzer bir şeyin oluşturulabileceği bir alana tekabül ettiği söylenebilir. Bahsi edilen alanda, özel bireylerin kamusal bir gövde oluşturarak toplandıkları her konuşma durumunda, kamusal alanın bir parçası olarak vücut buldukları ifade edilebilir (Habermas, 2010: 95).

Özel ve kamusal alan arasındaki ayrımın kökleri Antik Yunan dönemine kadar götürülebilir. Hannah Arendt kamusal alan kavramsallaştırmasında Antik Yunan polisinin agonistik kamusal alanını ideal bir kamusal alan olarak tanımlar. Agonistik terimi kamusal alanı ahlâkî ve politik büyüklüğün, kahramanlık ve seçkinliğin açığa çıktığı, sergilendiği ve başkalarıyla paylaşıldığı görünüm alanı olarak tanımlar. Arendt'e göre agonistik kamusal alan insanların tanınmak, üstün olmak ve itibar görmek için birbirleriyle rekabet ettiği ve insani olan her şeyin boşunallığını önlemek ve kalıcılığını sağlamak için güvence aradığı bir mekândır (Benhabib, 1992: 78). Kamusal alanın katılım ve görünür olma özelliğine karşın özel alan ise Arendt'in deyişiyle "*gölgede kalmış ev işlerinin alanı*" anlamındadır (Akt. Benhabib, 1992: 75). Bu bağlamda özel alan kamusala girememiş farklılıkları içinde barındıran, kamusal alanın iktidarı altında ötelenen, görülmeyen, duyulmayan ve müdahale edilmeyen bir alan olarak tanımlanabilir. Antik Yunan döneminde kamusal alan-özel alan arasındaki ilişkide özel alan agonistik kamusal alanın dışladığı kadınlar, köleler, emekçiler ve Atinalı olmayanları içermekteydi (Benhabib, 1992: 75).

Kamusal alanla özel alan arasındaki sınırların belirginleşmesinin kökeninin John Locke, Jean Jacques Rousseau ve Georg Wilhelm Friedrich Hegel'in düşüncelerinde görüldüğü belirtilebilir. Locke'un toplumsal sözleşmenin aile dışındaki toplumsal alanda yapıldığı argümanından yola çıkarak onun düşüncesinde özel alanın duygusallığın, aşkın, duygunun, merhametin ve özverinin sembolü olan kadının alanı olduğu söylenebilir (Çaha, 1998: 84). Kamusal alan ise ekonomik bağımsızlığın, rasyonel olmanın, sözleşme yapmanın ve yurttaşlığın sembolü olan erkeğe ait bir alan olarak yorumlanabilir. Bu anlamda kamusal alan tasarımında Locke'un kadını kamusal alana katmamasının sebepleri kadının ekonomik bağımlılığı, rasyonel olmaması, özel alanda hane halkına göz kulak olması ve evlilik sözleşmesi ile kamusal alandaki tüm haklarını erkeğe devretmesidir (Tannenbaum ve Schultz, 2008: 305). Böylece erkek kamusal alanda sözleşme yapan ve yurttaş olan birey olarak ailesini de temsil hakkı kazanmaktadır. Locke'un kamusal alanının siyasal boyutu mevcuttur. Kamusal alanın siyasal ayağının görevi toplumsal kamunun yaşam ve mülkiyet haklarını korumak ve güvenliğini sağlamaktır. Nihai olarak, Locke'un imgelemindeki özel alan kadının alanı iken kamusal alan sözleşmeye katılan yurttaş erkeklerin alanı ve siyasal alan ise kamusal alanın güvenliğini sağlamaktan sorumlu devletin alanıdır (Çaha, 1998: 84-85).

Locke'tan sonra kamusal alanın köklerinin bulunduğu ikinci düşünür olduğu ifade edilebilecek olan Rousseau'nun algısında kamusal alan erkeklerin yaptığı toplumsal sözleşme sonucu beliren genel iradeye tabi olma durumu yani yurttaşın diğer yurttaşlara ve devlete tabi ya da bağımlı olmasıdır. Bu anlamda kamusal alan genel irade, yeni bir toplum ve herkes için egemen bir otoritedir. Bu özelliğiyle genel irade kamusal bir şahıs, her bireyin kimliğini oluşturan bir hayat ve kendine ait iradesi olan organik bir bedendir (Tannenbaum ve Schultz, 2008: 330-335).

Kamusal alan tasarımının kökeninin görüldüğü bir diğer düşünürün Hegel olduğu belirtilebilir. Devleti "Tanrının yeryüzündeki yansıması" olarak tanımlayan Hegel, bir milletin duygu ve bilincinin ancak

devlet şuurunda birleşmesiyle anlam kazanacağına ve devlet olmadan milletin anlamsız olacağına inanmıştır (Özcan, 2008: 7). Bu anlamda Hegel'in kamusal alan modelinde devlet "*Düşüncenin en üst derecesi, aklın en mükemmel ve ahlâkîliğin en yüksek belirtisidir*" (Akt. Göze, 2005: 239). Devletin mutlak üstün olduğu kamusal alanda birey aşkın devletin taşıyıcısıdır ve devletin içinde eriyecektir. Devlet bireylere muhtaç oldukları anlamlarını verme karşılığında tüm bireylerin kamusal alanını kendi potasında eriterek kendinden menkul bir kamusal alanı doğurur. Bu anlamda gerek Rousseau gerekse Hegel'in algısındaki kamusal alan devletle bütünleşmiş bir model niteliğindedir. Rousseau ve Hegel'in imgelemindeki özel alan tasarımı ise kadınların, çocukların ve engellilerin alanıdır.

Kamusal alanın Arendt, Locke, Rousseau ve Hegel'in düşüncesinde devlet ve toplum arasında var olan bir mekân olarak tanımlandığını görmekteyiz. Her dört düşünürün algısında özel alan ailenin, kadının, ekonomik ilişkilerin, kişisel istek ve itkilerin alanı iken kamusal alan siyaseti içeren ve bu özelliğiyle katılımı mümkün kılan ve görünürlüğü bahşeden bir alan niteliğindedir. Bitirmeden önce burada dikkat çekmek istediğimiz husus kamusal alanın siyasal düşünürler ve siyaset kuramcılarının en azından bir kısmı tarafından her daim özel alanın karşısında konumlandırılarak tanımlandığıdır. Bununla amaçlanan kamusal alanın sınırlılıklar üzerinden tanımlanmasıdır. Bir diğer deyişle belli bir ahlâkîlik bağlamında tasarlanan kamuya uygun olmayan konular özel alana itilerek görünür olan kamusalın gündemine alınmamakta ve görünür olmalarına ket vurulmakta böylece kamusal alan sınırlandırılmakta ve bundan dolayı kapsayıcı olamamaktadır. Çalışmanın ilerleyen bölümlerinde cumhuriyetçi ve liberal siyaset teorilerinin kamusal alan tasarımlarında söz konusu kapsayıcılığa ne ölçüde haiz olabildikleri sorusunun cevabı aranacaktır.

### **KAMUSAL ALANDA LİBERAL MOTİFLER: İLETİŞİMSEL KISITLAMA VE YASALLIĞA DAYALI BİR KAMU ALANI TASARIMI**

Liberal ideolojinin esas alındığı yönetimlerde siyasal otoritenin varlık sebebi bireylerin hak ve özgürlüklerinin korunması ve bireylerin çıkarlarının takibinde güvenliğin sağlanmasıdır. Buna bağlı olarak liberal siyasete göre özgürlük dışsal müdahalelerden azade olma anlamındadır.<sup>1</sup> Bu anlamda liberal siyaset teorisi siyasal otoritenin müdahale edebileceği alanları olabildiğince kısıtlama ve bireylerin çıkarlarının takibini güvenli bir ortamda yapmaları için gereken ortamı sağlamayı kendisine temel görev edinmiştir. Liberal teoriye göre bireylerin kendi çıkarlarını gerçekleştirmenin sonucunda ortak çıkar da belirecektir. Bu bağlamda liberal teorinin meşruiyet ve rasyonalite anlayışının biçimsel durduğu söylenebilir (Çınar, 2005: 159). Siyasi sürecin işleminde oldukça önemli olan meşruiyetin biçimsel olması beraberinde liberal siyasi yapıda üzerinde her anlaşılmış durumun ve verilen her kararın rasyonel kabul edilmesinin ve içeriğinin incelenmemesini getirecektir.

Liberal siyaset teorisinde siyasal, toplumsal, ekonomik ve kültürel alanda çok önem verilen özgürlük ilkesinin delinmemesi adına biçimsel meşruiyetin benimsenmesi kamusal alanın iletişiminin kısıtlanması ve hukukilik üzerinden tanımlanmasına neden olmaktadır.

Bruce Ackerman, "liberal diyalog" adını verdiği modelinde farklı grupların kamusal alanda bir arada yaşama sorununu rasyonel bir şekilde nasıl çözebileceklerini sorunsallaştırdığında bunun yolunun farklılıkların dikkate alınmadığı bir tür pragmatizmden geçtiğini belirtmektedir (Ackerman, 1989: 9-10). Farklı toplumsal grupların diyalog sürecinde pragmatik davranması beraberinde her grubun sonuca odaklanmasını ve böylelikle farklılıkların ve anlaşmazlıkların üzerinin örtülmesini ve de sadece belirli konularda bir mutabakata varılmasını getirir. Ackerman, "iletişimsel kısıtlama" adını verdiği pragmatizme odaklı metodu sayesinde diyalog sürecinde bütün katılımcıların akla uygun, normatif temelde bir çıkar yolu bulacaklarına inanmaktadır (Ackerman, 1989: 16-17). Burada Ackerman'ın kamusal alan tasarımında farklı toplumsal gruplar arasında anlaşmazlık getirecek muhtemel konuların

<sup>1</sup> Isaah Berlin'in kavramsallaştırdığı bu özgürlük anlayışına göre negatif özgürlük kavramı en temel anlamda bir kişinin eylemini gerçekleştirirken müdahaleden azade olması anlamına gelir. Burada müdahaleyi yapacak olan devlet olarak kabul görmektedir. Bu bağlamda negatif özgürlük bireyin amaçlarını gerçekleştirmesinde devletin belirleyici olmasına karşı çıkar. Devletin belirleyiciliğini ortadan kaldırmanın yolu devlet ve toplum arasında bir sözleşme yapmaktan geçmektedir. Bu sözleşme ile devlet, bireyin özel alanına müdahale etmekten men edilecektir (Barry, 2003: 228-229).

ahlâkî, dini ve estetik bağlamda yer aldığını belirtmemiz gerekir. Bu anlamda toplumsal yaşamda herhangi bir bireyin özel alanına yönelik müdahale görmemesi ve özgürlüğünden olmaması için kürtaj ve şiddet gibi sözü edilen bağlama girecek mevzularla ilgili konuşmamak ve bunları özel alana hapsetmek gerekir (Benhabib, 1992: 82). Nihai olarak, Bruce Ackerman'ın kamusal alan tasarımı çalışmanın giriş bölümünde de belirttiğimiz üzere kültürel bağlamda farklı gruplardan müteşekkil modern toplumların farklılıklara rağmen ve farklılıkları içerecek biçimde kendi yaşamlarına ilişkin karara vararak özneleşmesine dayanan kamusal alan tasarımı içermektedir.

Liberal kamusal alanın hukukilik üzerinden tanımlanmasıysa siyasal ilişkilerin hukuki ilişkiler tasarımı üzerinden düşünülüp dar bir bakış açısından ele alınmasına neden olmaktadır (Benhabib, 1992: 83). Siyasal ilişkilerde hukukun üstünlüğü ilkesinin var olması devlete karşı bireyin hak ve özgürlüklerinin korunmasını garanti altına alırken, bireyin katılımcı demokrasinin gereği olan siyasi karar alma süreçlerine katılımı konusunda bir açılım sunamamaktadır. Bununla birlikte siyasal ilişkilerde hukukun üstünlüğünün olması toplumsal yaşamda tarafsızlığı getirdiğinden kültürel farklılıklar kamusal alana çıkarmakta bundan dolayı kamusal alanda çoğulculuk ve katılım yayılamamakta ve siyasi tartışma konularının kapsamı sınırlanmaktadır (Köker, 2008: 358-360).

Farklılıkların özel alanda yaşanması üzerine kamusal alan tahayyülünde bulunan devletle bu farklılıkları kamusal alanda yaşamayı savunan toplum arasındaki boşluğu liberal siyaset teorisinin dolduramadığını anlattıktan sonra, cumhuriyetçi siyaset kuramının bu boşluğu doldurup dolduramadığı incelenektir.

### **CUMHURİYETÇİ SİYASETİN AÇMAZI: KAMUSAL ALANIN AHLÂKÎLİK ÜZERİNDEN YAPILANDIRILMASI**

Kökleri Antik Yunan düşünce, pratik ve felsefesine dayanan cumhuriyetçilik, siyasi otoritenin meşruiyet kaynağının halktan kaynaklanmasını öngören, bu anlamda kendi kendini yönetebilen bağımsız bir siyasal toplumda yaşayan vatandaşların özgür olabilmeleri için “nasıl bir yönetim gereklidir?” sorusunu içeren bir düşüncedir (Keyman ve Turnaoğlu, 2008-09: 40). Cumhuriyetçi siyasete göre vatandaşların özgürce yaşaması özgür bir devleti gerektirir. Özgür bir devletin de özgürlüğünü kaybetmemesi için liberal kuramın savunduğunun aksine vatandaşların bireysel çıkarlarını bırakıp toplumun ortak yararına kendilerini adanmaları gerekir. Böylelikle kendini toplumun çıkarına adayan vatandaş birey sivil erdemi edinecektir.

Toplumun dışında herhangi bir özgürlükten bahsetmenin imkânsız olacağını düşünen cumhuriyetçi siyaset hukuk temelli bir kamusal alan tahayyülünde bulunur. Buna göre, hukuk temelli kamusal alan her bireyin kendinin evrensel bilincine vardığı, kendi özel çıkarını herkesin çıkarından ayırmamayı öğrendiği bir vatandaşlık alanıdır (Bilgin, 2008-09: 108). Toplumun refahından sorumlu olan vatandaş ortak iyinin tanımlanmasına katkı yaptığı sürece özgürdür. Tabiatıyla cumhuriyetçi kamusal alandaki vatandaş siyaset kanalıyla yaşadığı toplumun geleceğine yön veren kişidir (Çınar, 2005: 159). Cumhuriyetçi siyasete göre kamusal alan her insanın kendi özel alanında herhangi bir baskı hissetmeden kendi amaçlarının takibinin koşuludur (Bilgin, 2008: 108). Cumhuriyetçi kamusal alan özgürlüklerin bir arada var olmasını sağlayarak bireysel özgürlüğü mümkün kılar. Kamusal alanın hukuk temelinde inşa edilmesi ise hukukun üstünlüğünü getirir.

Cumhuriyetçi kamusal alanı bu özellikleriyle tasvir ettikten sonra farklılıkların kamusal alanda yaşayabilmesi sorunsalı bağlamında irdelendiğinde bunun pek mümkün olmadığı ileri sürülebilir. Cumhuriyetçi kamusal alan liberalizmin üstte tuttuğu bireyi topluma bağımlı yurttaş statüsüne sokarak ve bu yurttaşın kamu yararı adına fedakârlık yapabileceğini öngörüp ona erdem atfederek kamusal alana ahlâkî bir ton katar. Cumhuriyetçi kamusal alana yönelik ahlâkî oluş atfi özel alan-kamusal alan ayrımını yok ederek, hak ve özgürlükleri görmezden gelir. Bununla birlikte bu ahlâkî halin belirmesi cumhuriyetçi kamusal alandaki vatandaşın ortak iyinin tanımlanmasını mümkün kılan özne değil, tanımlanmasına katılan bir nesne olmasına neden olur (Çınar, 2005: 160-161).

Ahlâkîleştirilmiş bir kamusal alan düşüncesi, bu düşüncüyü benimsemeyen siyasi hareketleri ahlâk dışı ve irrasyonel olarak değerlendirir, bastırır ve böylece onlara kamusal alanda var olma şansı tanımaz. Biraz daha açarak söylemek gerekirse, kamusal alanın belli bir ahlâkî hal üzerinden tanımlanması fikri vatandaşların o kamusal alana katılımı için homojenleşmelerini şart koşar. Bu durum o ahlâkî durumu kabul etmeyen toplumsal grupların kamusal alandan dışlanmasını, yok sayılmasını beraberinde getirir (Çınar, 2005: 161-162).

## SONUÇ

Modern toplumlarda farklı kimliklerin ve çıkarların birlikte yaşayabildiği bir mekân olan kamusal alanın söz konusu bu farklı kimliklerin çatışması ya da uzlaşması sonucu kurulması gerekir. Bu meyanda farklılıkları barındıran kamusal alan sürekli biçimde toplum tarafından değişen ve gelişen siyasal ve toplumsal şartlara ve bağlamlara göre yeniden tanımlanmakta ve sürekli kurgulanmaktadır. Toplumu oluşturan bireyler kamusal alanın tanımlanmasına katıldıkları oranda toplumsallığın farkına varır, içinde yaşadığı toplumsal şartları ve kendi yaşamlarını belirleyen bir özne durumuna gelirler.

Çalışma kapsamında irdelenen liberal siyaset teorisinin kamusal alan modelinde bireysel özgürlüklere zarar verilebileceği endişesiyle farklılıkların özel alanda tutulması, kamusal alana taşınmaması gerektiği ve bu farklılıklar karşısında devletin tarafsız durması gerektiği fikri aktarıldı. Farklılıkların özel alanda tutulması ve devletin tarafsız üslubu siyaseti bireysel çıkarların kovalanması düzeyine getirmekte ve bu bağlamda siyasetin içeriğini boşaltmaktadır. Cumhuriyetçi kamusal alan tasarımı ise siyaseti ortak çıkarlar çerçevesinde algılamakta ve bu anlamda bireyi yurttaş olarak tanımlayarak özgürlüğünü toplumun özgürlüğüne feda etme riskini taşımaktadır. Kamusal alana ahlâkîlik atfeden cumhuriyetçi siyaset, kamusal alana yurttaşın girmesini belirli kıstaslara bağlamakta ve bu özelliğiyle de dışlayıcı olmaktadır.

Her iki kamusal alan modelinin farklılıkları barındırmaması durumundan hareketle mevcut kamusal alan modellerine alternatif bir kamusal alan tasarımının elzem hale geldiği ifade edilebilir.

**ÖZET**

Bu çalışma, 2022 yılı pamuk yetiştirme sezonunda Şanlıurfa-Harran koşullarında deneme desenine göre Fiona pamuk çeşidi kullanılarak ve 3 tekrarlamalı olarak deneme kurulmuştur. Sulama konuları (%50, %75 ve %100) olarak yapılmıştır. Çalışmada, yağ oranı, doymuş ve doymamış yağ asitlerinden miristik asit (c14:0), palmitik asit (c16:0), stearik asit (c18:0), oleik asit (c18:1), linoleik asit (c18:2), linolenik asit (c18:3) ve nervonik asit (C24:1) oranları (%) olarak saptanmıştır. Çalışma sonucunda sulama konularının oleik asit (c18:1) ve linolenik asit (c18:3) açısından etkisinin olduğu tespit edilmiştir. Sonuç olarak, yağlı bitkilerin yetiştirilmesinde, en önemli unsurlardan birisi olan yağ ve yağ asitleri kompozisyonunun bilinmesi için sulama konularının yanı sıra ekim zamanı, büyüme sıcaklıkları ve abiyotik streslerin de bitkisel yağın yağ içeriğini ve bileşimini değiştirebileceği yönünde dikkat edilmesi üretim açısından uygun olacaktır.

**Anahtar Kelimeler:** Pamuk, Sulama, Yağ oranı, Yağ asitleri, Biotik, Abiotik

**ABSTRACT**

This study was conducted in Şanlıurfa-Harran conditions in the 2022 cotton growing season, using the Fiona cotton variety according to the randomized blocks divided plots trial design and with 3 replications. Irrigation issues (50%, 75% and 100%) were made at the rates. In the research, fat ratio, saturated and unsaturated fatty acids; myristic acid (c14:0), palmitic acid (c16:0), stearic acid (c18:0), oleic acid (c18:1), linoleic acid (c18:2), linolenic acid (c18:3) and nervonic acid (c24:1) ratios were determined as (%). As a result of the study, it was determined that irrigation issues have an effect on oleic acid (c18:1) and linolenic acid (c18:3). As a result, it is necessary to know the composition of fat ratio and fatty acids, which is one of the most important elements in growing oily plants. Determination of these compositions, especially irrigation issues; Care must be taken in terms of production, as planting time, growing temperatures and abiotic stresses can alter the oil content and composition of the vegetable oil.

**Keywords:** Cotton, Irrigation, Fat ratio, Fatty acids, Biotic, Abiotic

## **GİRİŞ**

Pamuk (*Gossypium hirsutum* L.) kullanım alanları bakımından oldukça geniş bir kültür bitkisi olmakla birlikte, birçok farklı endüstri dalında hammadde görevi görmektedir. Üretimi yapılan kütlü pamuk, işlenmesi bakımından çırçır ve hazır giyim, çığıdı ile yağ sanayisi, liflerinden tekstil, küspesinden ise yem sanayisi alanında öne çıkan önemli bir hammadde olarak görülmektedir (TUİK, 2021). Dünyada pamuk ekiliş alanı 33.4 milyon ha, üretim miktarı ise 26.4 milyon tondur. En fazla üretimin yapıldığı ülkeler; Hindistan, Çin, ABD, Brezilya, Pakistan, Özbekistan ve Türkiye gelmektedir (ICAC, 2022).

Günümüzde tohumlarında yağ bulunan pek çok bitki bulunsa da endüstriyel alanda işlenerek yağı elde edilen başlıca bitkiler; soya, ayçiçeği, çığıt, kolza, yer fıstığı, susam, aspir, hintyağı, haşhaş, keten, kenevir, jojoba, mısır (mısır özünden), zeytin, hurma ve Hindistan cevizi öne çıkmaktadır (Arioğlu, 2014). Hayvansal kaynaklı yağların maliyet açısından yüksek olması ve yeteri kadar üretimi sağlanamadığından dolayı bitkisel yağlara daha fazla ihtiyaç duyulmaktadır (Kolsarıcı ve ark., 2015). Pamuk bitkisi her ne kadar lif bakımından öne çıksa da aynı zamanda yağlı bir tohum özelliği taşıdığı için önemli bir yağ bitkisidir. Tohumundan üretilen yağ, insan ve hayvan diyetlerinde en çok tercih edilen bitkisel yağlar arasında yer almaktadır (Yang ve ark., 2021). Pamuk tohumundan üretilen yağın içerisinde yüksek miktarda antioksidan kaynaklı maddeler bulunduğundan dolayı besin maddeleri için yüksek sıcaklık ve depolama bakımından diğer yağlara göre uzun süre bozulmadan kalabilmektedir (Sekhar ve ark., 2011).

Pamuk tohumu ortalama %20 oranlarda yağ içermekte ve bileşimleri ise doymuş ve doymamış yağ asitleri oluşturmaktadır (Özbek, 2011).

Pamuk tohumunun kalitesine etki eden unsurlardan birisi de tohumda bulunan yağ asitleri içerikleri ve miktarlarıdır. Bitkilerde özellikle sabit yağ içeriği ve bu yağlardaki yağ asitleri kompozisyonu bitki veya yağ elde edilen bitki kısımlarının gelişimine, bitkilerin yetiştirildiği dönemin biyotik ve abiyotik faktörlere göre değişebilmektedir (Aygün ve Mert, 2023).

## **MATERYAL VE METOT**

### **Deneme Yeri ve Toprak Özellikleri**

Şanlıurfa ili Harran Üniversitesi Osmanbey Kampüsü Ziraat Fakültesi Tarla Bitkileri Bölümü uygulama arazilerinde yürütülmüştür. Deneme alanı topraklarının, toprak pH'sı 7.92, organik madde içeriği ise %1.12 civarındadır (Ramazanoğlu, 2019). Deneme yerinden alınan toprak örneklerinden elde edilen analiz sonucu ve bu topraklara ait bazı fiziksel ve kimyasal özellikler Çizelge 1.'de verilmiştir.

Çizelge 1. Deneme yerine ait toprakların bazı fiziksel ve kimyasal özellikler

Derinlik (cm)	pH	Organik Madde(%)	Kireç (%)	Bitki Besin Elementleri (mg kg <sup>-1</sup> )						
				P	K	Mg	Fe	Zn	Cu	Mn
0.30	7.92	1.12	29.6	4.70	180	303	3.46	0.72	4.64	0.44

### **Metot**

#### **Deneme Deseni**

Bu çalışma, 2022 yıllı pamuk yetiştirme sezonunda Şanlıurfa-Harran koşullarında tesadüf blokları deneme desenine göre Fiona pamuk çeşidi kullanılarak ve 3 tekrarlamalı olarak deneme kurulmuştur. Sulama konuları (%50, %75 ve %100) belirlenmiş her parsel 5 sıradan oluşup, parsel uzunluğu 12 m, sıra arası 70 cm ve sıra üzeri mesafe ise 10-12 cm bırakılmıştır. Çalışmada bloklar arasında 3 m ve parseller arasında 3 m boşluk bırakılıp, toplam 36 parselden oluşmuştur.

## Sulama Uygulamaları

Araştırmada konulu 05.07.2022 tarihinde başlamış olup sulamalar damla sulama yöntemine göre yapılmıştır. Sulama suyu miktarının hesaplanmasında James ve ark. (1982) tarafından önerilen yöntem uygulanmıştır.

$$I = A * E_p * k_{cp} * P$$

Eşitlik de

I: Parsele uygulanan sulama suyu (L)

A: Parsel alanı (m<sup>2</sup>)

E<sub>p</sub>: 7 günlük birikimli class A pandaki buharlaşma miktarı (mm)

k<sub>p</sub>: Pan katsayısı

P: Örtü yüzdesi (%)

Çalışmada sulama suyu miktarı class A panda gerçekleşen 7 günlük yağışlı buharlaşma miktarı kullanılmıştır. Class A pan'da ölçülen buharlaşma miktarı çalışmadaki sulama suyu seviyeleri %50, %75 ve %100 ve bitki örtü yüzdesi (P) ile çarpıldıktan sonra konulara sulama suyu olarak uygulanmıştır.

## İstatistik analizi

Elde edilen veriler JMP 11 (SAS Institute 2013) istatistik programında tesadüf bloklarında bölünmüş parseller deneme desenine göre analiz edilmiş, ortalamalar Tukey testine göre (0.05) gruplandırılmıştır.

## BULGULAR VE TARTIŞMA

### Yağ Oranları

Pamuk yağı sulama suyu miktarı yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir (Grafik 1.). Uygulamalar arasında farklılık görülmediğinden aynı grupta yer almaktadır.

Grafik 1. incelendiğinde ortalama yağ oranı %15.96 olarak belirlenirken; sulama suyu miktarı bakımından en yüksek yağ oranı %50 uygulamasında %16.54, en düşük yağ oranı ise %15.18 ile %75 sulama suyu miktarına sahip uygulamada görülmüştür. Özbek (2011), pamuk tohumunda yağ oranının %20 miktarında, O'Brien (2005), pamuk tohumu yaklaşık olarak %16 yağ içeriğine sahip olduğunu belirtmişlerdir. Grafik 1'e göre farklı sulama miktarlarının yağ oranı üzerinde önemli bir etkisinin olmadığı, elde edilen ortalama yağ oranının O'Brien (2005)'in bulgularıyla benzerlik gösterdiği, ancak Özbek (2011)'in bulgularına göre düşük olduğu tespit edilmiştir.

Grafik 1. Pamuk bitkisinde farklı sulama suyu miktarı bakımından yağ oranları (%)

### Yağ Asitleri Oranları

#### Miristik asit (c14:0) (%)

Pamuk yağı yağ asitleri kompozisyonları miristik asit yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir (Çizelge 3.). Uygulamalar arasında farklılık görülmediğinden aynı grupta yer almaktadır.

Çizelge 3. incelendiğinde ortalama miristik asit oranı %0.85 olduğu saptanmıştır. Karahan (2007), yağ asidi kompozisyonunda ortalama miristik yağ asit oranının % 0.5, Sekhar ve ark (2011) ortalama miristik asit oranını % 0.8, Quampah ve ark (2012) % 0,56 ile % 1,08 aralığında olduğunu, Adesina ve ark. (2013) miristik oranının %0.9 olduğunu belirtmişlerdir. Beyyavaş ve ark. (2023) miristik asit oranlarının farklı değerlere sahip olması çeşitlerin çevre interaksyonundan ve farklı genotipik yapıya sahip olmalarından da kaynaklanabileceğini belirtmişlerdir. Bizim bulduğumuz ortalama Miristik asit değeri %0.85 olup önceki çalışmalarla benzerlik gösterdiği, ancak Karahan (2007)'nin bulgularına göre yüksek olduğu tespit edilmiştir.

#### Palmitik asit (c16:0) (%)

Pamuk yağı, yağ asitleri kompozisyonları palmitik asit yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir (Çizelge 3.).

Pamuk tohumunda yağ asidi olarak %17-29 oranında palmitik asit bulunmaktadır (Özbek, 2011). Doymuş yağ asitleri grubundan olan palmitik yağ asidi oranının düşük olması istenmektedir (Anonim, 2022b). Çizelge 3'e göre ortalama palmitik asit oranı %22 olduğu, farklı oranlarda yapılan sulamaların palmitik asit oranını etkilemediği ve oranlar birbirine yakın olduğundan aynı grupta yer almışlardır. Uygulamalara bakıldığında sulama seviyesinin artmasıyla palmitik asit oranının azaldığını fakat istatistiksel olarak önemli düzeyde bir fark görülmemiştir. Nagaraj ve Reddy, (1997) iklim koşulları ve büyüme sezonunda sıcaklık değişimlerinin de tohumdaki yağ asitlerinin değişimine etki ettiğini; Beyyavaş (2023), sulu koşullarda yetiştirilen çeşitlerin kuru koşullara göre daha fazla palmitik asit oluşturduğu belirtmişlerdir. Ashrafi ve Razmjoo (2010), sulama seviyesinin artması ile çeşitlerin palmitik asit oranının düştüğünü belirtmesi elde edilen bulgularımızla uyumlu olduğu görülmüştür.

Çizelge 3. 2022 pamuk yetiştirme sezonunda uygulanan sulama suyu miktarının (IW) bazı yağ asitleri açısından etkisi ve %CV değerleri.

Uygulamalar	Miristik asit (c14:0) (%)	Palmitik asit (c16:0) (%)	Stearik asit (c18:0) (%)	Cis-oleik asit (C18:1) (%)
%50	0.79 a	23.25 a	2.02 a	15.45 a
%75	0.93 a	21.46 a	1.78 a	13.87 b
%100	0.84 a	21.30 a	1.87 a	13.01 b
<b>Ortalama</b>	0.85	22.00	1.89	14.11
<b>%CV</b>	11.07	3.64	4.85	2.57

#### Stearik asit (c18:0) (%)

Pamuk yağı, yağ asitleri kompozisyonları stearik asit yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir (Çizelge 3.).

Çizelge 3. İncelendiğinde ortalama stearik asit oranı %1.89 olduğu saptanmıştır. Doymuş ve doymamış yağ asitlerinin arasındaki oranın dengeli olması insan beslenmesi açısından büyük önem taşımaktadır. Yağların kararlı artması açısından yağ asitlerinin oranlarının yüksek olması istenilen bir durum olmasına rağmen, insanların beslenmesi için doymuş yağ asitleri oranının çok yüksek olması tavsiye edilmez (Zambiazi ve ark., 2007).

Çevresel etmenler, genotipik özellikler ve kültürel uygulamalar, tohum içerisindeki stearik asit miktarının ve buna bağlı olarak toplam doymuş yağ asidi kompozisyonunun değişim göstermesine sebep olmaktadır (Hasrianda, 2016). Çizelge 3'e göre %50 sulamanın %75 ve %100'e göre stearik asit oranının daha yüksek olduğu, Ashrafi ve Razmjoo (2010), çalışmalarında sulama seviyesinin artması ile çeşitlerin stearik asit (c18:0) oranının düştüğünü belirtmesi çalışmamızla çelişki içerisinde. Karahan (2007), yağ asidi kompozisyonunda ortalama stearik yağ asit oranının %1.9 olarak bulmaları elde edilen sonuçlarımıza benzerlik gösterdiği, Adesina ve ark. (2013), stearik asit oranını (C18) %2.1 ise elde ettiğimiz sonuçlara göre yüksek olduğu tespit edilmiştir.

### Cis-oleik asit (C18:1n9c) (%)

Pamuk yağı yağ asitleri kompozisyonları oleik asit yönünden istatistiksel olarak ( $p < 0.05$ ) önemli bulunduğu izlenebilmektedir (Çizelge 3.).

Yağlı bitkilerde doymamış yağ asitleri arasında en önemli olanlardan biri de oleik asittir. Doymamış yağ asitlerinden özellikle endüstriyel alanda çok farklı yönlü olarak yararlanılmakta ve kullanım amacına göre istenilen düzeyde yağ asit oranları birbirinden farklı olabilmektedir.

Örneğin, yemeklik açısında kalite değeri yüksek olan bir yağın oleik asit (Omega-9) miktarının fazla olması tercih edilmesinin yanı sıra sıfır ya da sıfıra yakın miktarda erusik asitin olması da arzu edilmektedir (Göre, 2021). Pamuk tohumundan elde edilen yağlar, karakteristik tadının yanında kokusu olan ve oldukça koyu bir renge sahip bir yağ olmakla birlikte %13- 44 oleik içermektedir (Anonim, 2009; Özbek, 2011). Çizelge 3. incelendiğinde ortalama oleik asit oranının %14.11 düzeylerinde olduğu, en yüksek oran %50 sulamanın yapıldığı uygulamada görülürken en düşük ise %100 sulamanın yapıldığı uygulamada tespit edilmiştir.

### Cis-linoleik asit (C18:2n6c) (%)

Pamuk yağı, yağ asitleri kompozisyonları linoleik asit yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir (Çizelge 4.). Uygulamalar arasında farklılık görülmediğinden aynı grupta yer almaktadır.

Pamuk yağı %46–58 linoleik asit içeren bir yağdır (Kılıkçkan, 2008). Tohum yağında doymamış yağ asitlerinin doymuş yağ asitlerine oranı 2:1'dir. Pamuk tohumlarından elde edilen önemli yağ asitleri arasından linoleik asidin öne çıktığını belirtmişlerdir (Lukonge, Labuschagne, ve Hugo, 2007). Çizelge 4 incelendiğinde; ortalama linoleik asit oranının %49.41 olduğu, en yüksek oran %50.07 ile %50 sulama uygulamasında yer alırken en düşük ise %48.40 oranında %75 sulama uygulamasında tespit edilmiştir. Karahan (2007), pamukta yağ asidi kompozisyonunda ortalama linoleik asitte %61.4, Adesina ve ark. (2013), %53,5 olarak bulunmuştur. Çalışmamızda elde edilen sonuçlar Karahan (2007)'nin sonuçlarına göre düşük, Adesina ve ark. (2013)'nin sonuçlarına ise yakın olduğu görülmektedir.

Çizelge 4. 2022 pamuk yetiştirme sezonunda uygulanan sulama suyu miktarının (IW) bazı yağ asitleri açısından etkisi ve %CV değerleri.

Uygulamalar	Cis-linoleik asit (c18:2) (%)	Linolenik asit (c18:3) (%)	Nervonik asit (c24:1) (%)
%50	50.07 a	0.128 c	3.59 a
%75	48.40 a	0.136 b	6.06 a
%100	49.78 a	0.154 a	6.38 a
<b>Ortalama</b>	49.41	0.13	5.34
<b>%CV</b>	3.42	0.71	24.42

### **Linolenik asit (C18:3n6) (%)**

Pamuk yağı yağ asitleri kompozisyonları linolenik asit yönünden istatistiksel olarak ( $p < 0.05$ ) önemli bulunduğu izlenebilmektedir (Çizelge 4.).

Pamuk yağı %0.4 oranında linolenik asit içeren bir yağdır (Kılıçkan 2008). Linolenik asit (Omega-3) oksidasyona karşı son derece hassas olması ve yağın raf ömrünü azaltması nedeniyle yemeklik yağ olarak değerlendirilen bitkilerde düşük olması arzu edilir. (Silska ve Walkowiak, 2019). Çizelge 4 incelendiğinde; ortalama linolenik asit oranı %0.13 olarak görülmüştür. Wan ve ark. (1998), pamuk tohumundaki yağ asitlerinin belirlenmesi üzerine yaptıkları çalışmada ortalamanın %3 düzeyinde olduğunu, Darla ve ark. (2007), pamukta linolenik asit miktarının % 0.1 ile % 2.1 arasında değiştiğini, Dowd ve ark. (2010), çeşitli pamuk genotiplerinde yağ asitleri ortalamasının % 0.15 ile %0.25 arasında değiştiğini, Adesina ve ark. (2013), ise linolenik yağ asidini % 0.2 olarak bulduklarını bildirmişlerdir. Bizim çalışmamızda ise linolenik asit oranının Darla ve ark. (2007) sonuçları ile benzerlik gösterdiği, Wan ve ark. (1998); Dowd ve ark. (2010); Adesina ve ark. (2013)'nın sonuçlarına göre daha düşük olduğu tespit edilmiştir.

### **Nervonik asit (C24:1) (%)**

Pamuk yağı, yağ asitleri kompozisyonları nervonik asit yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir (Çizelge 4). Uygulamalar arasında farklılık görülmediğinden aynı grupta yer almaktadır.

Çizelge 4'te nervonik asit miktarı ortalaması %5.34 olarak bulunduğu gösterilmiştir. Nervonik asit miktarı yönünden en yüksek değer; %100 sulamanın yapıldığı uygulamada %6.38 olarak görülürken, en düşük değer ise %50 sulamanın yapıldığı uygulamada %3.59 miktarında tespit edilmiştir. %50 sulamaya sahip uygulama, %75 ile %100 uygulamalarına kıyasla oldukça düşük olmasına rağmen istatistiksel olarak bir fark görülmemiştir. Elde edilen sonuçlarımıza bakıldığında sulama miktarı arttıkça nervonik asit miktarında da artış olduğu saptanmıştır. Yaptığımız literatür araştırmasında nervonik asite rastlanmamıştır.

### **SONUÇ**

Yağlar, enerji kaynağı olarak insan beslenmesinde ayrı bir öneme sahiptirler. Küresel iklim değişimlerinden dolayı artan sıcaklıklar ve düzensiz yağışlar tarımsal üretimi olumsuz etkilemesinin yanı sıra yağlık ürünlerde yağın bileşimi üzerine de etkisinin olduğunu göz ardı etmemek gerekir. Hayvansal kökenli yağların maliyeti pahalı ve üretimi yeterli olmadığından, insan beslenmesi için gereksinim duyulan yağların büyük bir kısmı, bitkisel kökenli yağlardan karşılanmaktadır. Yağlı bitkilerin yetiştirilmesinde, en önemli unsurlardan birisi olan yağ asitleri kompozisyonunun bilinmesi için sulama konularının iyi bilinmesinin yanı sıra ekim zamanı, büyüme sıcaklıkları ve abiyotik streslerin de bitkisel yağın yağ içeriğini ve bileşimini değiştirebileceği yönünde dikkat edilmesi üretim açısından uygun olacaktır. Çalışma sonucunda, sulama konularının oleik asit (c18:1) ve linolenik asit (c18:3) açısından önemli etkisinin olduğu; miristik asit, palmitik asit, stearik asit, linoleik asit ve nervonik asit bakımından önemli düzeyde bir etkisi olmadığı görülmüştür.

**ÖZET**

Bu çalışma, 2020 yıllı yetiştirme sezonunda pamukta (*Gossypium hirsutum* L.) defoliant kullanımının verim ve lif teknolojik özelliklerine etkisini belirlemek amacıyla yapılmıştır. Çalışma, Şanlıurfa-Harran Ovası koşullarında Sultantepe köyünde tesadüf blokları deneme desenine göre 3 tekrarlamalı olacak şekilde kurulmuştur. Çalışmada ekim zamanı (5 Mayıs) olarak belirlenmiştir. Denemede bitki materyali olarak Fiona çeşidi kullanılmıştır. Defoliant uygulaması olarak Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) adlı kimyasal kozaların %60'nın açtığı dönemde uygulanmıştır. Çalışmada, uygulama öncesi ve uygulama 7, 14 ve 21 gün sonrası yaprak sayısı (adet bitki<sup>-1</sup>), uygulama öncesi toplam koza sayısı (adet bitki<sup>-1</sup>), açmış koza sayısı (adet bitki<sup>-1</sup>) ve uygulama 7, 14 ve 21 gün sonrası açan koza sayısı (adet bitki<sup>-1</sup>), koza ağırlığı (g), koza kütlü ağırlığı (g), kütlü pamuk verimi (kg da<sup>-1</sup>), çırçır randımanı (%) ve 100 tohum ağırlığı (g) incelenmiştir. Çalışmada, defoliant uygulamalarından Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) uygulamasının açan koza sayısını bakımından iyi performans gösterdiği tespit edilmiştir. Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) uygulanmasından 7. 14. ve 21. günlerden sonra açan koza sayısı kontrole göre sürekli artış gösterdiği ve kontrole kıyasla % %38'lik bir fark oluştuğu tespit edilmiştir. Defoliant uygulanan parsellerden elde edilen verim dekara 486.0 kg da<sup>-1</sup> olurken, kontrol parsellerinden alınan verim 432.67 kg da<sup>-1</sup> olmuştur.

**Anahtar Kelimeler:** Pamuk, Defoliant, Verim, Verim unsurları

**ABSTRACT**

This study was conducted to determine the effect of defoliant use on cotton (*Gossypium hirsutum* L.) yield and fiber technological properties in the 2020 growing season. The study was conducted in the Sultantepe village under the conditions of the Şanlıurfa-Harran Plain, with three replications, according to a split trial design in randomized blocks. Fiona variety was used as plant material in the experiment. As a defoliant application, a chemical called Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) was applied during normal planting, when 60% of the bolls had opened. In the study, the number of leaves before application and 7, 14 and 21 days after application (piece plant<sup>-1</sup>), total number of bolls before application (number plant<sup>-1</sup>), number of bolls bloomed application (number plant<sup>-1</sup>) and 7, 14, 21 days after application, number of bolls opening (pieces plant<sup>-1</sup>), boll weight (g), boll seed weight (g), seed cotton yield (kg da<sup>-1</sup>), ginning outturn (%) and 100 seed weight were investigated. In the study, it was determined that the Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) application, one of the defoliant applications, performed well in terms of the number of cocoons that opened. It was determined that the number of cocoons that opened after the 7th, 14th and 21st days after Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) application increased continuously compared to the control and there was a 38% difference compared to the control. While the yield obtained from the parcels where defoliant was applied was 486.0 kg da<sup>-1</sup>, the yield obtained from the control parcels was 432.67 kg da<sup>-1</sup>.

**Keywords:** Cotton, Defoliant, Yield, Yield components

### Giriş

İnsan yaşamı için öncü bir bitki olarak görülen pamuk, tekstil, beslenme, film malzemesi yapımından harp sanayisine kadar 50'den fazla sanayi alanının temel hammaddesini oluşturmaktadır. Özellikle tekstil alanında ön plana çıkan pamuk bitkisi, dünyada üretilen liflerin yaklaşık %35'ini sağlamakta ve bu anlamda tekstil endüstrisinde kullanılan en önemli bitkilerden biri olma özelliği taşımaktadır (Gündüz ve ark., 2020).

Pamuk bitkisi morfolojik yapıya sahip çok yıllık ve sınırsız bir büyüme sistemi gösterdiğinden dolayı optimum şartlar altında olduğu sürece vejetatif büyüme sürmekte olup gelişimi uzun süre devam edebilmektedir (Bondada ve Oosterhuis, 2001; Tariq, 2018). Bu sebepten dolayı kaliteli ve daha iyi verim sağlanabilmesi için pamuk bitkisinin hasadını zamanında yapılması oldukça önem taşımaktadır. Genellikle, kütlü pamuk hasadının temiz ve hasat etkinliğinin fazla olması istenmektedir (Ming-Wei ve ark. 2013). Ancak olumsuz hava şartları pamuk hasadını çoğu zaman zorlaştıran önemli bir etmendir. Özellikle hasat geciktiğinde yağmur riski artmakta ve yağmurlara maruz kalan pamuğun kalitesini olumsuz etkilemektedir (Mert, 2007).

Pamuk, elle veya makineli ekipmanlar ile hasadı yapılacaksa öncesinde pamuk bitkisinin yapraklarının dökülmesi hasat açısından olumlu etkileyecektir. Yaprakların dökülmesi ile makinenin toplama randımanı daha fazla olacağı gibi kütlü pamuğa karışan yabancı madde oranı da daha az olabilmektedir (Özbek, 2011). Ayrıca yaprak dökümü ile koza açma süresi ortalama 1-3 gün daha erken olabilmekte ve birinci el kütlü pamukta, %1-20 arasında değişen bir oranında, erkencilik göstermektedir (Ming-Wei ve ark. 2013). Daha önce yapılan çalışmalarda birçok araştırmacı hasada yardımcı olmak ve hasadı kolaylaştırmak amacıyla defoliant (yaprak dökürücü) ve koza açan kimyasallardan yararlanmışlardır (Çopur ve ark. 2010; Ming-Wei ve ark., 2013; Singh ve ark., 2015; Tashaev, 2016; Beyyavaş, 2019; Beyyavaş ve ark., 2022). Bazıları tek bir kimyasaldan yararlanırken bazı araştırmacılar da birden çok kimyasal kullanarak karışım halinde kullanmayı tercih etmişlerdir

Çalışmanın yapıldığı Harran ovası Türkiye'nin pamuk üretimi bakımından öne çıkan en önemli merkezidir. Fakat iklim koşullarında meydana gelen olumsuz durumlardan kaynaklı özellikle erken görülen sonbahar yağmurları hasadı olumsuz yönde etkilemektedir. Bu açıdan temiz ve verimli bir kütlü pamuk hasadını kolaylaştırmak için yaprakların dökülmesi ve kozaların açtırılması önem arz etmektedir.

### MATERYAL VE YÖNTEM

Denemede bitki materyali olarak bölgemiz koşullarında yaygın olarak yetiştirilen tescilli Fiona pamuk çeşidi kullanılmıştır. Deneme Şanlıurfa- Harran Ovası koşullarında Eyyübiye ilçesi Sultantepe köyünde 2020 yılı yetiştirme sezonunda yürütülmüştür. Denemede, halen piyasada çiftçilerin kullanımına sunulan Dropp Ultra ticari defoliant kullanılmıştır.

1-Dropp Ultra

2-Kontrol

#### Denemeye Ait Toprak Özelliği ve İklim Koşulları

Araştırmanın yapıldığı Sultantepe köyündeki çalışma alanından 30 cm derinliğinden alınan toprak analiz sonuçları çizelge 1'de yer almaktadır.

Çizelge 1. Şanlıurfa ili Eyyübiye ilçesi Sultantepe köyüne ait toprak özellikleri

Derinlik (cm)	Organik Madde (%)	Toplam Tuz (%)	pH	Kireç (%)	P2O5 (kg da <sup>-1</sup> )	K2O (kg da <sup>-1</sup> )
0-30 cm	0.877	0.0436	8.13	20.6117	2.061	131.0546

October 13-14, 2023

Şanlıurfa ili, Eyyübiye ilçesi karasal iklimin etkisi altındadır. Yaz mevsimi kurak ve sıcak, kış ayları ise ılık ve yağışlıdır. Çizelge 2 'den, pamuk bitkisinin gelişme dönemi boyunca yıllık (Nisan-Ekim ayları) yağış miktarı uzun yıllar ortalaması 16.80 kg m<sup>-1</sup>, sıcaklık ortalaması ise 25.4 °C ölçülmüştür.

Çizelge 2. 2020 yılı ile uzun yıllar ortalamasına ait Şanlıurfa ili iklim verileri

Aylar	2020 yılı		1929-2020 uzun yıllar ort.	
	Aylık Ort. Sıcaklık (°C)	Yağış (kg m <sup>-1</sup> )	Aylık Ort. Sıcaklık (°C)	Yağış (kg m <sup>-1</sup> )
Nisan	17.1	69.3	16.2	50
Mayıs	23.2	39.1	22.2	26.8
Haziran	28.9	0.4	28.1	4.3
Temmuz	34.2	0	32.0	2
Ağustos	30.9	0	31.5	3.4
Eylül	24.0	0	27.2	4.6
Ekim	13.5	0	20.6	26.5
Ortalama	24.5	15.49	25.4	16.80

MGM, (2020). Şanlıurfa Meteoroloji Bölge Müdürlüğü İklim Veri Değerleri, Şanlıurfa.

## Deneme Deseni ve Ekim

Deneme tesadüf blokları deneme desenine göre 3 tekrarlamalı olacak şekilde kurulmuştur. Çalışmada ekim zamanı (5 Mayıs) olarak belirlenmiştir. Defoliant uygulamaları 1-Dropp Ultra (Thidiazuron+Diuron 120+60 g l-1) 2-Kontrol ise parselleri oluşturmuştur. Uygulamalar kozaların %60'ı açtığı zaman gerçekleştirilmiştir. Kontrol parsellerine kalibrasyon yapıldıktan sonra yalnızca su püskürtülmüştür.

## Bakım, Sulama, Gübreleme ve Diğer Kültürel Uygulamalar

Deneme alanı sonbaharda önceki yıla ait bitki artıkları uzaklaştırdıktan sonra pulluk ile işlenmiş, Şubat sonu ile Mart ayının başında kültüvator ile sürülmüştür. Daha sonra tapan çekilerek tarla düzleştirilmiş ve sırt çekilerek ekime hazır hale getirilmiştir. Ekimle birlikte dekara saf 8.1 kg da<sup>-1</sup> N ve 20.7 kg da<sup>-1</sup> P (18-46 DAP) gübresi, üst gübrelemede ise 12 kg da<sup>-1</sup> saf N (% 46 üre) uygulanmıştır. Denemede bakım ve sulama işlemleri geleneksel olarak yapılmış olup toplamda 7 kez karık usulü sulanmıştır.

Fide döneminde Tütün Tripsi (*Thrips tabaci*)'i zararlısına karşılık dekara 100 ml 400 g l<sup>-1</sup> Dimethoate ile birlikte kök gelişmesine destek olmak için dekara 250 ml humik asit kullanılmıştır. Pamuk Yaprak Biti (*Aphis gossypii*) ve Pamuk Yaprak Pireleri (*Empoasca spp.*) için dekara 25 g %20 Acemiprid ile taraklanmayı teşvik etmek için yapraktan dekara 200 g fosfor takviyesi yapılmıştır. Aynı zamanda dekara 25 ml pix uygulanmıştır. Pamukta Yeşilkurt (*Helicoverpa armigera*) zararlısı için dekara 17.5 ml Coragen (200 g l<sup>-1</sup> Chlorantraniliprole) ile dekara 25 g Hekplan (%20 Acemiprid) uygulanmıştır. Ayrıca yapraktan dekara 200 g fosfor ve 200 g saf potasyum uygulaması yapılmış ve kozaların %20'si açtığı sulama sonlandırılmıştır.

## Denemede İncelenen Özellikler ve Belirleme Yöntemleri

Aşağıdaki özellikler Worley ve ark. (1976)'in belirttiği yöntemler gereğince saptanmıştır. Her parselden belirlenmiş 10 bitki üzerinden uygulamadan önce koza sayısı (adet bitki<sup>-1</sup>), uygulamadan önce açmış koza sayısı (adet bitki<sup>-1</sup>), uygulamadan sonra 7. gün açan koza sayısı (adet bitki<sup>-1</sup>), uygulamadan sonra 14. gün açan koza sayısı (adet bitki<sup>-1</sup>), uygulamadan sonra 21. gün açan koza sayısı (adet bitki<sup>-1</sup>), uygulamadan önce yaprak sayısı (adet bitki<sup>-1</sup>), uygulamadan sonra 7. gün yaprak koza sayısı (adet bitki<sup>-1</sup>), uygulamadan sonra 14. gün yaprak sayısı (adet bitki<sup>-1</sup>), uygulamadan sonra 21. gün yaprak sayısı (adet bitki<sup>-1</sup>) takip edilerek sonuçlandırılmıştır.

Her parsel yanlarındaki birer sıra ve parsel başlarından 1 m'lik kısım atılıp, ortadaki iki sırada bulunan (10mx1.4m=14m<sup>2</sup>) bitkilerden toplanmış olan kütlü pamuk verileri tartılıp ve daha sonra dekara çevrilerek verim hesaplanmıştır.

### **Verilerin Değerlendirilmesi**

Denemeden elde edilen her bir özelliğin verileri MİNİTAB (18.1) istatistik paket programı ile tesadüf bloklarında bölünmüş deneme desenine göre varyans analizleri yapıp ve Tukey testine (0.05) göre ortalamalar gruplandırılmıştır.

### **ARAŞTIRMA BULGULARI VE TARTIŞMA**

#### **Toplam Koza Sayısı**

Çizelge 3'te yapılan varyans analizi sonucuna göre; Dropp Ultra defoliant uygulamaları toplam koza sayısı (adet bitki<sup>-1</sup>) yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 3'te toplam koza sayısı (adet bitki<sup>-1</sup>) incelendiğinde; denemede kullanılan Dropp Ultra uygulamalarında toplam koza sayısı 20.76-26.40 adet bitki<sup>-1</sup> arasında olduğu saptanmıştır. Pamukta defoliant kullanma kararının verilmesinde, o anki beklenen hava koşulları, bitki olgunlaşması, bitki koşulları ve hasat programlarının tümünün düşünülmesi gerekmektedir (Edmisten 2006). Çopur ve ark. (2010), Drop ultra® (DU: Thidiazuron+Diuron) ve Roundup® uygulamalarını, çiçeklenme tarihinden 60 gün sonra yapılan Drop Ultra uygulamasında, koza sayısının azaldığını; Sokat ve Gürel 2010; Tülemen 2015; defoliant uygulamalarının koza sayısı bakımından istatistikî yönden önemli bir etkisinin olmadığını bildirmeleri çalışmamızla uyum içerisindedir. Görmüş ve ark. (2017), defoliantların koza sayısına etkisi olduğunu yönünde belirtmeleri çalışmamızla çelişir niteliktedir.

#### **Uygulama Sonrası Açan Koza Sayısı**

Çizelge 3'den, açan koza sayısına ilişkin yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamaları açan koza sayısı bakımından önemli düzeyde (p<0.05) istatistikî farklılıkların olduğu izlenmektedir. Farklı defoliant uygulamaları açan koza sayısı bakımından farklı gruplar oluşturmasına rağmen birbirine yakın değerler oluşturmuştur.

Açan koza sayısı incelendiğinde; denemede Dropp Ultra defoliant uygulamasının açan koza sayısı bakımından 12.00-18.86 adet bitki<sup>-1</sup> arasında olduğu saptanmıştır. Özbek (2011), defoliantların kullanımının hava sirkülasyonunu ve güneşlenmesini arttırdığını, bunun da kozaların daha iyi açımına sebep olduğunu, Sokat ve Gürel (2010), defoliant uygulamalarının koza açımı, gibi özelliklerde olumlu bir etkileşim saptandığını belirtmişlerdir. Beyyavaş (2019), hasada yardımcı kimyasal uygulamaların kontrole göre daha fazla açan koza oluşturduğunu belirtmeleri; Raghavendra ve Reddy (2020), yaprak dökücü uygulamadan 7. gün sonra, Dropp ultranın açan koza oranında artış gösterdiği belirtmesi çalışmamızla uyum içerisindedir. Tülemen ve Kaynak (2016), defoliant uygulamasının açık koza sayısı üzerine önemli olmadığı yönünde belirtmeleri çalışmamızla çelişir niteliktedir. Ayrıca Haliloglu ve ark. (2020), defoliant uygulamasının gecikmesi açılan koza sayısı, etkilemediğini bildirmişlerdir.

Çizelge 3. Pamuk bitkisine defoliant uygulamasıyla elde edilen toplam koza sayısı (adet bitki<sup>-1</sup>), açan koza sayısı (adet bitki<sup>-1</sup>), uygulamadan 7. 14. 21. gün sonra açan koza sayısı (adet bitki<sup>-1</sup>) ve yüzde oranı (%) değerleri

	<b>Toplam koza sayısı</b>	<b>Açan koza sayısı</b>	<b>7.gün</b>	<b>14.gün</b>	<b>21.gün</b>	<b>Yüzde oranı</b>
Kontrol	20.76	12.00 B	13.23 B	13.67 B	14.86 B	% 33
Dropp ultra	26.40	18.86 A	21.20 A	22.33 A	24.20 A	% 71
CV %	15	6	4	4	3	

#### **Uygulamadan 7. Gün Sonra Açan Koza Sayısı**

Çizelge 3'den, uygulamadan 7. gün sonra açan koza sayısına ilişkin yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamaları 7. gün açan koza sayısı bakımından önemli düzeyde (p<0.05) istatistikî farklılıkların olduğu izlenmektedir. Farklı defoliant uygulamaları açan koza sayısı bakımından farklı gruplar oluşturmasına rağmen birbirine yakın değerler oluşturmuştur.

Uygulamadan 7. gün sonra açan koza sayısı incelendiğinde; kontrolde 13.23 adet bitki<sup>-1</sup>, denemede kullanılan Dropp Ultra uygulamasından sonra 21.20 adet bitki<sup>-1</sup> olduğu saptanmıştır. Dropp Ultra

uygulamaları sonrası açan koza sayısı kontrole göre daha yüksek olmuştur. Ming-wei ve ark. (2013) tüm uygulamaların kontrol parsellerinden daha fazla koza açılmasına katkıda bulunduğunu; Beyyavaş (2019) hasada yardımcı kimyasal uygulamaların kontrole göre daha fazla açan koza oluşturduğu, Beyyavaş ve ark. (2022) hasada yardımcı kimyasal uygulamalarının kontrol parsellerine göre koza açtırma özellikleri yönünden iyi performans gösterdiğini belirtmeleri çalışmamızla uyumlu niteliktedir.

### Uygulamadan 14. Gün Sonra Açan Koza Sayısı

Çizelge 3'te, uygulamadan 14. gün sonra açan koza sayısına ilişkin yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamaları 14. gün açan koza sayısı bakımından önemli düzeyde ( $p<0.05$ ) istatistiki farklılıkların olduğu izlenmektedir. Farklı defoliant uygulamaları açan koza sayısı bakımından farklı gruplar oluşturmasına rağmen birbirine yakın değerler oluşturmuştur.

Çizelge 3. incelendiğinde; kontrol 13.67 adet bitki<sup>-1</sup> olduğu saptanırken, denemede kullanılan Dropp Ultra uygulamasından 14. gün sonra açan koza sayısı 22.33 adet bitki<sup>-1</sup> olduğu saptanmıştır. Açan koza sayısına bakıldığında 14. gün açan koza sayısı, kontrole kıyasla daha yüksek ve uygulamadan 7. gün sonra açan koza sayısına göre daha yüksek olsa da, birbirine yakın olduğu tespit edilmiştir. Beyyavaş ve ark (2022), hasada yardımcı kimyasal uygulamalarının koza açtırma özellikleri yönünden iyi performans gösterdiğini belirtmeleri; Ming-wei ve ark. (2013) tüm uygulamaların kontrol parsellerinden daha fazla koza açılmasına katkıda bulunduğunu; Beyyavaş 2019 hasada yardımcı kimyasal uygulamaların kontrole göre daha fazla açan koza oluşturduğu yönünde belirtmeleri çalışmamızla uyumlu niteliktedir.

### Uygulamadan 21. gün sonra açan koza sayısı

Çizelge 3'te, uygulamadan 21. gün sonra açan koza sayısına ilişkin yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamaları 21. gün açan koza sayısı bakımından önemli düzeyde ( $p<0.05$ ) istatistiki farklılıkların olduğu izlenmektedir. Farklı defoliant uygulamaları açan koza sayısı bakımından farklı gruplar oluşturmasına rağmen birbirine yakın değerler oluşturmuştur

Çizelge 3. incelendiğinde; kontrol 14.86 adet bitki<sup>-1</sup> olduğu saptanırken, denemede kullanılan Dropp Ultra uygulamasından 21. gün sonra açan koza sayısı 24.20 adet bitki<sup>-1</sup> olduğu saptanmıştır. Açan koza sayısına bakıldığında 21. gün açan koza sayısı, kontrol ile uygulamadan 7. ve 14. gün sonra açan koza sayısına kıyasla daha yüksek olsa da uygulamadan 14. gün sonra açan koza sayısına yakın olduğu tespit edilmiştir. Beyyavaş ve ark (2022), hasada yardımcı kimyasal uygulamalarının koza açtırma özellikleri yönünden iyi performans gösterdiğini belirtmeleri; Ming-wei ve ark. (2013) tüm uygulamaların kontrol parsellerinden daha fazla koza açılmasına katkıda bulunduğunu; Beyyavaş 2019; hasada yardımcı kimyasal uygulamaların kontrole göre daha fazla açan koza oluşturduğu yönünde belirtmeleri çalışmamızla uyumlu niteliktedir.

### Yüzde oranı %

Çizelge 3'te, açım oranları incelendiğinde; denemede en yüksek koza açım oranı %71 ile Dropp Ultra uygulamasından alınırken, kontrol %33 açım oranına sahip olduğu saptanmıştır. Dropp Ultra uygulanmasından 7. 14. ve 21. günlerden sonra açan koza sayısı kontrole göre sürekli artış gösterdiği ve kontrole kıyasla %38'lik bir fark olduğu tespit edilmiştir. Defoliant uygulamalarındaki başarı pamuğun olgunluğuna ve uygulama zamanındaki iklim koşullarına bağlı olmasına bağlamıştır (Malik ve Din, 1991; Gwathmey ve HaYes, 1997). Çalışmamızda kontrol parsellerine göre defoliant uygulaması olumlu sonuç vermiştir. Beyyavaş ve ark. (2022) çalışmalarında defoliant uygulamalarının kontrol parsellerine göre koza açma yüzdelerini bizim çalışmamızdan elde edilen bulgularla uyum içersindedir.

Çizelge 4. Pamuk bitkisine defoliant uygulamasıyla elde edilen toplam yaprak sayısı (adet bitki<sup>-1</sup>), uygulamadan 7. 14. 21. gün sonra yaprak sayısı (adet bitki<sup>-1</sup>) ve yüzde oranı (%) değerleri

	Toplam Yaprak Sayısı	7.Gün	14.Gün	21.Gün	Yüzde Oranı
Kontrol	77.03	69.83	65.30	58.97	%33
Dropp ultra	75.16	60.30	41.23	17.67	%86
CV %	7	8	17	5	

### **Uygulama Öncesi Toplam Yaprak Sayısı**

Çizelge 4’de toplam yaprak sayısına ilişkin yapılan varyans analizi sonucuna göre Dropp Ultra defoliant uygulamaları toplam yaprak sayısı yönünden istatistiksel olarak önemsiz bulunduğu Tablo 4’ten izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 4’de toplam yaprak sayısı incelendiğinde; denemede kullanılan Dropp Ultra uygulamalarında toplam yaprak sayısı 75.16 olduğu kontrol ise 77.03 olarak görülmüştür. Patterson (1996), Dropp Ultra yoğun olarak kullanıldığını, hava koşullarının yaprak döktürme başarısında ana belirleyici faktör olarak dikkate alınması gerektiğini; (Edmisten, 2013). defoliant dozlarının aşırı olması desikant etkisi yaratabileceği; sağlıklı bir yaprak dökümü için yaprağın yeterince canlı kalması gerektiği ve bu sayede absiyon tabakasına yaprak dökümü için önemli kimyasalların gönderilebileceği; Cathey (1986), döktürme etkinliğinin yapraklardaki yüksek nem düzeyinde ve sıcaklık ile nemlilik yüksek olduğunda en yüksek olduğunu; Kabak ve Kaynak (2021), yaprak sayısı yönünden farklılığın olmasına, uygulanan kültürel işlemler ile çevresel faktörler etkili olduğu belirtmişlerdir. Sokat ve Gürel (2010); Tülemen (2015), defoliant uygulamasının pamukta yaprak sayısına etkisinin önemli olduğunu yönünde belirtmeleri çalışmamızla çelişir niteliktedir.

### **Uygulamadan 7. Gün Sonra Yaprak Sayısı**

Çizelge 4’de uygulamadan 7. gün sonra yaprak sayısına ilişkin yapılan varyans analizi sonucuna göre; Dropp Ultra defoliant uygulamaları, uygulamadan 7. gün sonra yaprak sayısı yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 4’te uygulamadan 7. gün yaprak sayısı incelendiğinde; denemede kullanılan Dropp Ultra uygulamalarında kontrolde 69.83 Dropp Ultra 60.30 adet bitki<sup>-1</sup> olduğu saptanmıştır. Tülemen ve Kaynak (2016); Beyyavaş ve ark. (2022) yaprak döktürücü uygulamalarının, uygulamadan 7. gün sonra bitkide kalan yaprak sayısında önemli düzeyde farklılık olduğu yönünde belirtmeleri çalışmamızla örtüşmektedir.

### **Uygulamadan 14. Gün Sonra Yaprak Sayısı**

Çizelge 4’de uygulamadan 14. gün sonra yaprak sayısına ilişkin yapılan varyans analizi sonucuna göre; Dropp Ultra defoliant uygulamaları, uygulamadan 14. gün sonra yaprak sayısı yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 4’de 14. gün yaprak sayısı incelendiğinde; denemede kullanılan Dropp Ultra uygulamalarında 14. gün yaprak sayısı kontrolde 65.30 Dropp Ultra 41.23 adet bitki<sup>-1</sup> olduğu saptanmıştır. 14. gün sonra dökülen yaprak sayısının 7. gün sonra dökülen yaprak sayısına göre daha fazla olduğu saptanmıştır. Tülemen ve Kaynak (2016); Beyyavaş ve ark. (2022) yaprak döktürücü uygulamalarının, uygulamadan 14. gün sonra bitkide kalan yaprak sayısında önemli düzeyde farklılık olduğu yönünde belirtmeleri çalışmamızla uyumludur.

### **Uygulamadan 21. Gün Sonra Yaprak Sayısı**

Çizelge 4’de uygulamadan 21. gün sonra yaprak sayısına ilişkin yapılan varyans analizi sonucuna göre; Dropp Ultra defoliant uygulamaları, uygulamadan 21. gün sonra yaprak sayısı yönünden istatistiksel olarak önemsiz bulunduğu izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 4’te 21. gün yaprak sayısı incelendiğinde; denemede kullanılan Dropp Ultra uygulamalarında 21. gün yaprak sayısı kontrolde 58.97 Dropp Ultra 17.67 adet bitki<sup>-1</sup> olduğu saptanmıştır. Uygulamadan 21. gün sonra dökülen yaprak sayısının uygulamadan 7. ve 14. gün sonrası dökülen yaprak sayısına göre daha fazla olduğu belirlenmiştir. Tülemen ve Kaynak (2016); yaprak döktürücü uygulamalarının 21. gün yaprak sayısı bakımından önemsiz olduğu yönünde belirtmeleri çalışmamızı destekler niteliktedir. Beyyavaş ve ark. (2022) yaprak döktürücü uygulamalarının, uygulamadan 21. gün sonra bitkide kalan yaprak sayısında önemli düzeyde farklılık olduğu yönünde belirtmeleri çalışmamızla çelişir niteliktedir.

### **Yüzde Oranı**

Çizelge 4'te yaprak döküm yüzdeleri hesaplanmıştır. Çalışmada Dropp Ultra uygulamasının kontrole kıyasla daha yüksek döküm oranına sahip olduğu saptanmıştır. Çizelge 4 incelendiğinde; kontrole yaprak döküm oranı %33 olarak saptanırken, Dropp ultra uygulaması sonucu %86 olarak tespit edilmiştir. Yaprak döküm oranı kontrole göre arttığı, yaprak sayısının da kontrole göre %53 oranında azaldığı görülmektedir. Dropp Ultra uygulamasının 7. 14. ve 21. günlerden sonra kontrole göre daha fazla dökülme olduğu ve defoliant uygulamasının yaprak dökümünü büyük oranda etkilediği tespit edilmiştir.

### **Koza Ağırlığı**

Yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamaları koza ağırlığı yönünden istatistiksel olarak önemsiz bulunduğu Tablo 5'ten izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 5'de koza ağırlığı (g) incelendiğinde; denemede kullanılan Dropp Ultra uygulamalarında koza ağırlığının (6.33 g) olduğu kontrol ise (6.10 g) olarak görülmüştür. Ayala ve Silvertooth (2001), defoliant seçilirken çevre şartlarına dikkat edilmesi gerektiği ve uygulama zamanının iyi seçilmesi gerektiğini; Beyyavaş ve ark. (2022), vejetasyon süresinin uzaması pamuk bitkisinde koza ağırlığı üzerine olumlu katkı yaptığını belirtmişlerdir. Çopur ve ark. (2010) çiçeklenmeden 60 gün sonra yapılan Drop Ultra uygulamasında, koza ağırlığının azaldığı; Snipes ve Baskin (1994), defoliant uygulamasının kontrol parseline göre koza ağırlığında düşüş olduğunu; Ayaz ve Emiroğlu (2003), defoliant uygulamasıyla kozalar açmaya zorlandığı için ufak kozalar açılmakta dolayısıyla tek koza ağırlığı da düşüş yaşandığı, en yüksek ağırlığının kontrol parselinden alınırken defoliant uygulaması yapılan parsellerin hepsinde koza ağırlığının düştüğünü yönünde belirtmeleri çalışmamızla örtüşmektedir. Awan ve ark. (2012); Görmüş ve ark. (2017) çalışmalarında defoliant uygulamasının kontrol parsellerine göre daha yüksek değerlerde bulunması çalışmamızla uyum içerisindedir.

Çizelge 5. Pamuk bitkisine defoliant uygulamasıyla elde edilen koza ağırlığı (g), koza kütlü ağırlığı (g), verim (kg da-1), çırçır randımanı (%) ve 100 tohum (g) değerleri

	<b>Koza Ağırlığı</b>	<b>Koza Kütlü Ağırlığı</b>	<b>Verim</b>	<b>Çırçır randıman</b>	<b>100 Tohum Ağırlığı</b>
Kontrol	6.10	4.35	432.67	44.47	8.86
Dropp ultra	6.33	4.80	486.0	45.62	8.43
CV %	3	3	4	1	4

### **Koza Kütlü Ağırlığı**

Yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamalarının koza kütlü ağırlığı yönünden istatistiksel olarak önemsiz bulunduğu Tablo 5'ten izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 5'de koza kütlü ağırlığı (g) incelendiğinde; denemede kullanılan Dropp Ultra defoliant uygulamalarında koza ağırlığının (4.80 g) kontrol ise (4.35 g) olarak görülmüştür. Ayaz ve Emiroğlu (2003), farklı olgunluk dönemlerinde yapılan defoliant uygulamalarının koza kütlü ağırlığı için önemli olduğunu belirtmişlerdir. Sokat 2008; Sokat ve Gürel 2010; Tülemen 2016; defoliant uygulamalarının koza kütlü ağırlığı bakımından önemli düzeyde fark oluşturmadığını yönünde belirtmeleri çalışmamızla uyumlu niteliktedir.

### **Verim**

Yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamalarının pamuk verimi yönünden istatistiksel olarak önemsiz bulunduğu Tablo 5'ten izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 5'de pamuk verimi incelendiğinde; denemede kullanılan Dropp Ultra defoliant uygulamalarında kontrol 432.67 Dropp ultra ise 486.0 olarak görülmüştür. Kelley ve ark. (2000); Phipps ve ark. (2002), erken yaprak döktürücü uygulamasının pamuk verimini azaltabildiğini; Çiçek ve ark. (2003), %40-50 oranında koza açılım döneminde yapılan yaprak döktürme sonucunda, kütlü pamuk veriminde düşüş

olduğunu; Çopur ve ark. (2010), çiçeklenme tarihinden 60 gün sonra yapılan Drop Ultra uygulamasında, pamuk verimi azaldığını; Denizdurduran (2008), kütlü pamuk verimi bakımından ekimden 110 ve 120 gün sonra yapılan defoliasyon işleminin en uygun zamanlar olduğunu; Beyyavaş(2019), kozaların % 60'ı açtığı dönemde en fazla kütlü pamuk veriminin, Drop Ultra uygulamalarının verdiğini; Wright ve ark. (2014) ise yaprak döktürme zamanının verimi etkilemediğini belirtmişlerdir. Elde edilen sonuçlara göre, Awan ve ark. (2012); Ming-Wei ve ark. (2013); Mrunaline ve ark. (2018); Haliloğlu ve ark. (2020) çalışmalarında defoliant uygulamasının kontrole göre daha fazla kütlü pamuk verimi verdiğini belirtmeleri çalışmamızla uyum içerisinde.

#### **Çırcır Randımanı**

Yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamalarının çırcır randımanı yönünden istatistiksel olarak önemsiz bulunduğu Tablo 5'ten izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 5'de çırcır randımanı incelendiğinde; denemede kullanılan Dropp Ultra defoliant uygulamalarında kontrol 44.47 Dropp ultra ise 45.62 olarak görülmüştür. Larson vd. 2005; Beyyavaş (2019); Kabak ve Kaynak (2021)'in defoliant uygulamalarının çırcır randımanı üzerine etki ettiği yönünde belirtmeleri elde edilen bulgular ile zıtlık sağlamaktadır. Çiçek ve ark. (2003); Karademir ve ark. (2007); Sokat ve Gürel (2010); Tülemen (2015) ve Karaman (2019) çalışmalarında defoliant uygulamalarının çırcır randımanına etkisinin olmadığını belirtmeleri çalışmamızla uyum göstermektedir.

#### **100 Tohum Ağırlığı**

Yapılan varyans analizi sonucunda; Dropp Ultra defoliant uygulamalarının 100 tohum ağırlığı yönünden istatistiksel olarak önemsiz bulunduğu Tablo 5'ten izlenebilmektedir. Uygulamalar arasında istatistiksel oranda fark görülmediğinden aynı grupta yer almışlardır.

Çizelge 5'de 100 tohum ağırlığı incelendiğinde; denemede kullanılan Dropp Ultra defoliant uygulamalarında kontrol 8.86, Dropp ultra ise 8.43 olarak görülmüştür. Kaynak ve ark. (1999), Çiçek ve ark. (2003), Karademir ve ark. (2003), Sokat (2008), Sokat ve Gürel 2010; Haliloglu vd. (2020), defoliant uygulamasının 100 tohum ağırlığını etkilemediği yönünde belirtmeleri çalışmamızla uyum içerisinde.

#### **SONUÇ**

Pamuk bitkisinde iyi bir verim ve kalite elde edebilmek için hasadın iyi bir şekilde yapılması, yaprakların döktürülmesi ile makinenin toplama randımanı daha fazla olacağı gibi kütlü pamuğa karışan yabancı madde oranı da daha az olabilmektedir. Ayrıca yaprak dökümü ile koza açma süresi daha erken meydana geldiği ve daha önce yapılan çalışmalarda birçok araştırmacı hasada yardımcı olduğunu ve hasadı kolaylaştırmak amacıyla defoliant kullanımının olumlu etki ettiğini dile getirmişlerdir. Çalışmada, defoliant uygulamalarından Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) uygulamasının açan koza sayısını bakımından iyi performans gösterdiği ve Dropp Ultra (Thidiazuron+Diuron 120+60 g l<sup>-1</sup>) uygulanan parsellerden elde edilen verim, kontrol parsellerinden alınan verime göre daha fazla olduğu tespit edilmiştir.

### ABSTRACT

Our purpose in this research was to use social media analytics to figure out the most instagrammed destinations in the context of countries in the world. Therefore, the research was exploratory, focusing on Instagram as a data source, and attempting to identify meaningful topics and patterns in social media communication using data collected from Instagram. In the study, the popularity of a total of one hundred and fifty-six countries on the social media platform called Instagram was investigated by a quantitative method. The research was carried out by using the data of Instagram and collecting the obtained results. oth the local language equivalents and the English equivalent of each country were obtained from the data and the results were collected.

**Keywords:** Communication Studies, Communication Research, New Media Technologies, Tourism Marketing, Social Media

### ÖZET

Günümüzde, turizm destinasyonları arasındaki rekabet gittikçe artarken bu destinasyonlara yönelik karşılaştırmalı araştırmalar da artmaktadır. Bu araştırmanın amacı sosyal medya analitiğini kullanarak ülke bazında Instagram platformunda en fazla taglenen destinasyonu bulmaktır. Araştırma, bir veri kaynağı olarak Instagram'a odaklanan ve Instagram'dan toplanan verileri kullanarak sosyal medya iletişimindeki anlamlı konuları ve kalıpları belirlemeye çalışan keşif amaçlı bir araştırmadır. Araştırmada, dünyadaki toplam yüz doksan altı ülkenin Instagram adlı sosyal medya platformundaki popüleritesi kantitatif bir yöntemle araştırılmıştır. Araştırma, tüm ülkelerin İngilizce isimlerinin Instagram datasından toplanması tekniğiyle gerçekleştirilmiştir. Araştırmanın sonucunda elde edilen veriler baz alınarak bir sıralama oluşturulmuştur. Araştırmanın sonucuna göre,

**Anahtar Kelimeler:** İletişim Araştırmaları, İletişim Çalışmaları, Yeni Medya Teknolojileri, Turizm Pazarlaması, Sosyal Medya

### INTRODUCTION

With development of information communication technologies, destinations have started using social media and the internet to promote themselves. Tourism industry is broadly identified for its contribution to economic development as one of the “world's biggest and fastest growing industries” (as cited in Çakıcı, Kuhzady, & Benli, 2017, p. 1). Consequently, competition among the number of tourism destinations worldwide is continuously growing (Drakulić Kovačević, Kovačević, Stankov, Dragičević, & Miletić, 2017). Because of the market is high competitive, destinations needs to cautiously allocate resources and give precedence to actions to maximize benefits. In this relation, destination positioning has become one of the main components of destination marketing/planning and strategies for making the tourism development sustainable and successful (Chen, Chen, & Lee, 2010).

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

The contention is that destination competitiveness has "... tremendous ramifications for the tourism industry and is therefore of considerable interest to practitioners and policy makers." (as cited in Enright and Newton, 2004, p.777). Dwyer, Forsyth, & Rao (as cited in Enright and Newton, 2004, p.777) reinforce this view, stating that it is "...useful for the industry and government to understand where a country's competitive position is weakest and strongest". (Enright and Newton, 2004, p.777). Researchers and tourism industry need a holistic review of the tourism industry and communication patterns among diverse stakeholders. In this relation, social media platforms have a considerable influence (Park, Ok, & Chae, 2015, p.885). "Social media use platforms where consumers express or share their opinions and seek travel information. Marketers have used social media as an affordable but powerful promotional tool to disseminate information about their brands, products and services" (as cited in Park, Ok, & Chae, 2015, pp.885-886). For example, microblogging tools like Instagram creates what is called "big data", which is large in size and diverse in type. Instagram alone generates about 50 million photograph daily (Aslam, n.d.). "Social media have drawn unprecedented attention from customers, businesses, and researchers in many disciplines. The hospitality and tourism industry is no exception; lately, social media have become a hot research item in the hospitality and tourism academic community." (Park, Ok, & Chae, 2015, p.885).

Lu and Stepchenkova (as cited in Park, Ok, & Chae, 2015, p.886) reported that most existing studies analyzed social media content, customer review websites, and blogs which are related to products and services in the tourism, lodging, or restaurant industries. The authors strongly suggested using social media content (e.g. user-generated data from TripAdvisor) effectively as a data source and incorporating more sophisticated methods of analyzing this type of data where most previous studies in tourism and hospitality have extensively relied on survey methods.

Destination tags are labels or identifiers used to specify and categorize specific travel destinations. They are commonly used in various contexts to provide information, categorize content, or facilitate navigation related to travel and tourism. Below are listed some ways destination tags are used:

- On travel planning websites and apps, users can search for and explore destinations using destination tags. These tags help travelers find information about specific places, including tourist attractions, hotels, restaurants, and activities.
- Social Media: Travelers often use destination tags when sharing their travel experiences on social media platforms like Instagram, Twitter, and TikTok. These tags make it easy for others to discover content related to a particular destination and gain insights into what to see and do there.
- Travel Blogs: Travel bloggers often use destination tags to categorize their articles and stories by location. This allows readers to browse content based on their interests in specific destinations.
- Geotagging Photos: When travelers take photos with their smartphones, they can geotag them with the location where the photo was taken. This creates a visual record of their travels and helps others identify the places they've visited.
- Travel Itineraries: Travel agencies and tour operators may use destination tags to organize and promote travel itineraries. This helps potential customers find trips to their preferred destinations.
- Travel Reviews: Review websites and apps like TripAdvisor use destination tags to categorize and organize user reviews of hotels, restaurants, and attractions in specific locations. This helps travelers make informed decisions based on the experiences of others.
- Navigation Apps: Navigation and mapping apps use destination tags to help users find directions and information about specific places. Users can enter a destination tag to get directions to that location.
- Event Promotion: Destination tags are used to promote events and festivals happening in specific locations. This helps event organizers reach a target audience interested in that destination.
- Tourist Information Centers: Physical tourist information centers may use destination tags on maps and brochures to highlight key points of interest in a particular area.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

- Marketing and Advertising: Destination tags are used in marketing and advertising campaigns to promote tourism to specific destinations. Travel agencies, airlines, and tourism boards often incorporate destination tags into their promotional materials.

Destination tags play a crucial role in helping travelers discover, plan, and share their travel experiences. They make it easier for people to find relevant information and connect with others who have similar travel interests. Whether travelers seeking information or a travel industry professional looking to promote destinations, destination tags are a valuable tool for enhancing the travel experience. People tag countries on social media for various reasons. For example, tagging a country helps provide context and location information for a post. It lets others know where the content was created or where the person is currently located. The other reason of people tag countries is travel and tourism. Many social media users share their travel experiences, and tagging countries allows them to showcase the destinations they've visited. It's a way to document their adventures and share recommendations with others. Thirdly, cultural exploration is another reason. Tagging countries can be a way to explore and appreciate different cultures. People may share content related to cuisine, traditions, festivals, and customs specific to a country. The other reason is connecting with locals. Travelers and expatriates often use country tags to connect with locals or expat communities. It's a way to find like-minded individuals or seek recommendations from residents. Search and discovery is another reason of people tagging countries. Users interested in a specific country can search for posts tagged with that country to discover relevant content, such as travel tips, cultural insights, or news updates. In summary, tagging countries on social media serves various purposes, including sharing experiences, connecting with others, promoting businesses, raising awareness, and providing geographical context. It enhances the richness and diversity of content on social media platforms and fosters connections among users with shared interests or experiences related to a particular country.

The aim of this research is to quantify which countries are tagged how much. The reasons why people tag specific countries have been listed above. The purpose of this research is not to investigate why individuals tag specific countries. Such an investigation could be the subject of a much more detailed study. In this research, the sole objective is to determine which countries are tagged to what extent using Instagram's data. The results of this research may lead to various questions, such as why a particular country is tagged more or less, and these questions may become the subject of further research. The outcome of the research can guide sociologists, communication experts, politicians, public opinion researchers, or tourism professionals to ask different questions.

Our purpose in this research was to use social media analytics to figure out the most tagged destinations in the context of countries in the world. Therefore, the research was exploratory, focusing on Instagram as a data source, and attempting to identify meaningful topics and patterns in social media communication using data collected from Instagram. Instagram was specifically chosen because Instagram data are available to businesses and researchers. Researchers and hospitality managers and have the opportunity to use social media data and analytics. Instagram data can be used by using hashtags.

The use of hashtags on social media channels often increases the influence of content (making it public). Hashtags are those short links preceded by the pound sign (#). They are used to mark keywords or topics (e.g. #visitportugal and #heritage). A destination should create their one set of hashtags. The hashtag was created organically by Twitter users as a way to categorize messages. Now it is also linked to content on Facebook, Google+ and Tumblr and is an extremely powerful tool on Instagram and Pinterest (photo-sharing tools). Hashtags are integral to the way we communicate online, and it is important to know how to use them (as cited in Oliveira & Panyik, 2014, p. 61). Clicking on a hashtagged word in any tweet, message, photo or post shows all other tweets, messages, photos or posts marked with that keyword from all around the world. In seconds, they become a piece of knowledge on the global sphere. (Oliveira & Panyik, 2014, p. 61).

It's important to note that while hashtags are a valuable tool for social media engagement and analysis, their use in academic research often involves more rigorous methodologies, data collection, and analysis techniques. Researchers aim to gain insights into online behaviors, trends, and communication patterns, which can have broader implications for various fields of study. Hashtags serve different purposes in

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

the context of social media and academic research. In academic research, hashtags can be analyzed to understand social media trends, sentiment analysis, and the spread of information. Researchers examine how hashtags are used and the impact they have on public discourse. Some academic studies focus on the use of hashtags as a form of digital communication and language evolution. They explore how hashtags have become part of everyday online communication and how they convey meaning and context. Researchers study the role of hashtags in social movements and activism. Hashtags can help mobilize and connect individuals who share common goals and concerns, making them a subject of interest in sociology and political science research.

## METHOD

In the era of new technologies, there is a widespread opinion that hashtag is very important: “Hashtags are important. Period. There’s no argument there.” (Hart, 2018). There are many destination surveys using hashtags. For example, Jet2, a travel company, has conducted ‘the most photographed countries in the world’ survey in November 2016 (see “The Most Photographed”, n.d.). However, no more detailed and comprehensive research has been carried out since then in the context of countries. Instagram research is more related to the number of active users on geography basis (see “Leading countries”, 2018). There are also researches carried out about most instagrammed destinations but they are more based on local level not countries (see “25 Most Photographed”, 2018). For example, Sony Mobile have compiled a list of the most Instagrammed landmarks in the world (see “Top 30 most”, 2017). This research was carried out in order to eliminate the deficiency in this area. The results of the study will be able to provide useful data for researches in the various interdisciplinary fields as well as in the fields of tourism industry, sociology and communication studies. Moreover, to find out the rank of Turkey in the world is important to make a situation analysis in terms of tourism potential of Turkey. This research is important for determining Turkey's popularity on the world's trendiest social media platform as a tourism destination. Additionally, since this research is comparative in nature, it will also reveal data regarding the trendiest countries by identifying and comparing them on social media, resulting in a trend ranking.

The research methodology includes data collection and sampling, In the study, instagram hashtags of all countries in the world were collected. A list of all countries is reached from the Britannica encyclopedia (“List of”, n.d.). This list includes one hundred and ninety-five countries. This research is primarily focused on tourism marketing; therefore, the decision has been made to use English tags in the study. This choice is based on the fact that hashtags in the local language of a country may provide misleading information. The hashtags being investigated here are predominantly those used by tourists visiting a particular country. Consequently, it was decided to research the English names of countries. It is clear that hashtags related to a country's local language could be more associated with internal news networks rather than tourism. Therefore, they may provide deceptive data in the context of this research.

Because Georgia which is country one has the same name the state of Georgia in the United States, Georgia, an exception had to be made to exclude it from the list because it would provide us with misleading information. In order to ensure the reliability of the ranking, it was necessary to complete the research in a very short period of time. A long lasting search could have led to a more disadvantaged position for a country that had been searched earlier and this would undermine the credibility of the ranking. Therefore the research started on September, 30, 2023 and ended on the same date.

## RESULTS

1) Venezuela: 93.500.000, 2) Colombia: 86.800.000, 3) Canada: 84.600.000, 4) Turkey: 76.900.000, 5) Spain: 75.400.000, 6) Germany: 74.400.000, 7) Chile: 71.500.000, 8) Russia: 69.7000.000, 9) Thailand: 55.730.987, 10) Brazil: 52.500.000, 11) Malaysia: 50.400.000, 12) Greece: 48.600.000, 13) Kuwait: 45.300.000, 14) Singapore: 43.800.000, 15) Poland: 41.700.000, 16) China: 39.800.000, 17) Pakistan: 39.700.000, 18) United Kingdom (England): 36.700.000 19) Jordan: 35.800.000 20) Ecuador: 32.400.000 21) Qatar: 32.100.000 22) Peru: 31.500.000 23) Switzerland: 31.200.000 24) Sweden: 30.500.000 25) Iran: 30.400.000 26) Egypt: 29.600.000 27) Panama: 28.200.000 28) Norway: 27.400.000 29) Vietnam: 26.600.000 30) Lebanon 25.400.000 31) Ireland: 24.500.000 32) Philippines: 24.500.000 33) South Africa: 24.500.000 34) India: 24.200.000 35) Austria 24.100.000 36) Azerbaijan: 23.700.000 37) Nigeria: 20.600.000 38) Costa Rica: 18.900.000 39) Israel: 18.500.000 40) Oman:

## DICUSSION

According to the research results, four of the top 10 most tagged countries are from Latin America. As mentioned earlier, the findings of the research could indeed prompt sociologists, communication experts, or public opinion researchers to ask different questions. The fact that Latin American countries are tagged to such an extent has emerged as an intriguing finding based on the research results. However, why such a result has emerged, as previously mentioned, may be a subject and question for a more detailed and qualitative research in the future. Questions may arise regarding whether the reason behind Venezuela, Colombia, Chile, and Brazil being tagged so frequently is related to tourism or the usage rates of the Instagram platform in those countries. When looking at the lower end of the ranking, it can be observed that African countries or small countries from different parts of the world are concentrated in this section. This result suggests that there may be a direct correlation between internet infrastructure, population, and economic factors and the number of tags a country receives. According to the research

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

results, Turkey has become the fourth most tagged country, while Greece is the twelfth most tagged country and Spain ranks fifth in the list. When these data are read together, it is observed that both of these tourism-oriented countries receive a high number of tags. This result indicates a connection between tags and tourism, suggesting that people may be tagging these countries more frequently when sharing their travel experiences and memories on social media platforms. This finding highlights the link between tags and the tourism industry. Furthermore, the high ranking of Kuwait, despite being a small and sparsely populated country, also confirms the relationship between tourism and tags. The rise in Pakistan's ranking, on the other hand, demonstrates that a country's tagging is influenced not only by factors such as population, internet infrastructure, economic prosperity, and tourism (none of which are assumed to be present in Pakistan) but also by how much a country is discussed in the international context due to its domestic news. The likelihood of Russia ranking eighth in the list may indeed be due to similar factors. However, as previously mentioned, the findings of this research alone cannot make such claims, and this would be a subject for a different research study to explore in detail. Clearly, why Germany is tagged so frequently despite not being a tourism-oriented country could be a question for another research study. The high rankings of countries like Thailand, Malaysia, and Singapore in the list further strengthen the relationship between tags and tourism. Indeed, the fact that these countries have been actively promoting tourism in recent years is evident. This data strongly suggests that tourism marketing is being heavily carried out on social media platforms. These countries have not gained prominence for reasons similar to those of Pakistan, which further supports the idea that active tourism promotion plays a significant role in tagging and social media engagement. The fact that China ranks high in the list despite imposing restrictions on social media platforms is indeed another intriguing result of the research. The noteworthy results of the research have been briefly discussed. This research, falling into the category of primary research as it filters, categorizes, and collects data from Instagram, has the potential to prompt researchers to ask different research questions.

**ÖZET**

Overin seks kord tümörünü andıran uterus tümörü, patogenezi tam olarak belirlenemeyen, ancak belirgin polifenotipik immünohistokimyasal bulgulara sahip, oldukça nadir görülen bir jinekolojik tümördür. Clement ve Scully, bu tümörleri ilk olarak 1976'da literatürde yayınladılar ve bunları iki alt grup içinde sınıflandırdılar. Bu tümör uterin neoplazmalar için yayınlanmış 2021 Ulusal Kapsamlı Kanseri Ağrı Klinik Uygulama Kılavuzlarında, overin seks kord tümörünü andıran uterus tümörü bir uterus sarkomu olarak sınıflandırılır ve "geniş seks kordonu benzeri farklılaşma ve endometrial stromal bileşen içermeyen yumuşak içsi hücre proliferasyonu" olarak tanımlanır. Klinik olarak, overin seks kord tümörünü andıran uterus tümörü genellikle düşük malign potansiyelli neoplazm olarak kabul edilir. Bununla birlikte, birkaç overin seks kord tümörüne benzeyen uterin tümör (UTROSCT) vakasında postoperatif takip sırasında nüks ve metastaz bildirmiştir. Bu çalışmada klinikte postmenopozal kanama ve uterin kitle varlığı sebebiyle dış merkezde opere edilen, patolojisi "overin seks kord stromal tümörüne benzeyen uterin tümörü" olarak raporlanan olguyu sunmak amaçlanmıştır. 41 yaşında, dış merkezde total abdominal histerektomi + bilateral salpingooferektomi + pelvik paraaortik lenf nodu diseksiyonu yapılmış ve patoloji raporunda uterin kavite içinde 6x3,5x2,5 cm boyutlarında, polipoid yapıda, derece 1, malign miks müllerian tümör olarak rapor edilmesi üzerine sevk edilen olgunun histopatolojisinde solid, trabeküler ve tübül benzeri yapılar, tümör içerisinde sıkışık kalan endometrial glandlar, oval-yuvarlak nükleuslu, eozinofilik sitoplazmalı, hafif şiddette atipik nitelikte tümör hücreleri izlendi. İmmünohistokimyasal boyalardan ki-67, SF-1, Kaldesmon, Kalretinin, Vimentin, Östrojen, Progesteron, Desmin ve p16, Melan A, Pansitokeratin, EMA, CK7, SMA, İnhibin, S-100 ve CD10 çalışıldı. Çoğu benign ve malign lezyonlar ile benzer histopatolojik paternler gösterdiğinden, ameliyat öncesi veya ameliyat sırasında frozen kesitler yoluyla UTROSCT'lerin doğru teşhisini yapmak genellikle zordur. Çalışmada UTROSCT malign potansiyelli bir neoplazm olarak kabul edildi. Agresif karakterlere sahip UTROSCT alt kümesi için, tümörün nüks etmesi kötü bir prognoza yol açabilmektedir. Uterin kitlelerin klinikopatolojik ayırıcı tanısında, nadiren saptanan, overin seks kord stromal tümörüne benzeyen uterin tümörler de akla getirilmelidir.

**Anahtar Kelimeler:** Uterin tümörler, Overin seks kord tümörünü andıran uterus tümörü, Overin seks kord tümörüne benzeyen uterin tümör

## ABSTRACT

Uterine tumor similar to ovarian sex cord tumor is an extremely rare gynecological tumor whose pathogenesis is not fully determined, but has distinct polyphenotypic immunohistochemical findings. Clement and Scully first published these tumors in the literature in 1976 and classified them into two subgroups. This tumor is classified as a uterine sarcoma in the published 2021 National Comprehensive Cancer Network Clinical Practice Guidelines for uterine neoplasms, uterine tumor similar to ovarian sex cord and is described as "extensive sex cord-like differentiation and soft spindle cell proliferation without an endometrial stromal component." Clinically, uterine tumor similar to ovarian sex cord is generally considered a neoplasm of indolent or low malignant potential. However, several cases of uterine tumor resembling ovarian sex cord tumor (UTROSCT) reported recurrence and metastasis during postoperative follow-up. In this study, we aimed to present a case that was operated on at an external center due to postmenopausal bleeding and the presence of a uterine mass, and whose pathology was reported as "uterine tumor resembling ovarian sex cord stromal tumor". The case was referred to a 41-year-old patient who underwent total abdominal hysterectomy + bilateral salpingo-oophorectomy + pelvic para-aortic lymph node dissection at an external center and was reported to have a 6x3.5x2.5 cm sized, polypoid, grade 1 malignant mixed müllerian tumor in the uterine cavity in the pathology report. Histopathology revealed solid, trabecular and tubular tumors. Similar structures, endometrial glands trapped within the tumor, and mildly atypical tumor cells with oval-round nuclei and eosinophilic cytoplasm were observed. Among the immunohistochemical stains, ki-67, SF-1, Caldesmon, Calretinin, Vimentin, Estrogen, Progesterone, Desmin and p16, Melan A, Pancytokeratin, EMA, CK7, SMA, Inhibin, S-100 and CD10 were studied. It is often difficult to make an accurate diagnosis of UTROSCTs via preoperative or intraoperative frozen sections, as most show similar histopathological patterns as benign and malignant lesions. In the study, UTROSCT was considered a neoplasm with malignant potential. For the subset of UTROSCT with aggressive characters, tumor recurrence may lead to a poor prognosis. In the clinicopathological differential diagnosis of uterine masses, rarely detected uterine tumors that resemble ovarian sex cord stromal tumors should also be considered.

**Key Words:** Uterine sarcoma, Uterine tumor similar to ovarian sex cord tumor, Uterine tumor resembling ovarian sex cord tumor

## GİRİŞ

Overin seks kord tümörünü andıran uterus tümörü (OSKTAUT), patogenezi tam olarak belirlenemeyen, ancak belirgin polifenotipik immünohistokimyasal bulgulara sahip, oldukça nadir görülen bir jinekolojik tümördür. Clement ve Scully, bu tümörleri ilk olarak 1976'da literatürde yayınladılar ve bunları iki alt grup içinde sınıflandırdılar [1]. Bu tümör uterin neoplazmalar için yayınlanmış 2021 NCCN Klinik Uygulama Kılavuzlarında, (OSKTAUT) bir uterus sarkomu olarak sınıflandırılır ve "geniş seks kordonu benzeri farklılaşma ve endometrial stromal bileşen içermeyen yumuşak içsi hücre proliferasyonu" olarak tanımlanır [2]. Klinik olarak, OSKTAUT genellikle sessiz veya düşük malign potansiyelli neoplazm olarak kabul edilir [3]. Bununla birlikte, birkaç overin seks kord tümörüne benzeyen uterin tümör (UTROSCT) vakasında postoperatif takip sırasında nüks ve metastaz bildirmiştir [4-6]. Bu çalışmada klinikte postmenopozal kanama ve uterin kitle varlığı sebebiyle dış merkezde opere edilen, patolojisi "overin seks kord stromal tümörüne benzeyen uterin tümörü" olarak raporlanan olguyu sunmak amaçlanmıştır.

## OLGU

41 yaşında, dış merkezde TAH + BSO + omentektomi + PPLND yapılmış ve patoloji raporunda uterin kavite içinde 6x3,5x2,5 cm boyutlarında, polipoid yapıda, derece 1, malign miks müllerian tümör olarak rapor edilmesi üzerine sevk edilen olgunun histopatolojisinde solid, trabeküler ve tübül benzeri yapılar, tümör içerisinde sıkışık kalan endometrial glandlar, oval-yuvarlak nükleuslu, eozinoflik sitoplazmalı, hafif şiddette atipik nitelikte tümör hücreleri ve tümör hücrelerinde immünohistokimyasal bulgularda

SF-1 ile diffüz boyanma izlendi (Resim1-5). İmmunohistokimyasal bulgulara ki-67 indeksi düşük; SF-1, Kaldesmon, Kalretinin, Vimentin, Östrojen, Progesteron, Desmin ve p16 (fokal) pozitif; Melan A, Pansitokeratin, EMA, CK7, SMA, İnhibin, S-100 ve CD10 negatif olarak saptanmış olup patolojik tanısı Overin Seks Kord Tümörüne Benzeyen Uterin Tümör ile uyumlu olarak rapor edilmiştir. Hastanın kontrol ultrasonografik bulguları, operasyon loju sol komşuluğunda, intraabdominal yerleşimli, birbiri ile bağlantılı görünümde, medialde 31x38 mm boyutlarında, lateralde 36x42x104 mm boyutlarında, belirgin duvar yapısı izlenmeyen, öncelikle postoperatif hematoma lehine değerlendirilen koleksiyon şeklinde rapor edilmiştir ve bu koleksiyonun takiplerinde stabil olduğu izlenmiştir.

#### **TARTIŞMA VE SONUÇ**

Klinik tablo olarak çoğu zaman menopoz sonrası vajinal kanama, anormal adet görme veya pelvik ağrı [7,8] ile başvurur ve görüntüleme sonuçlarında büyümüş bir uterus veya fibrinoid lezyona benzer bir uterin kitle saptanmaktadır. Çoğu benign ve malign lezyonlar ile benzer histopatolojik paternler gösterdiğinden, ameliyat öncesi veya ameliyat sırasında frozen kesitler yoluyla UTROSCT'lerin doğru teşhisini yapmak genellikle zordur [9]. Çalışmada UTROSCT malign potansiyelli bir neoplazm olarak kabul edildi. Klinikopatolojik, immünohistokimyal bulgulara ve gözden geçirilmiş önceki literatürlere dayanarak, yüksek mitotik aktivitenin bulunması ve çapının büyük olması ( $\geq 10$  cm) tümörün agresif karakterli olduğunu düşündürdü. Agresif karakterlere sahip UTROSCT alt kümesi için, tümörün nüks etmesi kötü bir prognoza yol açabilmektedir (10).

Uterin kitlelerin klinikopatolojik ayırıcı tanısında, nadiren saptanan, overin sex kord stromal tümörüne benzeyen uterin tümörler de akla getirilmelidir.

### ÖZET

Kadın, edebiyata 4 şekilde dâhil olmuştur: Eseri oluşturan yazar ve/veya şair, eserde tip veya karakter olarak kahraman, eserin arz edildiği hedef kitle içerisinde okuyucu ve edebiyat bilimine katkıda bulunan bilim insanları. Eseri oluşturan kadın, modern yazılı edebiyatta eril türdeşine oranla sayısal açıdan zayıf kalmıştır. Eser içerisindeki kadın olarak da esinlendiği gerçek hayattaki kadar bulunmaktadır. Edebiyatın önemli bir kısmını oluşturan şiirlerde ve özellikle şiirin hayata en çok yansıyan şekli olan şarkı sözleri çok yüksek oranda kadına hitap veya kadından bahis üzerine kurulmuştur. İnsanlık nüfusunun yarısını oluşturan kadınlar her ne kadar eserlerde genellikle olumlu anılsalar da genellikle erkek bakış açısının ağırlığı altında kalmışlardır. Kadını, erkeğin bakış açısı üzerinden değerlendirmeye itiraz, zamanla “Feminist Bakış Açısı” ve “Feminist Eleştiri” kavramlarının doğmasına sebep olmuştur. Bu çalışmamızla “edebiyattaki kadın” olgusuna yönelik “farkındalık” oluşturmayı amaçladık.

**Anahtar Kelimeler:** Türk Edebiyatında Kadın, Edebiyat, Kadın, Feminist Bakış Açısı

### GİRİŞ

“Kadın”, türünün devamı için doğuran dişi insan için kullanılan bir tabirdir. Bu yönüyle varlık âleminde diğer dişiler gibi Tanrıdan aldığı lütufla Tanrısal bir eylem gerçekleştirir: Kendi türünden yeni bir canlı meydana getirir. Dünyaya getirdiği türdeşi olan yavrusu için doğumdan önce ve sonra birçok sıkıntılı süreç geçirdiğinden hayat içerisinde eril türdeşine göre oldukça dezavantajlı duruma düşmektedir.

Fiziksel açıdan eril türdeşine nispeten zayıflığı, yaşamsal üretim araçlarına ve üretilmiş artı değerlere ulaşmada yine dezavantajlı konuma sokmaktadır. Tanrısal lütufta, aynı zamanda dezavantaja dönüşmüştür. Eril akranları daha çok üretip daha fazla üretimden pay alırken “kadın” daha çok bedel ödediği halde daha az pay almaktadır.

Erkek, kadına nispetle insanlık tarihi boyunca hemen hemen her sahada egemen olmuş, üstünlük taslamış, kadını da herhangi bir mal varlığı gibi kendi erki altına almıştır. Hatta kadını insan olarak bile sayılmadığı coğrafyalar ve dönemler olmuştur. Günümüz dünyasında bile bu anlayışın hüküm sürdüğü yerlerin varlığı gözlemlenmektedir.

Görece bu olumsuz durumun yaşanmadığı modern toplumlarda bile erkeklerin meslekleri olarak kabul edilen işlerde bir kadın performansı ile öne geçtiğinde “kadınlar adına bir başarı” olarak lanse edilmektedir. Oysa o iş dalında bir erkek performans gösterdiğinde dikkat çekmiyor ise, o “kadın başarısı” olarak lanse edilmesinin hayret, hayranlık uyandırması, dutumun hala tam eşitlenmediğini göstermektedir. Her hayret veya takdir, süregelen, kadının “edemez, yapamaz” algısının bilinçaltında varlığını göstermektedir.

Günümüzde görece “varlık alanına” çıkmaları, yaşamın birçok alanında kadınların varlığı, üretimden kaynaklanan paylarının artışı, yüzyılları bulan ve ağır bedellerle kazanılmış haklar durumundadır.

<sup>1</sup> “Edebiyat ve Kadın” başlıklı bu çalışmamız “Türkiye Türkçesi Türk Edebiyatı”na odağına almıştır.

Hatta yalnızca kadınların dezavantajlı durumlardan kurtulmaları ve yaşam standartlarının erkekler düzeyine ulaşması için kurulmuş birçok sosyal organizasyon bulunmaktadır. Bunu yaşamsal amaç haline getiren “feminizm” diye adlandırılan felsefi/mental düşünce akımı dahi oluşmuştur.

Yaşamın birçok alanında bahsedilen durum gözleendiği gibi edebiyatta da durum aynıdır. Erkeklerle oranla popüler olmuş, kabul görmüş, tarihi dönemleri aşabilmiş kadın edebiyatçı azdır. Hem şair, yazar, araştırmacı, eleştirmen, hem de edebiyat tarihçisi, derlemecisi kadınlar erkeklerin sayısına yetişmemektedir.

Oysa edebiyat, özellikle oluşma/üretme aşamasında “duygu yoğun” bir eylemdir. Kadınlar da erkeklerle nispetle daha duygusal olduklarından daha üretken olmaları aklın gereğidir. Buna rağmen literatüre, orantısız olarak, çok az kadın girebilmiştir. Bunun sebepleri kişiden kişiye farklı yorumlanabilecek olsa da zannımızca bu alanda da erkeklerin kadınlara göre daha fazla fiziksel, finansal, sektörel üstünlüğü olmalıdır. Zira bir kadın bu alanda bile çoğu zaman bir erkeğin (kocas, babası, kardeşi) onayını almaya mecbur hissetmektedir.

Anlattığımız bu durumların tümü belki bütün dünya kadınları için geçerli ise de bizim içinde bulunduğumuz İslam kültürü içinde yaşayan kadınlar için daha fazla yaşanmış bir durumdur. Oysa İslam dini kadını erkeğin malı olmaktan çıkarıp birey yapmış ise de sonraki yüzyıllarda (aşırı korumacılığın etkisiyle) kadın daha çok hayattan kopmuş ve kendisini dille ve edebiyatla anlatsa bile modern yayıncılık kanallarıyla yayımlayamamıştır. Her ne kadar “kadın ağzı” doğaçlama yoluyla, bugün “halk edebiyatı” dediğimiz türe dâhil olmuş eserler var ise de kendi isimleriyle anılmadığından “anonim” kültür unsurlarına dönüşmüştür. Yani, başka bir deyişle “kadının adı yok” olmuştur!

Yazılı edebiyat bilgisi ve bilimine uygun olarak üretim yapıp yayınlama imkânına sahip kadınlar erkeklere göre çok az sayıda kalmıştır. Bu durum hemen hemen tüm edebiyat dönemlerimiz için böyle olmuştur: Klasik edebiyatımız, Batılılaşma dönemi edebiyatımız, Tanzimat dönemleri edebiyatımız, Servet-i Fünun-Fecr-i Ati dönemleri, Milli Edebiyat akımı ve bu sınıflandırmaların dışında faaliyet icra eden şahıslarımız için de böyledir.

Osmanlı devletinin, bir rejim ve sistem deęiştirilmesiyle yerine ikame edilen Türkiye Cumhuriyeti kadınların eğitimine önem ve öncelik vermiştir. Harf devrimi/deęişikliği ile ve okullaşma oranının artmasıyla kadınların bilgilenme, öğrenme, yazma ve yazdıklarını yayınlama imkânları artmıştır. Bu durum kadınların hayatın birçok alanında olduğu gibi edebiyat alanında da kendilerini gösterme imkânlarını artırmıştır. Kadın edebiyatçılarımız, yazar ve şairlerimiz daha fark edilir ve görünür olmuşlardır. Pek az kadın edebiyatçı edebiyat tarihimizde hak ettikleri saygınlığa ulaşmışlardır.

### **Kadın ve Edebiyat**

“Kadın”, edebiyata 4 şekilde dâhil olmuştur: Eseri oluşturan yazar ve/veya şair, eserde tip veya karakter olarak kahraman, eserin arz edildiği hedef kitle içerisinde okuyucu olarak ve Edebiyata dair araştırmalar yapan bilim insanı olarak.

#### *1. Edebi Eserde Kadın*

Söyleyen, Muhatap, Tip Veya Karakter Olarak Kadın

Edebi eserleri genel olarak üç temel sınıflandırmaya tabi tutabiliriz. Bunlar; Nazım/şiir, Kurmaca metinler ve bilgi metinleri.

Nazım/şiir kategorisinde erkek şairlerin eserleri kahir ekseriyetle kadına hitaben veya kadından bahseden eserlerdir. Metnimiz içerisinde örneklerden de anlaşılacağı üzere kadın, ulaşılması arzulanan, yokluğu acı, ıstırap veren, güzelliği yüceltilen “hedef obje”dir.

Kurmaca metinlerde ise (roman, hikâye, tiyatro) gerçek hayat esas alındığından gerçek hayattaki ağırlığı kadar metinlere dâhil olmuştur. Kadını, edebiyat türleri içine girebilen bilgi metinleri diyebileceğimiz anı, gezi, günlük, biyografi, otobiyografi, mektup gibi türlerde de yine gerçek hayattaki ağırlığına denk görebiliyoruz. Hemen hemen tüm dünya edebiyatında görünüm bu durumdadır.

Türk edebiyatında ise kadın, gerek aile konumundaki görevinden gerekse diğer konumlarıyla önemli bir yere sahiptir. Yaşamın ve zamanın uğradığı deęişiklerin beraberinde edebiyat ve edebiyatımızdaki kadın imgesi de deęişiklik göstermektedir. Örneğin İslamiyet öncesi Türk edebiyatını ele alırsak buradaki

kadın imgemiz ok atan, kılıç tutan bir yapıdayken zamanın ve hayatın değişmesiyle beraber bu özelliklerinin yerini haz, aşk vb. konular almaya başlamıştır.

Mehmet Kaplan, yaşadığımız medeniyet devrelerine göre Türk edebiyatında kadın üç şekilde değerlendirilmiştir:

1. İslamiyet'ten önce ve göçebelik devrinde o, bu devrin ideal erkek tipi olan Alp tipine yaklaşır. Erkek gibi o da ata biner, ok atar, kılıç kullanır ve icabında düşmanla kahramanca çarpışır.

2. Yerleşik medeniyete ve İslâmî kültür çevresine dâhil olduktan sonra kadın, erkek gibi ve erkekten daha fazla pasif bir karakter arz eder. Toprak ve din, insanları kendilerinden üstün tabiat veya tabiatüstü kuvvetlere bağlar. Bu devirde kadının kahramanca vasıflarını kaybederek bir haz ve aşk mevzuu olduğu görülür. Batı medeniyeti tesiri altına girdikten sonra kadının ilkin edebiyatta, sonra hayatta beşerî hakları müdafaa edilir ve tamamıyla erkekle eşit bir seviyeye getirilir.<sup>2</sup>

Kadın ve edebiyat kavramının bir arada kullanılması konusunda sürekli olarak bir tartışma durumu söz konusudur. Kadının edebiyat dünyasında yazar gerekse edebiyat ürünün malzemesi olarak kullanılması yoluyla kadının mağduriyetini geniş kesimlere duyurması açısından önemlidir.

Yazılı edebiyatın ilk ürünlerinin verilmeye başladığı dönemde Türk toplumuna ait kadınlar için erkeğin hayatı içinde erkeğin kadına verdiği değere göre tanıtılmamaktadır. *“Bir erkek her çağda bütünüyle kendi yetenek, faaliyet ve birikimlerine, başarı ve başarısızlıklarına göre değerlendirilmiş ve değerlendirilmektedir. Kadınlar ise baba, koca, oğul veya erkek kardeşinin statüsüne göre değerlendirildikten sonra kişisel nitelikleri söz konusu edilebilir. Bir kadın tek başına toplum içinde var olamaz. Bağlı olduğu erkeğin yaşama alanı içinde kendini gerçekleştirebilir ve üretken olabilir. Özellikle XX. yüzyılın ikinci yarısından sonra kadınlar kendi adlarına var olabilmeye imkân buldukça sanattan edebiyata, bilimden teknolojiye kadar dış dünya ile ilgili çalışma alanlarında başarılı ve aynı zekâ seviyesindeki erkekler kadar üretken olabileceklerini göstermişlerdir. Ancak, sorumlulukta ve imtiyazda eşitlik anlayışının bütün toplum ve kesimlerde egemen olabilmesi daha zaman alacaktır. Dünyanın pek çok yerinde olduğu gibi Türkiye’de de yer yer erkeğin üstünlüğü anlayışının hâkim olduğu kabul ve yaklaşımlar hala bazı kesimlerde oldukça etkilidir”* (Günay, 1998: 50).

Türk kahramanlık destanlarında kadın tipinin önemli bir yeri vardır. Destanlarda yer alan kadın, diğer edebiyatlarda görüldüğü gibi aşk konusu ile işlenmemekte bunun yerine kahramanlıkları ile işlenmektedir. Dede Korkut Destanı’na göre kadında aranan ikinci özellik doğurgan olmasıdır. Bunun temel sebebi Türklerde oluşan “kalabalık korku”dur ve onlar içim kısır kadın bir eğlence konusudur. Türk destanlarında işlenen kadın tipinin annelik vasfı vardır. Anne ile oğulları arasındaki sevgi ve bağlılık kadın tipinin en büyük kahramanlığıdır. Kadının kocasına sadakati göçebeler için büyük bir değer ifade etmektedir ve kadın gerektiğinde erkeğini uyarır ve tehlikelerden koruma görevi ile hükümlüdür. (Kaplan, 2004: 39-50).

Muhammethacı, efsane ve rivayetlerdeki kadın tanrı tipini yaşanan toplumun tabiatı anlayamamalarına bağlar: *“Eski insanlar toplum gelişmesinin iptidai aşamasında buldukları için üretim güçleri seviyesinin, kendilerinin bilim yeteneğinin çok geriliği sebebiyle, kendilerini çevreleyen tabiat dünyasındaki çeşitli değişimleri doğru anlama imkânına sahip değildi. Bundan dolayıdır ki, onlar hem kendi çevrelerindeki tabiat olaylarının, hem de tabiat dünyasındaki çeşitli değişmelerin, tabiatüstü gücün tesirinden olduğuna inanmışlardır. Bu yüzden eski efsane ve rivayetlerde Kadın Tanrı tipi çokça canlandırılmıştır.”* (Muhammethacı, 1997: 714 Aynı zamanda Muhammethacı, Türk edebiyatındaki kadınları üç tipe ele almaktadır. Bunlar:

<sup>2</sup> Ankara Üniversitesi. “Dede Korkut Kitabında Kadın”. Erişim: 16 Mayıs 2021.

1. Kadın ilâh ve tanrıça tipindeki kadınlar: Ana İlâhe Umay bu tipe örnek gösterilebilir. Umay, Türk halkları inancında koruyucu ilahe olarak görülür. Taht, talih ve devlet Tanrısı olarak da adlandırılan Umay'ın en önemli niteliği ana ve çocukları koruduğuna inanılmasıdır.
2. Kahraman kadın tipleri: Bu tipteki kadınlar becerikli kadın kahramanların tipik örneği olup kadınların o dönemdeki tabiat güçlerini ve muhtelif düşman kuvvetlerini yenme sırasında gösterdikleri kahramanca mücadele ruhunu yansıtır. Bu tip kadınlar, kadınların kahramanlığı, çevikliği ve fedakârlık ruhunun bazen erkeklerden de üstün olabileceğini gösterir. Kadınların özelliği sadece yemek yapmak, çocuğa bakmak gibi aile işleri değil, en önemlisi insanoğlunun var olma yolundaki mücadeleleridir.
3. Zeki, güzel, vefakâr kadın tipleri: Kadınların güzelliği, çevikliği, vefakârlığı halk edebiyatında övgülerin merkezi olmuştur. İnsanlar tarafında güzel olarak görülen her şey kadınların sembolü olmuştur.<sup>3</sup>

### **1.1. İslamiyet Öncesi Türk Edebiyatında Kadın**

İslamiyet önceki Türk edebiyatı olarak adlandırılmakta olan dönem Türklerin İslamiyet dinini kabul etmeden önceki dönemleridir. Bu dönem milattan önce 4000'li yıllara kadar sürdüğü bilinmektedir.

İslamiyet öncesi Türk edebiyatında kadının egemen olduğu bir durum söz konusudur. Kadın, aileyi çevirendir. İslamiyet öncesi elimize geçen veriler daha çok Çin kaynaklıdır. Bu kaynaklardan elde edilen bilgiler doğrultusunda kadının avcılık yapma becerisinin olduğu ve Türk milletinin kadına bakış açısını göstermesi konusunda önem taşımaktadır. Kaynaklardan edinilen bilgilerin neticesinde Türk edebiyatının bu döneminde kadın ve erkeğin aynı haklara, yaklaşık görevlere sahip olduğu söylenebilmektedir. Söz edildiği üzere kadının elbise dikmek, çadır kurmak, süt sağlamak vb. görevlerinin yanı sıra avcılık, çocuk büyütmek ve hatta devlet yönetiminde söz sahihi olmak gibi görevleri de bulunmaktadır. Bu durumu örneklemek adına Orhun abidelerinde peş peşe yer alan “*Devleti idare eden Han*” ve “*Devleti bile Hatun*” sözlerinden çıkartmak mümkündür.<sup>47</sup>

Eski Türk toplumlarında anne ve baba tipi eşit tutulmaktadır. Bu eşit tutulma hem haklar hem de mal varlığı konusundadır. Eski Türklerde ev, kadın ve erkeğin ortak ürünü olarak görülmektedir. Şamanizm’de eşitlik temel kurallardan birisidir ve kadın güçlü, kişilikli ve etkilidir. (Ziya Gökalp’ten akt. Abadan-Unat, 1985; 7, Doğramacı; 1989, 133)

Türk destanlarında diğer karakterler gibi kadın karakterler de tek bir açıdan ele alınmakta ve derinlemesine işlenmemektedir. Türk destanlarında kadın daha çok erkeğin destekçisidir ve bu konumdan öteye gitmemektedir.

<sup>46</sup> Gamze Polat, “*Cumhuriyet Dönemi Popüler Aşk Romanlarında Kadın Temsilleri: Muazzez Tahsin Berkand ve Kerime Nadir Romanlarının İncelenmesi*”. Yüksek Lisans Tezi, Ankara Üniversitesi Sosyal Bilimler Enstitüsü, 2009.

### **1.2. İslamiyet’in Kabulünden Sonraki Türk Edebiyatında Kadın**

İslamiyet’in etkisinde gelişen Türk edebiyatı, Türklerin İslamiyet’e geçmesiyle başlayan bir dönemdir.<sup>4</sup> Türk toplumunun İslamiyet’i benimsemesi IX. Yüzyılda başlamış ve XI. Yüzyıla kadar devam ettiği bilinmektedir.

İslamiyet öncesinden de bilindiği üzere eski Türkler kadına toplumsal olarak önem ve değer vermektedir. Ancak benimsenen İslam dininin kutsal kitabı Kuran bir bütün olarak erkeği kadından üstün kabul etmektedir. (Altındal, 2004;35) İslamiyet’in kutsal kitabı Kuran-ı Kerim’de erkeğin üstün tutulmasından ötürü destanlarda yüceltilen, değer görmekte olan kadının yerini değerini kaybetmiş bir kadın portresinin aldığı söylemek yanlış olmayacaktır. Aynı zamanda İslami kaynakların yanlış çevirilerinin sonucunda da kadının yerinin ve rolünün toplum içerisinde değiştiği görülmektedir.<sup>5</sup>

<sup>3</sup> Mehmet Emin Bars, “Türk Kahramanlık Destanlarında Kadın Tipleri”, *International Journal of Languages’ Education and Teaching* 3(2014): 128.

<sup>4</sup> Aktan, *Türk Edebiyatında Kadın*, 15.

<sup>5</sup> Aktan, *Türk Edebiyatında Kadın*, 15.

İslamiyet'in etkisinde gelişen Türk edebiyatı dönemine ait ilk eserlerden olan Kutadgu Bilig'de kadın kavramının pasif bir biçimde yer aldığı görülmektedir. Esere göre kadın; güzelliği kendini sevdirmesi, namus ve iffetine düşkün olmasıyla olumlu bir ifade ile değerlendirilirken öte yandan kadınla toplumsal hayatta fazla yeri olmayan imge olarak söz edilmektedir.<sup>6</sup>

Örnek Beyit:

“aya koldaş erdeş söz aydım kese / bu kız toğmasa yig tirig turmasa” (Albayrak & Serin, 2015, s. 28)

“Ey dost arkadaş, sana kesin bir söz söyleyeyim; bu kızlar doğmasa, doğarsa da yaşamasa daha iyi olur.”

Örnek Beyit:

“kalı toğsa yigrek anğa yir koyı / ewi bolsa koşnu ölügler toyı” (Albayrak & Serin, 2015, s. 28)

“Eğer dünyaya gelirse, onun yerinin toprağın altı veya evinin mezara komşu olması daha hayırlıdır.”

Örnek Beyit:

“kızığ tutma ewde uzun begsizin / ökünç birle ölgey özüng igsizin.” (Albayrak & Serin, 2015, s. 30)

“Kızı çabuk evlendir, uzun süre evde tutma, yoksa hastalığa gerek kalmadan bu pişmanlık seni öldürür.”

### 1.3. Halk Edebiyatında Kadın

“Halk” kelimesi sosyolojik bir terim olup bir milletin aydın kesimi, devlet yöneticileri ve ordu mensupları dışındaki büyük insan topluluğunu ifade etmektedir.<sup>7</sup> Halk edebiyatı ise bir topluluğun yaşam şartlarını, gelişmişlik düzeylerini, diğer toplumlarla olan ilişkilerini inceleyebileceğimiz destanlar, efsaneler, masallar vb. ürünlerin oluşturduğu Türk edebiyatı dönemidir.<sup>8</sup>

Ülkemizde birçok sahanın yanında halk edebiyatı araştırmalarının bilimsel anlamda başlatıcısı ve teşvik edicisi olan Fuad Köprülü ve ondan sonra gelen ilk dönem halk edebiyatçıları bu edebiyatı; ‘Anonim Halk Edebiyatı’, ‘Âşık Edebiyatı’ ve ‘Tekke Edebiyatı’ şeklinde üç ana başlık altında sınıflandırmaktadır.<sup>9</sup>

Halk edebiyatının ana başlıklarından birisi olan Anonim halk edebiyatından söz etmek gerekirse: Âşık ve tekke edebiyatlarından bağımsız, söyleyeni belli olmayan aynı zamanda da kendine özgü söyleyişi bulunan ürünlerden oluşan edebiyattır.<sup>10</sup> Aynı zamanda bu edebiyat, Türklerin en eski tarihinden beri var olan ve Müslüman oluşlarının ardından edebiyatımız içerik bakımından bir takım farklılıklarla beraber biçimini korumuş ve geleneksel oluşunun yanında dört önemli özelliği vardır: Sahibinin/söyleyenin belli olmaması, halkın hafızasında muhafaza edilmesi, kolektif hayat içinde işlevinin olması ve manzum-mensur oluşudur.<sup>11</sup> Anonim halk edebiyatı dönemin nazım şekillerinden olan ninni ile kadını ele almak yanlış olmayacaktır. Çünkü ninni, çocukların uykuya geçişinde yardımcı unsur konumundadır. Genelde “e bebeğim e ee” yahut “uyusun da büyüsün ninni tıptış tıptış yürüsün ninni” şeklindeki kelime gruplarından oluşan ve söyleyeni belli olmayan bir türdür.

Âşık edebiyatının şairleri 16. Yüzyıldan itibaren ele aldıkları şiirlerinde kadını ön planda tutmaktadır. Âşık edebiyatında kadın, Divan edebiyatına göre daha somut bir biçimde ele alınmaktadır. Şiirde yer edinen kadının kimi beyitlerde övüldüğü görülürken kimi beyitlerde ise eleştirildiği ve eksik yönlerine değinildiği görülmektedir. Bu dönemin şiiri; sade bir dil ve daha çok hece vezniyle yazılmaktadır.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Şairlerin kopuz, bağlama, cura veya tambura eşliğinde söylendikleri şiire “Türk Saz Şiiri” de denilmektedir.<sup>12</sup>

Âşık edebiyatı şairi tarafından sevgili yani kadın işlenirken tıpkı Divan edebiyatındaki gibi kullanıldığı görülmektedir. Benzetmeler daha çok badem göz, keman kaş, selvi boylu, elma yanaklı, sırma saçlı gibi vb. şeklindedir ve fiziksel özelliklerde ise sevgilinin gözü, yüzü, saçı, endamı, beni, beli, yürüyüşü vb. olarak karşımıza çıkmaktadır.<sup>13</sup>

Bayburtlu Zihni şiirinde göz:

*"Kâkülün ser bölük zülfün yüzbaşı*

*Çin mülkünün hükümrani gözlerin*

*Perçemin Hitayi halin Habeşi*

*Değer taht-ı Süleyman'ı gözlerin"* (Özdemir & Saraç, 2015, s. 115)

Dadaloğlu'nun şiirinde sevgilinin yürüyüşü:

*"Güzelin yüzü de ayın tekeri*

*Dili oğul balı nöbet şekeri*

*Omuzlar aşağı gerdan yukarı*

*Yürüyüşü kostak olur güzelin"* (Özdemir & Saraç, 2015, s. 117)

Halk edebiyatı döneminde kadınlar, sosyal hayatlarında buldukları konum itibari ile çeşitli yönlerden ele alınmış, daha çok olumsuz olmakla birlikte olumlu yönleri ile de değerlendirilmiştir. Şiirlerde olumsuz yönleri daha baskın bir şekilde ele alınmış olsa da kadının mizah çerçevesi içerisinde işlendiği de görülmektedir. Genele göre ele alınacak olursa anne, eş veya âşık olunan kadın; eleştirilere nazaran mizaha daha az konu olduğu görülmektedir. Bu eleştirme durumunu Karacaoğlan şiirlerinde görmek mümkündür. Karacaoğlan, bir şeyin tersini söyleyerek toplumun bir bireyi olan kadının eksiklerini, kusurlarını vb. yönlerini ortaya koymakta, iğneleyici ifadelerle başurmaktadır.<sup>14</sup>

Bir sevgili olarak kadın imgesi ilk olarak “Leylâ ile Mecnûn’u ele almak mümkündür. Leylâ ile Mecnûn mesnevisinde ilk kez kadın bir erkek tarafından arzu edilip ulaşılamamıştır. Mecnûn’un Leylâ’ya karşı olan düşkünlüğü erkeklik şerefini zedelediği üzerinde söylemlerin ortaya çıkmasına neden olmuştur. Çünkü bu döneme kadar hiçbir erkek bir kadına bu denli yalvarmamış, onu kovalamamıştır. Erkek emretmiş, olmuştur. Aynı zamanda Mecnûn’un yanına gelen bir Arap kadın hakkında düşüncelerini dile getiriyor: “Muhakkak ki her kadın vefasızdır. Ahde vefa keyfiyetini yazdıkları zaman kadınların ismine gelince kalem kırılmıştır. Kadın, senden başka sevecek bulamadığı müddetçe sever; ama bir başkasını bulunca seni göresi dahi gelmez! Kadın erkekte fazla sever, fakat bu sevgisinde hodgamdır. Kadın yalancı ve hilekârdır... Kadın bir hile kumkumasıdır. Evlilik hayatı zahiren sükûn ve saadet manzarası gösterir, fakat hakikatte gizli bir savaştır. Kadın, düşman olunca can için bir alettir; dost olursa canı helak eder. Yap dersin dinlemez; yapma dediğin şeye dört elle sarılır. Sen kederli isen o sevinir; sevinirsen kederinden ölür. Bu, doğru kadınların işidir, kötülere gelince onların hikâyesi çok uzundur.”<sup>15</sup> Bu söylemden yola çıkılarak dönemin kadının kötü bir eleştiriye tabii tutulduğu görülmektedir.

Leylâ ile Mecnûn mesnevisi ile tarihte kadın cinsel obje olarak nitelendirilmekten öteye gitmiş ve sevgili olmuştur. Sevgili olan kadın için; gözyaşı dökülmüş, dağ delinmiş, çöllere düşülmüş ve kendisine kavuşmak için bir erkeğin kendi canını feda ettiği ilk metin olarak karşımıza çıkmaktadır.

<sup>12</sup> Aktan, Türk Edebiyatında Kadın Divan Edebiyatında Kadının Yeri (Önemi, Nicelik ve Nitelikleri), 38.

<sup>13</sup> Aktan, Türk Edebiyatında Kadın Divan Edebiyatında Kadının Yeri (Önemi, Nicelik ve Nitelikleri), 39.

<sup>14</sup> Aktan, Türk Edebiyatında Kadın Divan Edebiyatında Kadının Yeri (Önemi, Nicelik ve Nitelikleri),

<sup>15</sup> Nizami, *Leylâ ile Mecnûn*, Ankara: Milli Eğitim Bakanlığı Yayınları, 2016, 112.

“Ferhat ile Şîrîn” mesnevisi, klasik aşk üçgeni üzerinde şekillenmekte olan bir hikâyedir. Bu mesnevîde sadece tasavvufî değerler anlatılmamakta aynı zamanda da sadece bir aşğın sevgilisine kavuşmak için çektiği acılar ele alınmamaktadır. Eserin kaleme alındığı dönemde kadının böylesine yüceltilmesinin başlangıcında bir Müslüman-Doğu hikâyesinin bulunduğu dille getirilmesi sembolik anlamı tartışılmayacak kadar önemli aynı zamanda da değerlidir.

Halk edebiyatı şairleri kadını şiirlerinde sosyal hayatlarında buldukları konum itibari ile farklı yönlerden ele alınmıştır. Şiirlerinde kadını ele alan sanatçılar onları çeşitli açıdan eleştirilene tutmuştur. Şiirlerde kadın; anne, eş veya âşık olunan kadın; eleştirilene nazaran mizaha daha az konu olduğu görülmektedir.

Halk edebiyatı sanatçılarından olan Koroğlu, ele aldığı şiirlerinde kadın-aşk-erkek üçlemesine rastlanmaktadır. Koroğlu'nun anlatmalarında birçok kadın ismine rastlanmaktadır. Bunlar: Mömîne Hanım, Telli Nigar, Dâna Hanım, Döne Sultan, Mercan Hanım, Esmer Hanım gibi adlara sahip karakterlerdir. Koroğlu'nun bu aşk ve evlilik maceralarındaki temel nokta klasik aşk ve halk hikâyelerinde farklı bir konumda olmasıdır. Bu durum klasik halk anlatılarında âşık olma durumu rüya vasıtası ile olurken Koroğlu anlatılarında bu biçimde olmamaktadır. Aynı zamanda Koroğlu'nun Anadolu anlatmalarında söz konusu edilen âşık olma genellikle Koroğlu veya keleşlerinden birinin bir kızının güzelliğinin övülmesi sonucu ona ilgi duyması veya Koroğlu veya keleşlerinden birine onların gücünü kuvvetini duyan bir kızın, onları görmeden ilgi duyması gibi durumlar ile ortaya çıkmaktadır.<sup>16</sup>

Metin Ekici, “keleş” adıyla anılan Koroğlu'nun yiğitleriyle evlenen, onlara yardımcı eden ya da onlara düşmanlık eden kadınlar bulunduğu söz etmektedir ve bu kadın tiplerini Koroğlu anlatmaları üzerinden inceleyerek üç kısma ayırmıştır:

Koroğlu veya keleşlerinin evlenmeyi düşündüğü veya kendileri Koroğlu veya kardeşleriyle evlenmeyi düşünen kadın tipler, Koroğlu veya keleşlerine yardımcı olan kadın tipler, Koroğlu veya keleşlerine kötülük eden kadın tipler.<sup>17</sup>

Özetlemek gerekirse Türk edebiyatının bu döneminde kadın, doğal güzellikleri kullanılarak yüceltildiği bilinmektedir. Aynı zamanda Türk destanlarında kadın önemlidir. Bu durumu destanda yer alan kadının evlilik yoluna çıkması için ona talip olan kişilerin belli bir mücadeleye girmesinden çıkarmak mümkündür.

#### **1.4. Klasik Türk Edebiyatında Kadın**

Türk Edebiyatında birçok adla anılan ve İslamiyet'in kabulünden sonra yazılı geleneğe dayanan edebiyattır. Bu dönem sanatçıların eserlerini, "Divan" adı verilen el yazması kitaplarda toplamasıyla dönemin isminin belirlenmesine sebep olduğu bilinmektedir.<sup>18</sup>

Türk edebiyatının bu döneminde kadın, yüceltilmekte olduğu söylenmektedir. Bunun temel sebeplerinden birisi de âşık olarak adlandırılmakta olan kişinin sevgiliye olan tapma duygusudur. Burada âşğın hissetmekte olduğu aşk tanrıya duyulmakta olan aşkın bir gölgesi, yansımadır ve kadına duyduğu aşk onu mutlak sona götürecektir.

Divan edebiyatında kadın şiirlere konu olan sevgili konumunun yanı sıra şair kadınlarımız da bu dönemde peyda olmaya başladığı görülmektedir. Ancak erkek hegemonyasının bulunduğu Divan edebiyatında kadın şairlerimizin ışığının pek parlamadığını demek yanlış olmayacaktır. Çünkü İslamiyet'in kabulü beraberinde kadına verilen değer, önem azalmaya başlamış ve bunun beraberinde kadınların imajının lekelenmesi göz ardı edilemeyecek bir unsurdur.

Bu dönemde yer alan şair ve yazarlar: Fıtnat Hanım (18.yy), Şeref Hanım (19.yy), Âdile Sultan (19.yy) gibi isimlerden oluşmaktadır.

Divan edebiyatında yer almakta olan kadın şairler, henüz kadın mektepleri olmamasına rağmen aile içerisinde tahsil görmüş olan kadınlardan oluşmaktadır.

<sup>16</sup> Metin Ekici, “Anadolu Sahası Koroğlu Anlatmalarında Kadın Tipler”, *Millî Folklor*, 11/4 (Haziran 1988): 16.

<sup>17</sup> Ekici, “Anadolu Sahası Koroğlu Anlatmalarında Kadın Tipler” 11.

<sup>18</sup> Aktan, *Türk Edebiyatında Kadın*, 24.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Divan edebiyatı döneminde kadın şair olan yazarların gerek meslektaşları olan erkek yazarlarının gerekse de eşleri tarafından kıskanıldıkları görülmektedir. Sanatsal açıdan kadın bir yazar olmanın zor olmasının yanı sıra bu kıskançlıkların ve yadırgamaların üzerinde toplumsal açıdan da kadın yazar olmanın zorlaştığı görülmektedir. Bu dönemde yazar olan kadın şairler, aşk ve tasavvufi konular üzerinde şiirler kaleme almıştır.

Hürrem Sultan, Osmanlı sarayında ilk kadın şair olarak tanınan Kanuni'nin kendisinden "*canum baharım güzeller şahı sultanım celisi halvetüm varum habibüm mahı tabanum enisi mahremüm yarüm*" hatta "*sitanbulum karamanum diyar-ı milleti rumum / bedahşanum ü kıpçağum ü bağdatum horasanum*" diye hitap ettiği eşidir.<sup>19</sup>

Leylâ Hanım, asrının bilinmekte olan ilk kadın şairlerinden birisidir. Kaleme aldığı şiirlerinde derviş ruhlu ve rind olduğunu bir müstezadında şu şekilde belirtmiştir:

*"Eyyam-ı şebeb etdi güzere bedeyi Leylâ*

*Terk etmedi belâ*

*Rindan iledir ülfetimiz rind-i cihanız*

*Biz âşık-ı canız*"<sup>20</sup>

İzzet Molla'nın kız kardeşi olarak da bilmekte olduğumuz Leylâ Hanım'ın bazı manzumelerinde abisinin izlerine de rastlanmaktadır. Aynı zamanda kendisinin ince, derviş ruhlu ve olgun bir kadın olduğu; şiiri kolay söylediği ve içinde yaşamakta olduğu durumu şiirine kolaylıkla yansıtmakta olduğu bilinmektedir.<sup>21</sup>

Babası Mehmed Nebil Bey'in izinden giderek Divan edebiyatının kadın yazarı olarak tanınan bir diğer kişi ise Şeref Hanım'dır. Şeref Hanım'ın, eserlerinde sade bir dil kullanmış, ev ve aile hayatına dair unsurlara yer vermiştir. Bazı mısralarının ahengine, ileride imalesiz bir devre girecek olan Türk arûzunun müjdecisi sayılacak bir ifade söz konusudur.<sup>22</sup>

*"Gûş etme bu âlemde şematat-ı aduyı*

*Zevkinde ol eğlen de ne delerse desünler*"<sup>23</sup>

Şeklindeki deyişi ile Şeref Hanım, kendi döneminde kadının hürriyetinin önem teşkil etmesi gerektiğine değinmiştir.

16.yüzyılın bir diğer kadın şairi Nisai, Şehzâde Mustafa'nın katledilmesi üzerine kaleme aldığı iki mersiyesi ile tanınmaktadır. Bir kadın şair olarak döneminde sözünü çekinmeden ve korkmadan dile getirmesi dönemin kadınları olmak üzere herkes için önem arz etmektedir. Mersiye'nin ilk bendine bakacak olursak:

*"Zulm idüp nev-cevâna eyledün cevr-i fezâ*

*Boynına dakdun kemendi cânına kıldun ezâ*

*Şefkat îmândur bilürken kılmanın havf-i hüdü*

<sup>19</sup> Emine Ersöz, "XV.-XVI. Osmanlı Döneminde Kadın Şairler", 3/5(Mayıs 2014): 179.

<sup>20</sup> Nihat Sami Banarlı, *Resimli Türk Edebiyatı Tarihi*, bs.3.(İstanbul: Milli Eğitim Basımevi, 1987), 1.

Cilt: 840.

<sup>21</sup> Banarlı, "*Resimli Türk Edebiyatı Tarihi*", 840.

<sup>22</sup> Banarlı, "*Resimli Türk Edebiyatı Tarihi*", 841.

<sup>23</sup> Banarlı, "*Resimli Türk Edebiyatı Tarihi*", 841.

*Merhametsüz şâh-ı âlem n'itdi Sultan Mustafâ*"<sup>24</sup> şeklindedir.

Şehzâde Mustafa'nın ölümü üzerine yazılan diğer mersiyeler ile Nisai'nin mersiyesi mukayese edildiğinde; diğer mersiye yazarlarının Nisai kadar ağır bir üslup kullanmadığı görülmektedir.

Bir diğer kadın yazarımız ise Fitnat Hanım diğer bir adlandırmasıyla Fitnat Zübeyde, Şeyhülislam Ebu İshakzâde Mehmed Efendi'nin kızı olarak bilinmektedir. Gerek dönemi gerekse diğer kadın şairlerle mukayese edildiğine adından daha çok söz ettirmeyi başarmış şairdir. Nüktedan ve hazır cevap bir hanım olduğu, aynı zamanda Arapça ve Farsçayı çok iyi bildiğinden bahsedilmekte, bu durumda yazmış olduğu divançesi bir kanıt niteliği taşıyabilmektedir.<sup>25</sup>

Divan edebiyatında yer almakta olan Fâzıl(Enderûnî), "Zenân-nâme" adını taşımakta olan eserinde; her kadın milletinin güzellerinin tasvirini yapmaktadır. Bu tasvirler içerisinde en çok İstanbul kadınları ön plandadır. Onları, bilhassa saçlarına saba rüzgârının bile değmediği ve ev kadınlarını hürmete layık bir aile mahremiyeti içinde beğenerek, saygı ile bahsetmektedir.<sup>26</sup>

### 1.5. Batı Tesirindeki Türk Edebiyatında Kadın

1789 Fransız Devrimi beraberinde yayılmaya başlayan "eşitlik ve özgürlük" kavramları, 19. Yüzyılda çöküşe başlamakta olan Osmanlı Devleti'nin umut ışığıdır ve Osmanlı Devleti'nin yaptığı bu iktisadi, toplumsal, kültürel ve siyasal değişimlerin genel adlandırılmasına "batılılaşma" adı verilmektedir.<sup>27</sup>

Türk edebiyatının bünyesine 19. Yüzyılda giren batılılaşma akımının beraberinde kadının eserlerdeki yeri değişmektedir. Bu değişim ile kadının toplumdaki yeri ve önemi tartışılmakta aynı zamanda da eserlere konu olduğu görülmektedir. Edebiyatımızın ilerleyen safhalarında kadınlık bilinci oluşmaya başlamakta ve çeşitli medya unsurları ile topluma yayılması yolunda çalışmalar yapılmıştır. Bu çalışmaların en önemlileri Osmanlı-Türk tarihinde oldukça önemli bir değişimi simgeleyen 'batılılaşma' çabalarının, birikimine ulaşarak anlamlı bir dönüşümü gerçekleştirdiği Tanzimat ve Meşrutiyet döneminde atılmıştır.<sup>28</sup> Bu adımlar atılmadan önce kadın, erkek ile aynı konumda değildir.

İnsanların temel ihtiyaçları arasında önemli bir yeri olan iki unsur; dinlemek ve anlatmaktır. Zamanın sürekli akışı, unutmayı, hafıza kayıplarını yanında getirmektedir. Bu sebepten ötürü insanoğlu yüzyıllar boyunca bazı şeyleri dinlemiş bazı şeyleri anlatmış, ortaya edebî türleri çıkartmıştır. Bu türler ise insanlık tarihi ve kültürünü taşımaktadır. Yazar ve/veya şair çevresinde bulunduğu edebiyat malzemelerini bazı işlemlerden geçirerek baştan üretir. Bu üretimin sonucunda ise ortaya bir tür çıkmaktadır. Roman da, üzerinde işçi titizliğiyle çalışılarak ortaya koyulan bu türlerden biridir. Aynı zamanda: "Roman, toplumsal hayatı ele alan ve bu hayatı enine boyuna inceleyen, bu yönüyle de verileri içinde barındıran önemli bir edebi türdür."<sup>29</sup> Bu sebeple diğer sanat dallarının aksine hayatı ve gerçekleri açık bir şekilde aktarmaktadır.

Tanzimat fermanının beraberinde Türk edebiyatında olan değişimin yanı sıra sosyal yaşantıda da değişimler görülmektedir. Bu değişimlerin en büyüğü ise kadının bu düzende kendinin farkına varması, yer aramasıdır. Orhan Oktay, "Osmanlı toplumunda kadının bir problem olarak ortaya çıkışı Tanzimat'la beraberdir."<sup>30</sup>(1191:159) şeklindeki cümlesiyle bu değişimden söz etmektedir.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Türk edebiyatında kadın söyleminin ilk ismi Mithat Efendi'dir ve onun kadından söz ettiği Esaret'in ve Felsefe-i Zenan'ın 1870'de yayımlandığı bilinmektedir.<sup>31</sup> Tanzimat dönemi romanlarında işlenmekte olan Avrupalı kadın karakterler ile Türk kadınlarının Avrupalı yaşam tarzını öğrenmesi sağlanmıştır. Batılı yaşam tarzını kendine amaç edinen Türk kadının aile, ahlak vb. açıklardan ortaya çıkan değişimlerin ikileminde kaldığı da görülmektedir.

Kaleme alınan romanlar genellikle aşk teması üzerinden şekillenmektedir. Bu durumun temel sebebi Avrupalı düzene imrenen Türk edebiyatı yazarlarının aşkı da Avrupalı tarzda ele almak istemesinden kaynaklıdır. Aşkı işleyen roman türünde kadın; düşmüş yahut cariyeye olarak kullanılmaktadır. Aynı zamanda eserlerde yer alan Batılı kadın karakterlerin, Türk kadın karakterlerine göre daha serbest tavırlı takıldığı görülmektedir. Bu durum Ahmet Mithad Efendi'nin eserinde şu şekilde geçmektedir:

*“O Türk karısı ki, tavrından azametinden geçilmez. Güya nîm handesiyle, insanı ihyâ edecekmiş gibi bunu dahi ketm ü imsâk ederek çehresinden düşen bin parça olur. Nazı çekilmez. Şakası lezzetsiz. Bilirsin ya a kardeş, Bilirsin ya! Ama bir cariyeye al. Artık bizim gibi serbest, hür adamlar bir esirden ne lezzet alabilir? Kim bilir gönlü kimdedir! Esirin olduğu için sana râm olmağa mecburdur.”*(Felatun Bey ile Rakım Efendi, 74)<sup>34</sup>

Romanlarda işlenmekte olan; aşk, esaret, cariyelik, kadının düşmesi, feminizm vb. konular ile dönemin insanlarına mesajlar verilmesi amaçlanmış, kadının sosyal hayatta aktif bir konuma gelmesi ve nasıl bir yere sahip olması gerektiğini açıklamaya çalışılmıştır.

Tanzimat dönemi ile oluşmaya başlayıp Cumhuriyet devri Türk romanına kadar devam edecek olan batılı tiplerin ilk örneklerini Ahmet Mithat Efendi'nin “Felatun Bey ile Rakım Efendi” romanında görülmektedir. Söz konusu esere göre Batı ile temas kuran kadının, ideal olanı temsil etmektedir. Aynı zamanda bahsi edilmekte olan dönemin romanlarında yer almakta olan kahramanlar yoluyla da kadınların hayat tarzlarında değişimlerin oluşmaya başladığı görülmektedir. Bu durum “Zehra” romanının kahramanı Zehra'da görmek mümkün çünkü o Dünya görüşünü okumakta okuduğu romanlar çerçevesinde şekillendiren bir kadın kahramandır. Bu kadın kahramanlar, iyi bir eğitim almamalarına olarak gerçek dünya ile romanların kurmaca dünyası arasında kalır ve bu durum onların doğru kararlar almalarına engel teşkil etmekte ve Flaubert'in “Madam Bovary” adlı romanından mülhem olarak dünya edebiyatına “bovarizm” olarak giren “hayal-hakikat” tezadının Türk edebiyatındaki ilk belirgin örnekleri arasında sayılabilir.<sup>32</sup>

Namık Kemal'in “İntibah” adını taşımakta olan romanı bir aile durumunu işlemektedir. Eserin ana kahramanı olan Ali Bey'in Mâhpeyker'i tanınması üzerinde şekillenmektedir. Bu romandaki kahramanımız Mâhpeyker, meşrep bir kadın olarak karşımıza çıkmaktadır. Aynı zamanda Mehmet Rauf, “Genç Kız Kalbi” adlı romanında kadınların hayatlarının dedikodu ile geçtiğini ve yerde bağdaş kurup birbirlerini çekiştirmekten zevk aldıklarından bahsetmektedir.<sup>33</sup> Fatma Âliye Hanım'ın romanında yer almakta olan Nebahat ve Piraye karakterleri alafranga tiplerdir. Fatma Âliye'nin ideal kadın tiplerinde aradığı en önemli özellik ise “kıskanç ve histerik” genç kız profilidir.<sup>34</sup>

Mehmet Rauf, kadının erkeğe muhtaç olarak yaşamasının aşağılayıcı bir durum olmasından “Genç Kız Kalbi” romanında şu sözlerle bahsetmiştir: *“Mesela Behiç Bey, şimdi istediğini yapmakta, istediğini görmekte, istediğini sevmekte serbesttir; arzu ettiği zaman istediği yere gider, istediği adamlarla görüşür, istediği şeylerle meşgul olur. Bizim bu esir hayatımıza göre ne kadar imrenilecek bir hayat!..*

<sup>32</sup> Mehmet Onur Hasdedeoğlu, “Tanzimat Dönemi Yazarlarının Roman Kahramanlarında Okuma Kültürü”, *Uluslararası Dil, Edebiyat ve Halkbilim Araştırmaları Dergisi* 3/5(2015): 18.

<sup>33</sup> Pınar Bayram, “Tanzimat Döneminde Kadın”, *Uluslararası Hakemli İletişim ve Edebiyat*

*Araştırmaları Dergisi* 2/5(Güz Dönemi 2014): 354.

<sup>34</sup> Betül Coşkun, “Türk Modernleşmesini Kadın Romanları Üzerinden Okumak – Tanzimat'tan Cumhuriyet'e-“, *International Periodical For the Languages, Literature and History of Turkic* 5/4(Sonbahar 2010): 936.

*İşte, ben, ne istediğim vakit sokağa çıkabilirim... Ne de istediğim şeyi yapabilirim, ne istediğim yere gidebilirim... Çünkü kadını... Yani iradesiz, arzusuz, kudretsiz bir aciz, bir esir...”* (Mehmet Rauf, 1997:47).

Edebi eserlerde gerek kadın-erkek ilişkisinde gerekse kadınların kendi arasında çatışması görülmektedir. Bu durum; Batı edebiyatı etkisinde gelişen Türk edebiyatı döneminde aşk evliliği yapılan kadına kötü gözle bakılıp onu geleneğe karşı çıkmakla yargılayan kişiler ile açıklamak mümkündür. Şemsettin Sami'nin “Taaşuk-ı Talat ile Fitnat” adlı eserinde kadının özgürlüğüne şu ifadeler ile vurgu yapılmaktadır: “*Ah biçare biz karılar! Bizi hiç insan sırasına koymazlar! Babalarımız, istedikleri adamlara bizi hediye verircesine verirler. O adamın tabiatını bize sormazlar. Biz o adamlar ile geçinecek miyiz? Orasını hiç düşünmezler.*” (Şemsettin Sami, 2011:37).

### 1.6. Tanzimat Edebiyatında Kadın

1831 yılında ilk Türk gazetesi olarak bilinen *Takvim-i Vekayi*, gazetesinin ardından 1840 yılında William Churchil tarafından *Ceride-i Havadis* gazetesi yayımlanmaya başlamıştır. Tanzimat Edebiyatı'nın başlangıcı olarak ise 1860 yılında Şinasi ile Agâh Efendi'nin ilk özel gazete olan *Tercüman-ı Ahval*'i çıkarması kabul edilmiştir. Böylece Batı etkisindeki Türk Edebiyatı'nın ilk devresi başlamıştır.

1860'dan sonra imparatorluğun siyasi ve toplumsal durumunda önemli gelişmeler göze çarpar ve bunlar tabiatıyla edebiyatın gelişmesinde önemli katkılar sağlamış aynı zaman Mustafa Reşit Paşa'nın 1858'de ölümünden sonra 1871 tarihine kadar yönetimi elinde tutan Ali Paşa, batılılaşma hareketinin temposunu düşürdüğü bilinmektedir.<sup>35</sup>

Bu dönemde Realizm ve Natüralizm'in Avrupa'daki en büyük ismi olan Emile Zola; ünlü fizyoloji bilgini Claude Bemard'ın tıptaki Ekspresimantalizm, yani deney metodu gibi yöntemler benimsendiği ve romanlara uygulandığı görülmektedir.<sup>36</sup>

Türk edebiyatının bu devresinde modernleşmenin beraberinde kadının ön plana geldiği görülmektedir. Bu dönemle birlikte toplumu diğer yarısını oluşturan ve gerçekte toplumsal yapıyı şekillendiren kadının farkına varılarak kadının medeni seviyesinin yükseltilmesinin önemi vurgulanmaktadır.<sup>37</sup> Aynı zamanda bu dönemle birlikte Türk toplumunda en çok değişime uğrayan unsurlardan birisi de aile kurumu olduğu görülmektedir. Batı'ya yönelmekte olan Türk edebiyatıyla birlikte Türk milletinin yaşayışı ve kültürü de değişim göstermektedir. Bu durum için Cevdet Paşa, II. Mahmut devrinde adeta vükelanın iltimasıyla kendilerine şehirli kadınların yeni yeni giyindikleri feracelerden yaptırılan saray kadınları, Cuma ve bayram alaylarına hususi araçla gelmelerinden söz etmesinden anlamak mümkündür.<sup>38</sup> Aynı zamanda kadına yabancı dil, özellikle Fransızca, Batı kültürü ve piyano çalma: genelde Fransız mürebbiyenin nezaretinde öğretilir.<sup>39</sup>

Tanzimat Dönemi'nde kız çocuklarının eğitimiyle ilgili de gelişmeler yaşanmıştır. Bu dönemde ve öncesinde, tutucu görüşün 9-10 yaşına gelen kız çocuğunun artık erkeklerden saklanması düşüncesi toplumda ağır basmakta ve öğretmenlerin erkek olması, bu fikrin sürmesine, bu durum da kızların eğitimden mahrum bırakılmasına neden olmaktadır.<sup>40</sup> Aynı zamanda Tanzimat'la birlikte, eğitim olanaklarının sağlanması ve sınırlı da olsa yasal değişikliklerin yapılmasıyla başlayan toplumsal dönüşüm, basın ve edebiyat yoluyla yayılmaya çalışılmıştır.<sup>41</sup>

<sup>35</sup> Akyüz, *Modern Türk Edebiyatının Ana Çizgileri*, 12.

<sup>36</sup> Önder Göçgün, *Hüseyin Rahmi Gürpınar*, bs.3. (Ankara: Ofset Repromat Matbaası, 1990), 4.

<sup>38</sup> Ahmet Hamdi Tanpınar, *19. Asır Türk Edebiyatı Tarihi*, 7. bs.(İstanbul: Çağlayan Yayınları, 1988), 142.

<sup>39</sup> Romanımızda çocukları her sahada yetiştirmek üzere ev içinde istihdam edilen ilk kadın mürebbiye, Midhat Efendi'nin *Karnaval*'inde görülür. (İstanbul 1881).

<sup>40</sup> Polat, “*Cumhuriyet Dönemi Popüler Aşk Romanlarında Kadın Temsilleri*”, 17.

<sup>41</sup> Polat, “*Cumhuriyet Dönemi Popüler Aşk Romanlarında Kadın Temsilleri*”, 18.

Edebiyatımızda bilinen ilk roman Şemsettin Sami'nin Taaşuk'ı Tal'at ve Fitnat adlı eseridir. Bu eser ile Türk edebiyatının geleneksel olandan kopmadığını ancak Batılılaşma yolunda önemli adımlar atıldığı görülmektedir. İlk köy romanı olarak adlandırılan Nazbizâde Nazım'ın kaleminden çıkan Karabibik, ilk realist roman Araba Sevdası Recaiâde Mahmut Ekrem tarafından kaleme alınmış, ilk tarihi roman Cezmi ve ilk edebi roman olan İntibah ise Namık Kemal tarafından Tanzimat edebiyatı döneminde yazılmıştır. Bunların yanı sıra; Ahmet Mithat Efendi, Sami Paşazade Sezai, Mehmet Murat (Mizancı Murat), Fatma Aliye Hanım gibi yazarlarda roman türünde eserler verdiği bilinmektedir.

Tanzimat edebiyatı ile ilk defa Türk edebiyatı sahasında görülmeye başlayan hikâye-roman kavramları beraberinde bir karmaşaya sebebiyet verdiği görülmektedir. Bu karmaşa arasında kalan yazarlardan birisi olarak Ahmet Mithat Efendi'yi ele almak mümkündür. Ahmet Mithat'ın kaleme aldığı eserler incelemeye tabii tutulduğunda bir sayfası hikâye gibiyken bir diğer sayfası roman özelliği barındırmakta olduğu görülmektedir. Aynı zamanda Ahmet M. Efendi, romanlarında Türk okurunun geride kalmışlığına değinerek bu konudan yakındığı görülmektedir.

Tanzimat döneminin kadın yazarı olarak bilinen Fatma Âliye Hanım'ı 1891 yılında Ahmet M. Efendi ile kaleme aldığı "Hayal ve Hakikat" adlı roman ile tanımamız mümkündür. Eserde kadın karaktere ait olan kısımlar Fatma Âliye tarafından kaleme alınmışken erkek karaktere ait olan kısımlar Ahmet Mithat tarafından kaleme alınmıştır. 1892 yılında yayınlanan "Muhadarat" adını taşımakta olan roman Fatma Âliye Hanım'ın kendi ismiyle yayımlanan ilk eseridir.<sup>42</sup> Fatma Âliye, bu eseri ile ilk aşkın unutulamayacağı tezini yıkmaya çalışmıştır. Eserlerinde kullandığı kadın karakterler daha çok ideal kadın tipleridir. Bunlar; Batılı tarzda büyümüş, aristokrat aile üyesi olan aydın kadınlardır. Muhadarat adlı eserin kahramanlarından olan Fâzıla, "Fatma Âliye Hanım ve o devrin diğer kültürlü kadınlarının idealize edilmiş bir örneğidir."<sup>43</sup> Fatma Âliye Hanım'ın eserlerinde yer alan kadın karakterler bahsedilen bu özelliklerinden ötürü erkeklerden üst konumda yer almaktadır. Ancak Batılı tarzda yoğurulan bu karakterlerin bir yanı halen geleneksel kültüre bağlı olduğu da görülmektedir.

Dönemin yazarları; kadının temel sorunlarından, kadın-erkek eşitsizliğinden, görücü usulü ile yapılan evlilikten ve kadının söz sahibi olmaması gibi konularda eserleri kaleme aldığı görülmektedir. Ele alınan bu eserlerle kadını gündeme getirmek ve sosyal hayata sokmak amaç edilmediğinden söz etmek mümkündür. Ne yazık ki dönemin yazarlarının bu çabasının olumsuz sonuçlandığını Tanzimat döneminden önce oluşan pasif kadın portresini Tanzimat romanı ve diğer türlerle ele almaktan öteye gittiği söylenememektedir.

### 1.7. Servet-i Fünun Edebiyatında Kadın

Tanzimat dönemi ile başlayan edebi alandaki yenileşme çalışmaları, tam anlamı ile ilk örneklerini Servet-i Fünun döneminde vermektedir. Bu nedenle Servet-i Fünun edebiyatı, 1950'li yıllara kadar daha çok "Edebiyatı-i Cedide/Yeni Edebiyat" adıyla anıldığı bilinmektedir.<sup>44</sup> Eserlerinde ağır ve sanatlı bir dil görülen Servet-i Fünun sanatçıları belirli bir sosyal hayat tabakasına ait olan bireylerin hayatlarını kendilerine konu edindiklerini söylemek mümkündür.

Türk edebiyatının Servet-i Fünun (1896-1901/1909) devresinde kadın artık birey olarak görülmektedir.<sup>45</sup> Artık geleneksel kadın portresinin yerinde bireyselliği ön planda tutan kadın portresi bulunmaktadır.

Servet-i Fünun sanatçıları, Tanzimat dönemi ve diğer dönem sanatçılarının aksine daha profesyonel nitelikler taşıyan eserler ortaya koymuştur. Bu dönemin romancıları, Tanzimat romancılarını gibi kişisel özelliklerini eserlerine yansıtmayı değil kişiliklerini saklamayı seçmiştir. Aynı zamanda da Servet-i

<sup>45</sup> Özcan, "Cumhuriyet Dönemi", 122.

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

Fünun sanatçıları vermek istedikleri mesajı karakter ile yoğurmuş ve bu şekilde okuyucuya sunduğu görülmektedir.

Ahmet H. Tanpınar için Servet-i Fünun sanatçılarının Batılılaşma yolunda gösterdikleri yönelimde platonik bir hayranlığın ilerisinde bir durum olduğu düşüncesindedir. Onların, şiirde parnasizm ve sembolizm; roman ve hikâyede realizm ve natüralizm; fikir boyutunda da pozitivizm gibi akımları benimsemeleri sonucunda eskiye dair bir kapıyı kapattıklarını aynı zamanda da onların yöneldiklerini örnekler, şekilde görüş ve duyuş tarzında dilde derin ve kökten değişmeyi zorunlu hale getirdiğini söylemek mümkündür.<sup>46</sup>

Edebiyat-ı Cedideciler, Tanzimat devri romancılarından farklı bir ideolojide hareket etmiştir. Karamsar bakış açısını benimseyip aynı zamanda da siyasal ve sosyal sorunlara sırt çeviren yazarlar bu durumlar karşısında da Tanzimat dönemi yazarlarından ayrılmıştır. Buna paralel olarak da kaleme aldıkları eserlerinde yer alan karakterler de hayal kırıklığı havuzunda yüzen kişiler olmuştur.

Avrupalı tarzda ilk roman veren Halid Ziya, Tanzimat edebiyatından kendi dönemlerine gelinceye kadar Batı edebiyatı ile kurulan bağları ve kendilerinin bu konuda attıkları adımları şu sözleri ile açıklamaktadır: “Tanzimat edebiyatı, mesela Fransız edebiyatıyla münasebetinde Chateaubriand’la Volney’den, nazımda da Corneille ve Racine’leri ihmal ederek, ancak Victor Hugo’nun satanının başlangıcından Lamartine’e ve Musset’ye kadar inmişken Edebiyat-ı Cedide aradaki uzun mesafeyi ancak genç bacaklarda bulunabilecek bir kuvvet ve cesaretle, yalnız bir hamlede aşırılmış ve bütün son çağda edebiyatını kucaklayarak, kendisiyle aynı yaşta ve aynı çağda bulunan Batı edebiyatı şahsiyetleriyle birlikte yaşamaya başlamıştı.”<sup>47</sup>

Halid Ziya Uşaklıgil’in romanlarında yer alan kadın ve genç kız tiplerinin buldukları toplum içerisinde yaşamsal mücadele yürütmekte olduğu görülmektedir. Romanda yer almakta olan bu karakterler, Batılı kadınların özelliklerine sahip olma ve kimliklerini kabullendirme yolunda adımlar atmaktadır. Ancak bu adımları atmakta olan karakterler ya tamamıyla açılma ya da tamamıyla kapanma durumu göstermektedir.

Edebiyat-ı Cedide ile yeni bir Türk edebiyatı dönemine geçmekle birlikte yeni bir sevgili imgesi de oluşmaktadır. Divan edebiyatında sevgili, soyut olan iken Edebiyat-ı Cedide topluluğu yazarları tarafından somuta evirildiği görülmektedir. Bu dönemin romanlarında kadına birtakım özellikler yüklendiği ve erkekle aynı konumda olması durumu da söz konusudur. Tanzimat döneminde ele alınan eserlerde görülen kadın karakterler daha çok cariye olarak yer almakta çaresiz, zayıf ahlaklıdır. Ancak Servet-i Fünun döneminde romanlara konu olan kadın kahramanlar tahsilli, düşünerek hareket etme özgürlüğüne sahip ve kendi kişiliğinin farkında olan kadınlardır. Türk kadınının ilk dönemlerde yaşadığı baskıcı tutumu kaleme alan yabancı bir kadın yazarın “Türk Kafeslerinin Ardı”<sup>48</sup> adlı eseri ile anlamak mümkündür.<sup>49</sup>

Bu dönemin önemli roman eserlerinden olan ve hareketin temel taşı olarak sayabileceğimiz “Mai ve Siyah” adlı eserde idealist bir şairin iç dünyası ve bir Türk ailesinin yaşam tarzı, adetleri ve dönemi tasvir edilmektedir. Aynı zamanda Halid Ziya’nın kaleminden çıkma bir diğer eser olan “Aşk-ı Memnu” adlı romanda ise batılı tarza evirilmiş olan zengin Türk ailesinin hayatı işlenmektedir. Batılı tarza en yakın hatta batılı tarzda eserler olarak alabileceğimiz bu eserlerde sosyal davalar bulunmamakta ve romanlarda yer alan kahramanların iç dünyasına yönelerek sosyal hayat tasvir edilmektedir. 19. yüzyıl kadını düşünmeyen bir yapıdadır ve bu dönemin eserleri böyle bir çevreden esinlenerek kaleme alınmıştır. Buna paralel olarak devrinde sessiz olan kadınlar, eserlerde de sessiz şekilde işlenmiştir.

Dönemin yazlarından birisi olan Mehmed Rauf, edebiyat sahasında “Eylül” adlı ilk psikolojik romanı ile yer kazanmıştır. Eserde ön planda tutulan hayalleri ve duyguları ön planda tutulurken sosyal çevre

<sup>46</sup> Ahmet Hamdi Tanpınar, *Yahya Kemal*, bs.1.(İstanbul: Dergâh Yayınları, 1982), 38.

<sup>47</sup> Şükran Kurdakul, *Çağdaş Türk Edebiyatı*, bs.1. (İstanbul: Evrensel Basım Yayınları, 2000), 38-39.

<sup>48</sup> H.D. Jenkish, *Behind Turkish Lattices*, 1bs. (London, 1909).

<sup>49</sup> Cahit Kavcar, “Batı Uygurluğu Karşısında Servet-i Fünun Romancıları”, *Dergipark*(Eylül 2019), 303.

geri kalanda tutulmaktadır. Bunu Uşaklıgil'in romanlarında söz ettiğimiz duruma benzetmek mümkündür. Ancak Mehmet Rauf'un en dikkat çeken özelliği üslubundaki gevşekliği olmuştur.<sup>50</sup>

Edebiyatı-ı Cedide diğer adıyla Servet-i Fünun döneminde yer alan diğer şair/ yazarlardan söz etmek gerekirse bunlar; Mehmet Rauf, Cahit Yalçın, Saffeti Ziya, Hüseyin Rahmi Gürpınar, Ahmet Rasim, Tefrik Fikret, Cenap Şahabettin şeklindedir.

Servet-i Fünun dönemi yazarlarından olan Hüseyin Rahmi Gürpınar, Tanzimat dönemi hikâye, roman ve tiyatrolarının belli başlı konularından birini teşkil eden; ana-baba zoru ile veya eşini hiç görmeden yapılan evlilikler ve bunların sonucunda ortaya çıkan kötü durumlar, acı olaylar Gürpınar'ın romanları içinde ilk defa *Bir Muâdele-i Seudd* adlı eserinde görülmektedir.<sup>51</sup>

Bahsi edilen Servet-i Fünun dönemini özetlemek gerekirse; bu dönemde kadın eğitime tabi tutulması medeniyetin gelişmesi açısından görülmekten ziyade kadının birey olarak kendi yönelimlerini seçmesi için eğitim görmektedir. Aynı zamanda dönemin yazarları eserlerinde kadını; samimi, sanatkâr ruhlu, kültürü güzelliğini besleyen, erkek için bir teselli ve kuvvet kaynağıdır.<sup>52</sup> Servet-i Fünuncular bir kadın duyarlılığına sahiptirler ve kadın, onların duygu ve düşüncelerini anlatmada kullandıkları bir semboldür.<sup>53</sup> Bu dönem eserlerinde kadının, kadınlık yönleri ile ön plana çıktığı görülmektedir.

### 1.8. Fecr-i Ati Edebiyatında Kadın

Fecr-i Ati topluluğu ilk olarak Servet-i Fünun dergisinde yayımlanan 12 Mart 1909 tarihli bir haber ile kendilerini duyurmuştur.<sup>54</sup> Bu durunun beraberinde bir beyanname ile bağlı kalacakları prensipleri ve hedeflerini ilan edecek olan Fecr-i Ati üyeleri sanat görüşlerini şu şekilde ifade etmiştir: "*Sanat şahsi ve muhteremdir.*"<sup>55</sup>

Fecr-i Ati roman ve hikâyelerinde yazarlar daha çok aşk teması üzerinde durduğu görülmektedir. Aşk teması ile şekil bulan bu eserlerde genellikle kötü anne ve düşmüş konumda olan kadın tiplemesinin varlığı söz konusudur. Bu tiplerden birisi olan kötü anne, kızlarının kaçınılmaz sonunu hazırlama görevi ile hükümlüken, düşküm kadın tipi ise kendisini diğer kadın karakterler ile kıyaslamaktır. Düşmüş kadın olarak tanıtılmakta olan kadın karakterler, dönemin erkeklerinin kadını tanınması ve kadının nasıl bir varlık olduğunu anlaması noktasında basamak görevini üstlenmekte olduğu görülmektedir. Daha çok aşk üzerinden şekillenmekte olan eserlerde kadın- erkek ilişkisi içerisinde bulunan roller açısından âşık kadınlar, kurgu gereği mutsuzluğa mahkûm veyahut toplumsal engellere karşı karşıya gelmektedir.<sup>56</sup>

Dönemin yazarlarından olan Cemil Süleyman'ın "Dört Sene Sonra" adını taşımakta olan eserinde bir çiftin aşkı işlenmektedir. Ancak bu eserde ne kadın karakterin ne de erkeğin adına yer vermemiş, sadece karakterleri tasvir etmiştir. Eserde kadın karakterinin adlandırılmamış olması durumu ile kadın karakterinin ön plana çekilmesi adına yapılmış olan bir durumdur. Aynı zamanda anlatıcının kadına isim vermediği hikâyelerde kadın, evlilik içinde toplumsal normların dayattığı zevcelik rolünü taşıırken mücadele etme arzusundan kopar ve duyguları ifade ediş, onların iç dünyasında bir serzenişe dönüşmüş olduğu söylenmektedir.<sup>57</sup>

Fecr-i Ati romanlarında yer almakta olan kadın karakterlerinin bir kısmında aşk söz konusu olduğunda, kadın üzerinde kurulan baskıyı kendi içerisinde çatışarak yaşadığı görülmektedir. Eserlerde yer verilen

<sup>50</sup> Kenan Akyüz, *Batı Tesirinde Türk Şiiri Antolojisi*, bs.3.(Ankara: Doğu Matbaacılık ve Ticaret Limited Şirketi, 1970), 96.

<sup>51</sup> Göçgün, *Hüseyin Rahmi Gürpınar*, 47.

<sup>52</sup> Özcan, "Cumhuriyet Dönemi", 122

<sup>53</sup> Ogün Kırtıl, "Türk Romanında Kadın ve Bir Tereddüdün Romanı", *Kadın Araştırmaları Dergisi*, 5 (1995), 128.

<sup>54</sup> Korkmaz v.dğr. , *Yeni Türk Edebiyatı El Kitabı(1839-2000)*, 228.

<sup>55</sup> Korkmaz v.dğr. , *Yeni Türk Edebiyatı El Kitabı(1839-2000)*, 228.

<sup>56</sup> Ayşegül Ayık, *Fecr-i Âti Romanında ve Hikâyesinde Kadın*(Yüksek Lisans Tezi, Yıldız Teknik Üniversitesi Sosyal Bilimler Enstitüsü, 2019), 67.

<sup>57</sup> Ayık, *Fecr-i Âti Romanında ve Hikâyesinde Kadın*, 47.

dul kadın karakterler de bu çerçevededir. Dul kadın karakterlerin yaşadıkları aşk cinsellik barındırmakta ancak bu durum dönemin özelliklerini yansıtacak düzeyde değildir.

Düşmüş, düşkün kadın karakterler Fecr-i Ati dönemi eserlerinde daha çok erkeğin cinselliği tatması noktasında önemli bir yerdedir. Bu karakterlerin bazıları fuhuş yapan kadınlarken bazıları da fuhuş batağına düşmemiş ancak bulunduğu sosyal çevrede o şekilde adlandırılan kadınlardan oluşmaktadır. Yakup Kadri'nin "Yalnız Kalmak Korkusu" adını taşımakta olan eserinde böyle bir durum söz konusudur. "Elimi elektrik düğmesine götürdüm. Derhal odaya tatlı bir ziya döküldü. Kadın tâ önümde duruyor ve davetkâr, muharrik bir nazarla bana bakıyordu." ("Yalnız Kalmak Korkusu", 30)

Fecr-i Ati topluluğu, roman ve hikâyelerinde anne olarak kadın önemli bir konumdadır. Kadın olarak annenin söz konusu olduğu eserlerde anne-çocuk ilişkisi geniş çerçeveye ile okuyucuya sunulmaktadır. Kötü anne rolündeki kişiler daha çok tip olarak eserde görülmekte ve kötü kişi ön planda tutulmaktadır. Fecr-i Ati döneminde anne olarak kadın karakterler verilerek anneliğin önemi vurgulanmıştır.

Sözü edilmekte olan Fecr-i Ati topluluğuna kadın: evli, bekâr, yabancı, dul, düşmüş, cariyeye, anne, âşık, erkeğin aşkından karşılık bulamamış, terk edilmiş, aldatılmış, hasta, kıskanç gibi şekillerde eserlere konu olmuştur.

### 1.9. Milli Edebiyat Döneminde Kadın

Milli edebiyat dönemi, II. Meşrutiyet dönemi sonrasında ortaya çıkan birtakım görüşlere göre İstiklal Savaşı'nı da içine alan ve Cumhuriyetin ilanına kadar devam eden edebiyat faaliyetlerine verilen adlandırmadır.<sup>58</sup>

Milli edebiyat hareketinin ilk filizi olan *Genç Kalemler*'in ilk şekli, Haziran 1909'da Manastır'da *Hüsn ve Şiir* adıyla on beş günde bir yayımlanan edebî dergidir. Dördüncü sayıdan sonra Selânik'e taşınan dergi, 23 Temmuz 1909'dan itibaren burada Selânik Hukuk Mektebi talebeleri H. Hüsnü ile İsmâil Subhi tarafından çıkarılmıştır.<sup>59</sup> Genç Kalemler dergisi etrafında şekillenmekte olan Milli edebiyat döneminde 1911 yılında dergide yayımlanan Turan manzumesiyle Bütün Türkçülük fikrini benimsediğini göstermiş olan Ziya Gökalp (1876-1924), bilhassa I. Dünya Savaşı boyunca, bu hareketin lideri durumundadır.<sup>60</sup>

Bu dönemin yazarları milli kaynakları kullanmayı kendilerine amaç edinerek özde milliliğe dönmeyi istemektedir. Türk edebiyatının başka edebiyatlardan beslenmesi görüşüne karşı bir tutum sergilemekte olan Milli edebiyatçılar dilde sadeleşmeyi ve yabancı sözcüklerin Türkçeden çıkartılması gerektiği görüşüne eserlerinde yer verdiği görülmektedir.

Yakup Kadri Karaosmanoğlu, Refik Halit Karay, Reşat Nuri Güntekin, Ebubekir Nazım Tepeyran, Halide Nusret Zorlutuna, Ömer Seyfettin, Ziya Gökalp, Mehmet Emin Yurdakul gibi yazarlar Milli edebiyat döneminde eser veren yazarlardır. Bahsi edilmekte olan yazarlar, Türk hikâyeye ve romanında bu dönemle birlikte yavaş yavaş bireysel temaların dışına çıkarak sosyal konulara eğilmeye başlamıştır.<sup>61</sup> Bunun beraberinde halk ile aydın çatışması ortaya çıkmıştır.

Milli edebiyat devresinde kadın, tıpkı erkekler gibi savaş mücadelesi içinde yer aldığını görmek mümkündür. Dönemin siyasal eğilimleri ile şekillenen Milli edebiyat döneminde, kadın olgusunu romanlarının odağına yerleştirmeyi başaran ve Milli edebiyat döneminin en önemli romancılarından birisi olarak Halide Edip Adivar'dan da söz etmek mümkündür.<sup>62</sup>

Fatma Âliye ile aynı zamanlarda roman yayınlayan Halide Edip'in eserlerinde meşrutiyetin izlerine rastlanmaktadır. Aynı zamanda Halide Edip'in romanlarında geleneksel kadın tipleri, ideal kadın

<sup>58</sup> Korkmaz v.dğr, *Yeni Türk Edebiyatı El Kitabı(1839-2000)*, 184.

<sup>61</sup> Sevgül Türkmenoğlu, "Milli Edebiyat Dönemi Roman ve Hikâyeciliğine Genel Bir Bakış", *Sosyal Bilimler Enstitüsü Dergisi* 45(Sonbahar 2019): 37.

<sup>62</sup> Şengül "Kadın Edebiyatı", 46.

kahramanı farklı bir bakış açısı ile yansıtma açısından önemli bir işlev görmektedir.<sup>63</sup> Halide Edip Adıvar'ın "Ateşten Gömlek"<sup>64</sup> adlı eserinde yer alan kadın karakteri vermek mümkündür. Eserde yer almakta olan kadın karakterimiz cinsel kimliği ile ön plana çıkmaktan ziyade toplumsal birlik ve mutluluk duygusu ile ön plandadır. Bu yönüyle bakacak olursak Milli edebiyat devrinde kaleme alınan kadın karakterler; milli bilince ulaşmayı başarmış, millet uğruna gözünü bile kırpmadan canını verecek olan kişilerdir.

Adıvar, eserlerinde sade bir dil kullanmakta aynı zamanda Adıvar'ın romanlarında tamamen terk ettiği realist bir yaklaşımla eserlerini kaleme alması da dikkat çekmektedir.<sup>65</sup>

Milli edebiyat dönemi yazarları artık bir gözlemci olarak Anadolu'yu anlatmak yerine bizzat yaşayıp, görerek eserlerini kaleme almıştır. Bu durum ile de okuyucu "taşra" gerçeklerini, insanların yaşadığı cehaleti, yoksulluğu görmüştür. Aynı zamanda Milli edebiyat döneminde ele alınan eserlerde genel konunun "Milli Mücadele" olduğundan söz etmek mümkündür. Türk edebiyatının bu devresi ile eserlerin: dili, işleniş biçimi ve teması değişmiş ve bunun beraberinde de Türk edebiyatında yeni bir serüven başlamıştır.

### 1.10. Cumhuriyet Dönemi Edebiyatında Kadın

Türkiye Cumhuriyeti Devleti'nin kurulmasından 1939'a kadar uzanan dönemi işleyen ve içine alan Türk Edebiyatı'nın en son evresi aynı zamanda da takip edilebilen evresi Cumhuriyet Devri Türk Edebiyatı (Atatürk Devri Edebiyatı) olarak adlandırılmaktadır.<sup>66</sup>

Bu dönemde eser vermekte olan yazarlar ve şairler Cumhuriyet dönemi öncesinde de bu sahada olan yazarları da bünyesinde barındırmaktadır. Cumhuriyet'in ilk yılları olarak adlandırılan bu devrede: Halide Edip Adıvar, Kerime Nadir Azrak, Osman Cemal Kaygılı gibi isimler yer almaktadır.

2. Meşrutiyet Dönemi, kadının sosyal hayattaki konumunun artmasına imkân sağlamıştır. 1917'de çıkarılan "Aile Hukuku Kararnamesi"nde kadınlara yönelik hükümler yer almıştır. Bu hükümler doğrultusunda kadınlar ilk defa derneklerde çalışma olanağını bu dönemde kazanmıştır.<sup>67</sup>

Cumhuriyet'in ilk dönemlerinde yazılmaya başlanan eserlerde "Kurtuluş Savaşı"nın destekler niteliktedir. Aynı zamanda bu dönemde yazarların kaleme aldığı eserlerle inkılaplara destekçi olarak sürecin hızlanmasını sağladığı görülmektedir. İnkılapların ivme kazanması yolunda yazılan romanlarda inkılapların halka aktarılması söz konusudur. Ancak kaleme alınan bazı eserlerde bu inkılapların eksik yanları da çıkmıştır.

Edebiyatın bu devresinde çeşitli Türk edebiyatı şair ve yazarları kadının İslamiyet öncesinde olduğu gibi değer kazanması gerektiği düşüncesini benimsemektedir. Bu düşünce temelinde hareket eden sanatçılardan olan ve Batı'ya yönelen Salahaddin Asım: "Kadının "iyi bir eş ve anne" olması gerektiğini belirten İslamcılara karşı çıkarak bu anlayışın kadını erkek için bir "şehvet kölesi", çocuk için ise fedakâr bir bakıcı konumuna indireceğini belirtir. Asım kadına toplumsal yaşam içerisinde hak ettiği yerin verilmesi ve onun eğitilmesiyle sağlıklı bir toplum kurulabileceğini vurgular (Asım: 1989, 22). Aynı zamanda Türk edebiyatının bu döneminde kadının özgürlük kazandığı görülmektedir. Bu özgürlükler doğrultusunda kadın, kendi ihtiyaçları için yaşamaktan vazgeçmiştir.

Cumhuriyet dönemi ile hayatımızda var olmaya başlayan, Kemalizm beraberinde ev ve iş hayatında başarılı olan kadınları meydana getirmiştir.

Kadınlar, "İslâmî kadın", "Kemalist kadın", "Sosyalist kadın" olmuşlar ancak hiçbir zaman "sadece kadın" olamamış ve 1970-1990 yıllarındaki süreçte kadın yazarlar sadece Kemalizm'in bu ikiliğini ve

October 13-14, 2023

Sosyalizmin başarısızlığını tatmakla kalmamışlar, kendilerine sorulmaksızın ya da kendi seçimleri olmaksızın kendilerine yüklenen farklı tipteki rol modelleri de tatmışlardır.” (Gülendam: 2001, s. 105)

Batılılaşmanın ilk tohumlarının atılmaya başladığı dönem olarak bilinen Tanzimat edebiyatında görülmeye başlanan kadının erkekleştirilme durumu Cumhuriyet dönemi Türk edebiyatında da görülmektedir.<sup>68</sup> Bu durum ile edebi eserlere konu olan kadın, tıpkı bir erkek gibi hürdür. Cumhuriyet’in ilk yıllarında, dönemin birçok kadın yazarı gibi Halide Edib de siyasi mücadelenin içinde yer almaktadır ancak diğerleri gibi “*hayallerini gerçekleştirecek görevler beklerken Halide de manevi anlamda linç edilmiş, işlevsiz kılınarak “öldürülmüştü”. Vurun Kahpeye adı, başına gelenlerin bir özeti idi.*” (Çalışlar: 2010, s. 303). Halide Edip, eserlerinde kadın karakterlerinin evliliği konusunda bazen muhafazakâr olmuş bazen ise serbest tutum sergilemiştir. Adıvar’ın değerler karşısında az çok muhafazakâr olan tutumu “Raik’in Annesi ve Handan” adlı eserinde ortaya çıkmaktadır.<sup>69</sup>

Halide Edib Adıvar (1882 veya 1884- 9 Ocak 1964), gerek muharebe döneminde gösterdiği başarıları neticesinde gerekse Milli edebiyat dönemini yansıtan eserleri ile akıllarda yer edinmiştir.

Tomris Uyar (15 Mart 1941- 4 Temmuz 2003), dönemin önemli dergilerinde yayınladığı çeşitli türlerdeki eserleri ile kendinden söz ettirmiştir.

Edebiyatımızın “*çoksatar*” kavramı ile eşleştirilen ve okumayı elit kavram olmaktan çıkaran kadın yazar ise Kerime Nadir (5 Şubat 1917-20 Mart 1984) olmuştur.<sup>70</sup>

Adalet Ağaoğlu(23 Ekim 1929- 14 Temmuz 2020), ele aldığı eserlerinde farklı dönemleri ve bu dönemlerde yaşayan insanların hayatlarını konu edinmesi yönüyle 20. Yüzyılda kendinden en çok söz ettiren kadın yazar olmuştur.

Üç kadın yazarımızdan olan Şükûfe Nihal, ele aldığı eserlerinde askerlik meselelerine değinmiş ve yaptığı göndermelerle Türk edebiyatında önem kazanmıştır. Bir romanında askerlik meselesinden şu sözlerle bahsetmektedir: “*Ben, kadını siyasi hakka malik etmek için uğraşan kadın cemiyetlerine hayret ediyorum. Bu cemiyetler, evvela, bütün kadınları bir iş sahibi etmeye alıştırmak için çalışmalı. Çünkü içtimai mevkii olmayan hiçbir fert siyasi hakka malik olamaz*” (Şükûfe Nihal, 2008a: 162, 163).

Cumhuriyet döneminde ile kadın yazarların ele aldığı eserler, erkek yazarların eserlerini yayınladığı dergilerde yayımlanmamakta, kadınların çıkarttığı “kadınlara mahsus” dergilerde yayınlanmaktadır. Bu dönemin kadın şairleri: Adile Ayda, Canan Apak, Mefkûre Dünder, İnci Asena, Aysel Özakin, Feriha Altıok, Neclâ Aysan, Nurten Çelebioğlu, Türkan İldeniz, Halide Nusret Zorlutuna, Sevim Dil, Emine Erbaş, Meliha Avni, Birhan Keskin, Meral Üner gibi isimlerden oluşmaktadır.

Dönemin şairlerinden olan Türkan İldeniz, bir kadın olarak kadına kadını anlatma sorumluluğu ile şiirlerini kaleme almıştır.<sup>71</sup> “Yarış” adını taşımakta olan şiirinde kız ve erkek çocuklarına toplumun bakışını tema edinmiştir. Henüz hiçbir suçu yokken kız bebeğin daha dünyaya gelirken toplum tarafından istenmediğine vurgu yaparak bu istenmeme yüzünden erkekle hep bir mücadele halinde olacağından bahsetmiştir:<sup>72</sup>

*Hazırım ben hadi artık başlasın yarış*

*Çalsın davullar zurnalar*

*Dinsin yağmur göreyim bir ebem kuşağını*

<sup>68</sup> Tuba Yılmaz, “1923-1940 Arası Cumhuriyet Dönemi Kadın Romanlarında İdeal Kadın Tipi Olarak Erkekleşen Kadın”, *Rumeli’de Dil ve Edebiyat Araştırmaları Dergisi* 7(Ekim 2016): 38.

<sup>70</sup> EQ Dergisi, “Türk Edebiyatının Can Suyu Kadın Yazarları”, erişim: 10 Mayıs 2021, <https://eqdergi.com/eq87/turk-edebiyatinin-can-suyu-kadin-yazarlari/>.

<sup>71</sup> Neslihan Bodur, “Cumhuriyet Dönemi Türk Şiirinde Kadının Sesi: Türkan İldeniz”, *Uluslararası Hakemli Kültür-Sanat-Mimarlık Dergisi* 1/1(Haziran 2018): 32-33.

<sup>72</sup> N. Bodur, “Cumhuriyet Dönemi Türk Şiirinde Kadının Sesi: Türkan İldeniz”, 33.

*Geçemezsem eğer, mezardan kaldırmak anamı*

*-Erkek evlat doğurmamış-*

*Hay benim de saçım kısa olmalıydı.*

*Demek ben doğunca ağladı evin saçakları*

*Ezik ninnilerde sorumsuz boşadı babam anamı ha*

*Tahtı mı vardı acep kendinden sonra kalacak*

*Ya da şehzadeler bekleyen tacı*

[...] *Bu bir üvey yaşantıydı baştan beri Biliyordum  
bağdaşamazdım*

[...] *Uzun saçıma demir atmışken bakışları*

*Doruklar bulutun türküsünü söyler mi yine*

*İşte rezilce yağmalanmış dünya pazarı*

*Aslan payını kapmışlar işte*

*Bu hile oyunda bana düşen pay*

*Boğulmaktı kadınlığının denizinde (İldeniz 1967: 27 - 28).*

Kadın, şiirlerde arzulanan, sahip olunmak istenen “ideal” objedir. Kadına şiirler yazılmış, yokluğu ile kahrolmuştur.

Nazım Hikmet’in “Kadınlarımız Yüzü” adlı şiiri ile kadınların çehrelerinden yola çıkılarak bir milletin yaşamış olduğu acıyı, eziyeti, sevinci vb. durumları görebileceğimizden söz etmektedir.

*Kadınlarımızın yüzü acılarımızın kitabıdır*

*acılarımız, ayıplarımız ve döktüğümüz kan*

*karasabanlar gibi çizer kadınların yüzünü.*

*Ve sevinçlerimiz vurur gözlerine kadınların*

*göllerde ışıyan seher vakıtları gibi.*

*Hayallerimiz yüzlerindedir sevdiğimiz kadınların, görelim görmeyelim  
karşımızda dururlar gerçeğimize en yakın ve en uzak.*

Kadınlarımızın Yüzleri, Nazım Hikmet

Cahit Sıtkı Tarancı “Başımı Koruyan Melek” adlı şiiri ile kadını bir melek gibi görmüş ve yüceltmıştır. Onun bu şiirinde kadın; yolunu aydınlatan bir fener, hayat kaynağı olmuştur.

*Aşk ile yaptım bu işi*

*Elimle seçtiğim dilber*

*Yarin olmuşu ermiş*

*Şefkatte anneye değer*

*Her sabah sağlığım neşem*

*Her akşam huzurum odur*

*Değme güzele değişmem*

*Böyle hanım az bulunur*

*Karımdır o benim gerçek*

*Merdivende ışık tutan*

*Başımı koruyan melek*

*Cümle kazadan beladan*

Başımı Koruyan Melek, Cahit Sıtkı Tarancı

Paul Walery'in "Green" adlı şiiri ile şairin kalbinin sadece kadın için çarptığı dile getirilmiştir. Aynı zamanda şiir ile birlikte şairin zihnine mih gibi işlenmiş bir kadın imgesi olduğu görülmektedir.

*İşte yemişler, çiçekler, yapraklar ve dallar!*

*İşte kalbim, çarpıntısı yalnız senin için!*

*O bembeyaz ellerin kalbimi kırmazlar!*

*Bu küçük armağanı dilerim hoş göresin.*

*Ben geldim işte, çiğlerle bezenmiş olarak;*

*Alnımda seher yelinin dondurduğu çiğler,*

*Yorgunluğumu alsam ayakucunda bırak!*

*Hayal etsem o tatlı demleri birer birer.*

*Bırak unutayım başımı taze göğsünde!*

*Hâlâ aklımda lezzeti son öpüşlerinin.*

*Hayırlı fırtınadan sonra sakin, asude*

Green, Paul Verlaine

"Eylül" şiiri ile Haydar Ergüven kadını eylül ayına benzetmektedir. Çünkü kadının gittiğinde yaşanan o dağınıklık tıpkı yaz mevsimin bitmesinde ağaçların yapraklarını dökmesi gibidir.

*Yazın bittiği her yerde söylenirse*

*kadının gittiği de her yerde söylenir*

*kadın gittiği her yerde şiir diye söylenir:*

*Kadının gittiği yazın bittiğidir, her yerde*

*yaz biter kadın giderse, bunun sonu şiirdir,*

*yazın sonu şiirdir, şiirdir aşkın sonu...*

*Şehir her semtiyle yazın peşine düşse*

*yaz uzar bundan ve aşklar da nasiplenir,*

*yazın peşinde şehir, kadının peşinde şiir*

*eylülün semtine kadar böyle gidilir*

*bir gecede gittimdi hazirandan eylüle*

*eylül yazdan terkedilmişti, şiirse haziranda*

*kadın tarafından terkedildi o söylenece:*

*Bütün oğullar anneyi bir şiire terkeder!*

*O kadın beni terkederse şair olurum*

*oğul olduğum kadın sakın beni terketme,*

*şiirdir söylenir, yazdır biter, kadındır gider*

*Bütün kadınlar şiiri bir kadına terkeder!*

Eylül, Haydar Ergüven

Melih Cevdet Anday'ın "Seni Düşünüyorum" adını taşımakta olan şiirinde kadın çocukluğudur, onu çocukluğuna götürür. Kadın, temiz ve saf olandır. Aynı zamanda şiirde geçmekte olan "gözümün nuru, başımın tacı" gibi ifadelerle de kadının el üstünde tuttuğu görülmektedir.

## 2. Eserin Arz Edildiği Hedef Kitle İçerisinde Okuyucu Olarak Kadın

Kadın okuyucuların edebiyatla ilişkisi, yüzyıllar boyunca büyük bir değişim ve evrim geçirdi. Bu ilişki, kadınların toplumsal rolleri ve statülerinin görünümü ile yakından ilişkilidir.

Kadın okuyucular, edebiyat hayatının önemli bir parçasını oluşturur. Hem yazar hem de okuyucu olarak, kadınların edebiyata katkısının bulunmaması ve yaşadıkları yerlerde görülenlerdir. Kadın yazarların eserleri, kadın okuyucular tarafından sıklıkla özdeşleştirilmiş karakterler ve deneyimler sunarak özel bir bağ kurmalarına yardımcı olur.

Kadın okuyucuların romantik rolü, 19. yüzyılda büyük bir değişim yaşadı. Özellikle 19. yüzyılın sonlarından itibaren, kadınların kitap okuma ve yazma işlemleri gerçekleştirilmektedir. Bu dönemde kadınlar, edebiyatın toplumsal değişimlerinin bir aracı olarak kullanarak, toplumsal cinsiyet normlarını ve rollerini sorgulamaya başladı.

Feminist edebiyatın artması, kadın okuyucuların daha fazla şikâyeti var. Feminist yazarlar, kadınların deneyimlerini ve toplumsal sorunları edebiyata taşıdılar ve bu eserleri, kadın okuyucuların yaşadıkları daha fazla temsil edildiklerini hissetmelerine yardımcı oldu. Feminist edebiyat, cinsiyet eşitliği ve toplumsal adalet göstergeleri önemli bir rol oynadı.

Kadın okuyucular, edebiyatı eleştiren ve araştıran önemli bir topluluk oluşturmuşlardır. Edebi eleştiriler ve incelemeler, kadınların edebiyatla ilgili analizleri ve ifade etmelerine olanak tanır. Cinsiyet, kimlik ve toplumsal sorunlar, kadın okuyucuların literatürünün dağılımını analiz etmelerine ve tartışmalarını zenginleştirmelerine yardımcı olur.

Klasik edebiyat eserleri, kadın okuyucular için özel bir bilgiye sahiptir. Bu eserlerdeki kadın karakterler ve yaşadıkları deneyimler, kadınların geleneksel ve kültürel açıdan nasıl evrimleştiğini anlamalarına yardımcı olur. Kadın okuyucular, klasik eserlerle duygudaşlık yaparak, geçmişteki kadınların yaşamlarını ve mücadelelerini daha iyi anlarlar.

Kitap kulüpleri ve toplulukları, kadın okuyucular için önemli bir sosyal platform sağlar. Bu gruplar, kitap okuma ve tartışma fırsatları sunuyor. Kadınlar, bu topluluklarda edebiyatlarını paylaşabilir, yeni yazarlar keşfedebilir ve daha fazlasını anlama yeteneğine sahip olurlar. Kitap kulüpleri, kadınların edebiyata olan bağlılığını güçlendirir.

Kadın okuyucuların edebiyatının daha da çeşitlendirilmesi önemlidir. Farklı kültürlerden gelen yazarlar ve çeşitli kimliklere sahip karakterler, kadın okuyucuların dünya görüntüleri genişletiliyor. Çeşitlilik ve temsil, edebiyatın zenginliğini artırır ve daha fazla okuyucunun yaşadığı edebiyatta görmesini sağlar.

Kadın okuyucular, genç nesilleri de içeriyor. Genç kızlar, edebiyatı keşfederken kadın yazarların eserlerini okuyarak kendi kimliklerini oluşturma yolculuğuna başlarlar. Kadın yazarlar, genç nesil okuyucular üzerinde önemli bir yapıya sahiptir ve sürekli olarak okuyucunun kuşaklarını şekillendirebilirler.

Kadın okuyucuların kitap tercihleri, edebiyat dünyasının çeşitlenmesine katkıda bulunur. Kadınlar, farklı türlerdeki kitapları tercih ederler ve farklı temalara ilgi gösterirler. Bu tercihler, edebiyatın çeşitli sanatçıları ve deneyimlerini yansıtır. Kitap seçimleri, bireysel ve toplumsal düzeydeki farklılıklar kutlar.

Kadın okuyucuların edebiyatla ilişkisi, tarihi ve kültürel olarak önemli bir evrim geçirdi. Bu ilişki, kadınların toplumsal değişimindeki rollerini ve yaşadıklarını ifade etme yolculuklarını yansıtır. Kadın okuyucular, sadece edebiyat okuma pratiği olarak değil, aynı zamanda toplumsal değişim aracı olarak da kullanmışlardır. Bu yolculuklarda kadınların edebiyatının zenginliğinin ifade edilmesi ve kendi deneyimlerinin artırılması sağlanır. Kadın okuyucuların edebiyatla ilişkisi, edebiyatın şekillendirmeye devam edecek, çünkü onun okuma deneyimi yeni bir anlam ve süre sunuyor.

### 3. Edebiyat Eserini Oluşturan İcracı Olarak Kadın

Edebiyat malzemesi insan temelinde kurulan ve insana hitap etmekte olan sanattır.<sup>73</sup> Sanatçı, yaşadığı çevreyi gözlemleyen ve bunu tecrübeleri ile harmanlayıp edebiyat eserini ortaya kayandır. 19. Yüzyıla kadar edebiyat eserini ortaya koyan sanatçı eril kimlikte olmuş ancak 19. Yüzyılın getirdiği yeniliklerle edebiyat eserini ortaya koyan dişil kimlik söz konusunu olmaktadır.

*Kadın edebiyatı* ifadesinin ilk kez “19. Yüzyılda erkekler tarafından ortaya atıldığını”<sup>74</sup> Ulla Hahn bir yazısında belirtmektedir. Ancak herhangi bir cinsiyetin egemenliğinin doğru olmamasından ötürü *kadın edebiyatı* adlandırması pek doğru bulunmamaktadır.<sup>75</sup> Sözü edilen edebiyat adlandırmasını doğru bulmakta olan yazarlar dönemin zihniyetinden şikâyetçi olan ve kadın anlayışının baskın olmasını istemekte olan yazarlardır.

Genellikle toplumun sosyal genlerini bir sonraki nesillere kadınlar taşımaktadır. Bunu da daha çok edebiyatın alanına giren konuşma eylemiyle gerçekleştirirler. Bugün “Halk Edebiyatı” olarak sınıflandırılmış eserlerin büyük çoğunluğu kadınlar tarafından icra edilmiştir. Bu durum hemen hemen tüm dünyada bu görünümde. Erkeklerin icra ettikleri eserler ise nispeten daha çok eserin icra usulleriyle ilgili bir önceki neslin ustalarından alınan eğitimler ile icra edildiğinden kayıt altına alınması daha olanaklı hale gelmiştir. Kadın icracıların eserleri zamanla yok olurken erkek icracıların eserleri yazılı olarak bir sonraki nesle aktarılabilmektedir. Bu durum “kadın” icracıların görece erkek icracılara oranla daha az eser verdiği algısı oluşturmuştur.

Bu durum, edebiyatın modernleşmeye başlayıp baskı teknolojilerinin ve yayıncılık imkânlarının gelişmeye başladığı dönemlerden itibaren de kadınların aleyhine gelişmiştir. Edebi eser basımının bir maliyet gerektirmesi, yayıncılığın ise bir sosyal ilişkiler ağı gerektirdiği düşünüldüğünde kadınların eril türdeşlerine göre gene dezavantajlı durumda oldukları gözlemlenmiştir.

#### 3.2. Türk Edebiyatında İcracı Olarak Kadın

Yukarıda adları anılan kadın yazarlar dışında birçok isim daha edebiyat evrenine dahil olmuşlardır. Bu kişileri eserleriyle, etkileriyle zikretmek bu metnimizin hacmini oldukça artıracaktır. Buna dair müstakil bir çalışma yapılması gereğine inanıyoruz. Böyle olmakla birlikte, eksik olsa da en azından isimlerin bazılarını yazmayı uygun gördük:

Adalet Cimcöz (1910-1970), Adile Ayda, (1913-1992), Afet İnan (1908-1985), Afet Ilgaz (Muhteremoğlu) (1937-2015), Ayla Oral (1938), Azra Erhat (1915-1982), Azra Kohen (1979), Birhan Keskin (1963), Buket Uzuner (1955), Didem Madak (1970), Elif Şafak (1971) Emine Işın (1938-2021), Ferzan Gürel (1919-2009), Füzûzan (1935), Gülten Akın (1933-2015), Gülten Dayıoğlu (1935), Güner Ener (1935), Güzide Sabri (1883-1946), Halide Nusret Zorlutuna (1901-1984), İffet Halim Oruz (1904-1993), İhsan Raif Hanım (1877-1926), İnci Aral (1944), Kerime Nadir Azrak (1917-1984), Lale Müldür (1956), Latife Tekin (1957), Leyla Erbil (1931-2013), Leyla Hanım (1850-1936), Melahat Özgü (1907), Melek Sabah Şardağ (1946), Meral Çelen (1934), Mihri Hatun (1460?-1506), Mîna Urgan (1915-2000), Muazzez Menemencioglu (1929-2011), Muazzez Tahsin Berkand (1900-1984), Mübeccel İzmirli (1934-1982), Müşerref Yılmaz (1944), Nilgün Marmara (1958-1987), Nermin Menemencioglu (1910-1994), Nevin İşlek (1936), Nezihe Meriç (1924-2009), Nezihe Araz (1920-2009), Nigar Hanım (1856-1918), Nihal Yalaza Taluy (1900-1968), Nursen Karas (1938), Nurten Çelebioğlu (1930), Pınar Kür (1943), Sabahat Emir (1943), Samiha Ayverdi (1905-1993), Sennur Sezer (1943-2015), Sevgi Sosyal (1936-1976), Tezer Özlü (1943-1986), Türkan İldeniz (1938), Ülker Köksal (1935), Yıldız İncesu (1939), Züleyha Münif (1932-2021).

#### I.IV. Edebiyata Dair Araştırmalar Yapan Kadın

Türkiye Cumhuriyetinde yıllar süren üniversiteleşme süreci ile kadınların akademik eğitim alma imkanlarının artması ve üniversitelerin ihtiyaç duyduğu akademik personel kadrolarına atanmaları

# INTERNATIONAL ANKARA CONGRESS ON MULTIDISCIPLINARY STUDIES-VI

October 13-14, 2023

neticesi oldukça çok sayıda kadın edebiyata dair araştırma, inceleme ve kritik edebilmişlerdir. Üniversitelerin Dil, Edebiyat, Dil ve Edebiyat, Dil ve Edebiyat Eğitimi, dil ile ilgili diğer bölümlerde öğrencilerin çoğunun kadın öğrenciler olduğu gözlemlenmekte, yine kadın akademisyenlerin sayısı artmaktadır. Bu alanda da eril türdeşlerine oranla sayısal açıdan azınlıkta kaldığı görülmektedir. Bilime, edebiyat ve dil bilimine oldukça değerli katkılar sunmuşlardır.

Kadın akademisyenlerin bilme katkıları ve arz ettikleri eserleri metnimizin hacmini oldukça artıracağından müstakil çalışmaya havale etmekle yetineceğiz.

## SONUÇ

Kadın, edebiyatın hem oluşturucusu, hem konusu, hem muhatabı hem de araştırmacısı olmuştur. Ancak fiziki zayıflığı, anne olarak ödediği ağır biyolojik bedeli dolayısıyla erkekler kadar edebiyat alanında da varlık gösterememişlerdir. Bu olumsuz durum, toplumların gelişmesiyle, teknolojinin ve yayıncılığın imkânlarıyla daha çok görünür olmuşlardır. Bu durum yalnızca Türk Edebiyatı için değil, tüm dünyada hemen hemen böyledir.

Türk Edebiyatında da çok güçlü kadın şair, yazar ve araştırmacı kendilerinden bahsettirir olmuşlar ve tarih süzgecinden geçerek bir sonraki kuşaklarca da benimsenip aktarılmıştır.

Biz, bu çalışmamızla Türk edebiyatı odaklı “Edebiyat” ve “Kadın” konusunu çalışırken “Kadın Edebiyatı” literatürüne katkı yapmayı amaçladık. Umarız ki bir nebze de olsa farkındalık oluşturabildik.

**ÖZET**

Toplumcu-gerçekçi bir yazar olan Yaşar Kemal, eserini duru bir halk Türkçesiyle kaleme almış, halkın yaşamına dair gözlemlerini olduğu gibi romanında yansıtmıştır. İnce Memed romanları, Çukurova köylüsünün feodal/ağalık düzeni karşısındaki mücadelesini, haksızlık ve adaletsizliğin karşısındaki emekçinin dönüşümünü, isyanını ve inançla sürdürdüğü yaşam yolculuğunu anlatırken yoğun bir kültürel malzemeyi de okuyucuya arz eder. Bu yönüyle Türk ve Dünya kültür bilimine önemli bir veri sağlamıştır. Çalışmamızın odağı olan, “İnce Memed romanlarını kültür izleri” bağlamında eseri incelenmiş; yoğun bir kültürel malzemeyle karşılaşılmıştır. Kültür izleri olarak, halk deyişleri (atasözü, deyim, kargış, mani, tekerleme, ağıt, türkü), gelenek ve görenekler, örf, adet ve töreler, giyim-kuşam, yeme-içme kültürü, oynan oyunlar, halk hekimliği, özellikle “at” unsuru ve halk inanışları (batıl inanışlar, dini inanışlar ve efsane ve efsaneleştirmeler) görülmüştür. Eserdeki sembolik yapılar ve üstlendikleri anlamlara değinilmiştir. Dikkat çeken bir diğer unsur da “kitle psikolojisi”dir. Bu tespitemizi gösterebilmek için romanların olay örgüsü aktarılmıştır. Olay ve durumlar karşısında kitlelerin edindiği tavırların psikolojik bir devinim olduğunu göstermektedir. Eseri incelediğimizde çatışan iki kitlenin varlığını tespit edilmiş, bu iki kitlenin hareket ve tavırları, içinde buldukları kültürel ortamın psikolojik yansıması olarak değerlendirilmiştir.

**Anahtar Kelimeler:** Yaşar Kemal, İnce Memed, Kültür, Halk Kültürü

**GİRİŞ**

Yaşar Kemal, toplumun dezavantajlı kesimlerinin yaşantılarındaki zorluklara tanıklık etmiş, acılarını, yaşadıklarını eserlerine yansıtmış bir yazardır. Halk edebiyatına da ilgi duyan Kemal'in şiirleri 1940'lı yıllarda "Çığ", "Ülke", "Millet", "Kovan" ve "Beşpınar" dergilerinde okuyucusuyla buluşur. İstanbul'a 1951'de taşınan Kemal, kısa bir süre işsizlikten sonra "Yaşar Kemal" imzasıyla, 1963'e kadar Cumhuriyet gazetesinde, fıkra ve röportajlar yazdı. Yazılarında Anadolu insanının sorunlarını anlatmaya çalıştı. Yaşar Kemal'in bu dönemde yaptığı "Dünyanın En Büyük Çiftliğinde Yedi Gün" başlıklı röportajı, Gazeteciler Cemiyetince verilen "Özel Başarı Armağanı"na değer görüldü.

Eserlerinde sade ve akıcı bir üslup kullanan Yaşar Kemal, roman ve öykülerinde çoğunlukla Çukurova'da yaşanan insan dramlarını işlemiştir. "İnce Memed" in de içinde bulunduğu birçok eseri sinema filmi ve tiyatroya uyarlanmıştır. Eserlerinde Anadolu'nun efsane ve masallarından da yararlanan Kemal, 1970'ten sonra yazdığı romanlarında ise şehir insanının hayatını ele almaya başlamıştır. Nobel'e aday gösterilmiştir.
